[fol. 1] IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[File endorsement omitted]

Civil Action No. 76-53

UNION PACIFIC RAILROAD COMPANY; CHICAGO AND NORTH WESTERN RAILWAY COMPANY; CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY; NORTHERN PACIFIC RAILWAY COMPANY; GREAT NORTHERN RAILWAY COMPANY; THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY; CHICAGO, MILWAUKEE, ST. PAUL AND PACIFIC RAILROAD COMPANY; AND WABASH RAILROAD COMPANY, PLAINTIFFS,

VS.

UNITED STATES OF AMERICA, AND INTERSTATE COMMERCE COMMISSION, DEFENDANTS

COMPLAINT—Filed June 25, 1953

Plaintiffs, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific

Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; and Wabash Railroad Company, bring this suit to enjoin, annul, suspend and set aside the order issued by the Interstate Commerce Commission (hereinafter called the "Commission") on January 12, 1953, in a proceeding entitled Docket No. 30297, The Denver and Rio Grande Western Railroad Company vs. Union Pacific Railroad Company, et al. The order, copy of which is attached and made a part hereof as Appendix A, requires:

[fol. 2] "*It is ordered*, That the defendants named in the complaint, according as they participate in the transportation, be, and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

"*It is further ordered*, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn

along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Okahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

"*It is further ordered*, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

"*And it is further ordered*, That this order shall continue in force until the further order of the Commission."

II

Union Pacific Railroad Company (hereinafter called "Union Pacific") as a corporation under the laws of the State of Utah, and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the State of Nebraska and other states hereinafter mentioned.

[fol. 3] Chicago and North Western Railway Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Wisconsin, Illinois, Minnesota, Iowa, South Dakota, Nebraska and other states.

Chicago, St. Paul, Minneapolis & Omaha Railway Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Nebraska, Iowa, Minnesota, and other states.

Northern Pacific Railway Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Minnesota, North Dakota, Montana, Idaho, Washington and other states.

Great Northern Railway Company is a corporation under the laws of the State of Minnesota and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Minnesota, North Dakota, Montana, Idaho, Washington, Oregon, California and other states.

The Atchison, Topeka and Santa Fe Railway Company is a corporation under the laws of the State of Kansas and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Illinois, Missouri, Kansas, New Mexico, Arizona, California, and other states.

Chicago, Milwaukee, St. Paul and Pacific Railroad Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Illinois, Indiana, Wisconsin, Minnesota, North Dakota, South Dakota, Montana, Idaho, Washington and other states.

Wabash Railroad Company is a corporation under the [fol. 4] laws of the State of Ohio and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Michigan, Indiana, Illinois, Missouri and other states.

III

Jurisdiction of this Court over this cause of action is provided by Title 28 U. S Code, Sections 1336, 2284 and 2321-2325, inclusive, which authorizes suits to be brought

in the District Courts of the United States against the United States of America to enjoin, annul, suspend and set aside orders of the Interstate Commerce Commission. Venue of this action is in this Court pursuant to Title 28 U. S. Code, Section 1398, because of the fact that the principal office of the Union Pacific is at 1416 Dodge Street, Omaha, Nebraska.

IV

The proceeding before the Commission in said Docket No. 30297 was initiated by a complaint filed August 1, 1949, by The Denver and Rio Grande Western Railroad Company, as complainant (hereinafter called "Rio Grande") against the Union Pacific and some 200 other railroads, including the plaintiffs herein, alleging, among other things, that the Union Pacific and other railroads, or some of them, failed and refused—

> "* * * to join with complainant in establishing competitive joint rates for the transportation of the freight traffic involved between
>
> "(a) points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof,
>
> "and
>
> "(b) on freight traffic betwen Utah common points on the one hand, and places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia, on the other hand,
>
> "which failure and refusal by the defendants constitute violations o Section 1(4), Section 3, Section 15 (1) and Section 15(3) of the Interstate Commerce Act, and is contrary to the National Transportation Policy."

The complaint also alleged that freight rates and charges via the Rio Grande on traffic to and from the territories [fol. 5] described were so much greater than rates and charges via routes of the Union Pacific and other defendants as to prevent the Rio Grande from obtaining a haul "on an unknown volume of competitive traffic" because shippers

will not route their traffic via the Rio Grande at the higher rates and charges.

V

Answers to the complaint were filed by the Union Pacific and numerous other defendant railroads denying the allegations of the complaint. The complaint did not allege that through routes via the Rio Grande are necessary or desirable in the public interest, or that existing routes of the Union Pacific and other railroads are unreasonably long compared to routes via the Rio Grande, or that through routes and joint rates via the Rio Grande to and from the described territories are needed to provide adequate and more efficient or more economic transportation.

[fol. 6]

VI.

Intervenors opposing the complaint and supporting the Union Pacific and other defendants named in the complaint include the State of Nebraska, City of Cheyenne, Wyoming, the Public Service Commissions of the States of Montana, Washington, Oregon, Wyoming, Nebraska and Kansas, chambers of commerce and other associations, certain industrial employe groups in Wyoming, and employe groups of the Union Pacific, the Chicago and North Western Railway Company and the Wabash Railroad Company.

Intervenors in support of the Rio Grande's complaint include the Secretary of Agriculture of the United States, the Public Utilities Commissions of Colorado and Utah, which intervened as their interests might appear, but later fully supported the complaint, the American National Live Stock Association, other live stock and stock feeder associations, various shippers' and producers' associations, milling companies, farm bureaus, chambers of commerce and certain groups of employes of the Rio Grande. The Public Utilities Commission of Idaho intervened without stating its position, but later took the position that the demands of the Rio Grande's complaint should be denied except with respect to live stock and fruits and vegetables.

VII.

Union Pacific owns and operates nearly 10,000 miles of railroad serving more than 1,700 cities, towns and stations

in the States of Iowa, Missouri, Nebraska, Kansas, Colorado, Wyoming, Utah, Nevada, California, Idaho, Montana, Oregon and Washington. Its eastern termini are at Council Bluffs, Iowa, and Kansas City, Missouri, and its western termini are at Los Angeles, California, Portland, Oregon, and Seattle, Washington, and at Ogden, Utah, where it made connection with what is now the Southern Pacific Company on May 10, 1869, to form the first transcontinental railroad in the United States. Beginning in 1878 the Union Pacific constructed and acquired railroad lines north of Ogden in Utah, Idaho, Montana, Oregon and Washington and now owns and operates 5,606.7 miles of railroad in the states just named of which 2,913.19 miles, [fol. 7] or over 50 per cent, consist of numerous branch lines connected with and extending from its main lines in those states.

The standard gauge lines of the Rio Grande, completed in 1890, extend from Ogden through Utah and Colorado to Denver, approximately 600 miles, and to Pueblo and Trinidad, Colorado. The Rio Grande connects with the Union Pacific at Denver, and interchange of traffic between the two railroads can be made at Ogden through the facilities of the Ogden Union Railway & Depot Company, a terminal facility owned and maintained by the Southern Pacific Company and the Union Pacific for the interchange between them of eastbound and westbound transcontinental and other traffic.

VIII.

In the States of Utah north of Ogden, Idaho, Montana, Oregon and Washington (designated by the Commission as the "northwest area" or "excluded territory"), more than 157,000 carloads of freight originate and terminate annually at stations on the main and branch lines of the Union Pacific. Most of the traffic now moves and for many years has moved over the lines of the Union Pacific through Pocatello, Idaho, and Granger, Wyoming, to or from the termini of the Union Pacific at Council Bluffs, Iowa, or Kansas City, Missouri, and the lines of connecting railroads at those two points. A portion of the traffic is moved by the Union Pacific to junctions with other railroads in Oregon, Washington and Montana, and by those

railroads to points on their lines or to connections with still other railroads. By far the greater portion of the traffic moves between the northwest area and the area east of the Missouri River and north of the Ohio River. It is this traffic and the revenue derived from it, or as much thereof as possible, which the Rio Grande seeks through its complaint to the Commission to divert to its line for a "bridge" haul over the entire length of its line between Ogden and Denver for the purpose, as testified by its president, of improving the financial condition and position of the Rio Grande. Routes via the Rio Grande are from [fol. 8] 33 to 219 miles longer than Union Pacific routes and diversion of the traffic to the Rio Grande would short haul or deprive the Union Pacific of its present haul to the extent of about 1,000 miles and would deprive other railroad plaintiffs herein of their entire haul on many thousand carloads of such traffic annually.

[fol. 9]

IX

Union Pacific and other railroads have never established or maintained any through routes and joint rates with the Rio Grande via Ogden on traffic from and to the described territories, except on eastbound sheep or goats and except during a period when the Union Pacific and the Oregon Short Line Railway Company, which is wholly owned by the Union Pacific, were in separate receiverships, at the conclusion of which period, the through routes and joint rates with the Rio Grande were cancelled in 1906 and 1912 with approval of the Commission. No complaints have been filed by shippers or the public or by any state public service commission demanding the through routes and joint rates which the Rio Grande seeks to compel via its line as a result of its complaint to the Commission.

X

Concurrently with the filing of the complaint August 1, 1949, and thereafter, officials of the Rio Grande conducted a vigorous and wide-spread campaign in Colorado, Utah, Idaho, Oregon and other northwestern states in which it solicited, agitated and sought to persuade and procure shippers located upon and served by the Union Pacific and

public service commissions of those states to join with the Rio Grande by intervention and testimony of such nature as to help it win its case. In that campaign, the Rio Grande condemned and vilified the Union Pacific, accused it of violations of law and of the rights of shippers served by it and urged upon shippers that they would benefit by joining with the Rio Grande in supporting its case. Some evidence of that campaign was received by the Commission at hearings hereinafter mentioned, but the Commission excluded and refused to receive most of the evidence offered by the Union Pacific disclosing and portraying the nature, vigor and extent of the Rio Grande's efforts to procure testimony of shippers to help it win its case before the Commission.

After the Examiner's proposed report and recommendations were issued November 20, 1950, U. S. Senator Edwin [fol. 10] C. Johnson of Colorado, then Chairman of the Senate Committee on Interstate and Foreign Commerce which approves or disapproves appointments and reappointments of persons nominated by the President of the United States for positions as Interstate Commerce Commissioners, made radio broadcasts on January 27 and February 2, 1951, over radio station KFEL at Denver, Colorado, in which he praised the Examiner's recommendations as "a great victory for Colorado shippers," denounced the desire of the Union Pacific to retain to its shorter route the traffic originated and terminated on its main line and numerous branch lines in the northwest as "the selfish interests of the Union Pacific" and announced that "I am, and will continue to do all that I can to rid my people of such economic tyranny." Again, on October 28, 1952, immediately following reargument of the case before the Commission on October 15 and 16, 1952, and while the case was under consideration and pending decision by the Commission, Senator Johnson caused or permitted to be published over his signature in the newspaper, Wichita Beacon, Wichita, Kansas, an "editorial" in which he charged Union Pacific with discrimination against shippers located on its own railroad, with maintaining a "transportation monopoly" by refusing to voluntarily deprive itself of revenues from traffic originated and terminated on its own railroad and refusing to join in the Rio Grande's plan to divert the traffic to its line for its financial improvement, asserted that

he had "investigated" the case then pending before the Commission and concluded "that the public interest was on the side of the Rio Grande."

The Commission rejected the Union Pacific's petition to reopen the record and receive copies of the radio broadcasts and "editorial" in evidence.

XI

Hearings upon the complaint were conducted by an Examiner of the Commission at Salt Lake City, Utah, Boise, Idaho, and Cheyenne, Wyoming, after which a proposed report of the Examiner was served upon the parties November 20, 1950, recommending that the Commission grant the [fol. 11] full demands of the Rio Grande's complaint. Exceptions to the proposed report of the Examiner were filed by the Rio Grande with respect to one feature of the proposed report and by the Union Pacific, other railroad defendants, the six state commissions, and other parties supporting the defendants. Oral arguments upon the exceptions were heard by the entire Commission October 11 and 12, 1951, and reargument ordered by the Commission was heard October 15 and 16, 1952.

XII

On January 12, 1953, a majority of the Commission, with certain of the Commissioners dissenting, issued the report and decision attached and made a part hereof as Appendix B hereto in which it announced the following "Conclusions":

> "1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in

carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kan., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the lower peninsula of Michigan and in Oklahoma and Texas.

"2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act.

"4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

Upon the same date the Commission entered its order [fol. 12] mentioned above and attached as Appendix A to this complaint.

XIII

Petitions for reopening, reargument and reconsideration of its decision and order were filed with the Commission by the Union Pacific and several other railroads, by the public service commissions of Nebraska, Wyoming, Idaho, Mon-

tana, Oregon and Washington, and by Union Pacific employees. In those petitions, the Commission was urged to reverse its findings and order and to dismiss the complaint. Petitions for reconsideration were also filed with the Commission by the Rio Grande and a number of shippers and others. On June 22, 1953, the Commission issued and made public its order dated June 10, 1953, denying all the petitions for reconsideration. Copy of that order is attached hereto as Appendix C and made a part hereof.

XIV

Plaintiffs allege that said order of the Commission dated January 12, 1953, is based upon errors of law, is not supported by evidence or adequate findings, exceeds the statutory power of the Commission, and is unlawful, arbitrary, null and void and should be set aside for the following reasons:

1. In rejecting testimony timely offered to prove that the Rio Grande agitated, solicited and procured shippers and others as witnesses to intervene and testify in such manner as to help it win its case and in rejecting transcripts of radio broadcasts over station KFEL at Denver, and an "editorial" by Senator Ed. C. Johnson, published in the Wichita Beacon, the Commission acted arbitrarily, unreasonably and unlawfully.

2. The Commission acted arbitrarily, unreasonably and unlawfully in refusing to accept and consider court decisions and other authorities offered by the Union Pacific in support of the contention that the Rio Grande's solicitation and procurement of shippers to intervene and testify so as to help it win its case, and that the intrusion of and utterances by Senator Johnson vitiated and nullified the proceeding requiring its dismissal by the Commission.

[fol. 13] 3. The Commission acted arbitrarily, erroneously and contrary to law in overruling plaintiffs' motion to dismiss the complaint on the ground that the Rio Grande seeks only to obtain additional revenues to improve its financial position and that the Commission is prohibited by section 15(4) of the Interstate Commerce Act from compelling through routes for that purpose.

4. In holding that, despite the fact that the Rio Grande's

complaint did not and could not raise an issue of undue preference and prejudice among shippers under section 3(1) of the Interstate Commerce Act, such issue nevertheless was tendered for decision because of testimony submitted by shippers, the Commission acted arbitrarily, erroneously and contrary to law.

5. In finding that the combination rates via the Rio Grande are unjust and unreasonable and that joint rates applicable via the Union Pacific and other defendants are reasonable for application via the Rio Grande, the Commission acted arbitrarily, unreasonably and unlawfully in that there was no evidence before it to justify or support such findings.

6. The Commission acted arbitrarily, erroneously and contrary to law in failing to find and hold that the refusal of the Union Pacific and other defendants named in the complaint to equalize shippers in the matter of transit privileges offered by the Rio Grande by joining in lower rates via the Rio Grande does not and cannot violate section 3(1) of the Interstate Commerce Act.

7. The Commission's finding that the combination rates applicable via the Rio Grande on traffic from and to the northwest area or "excluded territory" are unduly prejudicial of shippers and receivers using or desiring to use the Rio Grande's routes and unduly preferential of shippers and receivers using the Union Pacific's routes, is arbitrary, capricious, erroneous and contrary to law in that shippers in said northwest area using or desiring to use the Rio Grande's routes are the same shippers who were found by the Commission to be unduly preferred because they have available and make use of Union Pacific routes at lower joint rates.

8. After correctly finding that there are substantial differences and dissimilarities in transportation conditions [fol. 14] over the Union Pacific compared with those over the Rio Grande, the Commission acted arbitrarily, erroneously, contrary to and without support of evidence in finding that those substantial differences and dissimilarities in transportation conditions "become relatively insignificant" and that "transportation conditions are substantially similar" for the longer hauls and greater distances

between points in the northwest area and points in the southern and eastern part of the United States.

9. The finding that through routes and joint rates via the Rio Grande are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" is contrary to the overwhelming preponderance of the evidence, contrary to and inconsistent with facts clearly found and stated in the Commission's report and is based upon an erroneous interpretation of the words "needed in order to provide adequate, and more efficient or more economic, transportation" used in section 15(4) of the Interstate Commerce Act.

10. The finding that, regardless of the fact that there is no allegation or contention by the Rio Grande that through routes and joint rates via its line for the involved traffic are needed to provide adequate and more efficient or more economic transportation, or that routes of the Union Pacific and other railroads are not adequate, testimony of shippers raises "a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities" is arbitrary, erroneous in law and is not supported by evidence.

11. The basic facts found by the Commission are inconsistent with and do not justify or support, but are contrary to its ultimate conclusions and the order based thereon is arbitrary, erroneous and void.

12. The finding that the commodities specified in the order must be moved over as many routes as possible is arbitrary, erroneous and in conflict with and contrary to the provisions of sections 1(4) and 15(4) of the Interstate Commerce Act.

13. The Commission acted arbitrarily, capriciously, erro- [fol. 15] neously, and contrary to the evidence of record in finding that because of the refusal of the Union Pacific and other railroads to join with the Rio Grande in through routes and equal joint rates so that the specified commodities may move over the Rio Grande instead of routes of the Union Pacific and other railroads "the shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation

in the wide-spread system developed for the marketing of such commodities."

14. The finding that for traffic reconsigned or accorded transit privileges at points on the Rio Grande "defendants' routes are inadequate and less economical than are the Rio Grande routes" because higher rates apply via the Rio Grande and "the Union Pacific routes and the joint rates which apply over them are not available" at such points on the Rio Grande, is arbitrary, capricious, erroneous and is based upon a misinterpretation of law.

15. The finding that the situation as to the commodities specified in the order is similar to that in *D. A. Stickell & Sons, Inc.* v. *Alton R. Co.*, 255 I. C. C. 333, is erroneous, contrary to the facts stated in the decision in that case and contrary to the evidence of record in this case.

16. In view of the facts correctly found that there are substantial dissimilar transportation conditions over the Rio Grande compared with those over the Union Pacific, that operating conditions on the Rio Grande are "more onerous" than those on the Union Pacific, that Union Pacific routes are shorter, that the line of the Rio Grande is less favorably situated than that of the Union Pacific and that traffic diverted to the Rio Grande would require at least 24 hours more time in transit and two more terminal yard or interchange services than presently required for movement of traffic over the Union Pacific, the further finding that those substantially different transportation conditions become relatively insignificant when spread over long hauls between the northwest area and the eastern and southern part of the United States, is arbitrary, erroneous, capricious, contrary to law and without any evidence to support or justify it, and is based on an erroneous assumption that [fol. 16] the Commission may lawfully ignore the substantial differences and more onerous transportation conditions of the Rio Grande for longer hauls.

17. The Commission acted arbitrarily, unlawfully and contrary to the evidence in refusing to find and hold that the joint rates via the Union Pacific and other railroads are too low for application via the longer route of the Rio Grande and that such application of the joint rates would

result in wasteful and uneconomic transportation which the Interstate Commerce Act intends to prevent.

18. The findings that the combination rates via the Rio Grande are unreasonable because they are higher than the joint rates applicable via Union Pacific routes and that said joint rates are reasonable for application via the longer routes of the Rio Grande because although depressed and sub-normal the joint rates are the "going rates", and have been in effect for many years, are arbitrary, erroneous, capricious and contrary to law and the evidence of record.

19. The finding that "there is no claim that any of those (joint) rates is below a minimum reasonable level. It follows that the joint rates sought, as presently applied, are within the zone of reasonableness and must be regarded as reasonable rates" is arbitrary, capricious, erroneous in law and contrary to the evidence.

20. The Commission acted arbitrarily and unlawfully in failing and refusing to give effect to the requirement in section 15(4) of the Interstate Commerce Act that reasonable preference be given the originating carrier.

21. The Commission misconstrued and misapplied section 15(4) of the Interstate Commerce Act and exceeded its power in finding and requiring that the shorter Union Pacific routes may be short hauled because routes not more than 37 per cent longer could be made via the Rio Grande and because the Union Pacific would still retain a substantial haul after being short hauled approximately 1,000 miles. [fol. 17] 22. The Commission acted arbitrarily, erroneously and contrary to the evidence in finding that the additional traffic which will be diverted to the Rio Grande under the order can be interchanged through present terminal facilities at Ogden or Salt Lake City without serious detriment to operating efficiency, and in ignoring evidence portraying obstacles of interchange of traffic between the Union Pacific and the Rio Grande at Denver.

23. The Commission acted arbitrarily, capriciously and erroneously in failing to consider the probable injurious effect that any substantial diversion of traffic and revenues from the Union Pacific to the Rio Grande would have upon the Union Pacific, its employes and its service on cities, towns and communities served by it and in failing to find

that the probable diversion of traffic to the Rio Grande would impair and deteriorate service required by shippers and a large segment of the commerce of the country and the national defense.

24. The finding that maintenance by the Union Pacific of joint rates with the Bamberger Railroad at points between Ogden and Salt Lake City, Utah, while refusing to participate in like rates with the Rio Grande discriminates against the latter in violation of section 3(4) of the Interstate Commerce Act is without support of any evidence.

XV

Plaintiffs will be irreparably injured and damaged if the Commission's said order of January 12, 1953, is not restrained, suspended, enjoined, set aside and annulled. Plaintiffs would have no remedy at law to recover such loss or damage.

Said order of January 12, 1953, was originally made to become effective on April 7, 1953, by publishing and filing tariffs with the Commission on not less than 30 days' notice. [fol. 18] Further orders of the Commission dated February 13, April 15, and June 24, 1953, modified the order of January 12, 1953, so that it will become effective on October 7, 1935, by publishing and filing tariffs on September 7, 1953, unless the effective date thereof is further postponed by the Commission, or unless this Court restrains, enjoins, suspends and prevents said order from becoming effective.

If said order becomes effective and plaintiffs have not complied with its requirements, they and each of them will be subject to a penalty of $5,000.00 provided by Title 49, U. S. Code, Section 16(8) for each day they fail to comply with the order.

XVI

Wherefore, Plaintiffs pray:

1. That process may issue against the United States of America and Interstate Commerce Commission;

2. That this Court, by temporary stay, preliminary or interlocutory injunction, stay, restrain and suspend the operation of the order of the Commission dated January 12,

1953, pending the final hearing and determination of this action;

3. That a Court constituted as required by U. S. Code, Title 28, Sections 2284, and 2321-2325, consisting of three Judges, of whom at least one shall be a Circuit Judge, be convened, and that said Court so constituted and convened shall hear this petition upon due and legal notice to defendants;

4. That said Court, upon final hearing of this suit, enter a decree herein permanently suspending, enjoining, setting aside and annulling the said order of the Commission;

5. That Plaintiffs have recovery of the defendants of the proper costs of this suit; and

[fol. 19] 6. That the Plaintiffs have such other and further relief in the premises as to equity may appertain and as may be deemed by this Court fit and proper.

Respectfully submitted, Elmer B. Collins, Attorney for Union Pacific Railroad Company, Plaintiff, 1416 Dodge Street, Omaha 2, Nebraska; F. O. Steadry, Attorney for Chicago and North Western Railway Company, and Chicago, St. Paul, Minneapolis & Omaha Railway Company, Plaintiffs, 400 West Madison Street, Chicago 6, Illinois; Conrad Olson, Attorney for Northern Pacific Railway Company, Plaintiff, 5th & Jackson Streets, St. Paul 1, Minnesota; L. E. Torinus, Jr., Attorney for Great Northern Railway Company, Plaintiff, 175 East 4th Street, St. Paul 1, Minnesota; Roland J. Lehman, Attorney for The Atchison, Topeka and Santa Fe Railway Company, Plaintiff, 80 East Jackson Blvd., Chicago 4, Illinois; Carson L. Taylor, Attorney for Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Plaintiff, 516 West Jackson Blvd., Chicago 6, Illinois; Eugene S. Davis, Attorney for Wabash Railroad Company, Plaintiff, Railway Exchange Building, St. Louis 1, Missouri.

Of Counsel: W. R. Rouse, 1416 Dodge Street, Omaha 2, Nebraska, for Union Pacific Railroad Company; Nye F. [fol. 20] Morehouse, 400 West Madison Street, Chicago 6,

Illinois, for Chicago and Northwestern Railway Company, and Chicago, St. Paul, Minneapolis & Omaha Railway Company; M. L. Countryman, Jr., 5th & Jackson Streets, St. Paul 1, Minnesota, for Northern Pacific Railway Company; Edwin C. Matthias, 175 East 4th Street, St. Paul 1, Minnesota, for Great Northern Railway Company; J. C. Gibson, 80 East Jackson Blvd., Chicago 4, Illinois, for The Atchison, Topeka and Santa Fe Railway Company; M. L. Bluhm, 516 West Jackson Blvd., Chicago 6, Illinois, for Chicago, Milwaukee, St. Paul and Pacific Railroad Company; Joseph H. Miller, Railway Exchange Building, St. Louis 1, Missouri, for Wabash Railroad Company.

[fol. 21] APPENDIX "A" TO COMPLAINT

Order

At a General Session of the Interstate Commerce Commission, Held at Its Office in Washington, D. C., on the 12th Day of January, A. D. 1953

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY, et al.

This proceeding being at issue upon complaint and answers on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points

are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination:

It is ordered, That the defendants named in the complaint, according as they participate in the transportation, be, and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in Section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas [fol. 22] to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company

and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in Section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

George W. Laird, Acting Secretary. (Seal.)

APPENDIX B to Complaint

20423

INTERSTATE COMMERCE COMMISSION

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY
v. UNION PACIFIC RAILROAD COMPANY ET AL.

Submitted October 16, 1952. Decided January 12, 1953

1. Through routes and joint rates found necessary and desirable in the public interest via Ogden or Salt Lake City, Utah, in connection with complainant, on certain commodities from and to points in the excluded territory in the northwest area as described in the report, to and from points in official, southern, and southwestern territories, including Missouri and a portion of Iowa.
2. Rates on the same commodities from and to the same points over complainant's routes via Ogden or Salt Lake City, found unreasonable and unduly prejudicial to and preferential of shippers and receivers.
3. Maintenance by defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the line of complainant south of Ogden, found to subject complainant to unlawful discrimination.
4. Order entered requiring removal of unlawfulness found to exist and establishment of through routes and joint rates found reasonable.

Robert E. Quirk, *Otis J. Gibson*, and *H. L. Mulliner* for complainant.

Elmer B. Collins, *L. H. Anderson*, *John B. Burchell*, *Robert H. Bierma*, *L. E. Clarahan*, *F. H. Cole, Jr.*, *Eugene S. Davis*, *Lee S. Davis*, *P. H. Draver*, *F. G. Fitzpatrick*, *P. F. Gault*, *R. J. Hagman*, *L. W. Hobbs*, *Roland J. Lehman*, *B. P. Leverich*, *James E. Lyons*, *E. F. McGuire*, *F. J. Melia*, *Conrad Olson*, *W. R. Rouse*, *James S. Souby, Jr.*, *Carson L. Taylor*, and *L. E. Torinus, Jr.*, for defendants.

C. A. Miller for a railroad association; *Chas. B. Bowling*, *Carl R. Bullock*, *Henry A. Cockrum*, and *J. L. Pease* for Secretary of Agriculture; *Ralph C. Horton*, *John H. Winchell*, *Joseph W. Hawley*, *T. S. Wood*, and *Ralph Sargent, Jr.*, for Public Utilities Commission of the State of Colorado; *W. B. Joy*, *H. N. Beamer*, *B. Auger* and *L. F. Purvis* for Public Utilities Commission of Idaho; *Byron M. Gray* for State Corporation Commission of the State of Kansas; *Edwin S. Booth* and *Sidney T. Smith* for Board of Railroad Commissioners of the State of Montana; *Clarence S. Beck*, *Harold A. Palmer*, *Bert L. Overcash*, and *Harry C. King* for State of Nebraska and Nebraska State Railway Commission; *John H. Carkin* and *Thomas W. Dench*

for Public Utilities Commissioner of Oregon; *Smith Troy*, *Phil H. Gallagher*, *Joseph Starin*, and *Bartlett Burns* for Washington Public Service Commission; *Norman B. Gray* and *Jefferson C. Church* for the State Board of Equalization and Public Service Commission of Wyoming; *Hal S. Bennett*, *Donald Hacking*, *W. R. McEntire*, and *Chas. A. Root* for Public Service Commission of Utah; and *George F. Guy* for the city of Cheyenne, Wyo., interveners.

Calvin L. Blaine, *Chas. E. Blaine*, *Maurice H. Greene*, *Alden T. Hill*, *E. K. Kohlwes*, *Lowe P. Siddons*, *Reginald T. Titus*, and *Lee J. Quasey* for other interveners.

REPORT OF THE COMMISSION

BY THE COMMISSION:

Exceptions to the report proposed by the examiner were filed by the complainants, the defendants, and certain interveners and the issues were twice argued orally. Our conclusions differ in part from those recommended. Exceptions and requested findings not discussed in this report nor reflected in our findings or conclusions have been given consideration and found not justified.

The complainant, sometimes called the Rio Grande, a common carrier by railroad operating in interstate commerce within the States of Colorado, Utah, and New Mexico, requests us to order the Union Pacific Railroad Company, which with its leased lines is referred to as the Union Pacific system or the Union Pacific, and the other defendants to establish and maintain for the future just, reasonable, and nondiscriminatory competitive joint through rates[1] and charges for the transportation of freight in connection with the complainant through Salt Lake City or Ogden, Utah, referred to as the Ogden gateway. More particularly, we are asked to require the defendants to establish such joint rates on freight traffic in connection with the complainant through its Colorado and Utah gateways, (1) between (*a*) points on the Union Pacific or its connections in Utah north of Ogden and in Idaho, Montana, Oregon, Washington,[2] and British Columbia, Canada, and (*b*) Colorado common points and points east thereof; and (2) between Utah common points and the northwest territory specified in 1 (*a*).

No evidence was submitted with respect to rates from or to British Columbia, and such rates will not be considered.

Interveners in support of the complaint include the Secretary of Agriculture of the United States, the public utility commissions of the States of Colorado and Utah, the American National Live Stock Asso-

[1] Rates and rate differences named herein are per 100 pounds and are those in effect at the time of the hearing herein.

[2] This area is referred to in this report as the northwest area or territory.

ciation, other livestock and stock-feeder associations, various shippers' and producers' associations, milling companies, farm bureaus, chambers of commerce, and certain groups of employees of the complainant.

Interveners in support of the defendants include the State of Nebraska, city of Cheyenne, Wyo., the public utility commissions of the States of Montana, Washington, Oregon, Wyoming, Nebraska, and Kansas, various chambers of commerce and other associations, certain employee groups in Wyoming, and employee groups of the Union Pacific, the Chicago and North Western Railway Company, and the Wabash Railroad Company.

In its exceptions to the proposed report, the State Corporation Commission of the State of Kansas took the position that the recommended finding that joint rates should be established over the existing through routes by way of Ogden and the Rio Grande is amply sustained by the evidence with respect to the rates on wheat and livestock but not otherwise, and that the recommended findings as to commodities generally are too broad in scope.

The Public Utility Commission of the State of Idaho intervened but presented no evidence. It filed a brief in which it took the position that the relief sought by the complainant should be denied, except that joint through competitive rates should be required to be established via Ogden and the Rio Grande on livestock and fruits and vegetables.

We granted a petition for leave to intervene filed by the American Short Line Railroad Association. That association appeared in support of the complaint and was represented at the hearing and the oral argument, but offered no evidence. The defendants filed a petition for reconsideration of the order permitting intervention. The request was denied at the hearing, but it is renewed on brief. It appears that 44 of the defendants named in the complaint are members of the association and that 8 defendant members are subsidiaries under common control and management with other defendants. Additional facts were developed at the hearing with respect to the relation of certain members of the association as defendants and indicating that they, as well as some others, opposed the complaint. The association filed a brief from which it appears that it has a current membership of 314 common carriers by railroad and that the association as such and many of its members are interested in the issues presented in the complaint. The intervention sought and granted was by the association as such, and not by or in behalf of the respective members thereof named herein as defendants. The petition of intervention was properly granted, and the petition for reconsideration is denied.

Immediately prior to the oral argument, counsel for the defendants submitted a memorandum of additional authorities and discussion

relating to certain exceptions filed by the Union Pacific to the proposed report of the examiner. The complainant and certain interveners objected to the receipt of the document. Our rules of practice do not permit the submission of such a document so late in the proceeding. Permission to file it was not requested in time to permit opposing parties to examine it and to make reply thereto prior to the oral argument when the proceeding was finally submitted. The objection to its receipt in the proceeding is sustained.

The complainant alleges that the defendant's failure and refusal to join with it in establishing joint rates to and from the territories described on transcontinental and other traffic through the gateways referred to result in violations of sections 1 (4) and 3 of the Interstate Commerce Act, and is contrary to the national transportation policy as declared by the Congress. We are asked to prescribe just and reasonable rates over the Rio Grande routes to remove the alleged unlawfulness.

Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, but there are many exceptions. The principal ones of importance in this proceeding are those under which the Union Pacific for the most part restricts routing on traffic to and from points in Utah north of Ogden and in Idaho, Montana, Oregon, and Washington over its lines so that it may obtain the long haul from and to the Missouri River. On transcontinental traffic that moves over its lines to and from California, Nevada, and portions of Utah, the Union Pacific participates in through routes and joint rates with other lines, including the Rio Grande. On that traffic interchange is made with the Rio Grande at Salt Lake City and Provo, Utah.

As hereinafter explained, the Rio Grande participates in joint rates on transcontinental traffic with all of its connections at its Utah junctions, except the Union Pacific, from and to the western portions of the northwest area. Routes are available to and from points in the northwest area over the Union Pacific from and to Ogden and the Rio Grande and its eastern connections beyond, but generally shippers must pay combination rates when using such routes. The maintenance of those rates produces higher charges than those resulting from the joint rates maintained by the defendants over other routes. The higher rates and charges act as deterrents to shippers and, in effect,

close the Ogden gateway in a commercial sense. We are asked to exercise our authority under section 15 (3) of the act by requiring the establishment of joint rates through that gateway upon findings that such rates are necessary or desirable in the public interest.

The power to establish through routes and joint rates is limited by the provisions of section 15 (4), which declares that, except as provided in section 3 of the act, and except where one of the carriers is a water line, we may not require a railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (*a*) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (*b*) unless we find that the through route proposed is needed in order to provide "adequate, and more efficient or more economic, transportation." The foregoing provisions are subject to the further proviso that in prescribing through routes, we shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (*a*) and (*b*), give reasonable preference to the carrier by railroad which originates the traffic. The section further provides that no through route and joint rates applicable thereto shall be established by us for the purpose of assisting any carrier that would participate therein to meet its financial needs.

The complainant contends that because the routes over which joint rates are sought are in existence and open to traffic at combination rates, we are not called upon to require the establishment of through routes and, therefore, the limitations on our power to do so in section 15 (4) are not applicable and need not be considered. It further contends that the principal task here is to determine whether the through rates resulting from the combination or aggregate of intermediate rates over such through routes are unjust, unreasonable, or discriminatory, in violation of sections 1 and 3 of the act, and contrary to the national transportation policy. The complainant argues that there is public need for joint rates via the Ogden gateway equal to the joint rates now maintained by the defendants over the competitive routes, and that the public interest as well as the national transporation policy will be served by the establishment of such rates.

THROUGH ROUTES

The first question for our determination, therefore, is whether or not the present routes by way of the Ogden gateway constitute "through routes" as that term is used in section 15 (3) and (4) of the

act. As above stated and as testified by numerous shippers in this proceeding, the Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be opened to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess.

In *Thompson* v. *United States*, 343 U. S. 549, decided June 2, 1952, the Supreme Court considered the question of the content of the term "through route" as used in the act, upon an appeal from a decision of a lower court sustaining our order in *Omaha Grain Exc. of Omaha, Nebr.* v. *Missouri Pac. R. Co.*, 278 I. C. C. 519. Therein, we had affirmed a prior finding of division 2 that a through route on grain from points on the Central branch of the Missouri Pacific Railroad Company in Kansas, Concordia and west thereof (Lenora, Kans., was used as a typical origin), to Omaha, Nebr., and Council Bluffs, Iowa, in connection with the line of the Chicago, Burlington & Quincy Railroad Company beyond Concordia, was already in existence and therefore did not have to be established preliminary to the exercise of our power to prescribe reasonable rates under sections 1 and 15 (1) of the act. The Court held:

> In short, the test of the existence of a "through route" is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.
>
> In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such through route. * * * Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha * * *. Since there is admittedly no evidence that the Missouri Pacific ever offered through transportation service over the route in question, the Commission's order is without evidentiary support under the accepted tests for determining the existence of a through route.

The Court cited with approval *Beaman Elevator Co.* v. *Chicago & N. W. Ry. Co.*, 155 I. C. C. 313, wherein the Commission held that proof of one shipment on a through bill of lading over a particular route was not sufficient to show the existence of a through route, because, as stated by the Court, "that one shipment was not representative of the carriers' course of business." It thus becomes necessary to determine whether the carriers in this proceeding "hold themselves out as offering through transportation service" from and to the points here concerned via the Ogden gateway as indicated by their "course of business" in respect of traffic over the routes in question.

The evidence shows that 37 carload shipments were made in 1948, which may be accepted as a representative year, on through bills of lading from origins in Utah, Idaho, Oregon, and Washington to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific, except three which originated on its connections in Oregon or Washington. Twenty-three moved to Salt Lake City (via Ogden), Provo, Midvale, Murray, and Springville, Utah, and 14 to Denver, Louviers, Pueblo, and Trinidad, Colo., on the complainant's line from Denver to Trinidad. The commodities shipped were canned goods, canned salmon, machinery, contractors' equipment, paper bags, lumber, wallboard, flour, roofing, acid, newsprint, and sheep. The shipments of canned goods and canned salmon, 10 in number, were stopped at intermediate points on the Rio Grande for partial unloading. The 37 shipments moved from or to separate points, except that 2 carloads of canned salmon moved from Seattle, Wash., to Provo, 2 carloads of acid from Dupont, Wash., to Louviers, 2 carloads of canned goods from Logan, Utah, to Denver, 2 carloads of sheep from Bellevue, Idaho, to Pueblo, 3 carloads of lumber from McCall, Idaho, to Salt Lake City, 3 carloads of canned goods from Logan to Pueblo, and 6 carloads of lumber from Emmett, Idaho, to Midvale. No through shipments are shown to have moved from the northwest area over the Union Pacific and the Rio Grande via Ogden or Salt Lake City to any destination east of Colorado common points.

West-bound, in the same year, 18 carload shipments were made on through bills of lading from points in Illinois, Indiana, Michigan, Ohio, Pennsylvania, New Jersey, Arkansas, and Texas over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond to destinations in Utah, Idaho, Montana, Oregon, and Washington. These shipments consisted of tractors, dessert preparations, furniture, canned goods, agricultural implements, soap, cattle, castings, feed, rubber, cottonseed hull bran, and tile. The shipments of tractors, dessert preparations, furniture, canned goods, agricultural implements, and feed were stopped at intermediate points on the Rio Grande or the Union Pacific, or both, for partial unloading. Two of the shipments destined to Idaho points were delivered at Salt Lake City and trucked to destination so as to avoid paying the applicable combination rates on Ogden.

In that same year, 21 carload shipments moving on through bills of lading from various origins east of the Rocky Mountains to destinations in Idaho, Oregon, and Washington, which were routed over the Rio Grande and the Union Pacific, were held by the Rio Grande at Denver or Pueblo for correction of the routing because the joint

through rates were not applicable over that road via the Ogden gateway. Under service orders issued by us during and subsequent to World War II, a substantial number of shipments were diverted from the regularly used routes to the routes here sought to be opened commercially. For example, in February 1949, when the main line of the Union Pacific in Wyoming was blocked by snowstorms, the traffic was diverted to the route of the Rio Grande between Denver and junctions with the Union Pacific in Utah. During World War II, special combination trains of troops in passenger cars and of military supplies in freight cars from eastern and southern origins to destinations in the northwest area were initially routed and moved over the Rio Grande via Ogden and the Union Pacific. The rates and charges for these freight movements were not filed with us and were adjusted, under the authority of section 22 of the act, on the basis of the joint rates applicable over the Union Pacific routes through Wyoming. These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable, and have no bearing upon the issue of whether or not those routes constitute "through routes" within the meaning of that term as used in the act.

So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so by routing specified by the shipper or by a prior connecting carrier. In other words, so far as this record shows, "the carriers' course of business" has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads east-bound, none to destinations east of Colorado common points, and 18 carloads west-bound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

Thus, all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the

same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co.* v. *Chicago & N. W. Ry. Co.*, *supra*, cited with approval by the Supreme Court in *Thompson* v. *United States*, *supra*. Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15 (3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15 (4) made in 1940 (see *D. A. Stickell & Sons, Inc.*, v. *Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson* v. *United States*, *supra*.

We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic[a] here concerned, and that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation.

The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15 (3) and (4). In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower than the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together.

Before proceeding to a discussion of the evidence relating to the foregoing issues, we shall give consideration to a procedural contention and a motion made by the defendants. The contention is that an allegation of undue prejudice and preference under section 3 (1) of the act is not properly before us. As stated, the complaint embodies an allegation, among other things, of violation of section 3, without specifying any particular paragraph or paragraphs of that section. We agree that complainant, a railroad, could not raise, in its own behalf, an issue under section 3 (1) against another railroad. Intervening shippers, however, have raised such an issue. Testimony, pro and con, was received on this issue and we think it has been fairly tendered here for decision.

[a] Except on east-bound shipments of sheep or goats, to which reference is made later in this report.

The motion is that the complaint be dismissed on the ground that the request of the complainant for joint rates over the Rio Grande via the Ogden gateway is for the purpose of assisting that carrier to meet its financial needs. As stated, section 15, (4) of the act forbids us to require the establishment of any through route and joint rate applicable thereto for the purpose of assisting any carrier that would participate therein to meet its financial needs. Consistently throughout the proceeding, the complainant disclaimed any intent to prosecute the complaint with the object of assisting it in meeting its financial needs. The prohibition referred to is directed to us; not to any complaining carrier. In reaching our conclusions herein, no consideration has been given to the financial needs of the complainant. The motion is overruled.

PROPONENTS' TESTIMONY

Joint rates now apply via the Ogden gateway over the Rio Grande on traffic from and to Colorado common points and points east thereof to and from California and certain Pacific coast points in connection with the Union Pacific, the Southern Pacific Company, The Western Pacific Railroad Company, and The Great Northern Railway Company, as more particularly described later.

The Union Pacific with its leased lines has operated since January 1936 as a single system. It consists of the Union Pacific Railroad Company operating from Omaha, Nebr., and Kansas City, Mo., to Ogden via Julesburg, Colo., Cheyenne and Granger, Wyo., and via Limon and Denver, Colo., and Cheyenne; the Oregon Short Line Railroad Company operating in Utah north of Ogden, and in Wyoming, Idaho, Oregon, Montana, and Nevada, extending from Salt Lake City to Butte, Mont., and Huntington, Oreg.; the Oregon-Washington Railroad and Navigation Company operating in Idaho, Oregon, and Washington north and west of Huntington to Spokane, Wash., Portland, Oreg., and Seattle, Wash.; the Los Angeles & Salt Lake Railroad Company from Salt Lake City to Los Angeles, Calif.; and the St. Joseph & Grand Island Railroad Company in Kansas, Nebraska, and Missouri from St. Joseph, Mo., and Grand Island, Nebr. Lease of the properties of the foregoing roads, which had been operated with the Union Pacific under common control and management, was considered and approved in *Union Pac. R. Co. Unification*, 189 I. C. C. 357 (1933) and 207 I. C. C. 543 (1935).

The railroad now operated by the complainant was originally the Denver, Rio Grande Railway organized in 1870 as a narrow-gage line. After passing through various hands and receiverships, the Denver and Rio Grande Railroad Company was organized in 1886 to operate the property. When the main line was converted to standard gage

in 1890, the railroad was opened for through traffic between Denver and Ogden by way of Pueblo, Rio Grande, and Tennessee Pass, Colo. Prior to that date, the Rio Grande could participate in transcontinental traffic only by transferring the lading to its narrow-gage cars. In 1901, it acquired the Rio Grande Western Railroad Company operating between Grand Junction, Colo., and Ogden via Provo and Salt Lake City.

Although opened for through business, the line was handicapped by the fact, among others, that traffic originated at or destined to its Colorado gateways or east thereof could not be interchanged at joint through rates at Ogden or Salt Lake City with its connections, the Oregon Short Line, to or from points on that line in Utah north of Ogden and through southern Idaho to Butte and Huntington. Also, traffic from and to Oregon over the Southern Pacific, to or from Colorado common points and east, could not be transported over the Rio Grande at joint rates equal to those over competitive routes. In 1897, however, the Union Pacific and its controlled lines, the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company operating north and west of Huntington, were in separate receiverships. In that year the two lines last named established joint through rates to and from points in the northwest area with the Rio Grande via Ogden and thus opened that gateway at rates equal to the rates then in effect over the Wyoming line of the Union Pacific through Cheyenne and Granger. Those rates applied on traffic between the Pacific coast terminals, including Portland, Tacoma, and Seattle, and Missouri and Mississippi River points and numerous points east thereof.

In the same year, the Oregon-Washington Railroad and Navigation Company established joint through rates between its Oregon and Washington stations and points on, or reached by, the lines of the Great Northern and Northern Pacific Railway Company through Spokane and Wallula, Wash. Joint rates through those junctions from and to Union Pacific stations have been continued in effect.

Ogden remained as an open gateway through which joint rates over the Rio Grande applied until 1906, when such rates were canceled by the Union Pacific from and to Colorado common points and east, to and from points in Montana, Idaho, and Oregon on the Oregon Short Line and its connections. In 1912, transcontinental freight rates to and from points on the Oregon-Washington Railroad and Navigation Company (resulting from reorganizations in the interval) over the Rio Grande and its Utah junctions were also canceled. During this period the Southern Pacific was controlled by the Union Pacific and that circumstance greatly influenced the routing of freight and passenger traffic over the Union Pacific to and from

Oregon and California. As a result of competitive stresses, as well as for other reasons, the Rio Grande financed the construction of a new railroad, the Western Pacific, to obtain an outlet to the Pacific coast. The Western Pacific was opened in July 1911 and participates in through routes and joint rates on transcontinental traffic via Salt Lake City with the Rio Grande and the Union Pacific, its two connections at that point. In 1912, the Union P cific was required to divest itself of control of the Southern Pacific. *United States* v. *Union Pac. R. Co.*, 226 U. S. 61.

Through passenger fares also were in effect over the lines of the Union Pacific and the Rio Grande via the latter's Colorado and Utah junctions from 1897 to 1915, when they were canceled by the Union Pacific. *Ogden Gateway Case*, 35 I. C. C. 131.

In 1915, the Western Pacific and, in 1918, the Rio Grande, went into receivership. After various changes, the latter was reorganized on April 11, 1947, as The Denver and Rio Grande Western Railroad Company. *Denver & R. G. W. R. Co. Reorganization*, 267 I. C. C. 862. As a part of its reorganization on that date, the Rio Grande merged with the Denver and Salt Lake Railway Company, and thereby acquired the Moffat tunnel line of that carrier. By that line and the Dotsero cut-off, completed in 1934, from Orestod, Colo., on the Denver & Salt Lake to Dotsero, Colo., on its own line, the Rio Grande obtained a route from Denver to Ogden 175 miles shorter than its route through Pueblo.

The Rio Grande now operates between Denver and Ogden over the two routes. By way of the Moffat tunnel the distance is 607 miles, and the other route through Pueblo is 782 miles. These two are the main lines and constitute 951 miles, or 51 percent, of the Rio Grande standard-gage tracks. In addition, there are 1,452 miles of branch lines, of which 527 miles are narrow gage serving western Colorado and northwestern New Mexico in areas of small population and light traffic. In all, it operates about 2,400 miles of road.

Eastern connections of the Rio Grande are in Colorado at Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad. At Denver, it connects and interchanges traffic with the Union Pacific, the Chicago, Burlington & Quincy Railroad Company, called the Burlington, the Chicago, Rock Island and Pacific Railroad Company, called the Rock Island, The Atchison, Topeka and Santa Fe Railway Company, called the Santa Fe, and The Colorado and Southern Railway Company, of the Burlington system. At Colorado Springs, 75 miles south of Denver, it interchanges with the Rock Island and the Santa Fe. At Pueblo, 119 miles south of Denver, it interchanges with the Missouri Pacific Railroad Company (Guy A. Thompson, trustee), the Santa Fe, and the Colorado & Southern. At Walsenburg, 51

miles farther south, it interchanges with the Colorado & Southern. At Trinidad, a short distance from the Colorado-New Mexico State line and 92 miles south of Pueblo, it interchanges with the Colorado & Southern and the Santa Fe.

Western connections of the Rio Grande are in Utah at Ogden, Salt Lake City, and Provo. At Ogden, the connecting lines are the Union Pacific and the Southern Pacific. At Salt Lake City, 37 miles south of Ogden, the connections are the Western Pacific and the Los Angeles line of the Union Pacific. At Provo, 44 miles south of Salt Lake City, it again connects with the Union Pacific's Los Angeles line.

Since 1890, when its standard-gage line was completed between Denver and Ogden via Pueblo, the Rio Grande, through its eastern and western connections, has been a part of several transcontinental routes. It now participates in through routes and joint rates on equal terms with other carriers on transcontinental traffic between (1) points in an area generally described as west of a line beginning at Vancouver, British Columbia, thence south, just east of Seattle and Portland, and southeasterly to a point west of Ogden and Salt Lake City, crossing the line of the Union Pacific at Lynndyl, Utah, 118 miles west of Salt Lake City, and thence southwesterly, east of the Union Pacific's Los Angeles line, to a point south of San Diego, Calif., and (2) all points in the United States east of a line beginning at the Canadian border and extending southward along the Montana-North Dakota State line and the western border of South Dakota, thence southwesterly through the extreme southeastern portion of Wyoming, west of Cheyenne, and the eastern part of Colorado just west of Denver, Pueblo, and Trinidad, thence southwest and south through the central or western part of New Mexico to a point just west of El Paso. However, joint rates generally do not apply in connection with the Rio Grande on transcontinental traffic originating at or destined to points in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington east of the line first described. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande such traffic would move at higher combinations of rates to and from Ogden or Salt Lake City.

The area in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington, to and from which joint rates generally do not apply in connection with the Union Pacific and the Rio Grande, will be referred to as the excluded territory. Transcontinental traffic to or from such territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather than over the Rio Grande route, because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio Grande route. The Rio Grande desires to participate as a bridge line on such traffic via

its Colorado gateways and Ogden at the joint through rates. This also would include traffic to or from points in the excluded territory on lines which join with the Union Pacific in joint rates.

Representative origins, destinations, commodities, rates, distances, average loadings per car, and revenues per car-mile are shown in an appendix to this report, for east-bound and west-bound movements, compiled from exhibits of record. The distances shown are those over existing routes over the Union Pacific and its connections by which joint through rates apply, and over the Rio Grande and its connections over which combination rates apply. Revenues per car-mile are computed for such rates and distances and, in addition, for the distances over the Rio Grande at joint rates on the same basis as those over the Union Pacific routes, as sought herein.

Traffic between the excluded territory and Colorado common-point territory (points in eastern Colorado from Denver south to Trinidad and west to Canon City) generally must move over the Union Pacific through Denver to get the lowest rate. Similarly, traffic between the excluded territory and Utah common-point territory (points in Utah from Ogden south to Provo and Payson) generally must move over the Union Pacific to get the lowest rate. There are some exceptions, however, with respect to rates between Utah common points on the Rio Grande and the northwest area on livestock, lumber, grain, and other commodities.

An analysis of distances from and to 5 representative points[4] on the Union Pacific in Utah north of Ogden, and in Idaho and Washington, to 14 destinations, Denver and east, over restricted routes of the Union Pacific for distances, computed over the short routes, ranging from 649 miles to Denver to 3,279 to Boston, Mass., shows that routes via Ogden and the Rio Grande to the same points are longer by from 1 percent (from Spokane to New Orleans, La.) to 16 percent (from Idaho Falls to Kansas City). To the same destinations from nine other representative points[5] on the Union Pacific, from which through routes and joint rates are available in connection with the Chicago, Milwaukee, St. Paul, and Pacific Railroad Company, referred to as the Milwaukee, the Great Northern, the Northern Pacific, or the Southern Pacific, the routes via Ogden and the Rio Grande would be longer than the short workable and service routes by from 1 percent (from Seattle to Fort Worth, Tex., and Oklahoma City, Okla.) to 37.5 percent (from Yakima to Minneapolis, Minn.). To Minneapolis from seven of the nine origin points, the routes via the Great Northern form the short workable and service routes.

[4] Logan, Utah; Boise, Idaho Falls, and Twin Falls, Idaho; and Spokane, Wash.

[5] Hood River, Milton, Pendleton, Portland, Elgin, and Redmond, Oreg., and Yakima, Kent, and Seattle, Wash.

The Ogden-gateway routes of the Union Pacific consist of two lines. The Los Angeles line runs southwesterly through Salt Lake City, Provo, and Delta, Utah, Caliente and Las Vegas, Nev., and Barstow, Calif., to Los Angeles. Through routes with joint rates are maintained over that route in connection with the Rio Grande, as hereinbefore described. The other line of the Union Pacific runs north from Ogden, 111 miles to McCammon in southeastern Idaho. At that point it meets the Wyoming line of the Union Pacific leading west 486 miles from Granger, the junction point with the main line through Cheyenne to Ogden from the east. From McCammon the line extends north to Pocatello, Idaho, 22 miles, and from that point the main line runs in a northwesterly direction across Idaho into Oregon and Washington. From Pocatello another line extends northerly to Butte. From Cheyenne, the main line extends east across Nebraska to Omaha, 507 miles, and south to Denver, 109 miles. From Ogden through Granger to Cheyenne the distance is 488 miles.

All shipments to or from points in Idaho, Montana, Oregon, and Washington north or west of McCammon over present Union Pacific routes, or over routes through Ogden and the Rio Grande, must pass through McCammon. That point therefore, is used as the point of divergence in computing distances over the Union Pacific routes and the routes over the Rio Grande by way of Ogden. A shipment from McCammon over the Union Pacific to Cheyenne would move 529 miles; and to the Denver gateway, also over the Union Pacific, 623 miles. But over the Union Pacific to Ogden, thence the Rio Grande to the Denver gateway, the shipment would move 718 miles, or 198 miles farther than over the Union Pacific route to Cheyenne and 95 miles farther than over its route to Denver. On shipments carried through to the Missouri River and points east, the Union Pacific route through Cheyenne also has the advantage in distance.

From Cheyenne to Kansas City a shipment would move 624 miles, as compared with 636 miles for a movement off the Rio Grande from Denver to Kansas City over the Rock Island, its short-line connection. A through shipment, therefore, from McCammon to Kansas City over the direct line of the Union Pacific through Granger and Cheyenne would move 1,153 miles, as compared with 1,352 miles, 199 miles longer, via Ogden and the Rio Grande to Denver, thence the Rock Island. The latter route on such a shipment would be 17.2 percent circuitous. To points east of Kansas City the maximum excess mileage from McCammon over the Rio Grande route is on a haul to Pittsburgh, Pa. Over the Union Pacific to Omaha, thence the Chicago & North Western to Chicago, Ill., and The Pennsylvania Railroad Company beyond, the haul would be 1,991 miles, and over the Union Pacific to Ogden, the Rio Grande to Denver, the Burlington to Chi-

cago, thence the Pennsylvania, the haul would be 2,203 miles, 212 miles longer, or a circuity of 10.7 percent.

In the following table are shown representative destinations and the distances from McCammon over routes using the Rio Grande from Ogden to Denver, as compared with distances over routes using the Union Pacific through Wyoming. Joint through rates apply over the latter routes. Over routes that include the Rio Grande higher combination rates apply. The table does not contain complete routing, except over the Union Pacific direct to Omaha and Kansas City. The last column of the table shows the percentages by which the Rio Grande routes are longer, or the circuity, from the point of divergence, McCammon, to the points shown.

From McCammon, Idaho to—	Via Union Pacific	Distance	Via Rio Grande	Distance	Difference	Circuity via Rio Grande
		Miles		*Miles*	*Miles*	*Percent*
Omaha, Nebr	(1)	1,036	(2)	1,255	219	21.1
Kansas City, Mo	(3)	1,153	(2)	1,352	199	17.2
Minneapolis, Minn	(3)	1,396	(2)	1,593	197	14.1
St. Louis, Mo	(3)	1,428	(2)	1,627	199	13.9
Chicago, Ill	(1)	1,524	(2)	1,735	211	13.8
Pittsburgh, Pa	(1)	1,991	(2)	2,203	212	10.7
Charleston, W. Va	(3)	2,018	(2)	2,218	200	10.0
Columbia, S. C	(3)	2,274	(2)	2,473	199	8.8
Baltimore, Md	(1)	2,319	(2)	2,521	202	8.7
Norfolk, Va	(3)	2,438	(2)	2,637	199	8.2
New York, N. Y	(1)	2,477	(2)	2,674	197	8.0
Tulsa, Okla	(4)	1,377	(5)	1,427	50	3.6

Atlanta, Ga	(3)	2,044	(5)	2,204	160	7.8
Savannah, Ga	(3)	2,327	(5)	2,486	159	6.8

[1] Union Pacific through Wyoming to Omaha.
[2] Union Pacific to Ogden, Rio Grande to Denver.
[3] Union Pacific through Wyoming to Kansas City.
[4] Union Pacific to Pacific Junction, Kans.
[5] Union Pacific to Ogden, Rio Grande to Pueblo.
[6] Union Pacific to Denver, Colorado & Southern to Sixala, N. Mex.

The differences in the distances to destinations in the Southwest over routes including the Rio Grande from points in the excluded territory, as compared with the Union Pacific routes through Wyoming, are much less than they are to Missouri River crossings and points east and southeast. About 90 percent of the traffic upon which joint through rates are sought via Ogden and the Rio Grande moves to the latter areas, and about 10 percent to the Southwest.

Over its routes through Wyoming, the Union Pacific gets its long haul from McCammon to Omaha, 1,036 miles, and to Kansas City, 1,153 miles. If joint rates were prescribed over the Union Pacific to Ogden and the Rio Grande to Denver, the Union Pacific's haul from McCammon to Ogden on traffic to Omaha or Kansas City and beyond would be 111 miles. However, if such traffic were routed beyond Denver over the Union Pacific, the latter would get a further

haul of 560 miles to Omaha via Julesburg, or 640 miles to Kansas City via Salina, Kans., a total haul from McCammon of 671 miles to Omaha or 751 miles to Kansas City. Joint through rates are in effect over that route on sheep from Union Pacific origins in southern Idaho and eastern Oregon, but are 19 cents higher to the Missouri River and east (20 cents to Chicago) than rates over more direct routes of the Union Pacific. That railroad would establish a similar basis on cattle if requested. Over the route in connection with the Rio Grande, it would lose its haul of 529 miles from McCammon to Cheyenne, or 623 miles to Denver. On traffic routed via Ogden, the Rio Grande, and Pueblo to destinations east thereof, the Union Pacific would not be in a position to get any additional haul.

All of the foregoing distances, as stated, are computed from McCammon as the point of divergence. The great bulk of the traffic, however, from the excluded territory in Idaho, Montana, Oregon, and Washington originates or terminates on the Union Pacific or its connections west and north of that junction. On such traffic the Union Pacific would have a substantial haul in addition to that of 111 miles from McCammon to Ogden.

The hauls to Ogden would be, for example, from Lewiston, Idaho, 847 miles; from Centralia, Wash., 937 miles; and from Seattle, 1,029 miles. Over the Union Pacific direct from those respective origins to Omaha, the hauls would be 1,772, 1,862, and 1,954 miles. Those figures show the extent to which the Union Pacific would lose its long haul, the loss in mileage being 925 miles in each instance.

From and to points in the excluded territory in Oregon and Washington, and on the Burke and Headquarters branches of the Union Pacific in northern Idaho, the Union Pacific and certain other defendants have arrangements for the interchange of traffic in various commodities at junctions or gateways in Oregon, Washington, and Idaho, under joint rates. On traffic through such gateways moving under the joint rates, the Union Pacific in many instances foregoes its long haul. The gateways through which the rates are in effect, with certain limitations upon their application specified in the tariffs, are: Portland, in connection with the Southern Pacific; Marengo, Wash., and Plummer, Idaho, in connection with the Milwaukee; Spokane, in connection with the Great Northern; Wallula, Wash., and Spokane, in connection with the Northern Pacific; and Spokane, in connection with the Spokane International Railroad Company connecting with the Canadian Pacific Railway Company at Eastport, Idaho, at the Canadian border.

Illustrative of the hauls over the Union Pacific on traffic routed through these gateways are the following: From Lewiston, 132 miles via Marengo or 193 miles via Spokane; from Centralia, 393 miles

200071—53—No. 155——3

on a route through Marengo; from Seattle, 184 miles through Portland; and from Pendleton, Oreg., 165 miles via Marengo, 227 miles via Spokane, or 70 miles via Wallula, Wash., on traffic routed over its connections at such points. If joint rates were established from the same origin points to Omaha and beyond via Ogden and the Rio Grande, the hauls of the Union Pacific to Ogden would be substantially greater than many of its hauls via other junctions with its connections, as illustrated.

For example, from Pendleton, a representative point, on traffic to Chicago the Union Pacific has a haul of 1,560 miles on its route through Omaha, but only 70 miles over an established through route via Wallula and the Northern Pacific and connections. The rates are the same over both routes. Over a route via Ogden and the Rio Grande to Denver, thence the Burlington, the distance is 2,257 miles, or 6.4 percent longer than the route via Wallula and 10.4 percent longer than the Union Pacific route through Omaha. The Union Pacific's haul over the Rio Grande route would be 633 miles. From Pendleton to St. Louis, the Rio Grande route sought would be shorter by 168 miles than a through route now available via Spokane and the Spokane International and its connections, and would be 201 miles, or 10.3 percent, longer than the Union Pacific route through Kansas City. To Oklahoma City, Okla., the haul of the Union Pacific would be increased from 227 miles, over the present route via Wallula and the Northern Pacific and connections, to 633 miles via Ogden and the Rio Grande to Pueblo and the Santa Fe beyond. The distance over the latter route is 1,910 miles, or only 34 miles, 1.3 percent, longer than the route which gives the Union Pacific its long haul, and 692 miles, or 36.2 percent, shorter than the foregoing route through Wallula.

The foregoing are illustrative of numerous established through routes in which the Union Pacific participates from points in the excluded territory which short haul that carrier. Many of such routes are longer than those here sought via Ogden and the Rio Grande, and this is true to all sections of the country east of the Rocky Mountains, except western trunk-line territory. To the latter territory the short-hauling routes are generally shorter than the routes by which the Union Pacific retains its long haul, and considerably shorter, for example, by 37.5 percent from Yakima to Minneapolis, than the routes sought via Ogden and the Rio Grande. As indicated, the portion of the excluded territory from and to which this short hauling of the Union Pacific occurs does not include points in Utah nor points in Idaho, except on the Burke and Headquarters branches of the Union Pacific in the northern portion of that State.

These short-hauling routes have been in effect for many years. Most of them were established prior to the dates when the Union

Pacific assumed control of the portions of its line west of Huntington and south of Salt Lake City. Joint rates with the Southern Pacific through Portland have been in effect since about 1910, with the Milwaukee through Marengo and Plummer since about 1902, with the Great Northern through Spokane since about 1894, with the Northern Pacific through Wallula since about 1883, and with the Spokane International through Spokane since about 1907.

On some of the traffic interchanged at these gateways the Union Pacific obtains a short haul, as compared with its connections, and on other traffic a long haul. East-bound traffic through the specified Washington and Idaho gateways consists of apples, pears, lumber and other forest products, some steel products, and miscellaneous commodities. A large portion of the traffic, particularly lumber, moves to North and South Dakota, Minnesota, and Wisconsin over the northern routes. Traffic over such routes moves also to Midwestern States and to States east of the Mississippi River. West-bound traffic through the same gateways consists of manufactured products and miscellaneous commodities from the Middle West and from eastern and southern territories.

These interchange arrangements are warranted and in the public interest, according to the defendants, because each carrier shares in long hauls on some traffic as well as short hauls on other traffic, and because the arrangements make it possible for the carriers to handle traffic over shorter routes in many instances. This latter statement, however, applies only, except to an insignificant extent, to such routes to and from points in western trunk-line territory.

As indicated, through routes and joint rates apply in connection with the Rio Grande through Provo on traffic to or from points on the Los Angeles line of the Union Pacific. Such routes generally are shorter than routes over the Union Pacific direct to or from Omaha, Kansas City, or Denver. The following is illustrative:

From Los Angeles, Calif., to—	Via Union Pacific	Distance	Via Rio Grande	Distance
		Miles		*Miles*
Omaha, Nebr.	(1)	1,808	(2)	1,813
Minneapolis, Minn.	(1)	2,168	(2)	2,152
Kansas City, Mo.	(3)	1,925	(3)	1,911
St. Louis, Mo.	(3)	2,200	(3)	2,185
Denver, Colo.	(4)	1,395	(2)	1,276
Chicago, Ill.	(1)	2,296	(2)	2,293
Atlanta, Ga.	(3)	2,816	(5)	2,762
Little Rock, Ark.	(3)	2,430	(3)	2,272
Dallas, Tex.	(5)	2,226	(5)	2,045

[1] Union Pacific to Omaha.
[2] Union Pacific to Provo and Rio Grande to Denver.
[3] Union Pacific to Kansas City.
[4] Union Pacific to Denver.
[5] Union Pacific to Provo and Rio Grande to Pueblo.

Other defendants also participate in through routes with joint rates on traffic moving to or from points on the Union Pacific in the excluded territory from and to eastern points and voluntarily forego their long hauls. For example, the Burlington, the Rock Island, the Santa Fe, and the Missouri Pacific participate in joint rates with the Union Pacific through Kansas City and Omaha. The railroads named could haul the traffic for longer distances over their own rails to Pueblo, Denver, or Cheyenne, instead of permitting shippers to route through Kansas City and Omaha in connection with the Union Pacific.

The total amount of traffic moving between the four Northwestern States and points east of the Colorado common points is substantial. According to figures computed by the Union Pacific, transcontinental carload traffic from the East in the year 1948 over the Union Pacific through Wyoming to those Northwestern States totaled 55,631 cars. of these, (1) 81.7 percent originated in eastern Colorado, Kansas, Missouri, Kentucky, Virginia and all States north thereof, (2) 10.8 percent in Texas, Oklahoma, Arkansas, and Louisiana, and (3) 7.5 percent in Tennessee, Mississippi, Alabama, Georgia, Florida, North Carolina, and South Carolina. About 62 percent of the total consisted of manufactures and miscellaneous traffic, most of which originated in group (1). East-bound traffic from the four States to the same three groups in the same year totaled 116,278 carloads, of which 84.1 percent went to group (1), 10.5 percent to group (2), and 5.4 percent to group (3). About 75 percent of that total consisted of agricultural and forest products.

Of the total carloads, 171,909 in both directions, 121,909 originated or terminated in the excluded territory and the remainder, 50,000, originated or terminated at points in Oregon and Washington west of that territory. The Rio Grande is in a position to solicit movements of the latter traffic over its line at competitive joint through rates in connection with longer routes over the Southern Pacific from Portland to Odgen or over the Great Northern to Bieber, Calif., and the Western Pacific to Salt Lake City. These joint rates are the same as the rates which apply over the direct routes of the Union Pacific from origins on that road in the same area west of the excluded territory. For example, from Seattle to Denver the distance is 1,538 miles over the Union Pacific direct and 1,894 miles over the Union Pacific to Portland, the Southern Pacific to Odgen, and the Rio Grande beyond. In addition to the joint rates sought via the Ogden gateway from the excluded territory, the complainant is also seeking joint rates from the northwest area west of the excluded territory, the same as those in effect over the Union Pacific, Southern Pacific, and Great Northern-Western Pacific routes, for application in connection with the Union Pacific via the Ogden gateway.

A substantial volume of traffic is handled by the Rio Grande in connection with the described routes over which it participates in competitive joint through rates to and from Oregon, Washington, and British Columbia. For example, in 1948 the Rio Grande handled 30,486 carloads in connection with the Southern Pacific and 7,152 carloads in connection with the Western Pacific-Great Northern. In 1947, the volume was 22,722 and 8,909 carloads over the respective routes. Most of this consisted of lumber from Southern Pacific origins south of Portland.[6]

The complainant's estimate of the traffic in carloads that would be potentially available to and from the excluded territory for solicitation by the Rio Grande, in the event competitive joint rates were established over its line via Ogden, from Idaho, Montana, Oregon, and Washington is about 29 percent greater than the volume of traffic, according to the Union Pacific, that moved in 1948 over its Wyoming lines. The estimate was based upon the total carload traffic originated and terminated by the Union Pacific in the years 1944 to 1948, inclusive. It included commodities within the description of products of agriculture, animals and animal products, products of mines, products of forests, and manufactures and miscellaneous commodities. The total carloads estimated as originated by the Union Pacific annually in the area specified was 101,476 and the number terminated 56,286, a total "potential" of 157,762 carloads.

This estimate did not include any shipments that might originate or terminate off the line of the Union Pacific and mover over that carrier as part of a longer haul. Although stated to be a conservative estimate of potential traffic, it was computed from a substantial number of reliable sources, and represents the complainant's best analysis of the traffic considered available for solicitation. No attempt was made to estimate the amount of traffic that the Rio Grande might actually obtain from these potential sources other than a statement that there was no probability that it would get more than 10 percent and that the amount probably would be less than 10 percent because of the vigorous competition of the Union Pacific. This figure of 10 percent as a maximum was derived from the experience of the Rio Grande in obtaining other transcontinental traffic now moving at joint rates in competition with the Santa Fe, Southern Pacific, Union Pacific, Great Northern, Northern Pacific, and Milwaukee. If the Ogden gateway were opened to traffic to and from the four States named, there would be active

[6] Prior to February 1, 1949, joint rates applied over the Bieber route in connection with the Rio Grande to competitive territory in Colorado and east thereof on lumber from certain origins in Oregon and Washington on the Oregon Trunk Railway and the Spokane, Portland and Seattle Railway Company (subsidiaries of the Great Northern and Northern Pacific). Those rates were canceled on February 1, 1949, in connection with the Rio Grande; there is no indication that the cancellation was protested.

competition with the Union Pacific, the Wabash, the Chicago & North Western, and the Missouri River connections that favor Union Pacific routing. At the present time the Rio Grande gets less than 5 percent of the traffic to and from California over the available through routes, with joint rates in connection with its line, because of competition with other routes.

A transportation specialist of the United States Department of Agriulture testified that the Rio Grande would be doing well if it obtained 1,000 cars additional annually from this traffic, an amount that is less than 1 percent of the estimated potential total traffic.

Whatever the amount, it would be the result mainly of (*a*) active solicitation by the Rio Grande to persuade shippers and receivers of freight to use its line as an overhead or bridge route, and (*b*) the value of its service to shippers. It would also depend upon the extent to which the Rio Grande and receivers of freight on its line use, and can induce shippers to use, transit facilities available on that line so as to attract the movement of commodities thereto for various purposes for subsequent reshipment beyond at the balance of the joint through rates from the point of origin. The development of such activities is of particular interest to shippers and receivers of freight on the Rio Grande. This is indicated by the growth of traffic over that railroad in the 15-year period, 1934 to 1948, inclusive, and by the testimony of shippers and receivers served by it.

Since 1934, when the Dotsero cut-off was constructed, affording a shorter route by the Rio Grande between Denver and the Utah gateways, there has been a marked increase in the traffic carried over that railroad. For the 2 years prior thereto, the total tons carried were less than 6,000,000 although the tons carried exceeded that figure in each year before that, back to 1924. Beginning in 1934, the traffic gradually increased and reached a maximum of 18,517,000 tons in the war year of 1944. In 1945 it dropped to 14,213,000 tons, but increased in 1947 to 18,331,000 tons and in 1948 to 18,473,000 tons. This tonnage has shown a considerable increase percentagewise in traffic received from connecting lines and a decrease in traffic originated. In 1924, 23.2 percent was received from connections and 76.8 percent originated. In 1934, the respective percentages were 39.3 and 60.7. In 1947, they were 49.8 and 50.2, and in 1948 they were 52.3 and 47.7 percent. This traffic in 1948 did not differ markedly from the traffic handled in the four war years 1942–45, when the percentages of traffic received from connections ranged from 52.6 percent in 1942 to 58.2 percent in 1945.

Of the traffic received from connections in the 15-year period 1934 to 1948, inclusive, the percentage terminated on the line of the Rio Grande has ranged from 16.4 percent in 1941 to 20.7 percent in

1948. In the war years the percentages were 16.7 to 19.9 percent. In the same 15-year period, of the traffic received from connections, the amount delivered to connections, that is, bridge traffic, ranged from 20.7 percent in 1935 to 39.6 percent in the war year of 1945. Excluding the war years, the percentage of traffic received from connections that was delivered to connections was 30.1 percent in 1947 and 31.6 percent in 1948. In 1934, the corresponding percentage was 21.7 percent and in 1924 it was 9 percent. These percentages show the increasing importance of the Rio Grande as a bridge line. In tons of freight carried in 1947, such traffic accounted for 5,519,239 tons out of a total of 18,331,176 tons, and in 1948 accounted for 5,846,793 tons of a total of 18,473,356 tons carried. In revenue, the Rio Grande received in 1947 from its bridge traffic $22,894,412, which was 43.3 percent of its total revenue of $52,883,339; and in 1948, $27,654,086 or 44.2 percent of its total revenue of $62,505,951.

Although the percentage relation of the traffic originated on the Rio Grande to the total traffic of that carrier has decreased, such traffic both in tonnage and revenue has increased in the same 15-year period. In 1934, the tons originated were 3,826,049 and the revenue received therefrom was $8,311,254; in 1947, the tons originated were 9,202,867 and the revenue therefrom $20,190,318; and in 1948, the corresponding figures were 8,804,334 tons and $22,018,519. The 1947 and 1948 figures exceeded those of the war years. The volume of strictly local traffic; that is, traffic both originated and terminated on the line, also increased; this traffic in 1934, for example, accounted for 2,048,544 tons and $4,351,807 in revenue, and in 1948, for 3,307,374 tons and $7,630,587. Strictly local traffic was less annually throughout the 15-year period, including the war years, than during the 6-year period 1924 to 1929, inclusive.

The reasons given for the decline or lack of proportionate growth in traffic originated are (1) depletion of nonferrous ores in Colorado and the closing of smelters, except one now operating at Leadville, Colo.; (2) decline in the amount of coal originating on the road; (3) decline in production of lumber and its products in the area served, and the discontinuance of operation by many sawmills; and (4) loss of local traffic to other forms of transportation.

The relative decline in strictly local traffic has been offset by increases in traffic originated and shipped out over connecting lines, and traffic received from connecting lines and terminated. Such traffic affords a measure of the increasing importance of the Rio Grande to the shippers and receivers of freight in the localities and areas in the States of Colorado and Utah served by it. Although percentagewise, bridge traffic in relation to the total was greater in 1948 than in 1934,

and increased by over 326 percent in the 15-year period, traffic originated or terminated also increased by substantial amounts, or over 155 percent. In terms of revenue, however, less was received from bridge traffic than from the other traffic. In 1934, for example, the Rio Grande received from bridge traffic $5,648,891, and in 1948 it received $27,654,086; from the other traffic, it received $11,519,335 in 1934 and $34,851,865 in 1948.

The record shows that both the Rio Grande and the Union Pacific sought to interest the public in the controversy and to inform other persons, especially shippers, as to the merits of their respective views. For example, the Rio Grande issued a pamphlet entitled "20 Questions" as a means of informing the public of the Rio Grande's side of the case and its reasons for seeking opening of the gateway. In its brief, the Railroad Commission of the State of Montana states that it had informal conferences with official representatives of both the complainant and the defendants before it intervened in the proceeding. A number of witnesses related that they had listened to representatives of both sides before appearing to give testimony. All witnesses were men of responsibility in their communities and were successfully engaged in their respective occupations. Many appeared and testified as representatives of large groups of producers, shippers, and receivers of freight in their areas. There is no indication that these witnesses, whether for or against the complaint, were improperly influenced, or that their respective interests in the subject matter of the controversy had been stimulated in any questionable manner.

Transit.—In transportation by rail, arrangements offered by railroads to shippers under which shipments may be stopped in transit for various commercial operations and reshipped at the balance of the joint rate from the point of origin are of great value to shippers, receivers, and distributors of freight. They are of substantial value in many marketing operations and permit a freer flow of traffic through the transit points.

The Rio Grande, like other railroads, offers a large number of such transit arrangements, including stops for partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling, fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding. Such arrangements are of importance to shippers and receivers in the territory served by the Rio Grande. Traffic from the excluded territory consists of perishable commodities, other agricultural products, milled products, livestock, and lumber and its products. West-bound traffic to that territory is made up for the most part of manufactures and partially manufactured articles, some of

which are stopped for storage, partial unloading at a number of points, and fabrication in transit.

On traffic from Colorado common points and points east thereof through Pueblo, Colorado Springs, or Grand Junction, and Price, Utah, to final destinations north or west of Ogden on the Union Pacific or points on its connecting lines, failure to have joint through rates in connection with the Rio Grande hinders the use of the stoppage-in-transit arrangements offered by that railroad at such Rio Grande points. Pueblo has a population of about 75,000; Colorado Springs, 50,000; Grand Junction, 17,500; and Price, 5,000. All of these are distributing points for surrounding areas. A shipper at Chicago, for example, may have a carload containing shipments for consignees at Pueblo and Boise, Idaho. If the car is partially unloaded at Pueblo, it cannot be reshipped over the Rio Grande to Boise at a joint through rate; but the car can be moved to Boise via Pueblo and Denver, thence the Union Pacific, at a joint through rate. If stops are desired on the Rio Grande at Grand Junction, Price, or Provo, for example, joint through rates would not be available.

A discussion of the evidence offered by shippers and receivers of particular commodities who testified in support of the complainant follows.

Building materials.—A dealer in and distributor of general building materials in Salt Lake City, who handles from 400 to 500 carloads annually, obtains from 150 to 200 cars from points east of Colorado common points, including cellotex from Marrero, La., roofing from Cincinnati, Ohio, doors from Louisville, Ky., hardwoods and plywoods from Algoma, Wis., and Orangeburg, N. C., asbestos products from St. Louis, and asphalt siding from Minneapolis. Distribution is made in carloads, from pool cars, and from warehouses to customers located on the Rio Grande on the western slope of Colorado, such as Glenwood Springs and Grand Junction, Colo., and in Utah, such as Price, Helper, Ephraim, and Manti; and also on the Union Pacific in northern Utah; in Wyoming, Rock Springs and west; and in southern Idaho northward to and including Ashton on the West Yellowstone branch and westward to and including Magic, Shoshone, and Buhl. This dealer cannot now serve these customers from shipments made in through cars at joint rates over the Rio Grande when such cars also carry shipments for points on the Union Pacific beyond Ogden. Ephraim and Manti are on a branch line about 52 and 59 miles, respectively, south of Thistle, Utah.

In some instances this shipper has had to forego business east of Salt Lake City at points as far as Glenwood Springs because of the rate situation. If joint through rates were established, this distribu-

tor could give customers at a number of intermediate points on the Rio Grande, who generally are small dealers and can take only less-than-carload quantities, better service through partial unloading in transit and more efficient service by frequent deliveries under more flexible schedules, instead of being limited, as at present, to furnishing service in connection with pool cars consigned to Salt Lake City as the ultimate destination. Pool cars with partial loads for that point or Ogden and points on the Union Pacific beyond do not now move over the Rio Grande, but are routed over the Union Pacific to get the benefit of joint rates.

Of the 150 or more cars annually from the east, this distributor estimated that he would have stopped for partial unloading about 25 percent. Witness made no mention of commercial competition, but indicated that his chief concern was better service to his customers and a saving in cost to his company if such carloads could be stopped for partial unloading at intermediate points on the Rio Grande while moving at the through rates to Union Pacific destinations in the area served by him.

Farm machinery.—A distributor of farm machinery and equipment at Salt Lake City receives carloads of these commodities from eastern origins, including farm tractors from Detroit, Mich., and distributes them by his own motor vehicles to points in Utah and Idaho. This business was established in 1947, at which time the production of these commodities was insufficient to meet all demands, and a system of allocations based on prior needs was introduced. While the system of allocations was in effect, it was found to be more convenient and efficient to bring all shipments to Salt Lake City and distribute them by truck. This distributor is located on the Rio Grande at Salt Lake City and all shipments move over that line. He expressed a desire for joint through rates from eastern origins to points in Utah and Idaho in connection with the Rio Grande, but admitted that no attempt was being made to partially unload shipments at points on the Rio Grande south of Salt Lake City when carloads are consigned to the latter point, or to ship over the Union Pacific to Salt Lake City where carloads could be partially unloaded or stored and later shipped to Union Pacific destinations in Utah and Idaho at joint through rates. The witness for this distributor stated that he preferred to ship in-bound over the Rio Grande and forego the stopping-in-transit provisions that are now in effect at Salt Lake City and other points on the Union Pacific when traffic is routed over that line.

A factory branch of a large manufacturer of farm machinery and equipment which distributes in the intermountain area is located on the Rio Grande at Salt Lake City. In 1949 it received 369 carloads

from its eastern manufacturing points. Of these, 70 percent were sold at points north of Salt Lake City, mostly at points served by the Union Pacific as far as Ontario, Oreg., and the remainder in Utah and western Colorado. About one-half of the shipments to Salt Lake City moved over the Rio Grande route and one-half over the Union Pacific. Shipments which move in over the Union Pacific may be stopped at Salt Lake City for partial unloading or storage in transit at the joint through rates when the ultimate destinations are on the lines of that carrier, but combinations of rates to and from Salt Lake City apply when such shipments move into that point over the Rio Grande. The manager of this branch testified that it would be desirable to establish joint through rates over the Rio Grande so that shipments moving over that line could be stored in transit at Salt Lake City and later reshipped, or partially unloaded thereat and the remainder forwarded, to points on the Union Pacific at charges no greater than apply on similar shipments moving over the Union Pacific. However, he did not know what effect this would have on the parent company, as some shipments have been routed over the Rio Grande when Union Pacific routing was requested. To indicate a need for joint through rates, reference was made to a shipment of tractors which were routed over the Rio Grande to Salt Lake City. At that time a customer at Ontario needed two tractors, and it cost about $50 each to ship them from Salt Lake City by motor carrier. If joint through rates had been in effect, the car could have been partially unloaded at Salt Lake City and the two tractors could have been forwarded to Ontario at the joint rate from origin to Ontario. The record fails to show the difference in the joint rates to Salt Lake City and to Ontario. On a 34,000-pound shipment of tractors from Chicago, the joint through rate is $2.68 to Ogden and $2.98 to Boise, which is southeast of Ontario, representing a difference of $102 in charges.

Monuments.—A fabricator and wholesaler of granite and marble monuments at Brigham City, Utah, on the Union Pacific 21 miles north of Ogden, obtains his stone from Vermont, Georgia, Wisconsin, and Minnesota and sells in Colorado, Utah, Idaho, Wyoming, Montana, Oregon, and Washington. This dealer has keen competition with dealers in like articles in Salt Lake City. Its business is such that straight carloads rarely can be shipped to retailers. If joint through rates were established over the Rio Grande through Ogden, cars could be stopped in transit at Colorado points, such as Grand Junction. A retailer at the latter point testified that he finds it impracticable, except in unusual instances, to purchase the various kinds of monuments needed in the trade in carloads, and that the keen

competition cannot be met when shipments are made in less than carloads. There is thus an urgent need for the establishment of joint through rates on this traffic to destinations in the excluded territory with stop-off privileges at intermediate points on the Rio Grande. A substantial portion of this traffic has been lost to the trucks, chiefly because of rate differences and the lack of stop-off privileges on the Rio Grande at competitive through rates.

Livestock.—Large volumes of traffic are involved in connection with the livestock industry and with the processing and marketing of agricultural products. With respect to livestock, evidence was submitted by producers, feeders, and marketers. A number of producers in the northwest area, particularly in Idaho at such points as Pocatello, Burley, Soda Springs, and Blackfoot, desire joint rates via Ogden and the Rio Grande to markets in Denver, Pueblo, and east thereof on the same basis that applies on shipments moved over the Union Pacific through Cheyenne. Much of the evidence dealt with the advantages from such joint rates when applied on livestock shipped to grazing and feeding areas in Utah and Colorado on the Rio Grande for reshipment beyond under transit arrangements. In the areas in Utah and Colorado served by the Rio Grande are good pasture lands for grazing livestock. In addition to livestock produced locally in those areas, substantial quantities are shipped in the summer season from other sections in Colorado, Utah, and surrounding States, both for feeding in feed lots and pastures and for grazing on the livestock ranges. Movements of livestock, both sheep and cattle, into and out of Colorado are substantial in volume.

Evidence as to the needs of raisers of livestock and operators engaged in fattening livestock for markets was submitted by persons engaged in those pursuits, individually and as representatives of livestock and feeder associations. These came from several representative points or districts served by the Rio Grande, such as Heber City and La Sal, Utah, and Burns, Lamar, and Las Animas, Colo. Those served only by the Rio Grande generally buy from areas from which joint rates apply in connection with that road in order to obtain the benefit of grazing or feeding in transit on feeder stock when the fattened animals are shipped to Denver or markets east thereof. The evidence shows that such operators have to absorb the difference in transportation costs and are not able to purchase cattle or sheep economically in the northwest area in competition with buyers from Iowa, Wyoming, Nebraska, Colorado, and Kansas that have the benefit of competitive joint rates from the excluded territory over Union Pacific routes with grazing or feeding in transit arrangements.

Due to the curtailment of the use of grazing lands in national forests in Colorado, as part of a general policy for all such forest

lands, livestock raisers in Colorado have curtailed their operations in raising livestock, and have engaged more in fattening stock by grazing in private pastures or feeding in feed lots. They purchase most of their feeder stock in Colorado and surrounding areas, but for supply, quality, and price reasons they have been seeking some feeder stock from more distant origins, and the need for doing so, particularly by reason of the curtailment of the pasture area, has been increasing. Livestock produced in the northwest area, particularly in Idaho, Montana, and Oregon, is of excellent grade, does well on the range, and is considered very desirable for feeding and breeding purposes. About 90 percent of the sheep produced in Colorado are produced in the area served by the Rio Grande, and the operators in this territory purchase replacement or breeding ewes in the excluded territory for summer grazing and the production of white-faced or mutton-type lambs. One witness indicated that in-bound billing on breeding ew s is used under the feeding-in-transit arrangements, when available, at points on the Rio Grande when the newborn, fattened lambs are shipped to markets, but the feeding-in-transit arrangements apparently do not apply for breeding in transit.

Operators on the Rio Grande in western Colorado and those in the eastern Arkansas Valley sections (in southeastern Colorado east of Pueblo and in southwestern Kansas) feel that they cannot now profitably purchase stock in the excluded territory for feeding in transit in competition with similar operators on the Union Pacific in Wyoming, Colorado, Nebraska, and Kansas, due to the rate situation. For example, from Dillon, Mont., to Kansas City the rate on sheep or goats in double-deck cars is $1.21 over the Union Pacific direct and $1.40 over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond, a difference of 19 cents. The 19-cent differential over the latter route applies generally on sheep and goats from Union Pacific origins in the excluded territory to Missouri River markets and points east thereof. These rates are published as joint rates over through routes via Ogden and the Rio Grande. On sheep and goats to destinations west of the Missouri River, including Colorado common points, and on cattle to all of the territory Colorado common points and east theref, via Ogden and the Rio Grande, the rates are on a combination basis. Cattle and sheep may be shipped from the excluded territory over the Union Pacific to Denver and connecting lines beyond to points in the Arkansas Valley, such as Lamar, for feeding in transit and subsequent reshipment to Missouri River markets, or markets east thereof, at the rates applicable over the Union Pacific direct to the Missouri River markets, plus an arbitrary of 8.5 cents per 100 pounds. Feeders of livestock located on the Union Pacific in northern Colorado and Nebraska are

now able to overbid the Arkansas Valley feeders on northwest stock when destined to the Missouri River and east thereof, and the latter are thus unable to compete successfully because of their unfavorable rate situation. The northern Colorado-Nebraska operators feed a majority of the lambs fattened for market in the United States.

A packing plant at Pueblo purchases lambs at the Ogden market, some of which originate at points on the Union Pacific in Idaho and Oregon. These shipments are routed over the Rio Grande from Ogden even though it costs from $70 to $80 per car more than the total charges would be if the shipments were routed over the Union Pacific to Denver at the transit balance of the through rate. The Rio Grande is used from Ogden because shipments do not have to be stopped for feed and water en route to Pueblo, whereas shipments routed from Ogden over the Union Pacific usually require feed and water at Denver. There is less shrinkage on shipments moved over the Rio Grande, but not enough to offset the additional freight charges.

The rates on livestock in western territory were prescribed in *Livestock, Western District Rates*, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535. Generally, the rates are predicated on the shortest routes over which carload traffic can be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the act. The rates on stocker or feeder livestock were prescribed on a basis not in excess of 85 percent of the rates prescribed on the same kind of stock when fit for slaughter, and the carriers were authorized to establish tariff provisions which allow stock moving toward a market to be fed in transit at intermediate points on the basis of the through rates plus a reasonable charge for such privilege. On December 6, 1932, the Rio Grande was authorized (190 I. C. C. 175) to add certain arbitraries to the rates prescribed for mountain-Pacific territory for hauls over its standard-gage lines between Pueblo and Walsenburg on the east, and Provo on the west, including branch lines connecting with the main lines between those points. For hauls of 500 miles or more, the arbitrary authorized at that time was 6 cents on cattle and on hogs and sheep, double deck. Later, these same arbitraries were authorized for application between Denver and Provo over the Dotsero cut-off (200 I. C. C. 535).

In establishing the prescribed rates on livestock, the carriers appear to have limited their application over routes which do not result in short hauling, and over other and longer routes to have provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the dis-

tance involved. As indicated, operators in the Arkansas Valley may now obtain cattle and sheep in the excluded territory for feeding in transit at an arbitrary of 8.5 cents, and this same arbitrary applies when the stock originates on the Burlington in Montana and Wyoming. On the other hand, such operators may obtain feeder stock in other areas, such as Texas and New Mexico, for feeding in transit and reshipment to the Missouri River markets or markets east thereof, at lower rates than would apply if the same stock were fed in transit by operators on the Union Pacific in Colorado, Nebraska, or Kansas. For example, the rate on cattle from Las Vegas, N. Mex., to Chicago is $1.13 when stopped for feeding at Lamar, but if the same cattle were fed at Barton, Nebr., just east of Julesburg on the Union Pacific, the rate would be $1.26, of 13 cents higher. On cattle from Raton, N. Mex., fed in transit at Lamar, the rates are $1.07 to Chicago and 76 cents to Kansas City, but if the same cattle were fed in transit at Barton the rates would be $1.21 and 89 cents, respectively. Many other examples of a similar nature are shown.

The arbitrary of 19 cents, originally 13 cents, applicable on lambs from the northwest area and moving over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond was established prior to the opening of the Dotsero cut-off, and was based in part on the mileage over the Rio Grande via Pueblo. The evidence indicates that this arbitrary was based on the difference between the prescribed scale rates for the average distance from 12 representative origins, on the line of the Union Pacific from Pocatello north to Butte and west to Pendleton, to the several Missouri River markets over the Union Pacific direct and over that road to Ogden, the Rio Grande to Denver via Pueblo, and the Union Pacific beyond. Using the same formula, but giving consideration to the shorter distance over the Rio Grande's Dotsero cut-off, the Union Pacific states that the arbitraries on traffic routed over the Rio Grande should be 5 cents to Denver and Pueblo and 15 cents to the Missouri River markets, and it is willing to establish these arbitraries and make them applicable to cattle as well as sheep. The arbitrary of 8.5 cents on cattle and sheep from origins on the Union Pacific and the Burlington when fed in transit at points in the Arkansas Valley and reshipped to the Missouri River and beyond apparently is based on a similar formula. Reasonable groupings were authorized in *Livestock, Western District Rates, supra.*

In seeking to have the rates on livestock which apply over the Union Pacific made applicable over its lines from Ogden, the Rio Grande indicates a desire to waive the arbitraries which were authorized over its line from Provo to Denver and Pueblo and, in addition, to have estab-

lished over its routes lower rates than would result from the application of the prescribed scales for the distances over its routes. On shipments moving over the Union Pacific-Ogden-Rio Grande route, this would result in short hauling the Union Pacific by 512 miles to Denver and 1,042 miles to Kansas City, which are the differences in the Union Pacific distances from McCammon to Ogden and from McCammon to Denver and Kansas City.

Reference is made to *Crouch* v. *Nevada N. Ry. Co.*, 208 I. C. C. 586, which concerned the rates on feeder cattle moved from East Ely, Nev., to Davis, Calif., over the lines of the Nevada Northern Railway Company to Shafter, Nev., thence the Western Pacific to Sacramento, Calif., and the Southern Pacific beyond, 760.4 miles. A rate of 47.5 cents was applicable over the Nevada Northern to Shafter and the Southern Pacific beyond, 705 miles. This rate was collected, but the defendants later sought to collect a rate of 58 cents, which was the combination rate based on Sacramento. Division 4 found that the combination rate was applicable but unreasonable to the extent that it exceeded 49.5 cents, which was the prescribed scale rate for distances of 775 miles and over 750 miles. See also *Routing Livestock to and from Oregon Points*, 209 I. C. C. 349. We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive rates over the Rio Grande via the Ogden gateway.

Agricultural commodities.—Growers of wheat, potatoes, onions, peas, other vegetables, and fresh fruits at Idaho Falls, Burley, Twin Falls, Blackfoot, Aberdeen, Caldwell, and Parma on the Union Pacific, and also those engaged at such points in buying, selling, packing, and distributing vegetables and fresh fruits, market such products throughout the United States. In order to get as wide a distribution as possible those growers and other growers in the northwest area need as many markets and outlets as possible.

In marketing the large production of such products, particularly Idaho potatoes, it is the general practice to divert carloads in transit as markets are found and sales are made. Routes over which joint through rates apply are generally used so that a shipment can be diverted or reconsigned without the application of a combination of rates. If a shipment reaches a point through which a combination of rates applies and the sale is lost, it is frequently necessary to dispose of the shipment at that point at a forced or distress price. Such points are called closed or pocket markets.

The principal outlets for Idaho fruits and vegetables vary from year to year, but large markets are in the Central, Southwestern, and Southeastern States. Carloads moved over the Union Pacific to the

Central States can be diverted to the Southeastern States at the joint through rates if they move east through Omaha, Kansas City, St. Louis, or Chicago, but if the cars are routed to points in the Southwest over the Union Pacific and connections through Denver they cannot be diverted to southeastern markets east of New Orleans at joint through rates. The southwestern markets are pocket markets in that respect. Idaho producers are in competition with shippers in other producing areas and find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City. One Idaho shipper has made few sales of potatoes in the Southwest in the last several years because of pocket markets there.

Wichita and Liberal, Kans., are described as pocket markets on potatoes and other vegetables originating in Idaho because they cannot be diverted or reconsigned therefrom to points east of the Missouri River at joint through rates. However, the record indicates that shipments refused at these two points may be diverted or reconsigned to destinations in the Southwest at the joint through rates. Wichita is not located on the direct line of any carrier operating between the Colorado common points and the Missouri River gateways, and Liberal is located in the southwestern part of Kansas near the Oklahoma border. Shipments to Kansas City and east thereof would require an out-of-line haul via Wichita and a substantial back haul via Liberal.

Storage facilities are available at Pueblo for the storage of perishables, including potatoes, onions, apples, pears, frozen poultry, frozen foods, butter, and eggs. Joint through rates are applicable from the excluded territory via Pueblo on shipments routed over the Union Pacific to Denver and connecting lines beyond to destinations in the Southwest and to points west of the Missouri River. The route of the Rio Grande from Ogden would be used if joint through rates were available over that route to additional destinations with storage in transit at Pueblo. Storage operators at Pueblo are now handicapped, in relation to two competitors at Denver, because the through rates do not apply via Pueblo to Denver and other northern destinations where a back haul would be required on shipments routed to Pueblo via Denver, whereas the competitors can ship at the through rates in all directions, except westward. The application of the through rates via Ogden and the Rio Grande is sought so that these shippers may have available the same distribution markets as their competitors.

A shipper who deals in dried beans from Idaho and other Western States is located at Colorado Springs. His principal markets are in southeastern territory. Beans which originate in California, Colorado, and Wyoming may be stopped at Colorado Springs for cleaning and packaging and reshipped at the balance of the joint through rates.

Beans which originate in Idaho may be shipped over the Union Pacific to Denver and the Rio Grande or other connections to Pueblo and reshipped therefrom at the balance of the through rates, except to points east of the Missouri River. The route of the Rio Grande from Ogden would be used on Idaho beans if it would result in the application of joint through rates to points east of the Missouri River on the same competitive basis as is now applicable when such beans are transited at points on the Union Pacific. Another bean dealer at Fruita, Colo., on the Rio Grande about 10 miles west of Grand Junction, would like to transit Idaho beans on the same competitive basis as is applicable at Union Pacific points. This dealer is now engaged primarily in buying pinto beans from growers in the vicinity of Fruita and shipping them in carload lots to others, including the shipper at Colorado Springs. These dealers in dried beans are in competition with like dealers at points on the Union Pacific who have the benefit of transit at the through rates to destinations, among others, east of the Missouri River.

A company which is engaged in the purchase and sale of dried beans and peas maintains plants in Nebraska at Morrill on the Burlington and at Gering on the Union Pacific. Carloads of dried beans and peas originating in California, Utah, Oregon, Washington, Idaho, Colorado, Wyoming, Montana, and Nebraska are shipped to Morrill and Gering where they are cleaned, sorted, and packaged, and reshipped generally eastward and to Oklahoma and Texas. This company can obtain Idaho beans and reship them from Gering to eastern and southern destinations at the joint through rates. It was stated, however, that a substantial amount of pinto beans (about 6,000,000 pounds per year) are obtained from Colorado, mostly on the Rio Grande, on which an out-of-line charge of 7 cents per 100 pounds is applicable in addition to the joint through rates over direct routes when such beans are processed at Gering and reshipped to the Missouri River and points east thereof; also that when such beans are processed at Gering and reshipped to destinations west of the Missouri River, combinations of rates to and from Gering are applicable.

The Utah Growers' Cooperative operates throughout Utah in the production and shipment of vegetables, including potatoes and onions. It has two branches on the Union Pacific and three on the Rio Grande in Utah, the latter at Midvale, American Fork, and Springville, all south of Salt Lake City. These three points are served by the Union Pacific and the Rio Grande, but track connections exist only at Midvale. Shipments of box shooks and of seed potatoes from Idaho and of fertilizer from Montana may move into American Fork and Springville over the Union Pacific at lower rates than when they are

interchanged with the Rio Grande at Ogden or Salt Lake City, but when they are received over the Union Pacific they must be trucked to the plants on the Rio Grande. The differences in the rates are not shown.

Various flour mills at southern Kansas points, such as Moundridge and Wichita, support the complaint because they cannot at present purchase wheat at points on the Union Pacific in Idaho, Oregon, and Washington, mill it in transit, and reship to the Missouri River and points east thereof at the same rates that are applicable when similar wheat is milled at points on the Union Pacific. A specific instance was shown where nine carloads of wheat moved from Ogden to Moundridge on which the Ogden shipper applied in-bound transit billing on wheat originating at Idaho Falls. The shipments moved from Ogden over the Union Pacific to Denver, the Rio Grande to Pueblo, and the Missouri Pacific beyond. Moundridge is a local point on a branch line of the latter carrier north of Eldorado, Kans. After the wheat was milled at Moundridge the in-bound billing thereon was applied against an out-bound movement of flour to New Cumberland, Pa. The rate on flour from Idaho Falls to New Cumberland over the route of movement through Denver and Moundridge was $1.335, or 12.5 cents higher than the rate would have been if the same wheat had been milled at a point on the Union Pacific. The distances over the route of movement through Denver and Moundridge and the more direct route of the Union Pacific are not shown.

The rate restrictions complained of by shippers of and dealers in fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from the excluded territory to Colorado common points and east thereof have placed these shippers and dealers at a serious disadvantage in marketing their products, as compared with competing shippers and dealers located on the Union Pacific and having the benefit of the lower joint through rates from and to the same points. Some of these restrictions complained of, such as those by operators of flour mills in southern Kansas, could be remedied by the establishment of additional joint through rates from the excluded territory over routes of the Union Pacific to Denver and connecting lines beyond. From McCammon and points north thereof such routes would in all instances be shorter than the routes over the Union Pacific to Ogden, the Rio Grande to Denver or Pueblo, and connecting lines beyond. The Union Pacific states that it has not been requested to establish additional joint through rates via Denver. Its position with respect thereto is that the rates on agricultural commodities are on a low basis and, therefore, the carriers should be permitted to limit their application to more direct routes, thereby maintaining their long

hauls and preventing undue circuity. For example, it believes that if competitive joint through rates were established on grain for milling at Wichita and other southern Kansas points and reshipment beyond to the Missouri River and east, other and longer routes probably would be demanded on the same basis at points in Oklahoma and Texas where competing mills are located.

The establishment of additional routes and rates by way of the Union Pacific, however, would not remedy the disadvantage complained of by the shippers of and dealers in these products in the excluded territory who are compelled to pay combination rates on shipments diverted or reconsigned at intermediate points on the Rio Grande, including those stored at Pueblo or Colorado Springs on that road, and reshipped to Colorado common points and east thereof. The only effective remedy in those instances would appear to be the establishment of through rates, the same as those over the Union Pacific routes, over Rio Grande routes via Ogden or Salt Lake City.

Lumber.—A number of lumber dealers and lumber mills are located at Grand Junction and other points, and a wood-treatment or preserving plant is located at Salida, Colo., all on the Rio Grande. Generally, the complaints of these parties relate to their inability to ship lumber and millwork from the excluded territory on competitive joint rates via Ogden and the Rio Grande with stoppage in transit for partial unloading, storage, milling, or treatment and reshipment beyond to Colorado common points and east thereof at the balance of the joint rates. Mention also was made of a handicap in diverting or reconsigning at the joint rates to such points carloads originally shipped to local stations on the Rio Grande via Ogden. As previously indicated, joint through rates apply on lumber and millwork from points in California and in Oregon and Washington west of the excluded territory, including areas around Seattle, Tacoma, and Portland, over the Southern Pacific or the Western Pacific and the Rio Grande through the Utah gateways to points on the Rio Grande and east thereof, with storage, milling, and treatment under transit arrangements. Lumber may also be shipped at joint through rates from the excluded territory when the final destinations are local points on the Rio Grande, but such rates are not applicable from that territory over the Union Pacific to Ogden and the Rio Grande when the final destinations are Colorado common points or points east thereof, whether the shipments move direct or are stopped for milling or other transit purposes.

A lumber company with a wholesale yard, a box factory, a mill, and a storage and drying yard is located at Grand Junction. This company buys most of its lumber, both rough and dressed, and plywood and doors at points west of the excluded territory and sells in Colorado

and points east and south thereof. This company also has a financial interest in a wholesale lumber company at Colorado Springs. It has purchased some lumber at points in the excluded territory, such as Cascade and Winchester, Idaho, Burns, Oreg., and Metaline Falls, Wash. Lumber shipped from Cascade, Winchester, and other points in the excluded territory over the Union Pacific to Ogden and the Rio Grande to Grand Junction could not be stored in transit at the latter point and later reshipped to Colorado common points or points east thereof at the joint through rates as those rates apply only over the Union Pacific routes.

Another lumber company on the Rio Grande at Military Junction, Colo., about 10 miles south of Denver, purchases lumber in California and Oregon; also a small amount in Washington, for milling in transit and reshipment beyond. Lumber from the excluded territory can now be milled in transit at Military Junction and reshipped to Colorado points south thereof and to points in the Southwest at the joint through rates to final destination, but this is not true to other destinations east of the Rocky Mountains. Military Junction is about 1 mile outside of the Rio Grande's switching limits at Denver.

The wood-treatment plant at Salida purchases some lumber, poles, piling, and cross ties in Colorado, Utah, and New Mexico, but most is obtained from points in Oregon and Washington west of the excluded territory. This plant has a contract for treating cross ties for the Rio Grande, but about 60 percent of the forest products which it treats are reshipped to points outside of Colorado. It has not purchased products in the excluded territory, but probably would do so if the joint through rates to eastern and southern destinations were made applicable over the Union Pacific to Ogden and the Rio Grande through Salida. The company which owns the plant at Salida has a similar plant at Denver and 22 others scattered throughout the country. The plant at Denver can perform treatment in transit at the joint through rates from the excluded territory to final destinations in the East, South, and Southwest, and apparently joint through rates apply on about 40 percent of the business at Salida which does not move outside of Colorado.

OPPOSITION TESTIMONY

The Union Pacific operates about 9,724 miles of railroad serving over 1,700 points in 13 States.[7] It reaches the Pacific coast at Seattle, Portland, and Los Angeles, and the Missouri River at Council Bluffs, Iowa, and Kansas City. Its line between Pocatello and North Platte,

[7] Iowa, Nebraska, Wyoming, Idaho, Oregon, Washington, Missouri, Kansas, Colorado, Montana, Utah, New Mexico, and California.

Nebr., the point of divergence of traffic via Council Bluffs and Kansas City, runs through a substantial portion of the territory principally involved in this proceeding. It has over $600 million invested in the routes concerned. Its present facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future.

Evidence of the amounts expended by the Union Pacific for improvements in line, heavier tracks, yard facilities, traffic control, and other facilities, and as to its capacity and efficiency in operation, shows that the railroad has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line.

The maximum elevation on the Union Pacific route between Pocatello and Cheyenne is 8,013 feet at Sherman, Wyo., for 1 mile, as compared with the maximum elevation of 9,239 feet between Ogden and Denver on the line of the Rio Grande, which operates at an elevation of 8,000 feet or more for about 35 miles. East-bound on the Union Pacific the maximum grade at any point is 1.52 percent and westbound 1.55 percent. The Rio Grande's maximum grade is 2 percent over substantial mileage. There is much greater curvature in the Rio Grande line than in that of the Union Pacific. The total rise and fall in feet on the Rio Grand is 66.3 percent greater than that of the Union Pacific. Other data as to the physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services.

The Union Pacific objects to the establishment of joint through rates to points beyond Denver or Pueblo via Salt Lake City or Ogden over the Rio Grande upon the principal grounds that such routes would short haul the Union Pacific and that the diversion of traffic over such route from the Union Pacific routes now available would curtail the service and growth of the Union Pacific in the territories it alone serves and in which it pioneered in railroad construction. Such diversion, it fears, would adversely affect the operation of its numerous branch lines in Idaho, Montana, Oregon, and Washington, which are feeders for its main line and are not self-sustaining. In those States the Union Pacific operates a total of 5,606 miles of railroad, with 2,913 miles of branch lines upon which about 46 percent of the total traffic in that territory originates or terminates. It contends that unless it has a substantial main-line haul on branch-line traffic, the operation of many, if not most, of such branches would not long be justified.

Another objection is that yard facilities of the Ogden Union Railway and Depot Company, referred to as the Depot Company, jointly owned by the Southern Pacific and the Union Pacific, at Ogden terminal are inadequate to interchange any additional volume of traffic with the Rio Grande that may be routed to or from the northwest area through Ogden, and that expansion of facilities there is not possible. Several instances of delays to trains, particularly in the fall when traffic is heavy, are shown. The record describes in detail the yard and track lay-out at this terminal and interchange point. At present the Union Pacific finds it necessary to bypass the Ogden terminal as much as possible by taking its trains for Pocatello, Salt Lake City, or Green River over an outside wye track which avoids the terminal proper. In addition to these deficiencies, icing facilities now maintained at Ogden for east-bound and west-bound traffic are not considered adequate for icing perishable commodities from Idaho and the Pacific Northwest for delivery to the Rio Grande. The Depot Company estimated that the cost of interchanging cars between the Rio Grande and the Union Pacific and Southern Pacific is at least twice the average cost of cars in the terminal because of the additional handling required.

The largest volume of traffic was moved through the Ogden terminal in the war year 1945, when a total of 2,847,277 cars were handled. In July, the peak month in that year, the total was 284,711 cars in 2,966 trains, an average of 96 trains daily, which required an average of 70 switching shifts a day. Of that number in July, 894 were solid trains that moved through the terminal without switching. The handling of such a large volume caused considerable congestion and delays to trains. In 1949, the total number of cars handled was 1,955,219. In the peak month of that year, 2,359 trains were handled, an average of 76 trains per day, requiring about 59 switching shifts daily. These figures show that 892,058 fewer cars were handled in 1949 than in the peak year of 1945.

To show that the Union Pacific cannot afford to lose any part of its haul on traffic, attention is directed to the large deficits which the Union Pacific incurred in its passenger service. In 1948, that deficit amounted to $28,462,000, equivalent to $4,291 per mile of road operated, as compared with a passenger deficit incurred by the Rio Grande of $4,954,000, equivalent to $3,127 per mile of road. In the last 20 years the Union Pacific in only 6 years, principally in the war years, has had railway operating income sufficient to pay fixed charges plus declared dividends, and in 1949 it had a net railway operating income of $21,707,437, which was not sufficient by $10,269,865 to pay declared dividends and interest on funded debt. This is contrasted with the

results on the Rio Grande, which in 1948 had a net railway operating income of $12,156,284, out of which it provided for all fixed charges, paid a declared dividend, provided for sinking-fund requirements, and had left for its surplus account $5,167,148.

The Wabash and the Chicago & North Western, important eastern connections of the Union Pacific, furnished estimates of the possible loss of traffic to those roads, and its effect upon train service and employment on their lines in the event that the volume of traffic embraced in the Rio Grande estimate of potential traffic were diverted over the Rio Grande route.

The Wabash in 1948 participated in 9.07 percent of the total traffic handled by the Union Pacific from the Northwest and about one-half of that on west-bound traffic to that area. It estimates the value to it of the potential traffic which it might lose at $1,602,000.

The revenue derived by the Chicago & North Western from the traffic to and from the northwest territory handled in connection with the Union Pacific in 1948 was about $4,000,000. Based on the loss of the potential traffic as estimated by the Rio Grande, it urges that it will lose that amount of revenue if the joint through rates sought in this proceeding are established.

The Great Northern, Northern Pacific, Santa Fe, and Milwaukee oppose granting the Rio Grande's request for the establishment of competitive joint through rates via Ogden. Neither of these defendants, except the Santa Fe, connects with the Rio Grande. They participate, however, in joint rates with the Union Pacific on traffic between the northwest area and eastern points, but there are numerous exceptions. For example, from origins on the Great Northern joint rates are not applicable via Spokane and the Union Pacific on wool, livestock, ores, concentrates, or smelter products, and the joint rates east-bound on fruits and vegetables over that route are limited to destinations reached by the Union Pacific. These restrictions became effective on September 15, 1932, although they were protested by various shipping interests. On lumber from origins on the Great Northern, joint rates apply over that line to Spokane and the Union Pacific only when the traffic is destined to points on and west of the Missouri River, Council Bluffs to Kansas City, thence the line of The Kansas City Southern Railway Company to the Gulf of Mexico. Reference is made also to *Transcontinental Traffic Routed via Bieber, Calif.*, 213 I. C. C. 487, wherein the Great Northern was permitted to cancel joint rates via Bieber and Salt Lake City on transcontinental traffic originating at or destined to various points on the Great Northern in Idaho and Washington.

The Milwaukee, the Santa Fe, and the Wabash, in a joint brief, contend, as does the Great Northern, that upon the evidence submit-

ted the establishment of joint rates which would short haul the defendants is not warranted.

A large number of shippers and representatives of communities served by the Union Pacific, and traffic associations, opposed the complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado. Those three supported the complaint in whole or in part, and as indicated, the Kansas commission later qualified its opposition by supporting the position of the complainant insofar as it pertains to wheat and livestock.

It is not practicable to deal with all of this evidence in detail, but the testimony and position of the parties have been considered. Most of the shippers in opposition to the complaint commented upon the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. Many of them testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event. Most of the opposition arises from the assumed effects of the diversion from the Union Pacific of the full amount, or a very large portion, of the traffic estimated by the Rio Grande as the potential traffic that would be subject to solicitation by that carrier for movement over its lines if the joint rates sought should be established. Upon the assumption that the Union Pacific would lose its long haul on the full estimated potential traffic of 101,476 carloads originated and 56,286 carloads terminated annually on the Union Pacific in the four Northwestern States, a total of 157,762, that number was used as a base by the Union Pacific to determine possible revenue losses. These were computed as amounting, in the aggregate, to $49,880,000 yearly.

Diversion of traffic with such a large loss in revenue would result, according to Union Pacific estimates, in (*a*) the discontinuance of four trains daily east-bound and four trains daily west-bound between Pocatello and North Platte; (*b*) three trains east-bound and three west-bound daily between North Platte and Council Bluffs; and (*c*) one train east-bound and one west-bound daily between North Platte and Kansas City. Extending this loss to show the direct effect upon employment, it was calculated that 1,240 employees, with annual payroll earnings of $5,000,000 yearly, would be laid off, with additional losses in employment by employees in other departments, bringing the total to about 5,300. Other losses are calculated, such as loss of employment of Union Pacific employees engaged in moving fuel coal from the company's mines in Wyoming. Based on

these assumptions, derivative losses were computed by communities and localities on the Union Pacific's line whose local industries and merchants depend more or less upon the wages paid to railroad employees.

Considerable evidence of the same general character was submitted by representatives of employees of the Union Pacific, to show the effect upon them if all of the potential traffic were routed via Ogden and the Rio Grande. The number of employees that might be laid off was computed as 5,144, with a total loss of wages of $21,080,400. Losses by reason of possible loss of homes due to forced changes in places of employment, decline in real-estate values, and other contingent losses were calculated. Similar figures for possible loss of employment were calculated for certain lines connecting with the Union Pacific, such as the Wabash, the Chicago & North Western, and the Milwaukee.

The record contains detailed computations and estimates upon all of these matters. Employee representatives contend that if joint rates are required to be established we must determine what would be the probable extent of diversion of traffic from one or more routes to the route via Ogden and the Rio Grande. Based on such a finding, they further contend that we must determine the probable adverse effects of the diversion on employees of the railroads affected and impose measures to compensate or to protect such employees from loss, as conditions upon the establishment of the joint rates and through routes.

There is no specific provision in section 15 (3) or (4) requiring that such conditions be imposed, but it is argued that in finding joint rates and through routes necessary and desirable in the public interest, as required by section 15 (3), the interests of employees must be considered as they are in proceedings involving consolidations, mergers, and abandonments. Reference is made to the decision in *Cancelation of Rates and Routes via Short Lines*, 245 I. C. C. 183. In that proceeding certain carriers sought to cancel their joint rates over through routes with specified short lines. It was found that cancellation of the rates and routes would result in abandonment of the short lines with resulting inconvenience and loss to shippers and to carrier employees. Permission to cancel certain of the routes was denied.

Upon the record before us it is impossible to find definitely, or to estimate with any degree of accuracy, how much traffic might be diverted to the Rio Grande if all of the rates sought were to be made applicable over that carrier, nor how much traffic will be diverted to the Rio Grande under the restricted findings herein made. Shippers have a right to route their own traffic, and where traffic is not routed

by the shipper, the originating carrier has the right to control the routing within certain limitations.

GENERAL DISCUSSION AND ULTIMATE FACT FINDINGS

In support of its contention that the assailed rates over its line are unreasonable, the Rio Grande submitted a large number of comparisons showing the differences in such rates and the competitive joint through rates on various commodities, together with the car-mile and ton-mile revenue under the respective rates and what the revenue would be if the lower joint rates were made applicable over its line. Neither factor of the combination rates is assailed, but the aggregates of such factors are alleged to be unreasonable to the extent that they exceed the competitive joint rates.

Many of the present joint rates on the transcontinental traffic here affected are commodity rates which were established originally on particular commodities to meet water competition. Others, such as those applicable on agricultural commodities, were established from producing areas in the excluded territory to enable growers and shippers to market such commodities in eastern and midwestern territories. For these reasons, and others, the defendants contend that it would be unreasonable to require the application of the joint rates over the Rio Grande, as it would result in depleting their revenues and in wasteful transportation over circuitous routes, as well as in short hauling the defendants, especially the Union Pacific. For example, the rates on potatoes to Chicago are 96 cents from Monte Vista and Greeley, Colo., and $1.14 from Idaho Falls, Idaho, a difference of 18 cents, although the distance from Idaho Falls to Chicago, 1,597 miles, is 315 miles greater than from Monte Vista and 590 miles greater than from Greeley. Computations were submitted which indicate that on a carload of potatoes weighing 45,120 pounds from Idaho Falls to Chicago the joint rate of $1.14 would yield a net profit of $1.97 per car when moved over the Union Pacific to Omaha and the Chicago & North Western beyond, and a net loss of $62.93 per car if routed over the Union Pacific to Ogden, the Rio Grande to Denver, and the Burlington beyond, 1,809 miles. The computed costs were based on general cost scales compiled by our Bureau of Accounts and Cost Finding and were not based on studies of particular movements of traffic over the respective routes. Many other examples of this nature were submitted.

With unimportant exceptions, the only rates of record with which comparison is made by or in behalf of the complainant are the joint rates in effect over routes embracing the lines of the Union Pacific which are sought for application over the lines of the Rio Grande and

the Union Pacific via Ogden or Salt Lake City. As above indicated, many of those rates are the result of competition. However, they are the going rates on this traffic and, except for authorized general increases therein, have been in effect for many years. There is no claim that any of those rates is below a minimum reasonable level. It follows that the joint rates sought, as presently applied, are within the zone of reasonableness and must be regarded as reasonable rates.

With respect to the issue under section 15, the facts before us here are in some respects similar to those considered in *United States* v. *Union Pac. R. Co.*, 28 I. C. C. 518, and *Western Pac. R. Co.* v. *Northwestern Pac. R. Co.*, 191 I. C. C. 127, in both of which the complaints were dismissed. In the first, the complainant sought through routes and joint rates over the Rio Grande, among others, in connection with the Santa Fe at Pueblo or Denver on the east and the Oregon Short Line at Salt Lake City or Ogden on the west, on traffic moving between Chicago and certain Mississippi and Missouri River points, on the one hand, and stations on the Oregon Short Line, on the other. The joint rates sought were the same as those then in effect over generally shorter routes of the Union Pacific and other defendants. The short-hauling provision of the statute was held to be a bar to the establishment of the routes and rates sought.

In the second proceeding, the Western Pacific alleged that the failure of the defendants to join with it in the establishment and maintenance of joint rates between points in California on the Northwestern Pacific Railroad Company, controlled by the Southern Pacific, on the one hand, and eastern defined groups, on the other hand, over routes in which the Western Pacific would be an intermediate participating carrier, was discriminatory and prejudicial, and that the combination rates between such points over such routes were unreasonable. Therein, division 2 said, at pages 136 and 137:

> In requesting the application of the joint rates over its line complainant is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic which, under the act, belongs, in the absence of emergency, to the Northwestern Pacific and Southern Pacific.

The instant complainant likewise is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic on which the Union Pacific refuses to relinquish its long haul. In that proceeding, the distance over the Southern Pacific route to Ogden was about 200 miles shorter than the route sought, which is substantially the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves. Again, the short-hauling provision was held to be a bar to the relief sought.

Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the "through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation." Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in *D. A. Stickell & Sons., Inc.*, v. *Alton R. Co.*, *supra*, the Supreme Court said that the expressions "more efficient or more economic" transportation, as used in section 15 (4), "may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found." These latter considerations are not determinative, however, unless the existing routes can be found not to provide "adequate" transportation.

In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests.

There is no contention here by complainant that the present routes of the defendants are not adequate for the traffic hauled, and no finding is sought by complainant to that effect. The absence of such a request may well be due to complainant's contention, not sustained herein except as to sheep and goats to points on the Missouri River and east thereof, that through routes via Ogden and the Rio Grande already exist within the meaning of section 15 (3) of the act. Testimony on behalf of shippers, however, does raise a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities.

In order properly to evaluate the testimony of shippers it is necessary to consider the nature, extent, and functioning of our intricate and far-flung commodity marketing system. The growth of our population and the development of the country have required a constantly expanding flow of diverse commodities. Great consuming areas in many instances are far distant from the points of production of the necessities of every-day life, particularly articles of food. Movements of transcontinental proportions are involved in important instances. That is true here. A complex but efficient marketing

system has been evolved to provide as orderly a distribution of food commodities as possible. Adequate transportation facilities and services are required for the proper functioning of the system. Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and over as many routes as possible. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that as much flexibility as possible in the distribution process be permitted. A number of services, not only at origin and destination, but en route, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities. *Southeastern Vegetable Case*, 200 I. C. C. 273, and *Routing Lumber and Fruits, South to C. F. A. Territory*, 256 I. C. C. 223.

While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated. The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities. This conclusion is also supported and emphasized by the situation with respect to the operation of many of the in-transit privileges and services which are generally accorded such traffic and are necessary for its efficient marketing. For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply. On such traffic the defendants' routes are inadequate and less economical than are the Rio Grande routes.

In addition to the above-mentioned commodities, we are of the opinion that a special need for joint routes and joint rates on granite and marble monuments, in carloads, from origins in Georgia and Vermont to destinations in the excluded area, has been established.

The situation as to the commodities above named, as to which the defendants' routes are inadequate, is largely similar to that considered in *D. A. Stickell & Sons, Inc.*, v. *Alton R. Co.*, *supra*. There is one point of difference. There, the operating conditions, mile for mile, on the respective routes were substantially similar. Here, as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein. This fact was recog-

nized by the Commission in prior proceedings. See *Livestock, Western District Rates, supra*, and *W. H. Bintz Co.* v. *Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486. There is before us no data from which the exact differences in the costs over the Union Pacific routes and the Rio Grande routes can be determined. Several estimates were made by witnesses for both the Rio Grande and the defendants, but the estimates vary so widely and are so obviously incomplete as to be practically useless. The record is sufficiently complete, however, to enable us to make a rough approximation of the differences in the operating conditions and to appraise the weight which should be given to those differences, as well as to the differences in the distances over the respective routes, in determining the issues before us.

The differences in the distances between the Union Pacific routes through Wyoming, on the one hand, and the Rio Grande routes sought, on the other, using Boise, Idaho, as a representative point in the excluded territory, vary approximately from 95 miles or 11 percent to Denver, short-route distance 880 miles; 200 miles or 14 percent to Kansas City, 1,410 miles; 211 miles or 8 percent to New York, N. Y., 2,691 miles; 200 miles or 9 percent to Atlanta, Ga., 2,289 miles, to 33 or 35 miles, or 2 percent, to New Orleans, and to Fort Worth and other points in the Southwest, with short-route distances varying from 1,612 miles at Oklahoma City to 2,282 miles at New Orleans. From most of the excluded territory to western trunk-line destinations north of the route of the Union Pacific and Chicago & North Western between Omaha and Chicago, and in the Dakotas, the short routes are in connection with the Northern Pacific, Great Northern, or Milwaukee, and to such destinations the Rio Grande routes sought via Ogden are longer generally by at least 33 percent, and range up to more than 50 percent, than the short routes. From many points in the excluded territory to points in Colorado east of and including the common points, Kansas west of points on the Missouri River, and Nebraska, except Omaha, the short-route distances are less than 1,000 miles. We are of the view that the differences in transportation conditions, by which is meant operating conditions and lengths of hauls, over the Union Pacific routes and over the Rio Grande routes via the Ogden gateway are substantial for hauls between the excluded territory, on the one hand, and points in Colorado east of and including the common points, Kansas west of points on the Missouri River, Nebraska, except Omaha, the Dakotas, Minnesota, Wisconsin, and Iowa and Illinois north of points on the route of the Union Pacific and the Chicago & North Western extending between Omaha and Chicago, on the other hand, but that for hauls between points in the excluded territory and points in the United

States east and south of the points and territory above described, the differences in the transportation conditions are, in general, spread over hauls of such great lengths that, considered as a whole, they become relatively insignificant. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar.

As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments westbound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs east-bound, who reconsign such shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3 (1) of the act.

As before indicated, on a number of commodities, from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections here defendant, its long haul, while refusing to apply the same joint rates over routes in connection with the Rio Grande via the Ogden gateway. Such routes by which the Union Pacific and certain of its connections short haul themselves are generally about as long as, and in many instances substantially longer than, the Rio Grande routes here sought, and the hauls of the Union Pacific, as well as of certain of the other defendants, are shorter over such established routes than over routes in connection with the Rio Grande via Ogden.

There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than the over routes said to be preferred. No such a showing has here been made.

The situation is different with respect to traffic between Utah common points, on the one hand, and the northwest area, on the other. On such traffic the Union Pacific interchanges with the Bamberger Railroad Company at Ogden at joint through rates to and from

points on that line, including Salt Lake City. There is no apparent reason why similar arrangements should not apply on like traffic interchanged with the Rio Grande. The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande.

The evidence is convincing that the joint rates sought, which now apply over the Union Pacific routes, would be reasonable for application also over the Rio Grande routes via the Ogden gateway on the traffic, and from and to the points, embraced within the findings of unlawfulness herein made.

The testimony dealing with the terminal facilities at Ogden has been carefully considered. We are persuaded that the additional traffic over the Rio Grande routes which will result under the findings herein made can be interchanged at that point or at Salt Lake City by the use of the present facilities and without serious detriment to the operating efficiency of the railroads concerned.

CONCLUSIONS

We conclude:

1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas.

2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and

unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

An appropriate order will be entered.

LEE, *Commissioner*, concurring in part:

I concur in the conclusions of the majority that joint rates the same as apply over the Union Pacific and its connecting lines should be established via Ogden or Salt Lake City, in connection with the Rio Grande, on the commodities and from and to the origins and destinations specified by the majority; that the rates assailed on such commodities from and to such origins and destinations are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes; and that the maintenance by the Union Pacific and other defendants of joint rates from and to points on the Bamberger Railroad south of Ogden, while refusing to participate in like rates from and to the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act. The decision in this case will correct in part, a long-standing, unlawful rate adjustment, an adjustment which has discriminated against the industries and people of Washington, Oregon, Idaho, Montana, and Utah, the area from and to which such unlawful adjustment applies being referred to in the report as the "excluded territory." However, I am of the opinion that the action of the Commission should not be limited to a partial correction of this unlawful rate adjustment. On the facts shown in the record, the act requires that the rates on all commodities, between points in the excluded territory and Colorado common points and points east thereof, over the Rio Grande routes shall be no higher than those over the Union Pacific routes. The act contemplates that there shall be no excluded territory with respect to any commodity or persons.

Transcontinental joint rates on freight traffic were established in 1897, from and to the territory here considered, applicable over the Rio Grande routes via Ogden. These joint rates were in effect for many years, until 1906 from and to some points and until 1912 from and to other points, when they were canceled by the Union Pacific and higher combination rates became effective. However, the through routes were not closed. Numerous shippers testified that these routes are open and available and that they can route traffic over them. This testimony was not challenged or contradicted. On the contrary, a responsible traffic official of the Union Pacific testified that the Rio Grande routes are "actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon, and Washington." That these routes are open and used is proved by evidence in the record (1) of east-bound shipments of various commodities made in 1948 from points on the Union Pacific in the excluded territory to Colorado common points, and which moved over the Rio Grande routes, including the entire length of the Rio Grande line, on through bills of lading issued by the Union Pacific, (2) of west-bound shipments of various commodities made in the same year from various eastern points to points in the so-called excluded territory, and which moved on through bills of lading over carriers east of Colorado junctions to the Rio Grande at such junctions and thence over the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond, and (3) of numerous shipments moved over the Rio Grande routes between eastern points and the excluded territory during World War II and in 1949 when the Union Pacific main line in Wyoming was blocked by snow. The year 1948, the calendar year immediately preceding the hearing, was selected as typical of the situation which prevailed in the prior years and which continued up to the time of the hearing.

I am unable to agree with the majority that the shipments referred to above must be regarded as of an isolated nature and as falling in the same category as the single shipment considered in the *Beaman Elevator case*, 155 I. C. C. 313, referred to in a footnote to the opinion of the United States Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. In the *Beaman* case a single carload shipment of grain moved over the lines of two connecting railroads from Beaman, Iowa, via Clinton, Iowa, to St. Louis, Mo. The evidence plainly showed that the bill of lading covering this shipment was issued and recognized by these railroads through error. There was no evidence "of any like movement before or since." Adequate service was available over nine other routes. A wholly different situation is before us in this proceeding. Numerous shipments of a variety of commodi-

ties have been transported in both directions over the Rio Grande routes on through bills of lading deliberately issued and recognized by the Union Pacific and the other participating carriers. The situation here before us is similar to that considered by the Supreme Court in *Virginia Ry.* v. *United States*, 272 U. S. 658, also referred to in a footnote to the decision in *Thompson* v. *United States*, *supra*, in which, in referring to the route over which the Commission there prescribed reasonable and nondiscriminatory rates, the Court stated that "that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive." The Court held however, that even though the route was closed commercially, open through routes to the West were in existence.

In the *Thompson* case the court pointed out that "there is no evidence that any shipment has ever been made from Lenora to Omaha via the Burlington line" or that the carriers have ever offered through service over the Missouri Pacific-Burlington route. Thus, the facts before the Court in that case likewise were wholly different from those before us in this proceeding. I think that the Court's opinion in that case supports the conclusion that through routes on freight traffic over the Rio Grande routes have existed for many years and now exist and that the short-hauling provision of section 15 (4) is not applicable.

If, however, the Rio Grande routes were actually closed, the short-hauling provision of section 15 (4) of the act would not be a bar to the correction in full of the present discriminatory rate adjustment. The discrimination in violation of section 3 of the act, shown by the evidence, makes that provision of section 15 (4) inapplicable. In any event, the Rio Grande routes are shown to be needed in order to provide adequate, and more efficient and more economic transportation, and, if they were not already open through routes, we could and should require that they be opened.

As stated in the report of the majority, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments, livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, who reconsign shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific. The evidence is equally impressive with respect to the disadvantage or handicap to shippers

or receivers of lumber, building materials, farm machinery, and other commodities. For instance, the lumber company at Military Junction, Colo., referred to in the majority report, is handicapped in its efforts to compete with mills at Denver and Kansas City because it cannot obtain lumber from the excluded territory for milling in transit on the same basis as these competing mills. A representative of that company testified that it would purchase several million feet of lumber annually from points in the excluded territory if it had available reasonable and nonprejudicial joint rates over the Rio Grande routes. By reason of the rate situation complained of, the lumber dealer at Grand Junction, Colo., who is also referred to in the majority report, has lost business to competitors who have the benefit of transit at the joint rates applicable over the Union Pacific routes. This evidence is only typical; it was presented as representative of the prevailing situation.

Shippers and receivers of freight at points in eastern Oregon and southern Idaho, on the line of the Union Pacific, have been, and are, excluded from additional markets that would be available to them if reasonable and nonprejudicial joint rates were in effect over the Rio Grande routes. Some of these shippers express the belief that the establishment of such joint rates would provide them with a better car supply, in that the Rio Grande would furnish additional cars to move out shipments routed over its line. It is common knowledge that a better supply of cars is available to shippers who have competitive routes to the consuming markets. The record clearly establishes that the present rate adjustment results in a substantial disadvantage to the industries, shippers, and receivers located in the considered territory, and in undue prejudice to them.

Likewise, the evidence establishes that the defendant railroads discriminate against the Rio Grande, in that from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections, its long haul, while refusing to establish the same joint rates over the Rio Grande routes. The routes by which defendants short haul themselves are generally as long as, and in many instances substantially longer than, the Rio Grande routes, and the hauls of the Union Pacific and of other defendants are shorter over such established routes than over the Rio Grande. The evidence does not establish that transportation conditions are more favorable over these routes

than over the Rio Grande routes which are discriminated against by defendants. On the contrary, the record, in my opinion, warrants finding that the transportation conditions over such routes are, in general, no more favorable than over the Rio Grande routes. The Union Pacific and the other defendants are, and for the future will be, violating section 3 (4) of the act by failing and refusing to participate in joint rates with the Rio Grande, from and to points in the excluded territory, to and from points in official, southern, and southwestern territories, while participating with each other in joint rates from and to the same points, over routes over which the Union Pacific and other defendants short haul themselves.

The Union Pacific is a strong and progressive railroad. It is ably managed and efficiently and economically operated. Being the only railroad in southern Idaho, every shipper in that area is dependent on it for rail service. I am persuaded that, instead of being allowed to continue to maintain an "excluded territory," it should be required to provide these shippers with joint rates which will enable them to buy and sell in all markets on an equality with other shippers, and that such joint rates will not result in any substantial diversion of the traffic now moved over its lines.

The joint rates now in effect on freight traffic over the Union Pacific routes are shown by the record to be reasonable for application over the Rio Grande routes. We should require that these rates be maintained over the latter routes.

PATTERSON, *Commissioner*, concurring in part:

I concur in the relief granted to the Rio Grande and transit operators thereon who are handicapped by the lack of through routes and joint rates the same as those over the Union Pacific routes. It seems to me, however, that the findings of unlawfulness are inconsistent in that they fail to include lumber and articles taking lumber rates in the relief granted.

The showing made of a need for such through routes and joint rates, in my opinion, is more persuasive as to lumber and articles taking lumber rates than as to any of the commodities included in the foregoing findings, with the possible exception of livestock. The record shows that at least one lumber dealer at Grand Junction, another at Military Junction, near Denver, and a wood-treatment plant at Salida, all on the Rio Grande, are handicapped in their efforts to compete with like dealers on the Union Pacific routes, and that at least the dealer at Grand Junction has lost business, by reason of the rate situation complained of, to competitors who have the benefit of transit at the joint rates over the Union Pacific routes. I

believe this evidence is adequate support for the inclusion of this commodity group in the findings of unlawfulness made.

The order entered in connection with this report requires the establishment on particular commodities, in connection with the Rio Grande, of through routes and joint rates the same as those now in effect over the Union Pacific routes. The formation of those through routes is appropriately left, in large measure, to the carriers. I want to make it clear that in my view, on traffic to or from the area east of the Colorado common points, where the provisions of the order so permit, these new routes should be formed in such a manner as to short haul the Union Pacific only to the extent necessary to afford the Rio Grande its line haul and avoid unduly circuitous routes.

ARPAIA, *Commissioner*, concurring:

In my opinion there are through routes over the Rio Grande and the Union Pacific via the Ogden Gateway on traffic between the territories included in this proceeding, and therefore a finding under the provisions of section 15 (4) of the Interstate Commerce Act is not required.

The evidence of record shows that these routes presently are open and available to shippers on combination rates. The history of the relationship between these carriers leaves no doubt as to that fact.

When joint rates over these routes, which were in effect from 1897 to 1906 and 1912, were canceled by the Union Pacific, no specific cancellation was made of the through routes over which the joint rates applied. To my mind it would be necessary for the Union Pacific to have shown affirmatively that it refused traffic on through billing over the Ogden Gateway in order to negative the existence of such through routes. Instead, the record shows information elicited from an official of the Union Pacific to the effect that routes via Ogden were available subject to the application of combinations of local rates.

The question then is to what extent should we compel joint rates. Joint rates over the routes through Ogden, I believe, are warranted in the public interest only on the commodities for which relief is included in the majority report.

We should interfere in the management of a railroad only when the reasons for doing so are clear and compelling, as they are here, and only to the extent the public interest actually requires.

MAHAFFIE, *Commissioner*, dissenting in part:

I dissent from the majority report insofar as it fails to find that the existing routes to and from the northwest territory, described in

the report, via the Rio Grande through the Ogden gateway are effective through routes and that the failure of the Union Pacific and other defendant railroads to establish joint rates with the Rio Grande via Ogden unjustly discriminates against that carrier. I disagree also because the report does not find that it is necessary and desirable in the public interest that joint rates on commodities generally, in addition to those specified, should be established over such through routes.

We are not called upon in this proceeding to exercise our authority, under section 15 (4) of the Interstate Commerce Act, to establish new through routes via that gateway. Therefore, the conditions in that paragraph are not applicable. We are free to exercise our power under section 15 (3) to establish joint rates unhampered by those restrictions.

A finding that these routes are open and freely available to shippers today is fully supported by the evidence. It was acknowledged by a freight traffic official of the Union Pacific that a shipper has the right under the act (section 15 (8)), to specify such routes for the carriage of his shipments. That right, it should be noted, can be availed of only when two or more through routes and through rates are actually established and in existence.

The record shows that some joint through rates, as distinguished from combination rates, are in fact now published in a Union Pacific tariff for application through Ogden over the entire length of the Rio Grande to Denver and the Union Pacific beyond. These apply on shipments of sheep or goats originating on the Union Pacific in southern Idaho and eastern Oregon, billed to destinations on the Missouri and Mississippi Rivers and to Chicago and other points. The joint rates are higher than rates on like livestock moved over the direct route of the Union Pacific and, therefore, retard use of the Rio Grande route. But the publication of such joint rates in connection with transportation over the whole length of the Rio Grande is proof of the consent of the Union Pacific for the use of that rail line as part of a through route at joint rates. And it was further stated by the same witness that the Union Pacific has no objection to publishing the same joint rate arrangement on shipments of cattle.

In 1941–42 mixed military trains with troops in passenger cars and military supplies in freight service were transported over this route on through billing. Four examples of such trains are described in the record. These moved from Fort Sill, Okla., and Camp Claiborne, La., to Fort Lewis, Wash., in December 1941 and February 1942. The trains were routed and moved to Colorado junctions of the Rio Grande, thence over that railroad to Ogden and the Union Pacific

beyond. Unlike certain other movements to and from the northwest area via Ogden in the war period in connection with these two lines, the military trains were not routed under service orders issued by us or the Office of Defense Transportation. Arrangements for the through movements were made with the railroads and the rates charged were settled on the basis of the joint rates applicable in connection with the Union Pacific routes through Wyoming.

The existence of the route as an established through route was undoubtedly an important consideration for its use in February 1949, when the line of the Union Pacific was blocked by snow. In that emergency, freight cars, passenger cars, express and mail were promptly diverted by the Union Pacific through Denver over the Rio Grande to Salt Lake City and to Ogden for movement beyond. Of the freight cars diverted, 1,493 were for destinations in Idaho on the Union Pacific and in the northwest area.

Actual and continuous use of the Rio Grande route at through rates made by combinations of separate rate factors via Ogden to and from the Northwest without opposition or objection by the Union Pacific or other participating railroads is amply shown by the evidence of typical movements of numerous commodities. The calendar year 1948 was used by the Rio Grande as a representative year. In that year 16 carloads of various commodities were shipped from the northwest territory over the Union Pacific to Ogden and the Rio Grande beyond to Denver, Louviers, Pueblo and Trinidad, Colo., over the entire length of the Rio Grande. They originated on the Union Pacific and moved on through bills of lading. Some of the cars were partly unloaded at Rio Grande points and then continued through to their destinations. Seventeen carloads of various commodities moved, from late in December 1947, and in the year 1948, from various eastern points on through bills of lading at through combinations of rates over rail lines east of the Colorado junctions to the Rio Grande at such junctions thence over that line to Salt Lake City or Ogden and the Union Pacific beyond. Some of the cars were stopped for partial unloading at stations on the Rio Grande or the Union Pacific.

The same kinds of movements as those exhibited in 1948 prevailed to about the same extent in years prior to 1948 and continued into 1949 at the time of the hearings.

All of this evidence clearly supports a finding that the routes are existing established through routes over which through rates apply and that the railroads participating therein consent to their use as through routes and freely hold themselves out to shippers as ready and willing to perform transportation service over them. They meet completely the requirements necessary as prerequisites for a finding that

they are established through routes announced by the United States Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. In that case, the Court said "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service." However, as stated by the Court, there was no evidence that any through transportation had ever been offered from and to the points involved in the suit and, therefore, no through routes existed between those points.

The situation here is in striking contrast to that in the *Thompson* case. Here there is substantial evidence of a holding out that through transportation will be furnished and of execution of such offers by the issuance of through bills of lading and the performance of through service over many years. We cannot ignore the fact that the joint rates over these routes that were in effect from 1897 to 1906 and 1912 were canceled by the Union Pacific without canceling its participation in the same through routes thereafter at higher through combination rates. That railroad's course of conduct evidenced no more than a desire to discontinue joint rates so as to make the higher combinations applicable. Its action in canceling its participation in joint rates did not, without more, cancel its participation as a carrier in the through routes. The latter were never disestablished but continued to exist. The record taken as a whole inevitably leads to that conclusion. To find under such a state of facts that no through routes exist for commodities generally is directly contrary to the evidence.

Even if a finding that no through routes exist over this line be sustained, there is substantial evidence that the rate situation results in undue prejudice and undue disadvantage to shippers and to districts and localities in Utah and Colorado dependent upon the Rio Grande for rail service, in violation of section 3 (1) of the act. Such violation removes the restrictions imposed in section 15 (4) upon our authority to establish through routes. That undue prejudice and undue disadvantage exist is fully supported by the testimony of numerous witnesses. Briefly, the testimony shows that livestock producers in Utah and Colorado, in areas served by the Rio Grande, are not able, due to the combination through rates via Ogden, to buy on a reasonably competitive basis, cattle and sheep in Idaho, Montana, Oregon, and Washington for grazing and feeding in transit on the ranges in Utah and Colorado, in competition with buyers and stock feeders in northern Colorado, Nebraska, and northern Kansas. The same undue prejudice and undue disadvantage is experienced by buyers and feeders in southeastern Colorado east of Pueblo, Colo., and

in southwestern Kansas served by the Santa Fe and the Missouri Pacific railroads. Their failure to obtain joint through rates from the producing areas in the Northwest over the Union Pacific to Ogden, Rio Grande to Pueblo and its connections beyond places them at an undue disadvantage.

The record contains convincing evidence by representatives of large groups of shippers that there is undue prejudice and undue disadvantage to wool producers, as well as to livestock operators in Colorado served by the Rio Grande; also to lumber dealers and processors; dealers in farm machinery and other commodities, and to a cold storage warehouse operator in Pueblo. There is substantial evidence from producers and shippers of agricultural commodities in the Northwest, particularly in Idaho, to support findings that the refusal of the defendant railroads to join in joint through rates via Ogden and the Rio Grande to and from points beyond the Colorado gateways of that carrier exclude them from additional markets needed for their products. All of that evidence sustains and fully supports the finding that there is a violation of section 3 (1) of the act and justifies a general finding that joint through rates via the Ogden gateway should be established on commodities generally. The findings should not be limited, as are the findings of the majority, to particular commodities as to which evidence was offered but should be broadened to include all commodities.

We are fully warranted in dealing with this situation broadly, in considering what is necessary and desirable in the public interest, with respect to joint rates over these established through routes. We are not limited to consideration of proof as to every rate on every commodity from every origin to every destination. Such a view of our authority is too narrow and is not justified by the law or the evidence.

In other types of proceedings where we found it necessary to deal generally with a comprehensive rate situation, the Supreme Court has held that we may properly make general findings upon typical evidence representative of the situation as a whole.

In exercising authority under section 13 (4) as to the lawfulness of rail rates on intrastate traffic in a State and under section 15 (6) as to divisions of joint rates of rail carriers we may make general findings when the evidence is shown in numerous and representative instances that are typical of the rate situation as a whole. Similarly we need not attempt the impracticable, if not impossible, task of examining every rate on every commodity and class of commodities, from every origin to every destination in the large areas and territories under scrutiny here. We can adjust the remedy to the evil and make our order as broad as the discrimination and undue prejudice. See *Illinois*

Central R. Co. v. *Public Utilities Commission*, 245 U. S. 493, 507. In *Wisconsin Railroad Comm.* v. *Chicago, B. & Q. R. Co.*, 257 U. S. 563, 579, a proceeding dealing with intrastate rates on a State-wide basis, the Court stated that "any rule which would require specific proof of discrimination as to each fare or rate and its effect would completely block the remedial purpose of the statute." In *Georgia Public Service Comm.* v. *United States*, 283 U. S. 765, 774, the Court said that "when an investigation involves shipments from and to many places under varying conditions, typical instances justify general findings." That case also arose under section 13 (4) of the act with respect to intrastate rates. There the order related to a few commodities but the rates prescribed were State-wide in operation and applied to shipments between hundreds of points of origin and destination. Under those circumstances the Court held that "To require specific evidence and separate adjudication in respect of each would be tantamount to denying the possibility of granting relief."

To the same effect is the holding of the Court in *New England Divisions Case*, 261 U. S. 184, 197. There the Court had under consideration contentions with respect to the nature of the evidence in support of our order as to divisions of joint rates between groups of rail carriers. The Court pointed out that our order was based on evidence which we assumed was "typical in character, and ample in quantity, to justify the finding made in respect to each division of each rate of every carrier." That method of proof was found to be our common practice in adjudicating comprehensively upon substantially all rates in a large territory, and that the actual necessities of procedure and administration had led to the adoption of that method also in passing upon the reasonableness of proposed rate increases. That method was found equally appropriate in passing upon multitudes of divisions of joint rates. That it has similar application in a comprehensive case such as we have here where we are called upon to establish joint rates via a gateway through which substantially all joint rates have been refused, is equally clear. In the case cited, the Court said that there was no constitutional obstacle to the adoption of the method pursued and that only in the way could the task be performed.

The same rule should be applied in the instant case, in order to carry out effectievly our authority to prescribe, in the public interest, joint rates by way of the Ogden gateway. The report of the majority finds it necessary in the public interest that joint rates via that gateway be established on particular commodities as specified in the report. The same evidence is, and should be concluded to be typical of the rate situation as a whole. In accordance with our practice in other types of comprehensive proceedings which has been found lawful and neces-

sary under principles announced in the Supreme Court cases cited, that evidence should be found adequate to support an order that joint rates be established via that gateway on commodities generally.

I am authorized to state that COMMISSIONERS SPLAWN and CROSS join in this expression.

COMMISSIONER KNUDSON did no participate in the disposition of this proceeding.

[fol. 24] APPENDIX "C" TO COMPLAINT

Order

At a General Session of the Interstate Commerce Commission Held at Its Office in Washington, D. C., on the 10th Day of June, A. D. 1953

No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY, et al.

Upon further consideration of the record in the above-entitled proceeding, and upon consideration of petitions for reconsideration, and for modification of the findings and order filed by complainant, defendants and various interveners, and the several replies to the petitions, and it appearing that none of the petitions presents matters that are materially different from those of record in the proceeding, or offers new or additional contentions or arguments that vary substantially from those previously advanced and considered by the Commission in disposing of the issues:

It is ordered. That said petitions be, and they are hereby, denied.

By the Commission.

George W. Laird, Acting Secretary. (Seal.)

SUMMONS AND RETURNS—Filed July 2, 1953

Defendants

To the above named Defendants:

You are hereby summoned and required to serve upon Elmer B. Collins, and W. R. Rouse, plaintiff's attorneys,

whose address is: 1416 Dodge Street, Omaha 2, Nebraska, an answer to the complaint which is herewith served upon you, within 60 days after service of this summons upon you, exclusive of the day of service. If you fail to do so, judgment by default will be taken against you for the relief demanded in the complaint.

Mary A. Mullen, Clerk of Court, by Evelyn Copeland, Deputy Clerk. (Seal of Court.)

Date: June 26, 1953.

Note.—This summons is issued pursuant to Rule 4 of the Federal Rules of Civil Procedure. LMP.

[fol. 25a] Return

I hereby certify and return that I received this Summons on the 26th day of June, 1953 and on the 26th day of June, 1953 I served the same upon the within named United States of America and the Interstate Commerce Commission by leaving a true and correct copy thereof with Joseph T. Votava, United States District Attorney for the District of Nebraska, at Omaha, Douglas County, State and District of Nebraska and by mailing two true and correct copies thereof to the Honorable Herbert Brownell, Jr., Attorney General of the United States at Washington, D. C. in a duly registered envelope, a receipt for same is herewith attached and made a part of this return and by mailing a true and correct copy thereof to George W. Laird, Acting Secretary of the Interstate Commerce Commission at Washington, D. C. in a duly registered envelope a receipt for same is also attached and made a part of this return. And at the same times and places and in the same manner and upon the same parties I also served copies of the Complaint herein.

(S.) Frank Golden, U. S. Marshal, District of Nebraska.

DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

ORDER ORGANIZING THREE-JUDGE COURT—July 2, 1953

The above named plaintiffs having filed suit which is now pending in the above entitled court, seeking temporary and permanent injunction enjoining, suspending, annulling and setting aside a certain order of the Interstate Commerce Commission dated January 12, 1953, on the grounds, among others, that said order is and the enforcement thereof will be violative of certain provisions of the Constitution of the United States; and said application for temporary injunction having been presented to the Honorable John W. Delehant, United States District Judge for the District of Nebraska, and said Judge having notified the Chief Judge of the United States Court of Appeals for the Eighth Circuit thereof;

It Is Now Here Ordered that Honorable Joseph W. Woodrough, United States Circuit Judge, and Honorable Harvey M. Johnsen, United States Circuit Judge, be and they [fol. 27] hereby are designated to with *with* the above named Honorable John W. Delehant, United States District Judge for the District of Nebraska, to hear and determine said action and proceeding.

Dated this 2nd day of July, A. D. 1953.

Archibald K. Gardner, Chief Judge, United States Court of Appeals, for the Eighth Circuit.

ORDER ORGANIZING THREE-JUDGE COURT—July 13, 1953

The above named plaintiffs having filed suit which is now pending in the above entitled court, seeking temporary and permanent injunction enjoining, suspending, annulling and setting aside a certain order of the Interstate Commerce Commission dated January 12, 1953, on the grounds, among others, that said order is and the enforcement thereof will be violative of certain provisions of the Constitution of the United States; and said application for temporary injunction having been presented to the Honorable John W. Delehant, United States District Judge for the District of Nebraska, and said Judge having notified the Chief Judge of the United States Court of Appeals for the Eighth Circuit thereof;

It Is Now Here Ordered that Honorable John B. Sanborn, United States Circuit Judge, and Honorable Harvey M. Johnsen, United States Circuit Judge, be and they hereby [fol. 30] are designated to sit with the above named Honorable John W. Delehant, United States District Judge for the District of Nebraska, to hear and determine said action and proceeding.

The order organizing a three-judge court, dated herein July 2, 1953, is hereby revoked and cancelled for the reason that the Honorable Joseph W. Woodrough, United States Circuit Judge, deems himself disqualified to sit in said action.

Dated this 13th day of July, A. D. 1953.

Archibald K. Gardner, Chief Judge, United States Court of Appeals, for the Eighth Circuit.

ANSWER OF INTERSTATE COMMERCE COMMISSION—Filed July 17, 1953

The Interstate Commerce Commission, one of the defendants in the above-entitled case, hereinafter called the Commission, now and at all times hereafter saving and reserving to itself all and all manner of benefit and advantage of exception to the many errors and insufficiencies in the complaint contained, for answer thereunto or unto so much or such parts thereof as it is advised that it is material for it to answer, answers and says:

I

Answering the allegations of paragraphs I to III, inclusive, of the complaint, the Commission admits the same.

II

Answering the allegations of paragraph IV of the complaint, the Commission admits the same but refers to the complaint filed August 1, 1949, referred to in said paragraph, for a more full and complete statement as to the relief sought by said complaint.

[fol. 32] III

Answering the allegations of paragraph V of the complaint, the Commission admits the allegations contained in the first sentence of said paragraph. In answer to the remaining allegations of said paragraph V of the complaint, the Commission refers the Court to the complaint in the Commission proceedings, which is a part of the record before the Court, for a statement as to the exact allegations contained therein.

IV

Answering the allegations of paragraph VI of the complaint, the Commission admits the same and avers that the

American Short Line Railroad Association also intervened in support of the Rio Grande's complaint.

V

Answering the allegations of paragraph VII of the complaint, the Commission admits the same, except that it alleges that The Denver and Rio Grande Western Railroad Company, as well as the Union Pacific Railroad Company, has numerous branch lines connecting with and extending from its main lines in Utah and Colorado.

VI

Answering the allegations of paragraph VIII of the complaint, the Commission admits the first four sentences thereof; the Commission neither admits nor denies the remaining allegations of paragraph VIII because they are argumentative in character and require no further answer. The Commission denies that diversion of the traffic to the Rio Grande would short-haul or deprive the Union Pacific of its present haul to the extent of about 1,000 miles and would deprive other railroad plaintiffs herein of their entire haul on many thousand carloads of traffic annually.

[fol. 33]

VII

Answering the allegations of the first sentence of paragraph IX of the complaint, the Commission admits that the joint rates were cancelled, but not with the approval of the Commission, and alleges that the through routes referred to in said paragrah IX were not cancelled as alleged in this paragraph of the complaint. The Commission denies the allegations contained in the last sentence of said paragraph IX.

VIII

Answering the allegations of paragraph X of the complaint, the Commission denies the same and alleges that said allegations are not material to any of the issues that were before it, or to any of the issues before this Court.

IX

Answering the allegations of paragraphs XI, XII, and XIII of the complaint, the Commission admits the same but respectfully refers the Court to its report of January 12, 1953, annexed to the bill of complaint as Appendix B, for a more full and complete statement as to its conclusions and findings, and the reason therefor, that is contained in the excerpt quoted in paragraph XII of the complaint.

X

Answering the allegations of paragraph XV of the complaint, the Commission denies that its order is invalid for any of the reasons set forth in said paragraph or for any other reason or reasons.

XI

Answering the allegations of paragraph XI the complaint, the Commission denies that its said order of January 12, 1953, if permitted to become effective would irreparably injure and damage plaintiffs.

[fol. 34]

XII

The Commission admits and alleges that in the proceedings in Docket No. 30297, *The Denver and Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.*, 287 I. C. C. 611, involved in this suit, the parties thereto, including the plaintiffs herein, were, and that each of them was, accorded the full hearing provided for by the Interstate Commerce Act; that in said hearings a large volume of testimony and other evidence bearing upon the matters covered in said report and order of January 12, 1953, were submitted to the Commission for consideration, including testimony and other evidence submitted on behalf of plaintiffs herein by their counsel; that at said hearings and subsequently, in briefs filed in said proceedings, questions relating to said matters were fully argued and submitted to the Commission for determination on behalf of said parties by their respective counsel, including many of the particular questions raised by plaintiffs in this suit, whereupon the Commission determined said matters and entered and served upon all the parties to said proceedings, including

the plaintiffs herein, its said order and report of January 12, 1953, annexed to and made parts of the complaint as Appendices A and B; that said report and order included the Commission's findings of fact, conclusions and requirements in the premises, and that, upon the evidence as aforesaid, and as shown in and by said report, the Commission made the findings and stated the conclusions upon which its said report and order were based.

The Commission further alleges that the findings and conclusions of said report were and are, and that each of them was and is, fully supported and justified by the evidence submitted in said proceedings as aforesaid.

[fol. 35] The Commission further alleges that in making said report, it considered and weighed carefully, in the light of its own knowledge and experience, each fact, circumstance and condition called to its attention on behalf of the parties to said proceedings by their respective counsel, including many of the matters covered by the allegations of the complaint herein.

The Commission further alleges that said report and order of January 12, 1953, were not made or entered either arbitrarily or unjustly, or contrary to the relevant evidence, or without evidence to support them; that in making said report and order the Commission did not exceed the authority which had been duly conferred upon it, and the Commission denies each of and all the allegations to the contrary contained in the complaint. The Commission denies that its said report and order are unreasonable, arbitrary, unlawful, or null and void for any of the reasons set forth in said complaint, or for any other reason or reasons. The Commission denies that its said report and order cause, or will cause, plaintiffs either irreparable damage or any damage if said report and order are not enjoined.

Except as herein expressly admitted, the Commission denies the truth of each of and all the allegations contained in the complaint, insofar as they conflict either with the allegations herein, or with either the statements or conclusions of fact included in said order and report referred to and made parts of the complaint as Appendices A and B.

All of which matters and things the Commission is ready

to aver, maintain and prove as this Honorable Court shall direct, and hereby prays that said complaint be dismissed.

Interstate Commerce Commission, by Edward M. Reidy, Chief Counsel.

Samuel R. Howell, Assistant Chief Counsel, of Counsel.

[fols. 36-37] CERTIFICATE OF SERVICE (omitted in printing)

[fol. 38] CLERK'S CERTIFICATE OF SERVICE OF ANSWER ON JUDGES (omitted in printing)

[fol. 39] [File endorsement omitted]

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

PETITION OF THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY FOR LEAVE TO INTERVENE—Filed July 21, 1953

To The Honorable Judges of the District Court of the United States for the District of Nebraska, Omaha Division:

Now comes The Denver and Rio Grande Western Railroad Company and represents that it has an interest in the issues and matters involved in the above-entitled proceeding adverse to the interest of the plaintiffs herein and files this its petition for leave to intervene in and become a party defendant to said proceeding, with a right to be heard and to file an answer and other pleadings therein; and for cause shows:

1. That the petitioner, a corporation organized and existing under the laws of the State of Delaware, is a common carrier by railroad engaged in the transportation of persons

and property in intrastate, interstate and foreign commerce; that it owns and operates approximately 2400 miles of railroad in the States of Colorado, New Mexico and Utah; that it has interchange track connections and interchanges traffic with the Union Pacific at Denver, Colorado, [fol. 40] and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, and with the Western Pacific at Salt Lake City. The Rio Grande also has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, the Santa Fe and the Colorado and Southern, which is a part of the Burlington System. At Colorado Springs the Rio Grande interchanges traffic with the Santa Fe and the Rock Island. At Pueblo, Colorado, it interchanges traffic with the Santa Fe, the Colorado and Southern, and the Missouri Pacific. At Walsenburg, Colorado, it interchanges traffic with the Colorado and Southern, and at Trinidad, Colorado, with the Santa Fe and the Colorado and Southern.

2. The petitioner was the complainant in the proceeding before the Interstate Commerce Commission, the decision and order in which the plaintiffs herein seek to enjoin and set aside. By that complaint petitioner sought an order from the Interstate Commerce Commission requiring plaintiffs herein and other defendants in that case to establish joint rates on freight traffic via the route of the complainant through its Colorado and Utah gateways, between (a) points on the Union Pacific or its connections in Utah north of Ogden and in Idaho, Montana, Oregon, Washington and British Columbia, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Trinidad, etc., and points east thereof; and between Utah common points and the northwest territory served by the Union Pacific and its connections already described. In its decision of January 12, 1953, reported in 287 I. C. C. 611, the Commission granted a part of the relief sought by the petitioner as complainant in the proceeding described. It is that decision of the Commission which the plaintiffs seek to annul, set aside and enjoin in the instant proceeding.

[fol. 41] 3. Under the provisions of Section 2323 of the Judicial Code, 28 U. S. C. 2323, the petitioner is authorized to intervene in the above-entitled proceeding as of right.

Wherefore, petitioner prays for an order granting it leave to intervene as a defendant in the above-entitled case and to file an answer or other pleading herein with the right to have notice and to be treated in all other respects as if it had been named as defendant, and for such other and further relief as the Court shall determine.

Respectfully submitted, Harry L. Welch, Farm Credit Building, Omaha, Nebraska; Herbert M. Boyle, 1531 Stout Street, Denver, Colorado; Robert E. Quirk, 1116 Investment Building, Washington 5, D. C., Attorneys for Petitioner.

[fols. 42-43] CERTIFICATE OF SERVICE (omitted in printing)

[Title omitted]

MOTION OF WASHINGTON PUBLIC SERVICE COMMISSION, ET AL., TO INTERVENE AS PLAINTIFFS UNDER RULE 24, AND NOTICE THEREOF—Filed July 22, 1953

I

Washington Public Service Commission, Public Utilities Commissioner of Oregon, Board of Railroad Commissioners of the State of Montana, State Board of Equalization and Public Service Commission of Wyoming, State of Nebraska and Nebraska State Railway Commission, file this motion pursuant to Rule 24(a) and (c), (28 U. S. C. A., Federal Rules of Civil Procedure, Rules 17-51), to intervene as plaintiffs in the above-entitled proceeding.

II

Movants are duly constituted administrative agencies of the states named in the foregoing paragraph and are em-

powered and required to regulate and supervise railroads [fol. 45] and other transportation agencies operating intrastate in their respective states and to appear on behalf of and represent the public interest of their states in proceedings in which such public interest may be involved.

III

The complaint in the above-entitled proceeding seeks to enjoin, suspend, annul and set aside an order issued January 12, 1953, by the Interstate Commerce Commission (hereinafter called "Commission") in proceedings entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al.* Because the demands of the Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande"), in its complaint in said proceedings threatened seriously to jeopardize and harm the interest of shippers and the public generally in their respective states as well as the economic and general welfare of those states, movants intervened in said proceedings before the Commission and presented testimony and oral and written arguments in support of their contentions that the Commission should deny the demands of the Rio Grande and dismiss its complaint. Said order grants a large part of the Rio Grande's demands and potentially jeopardizes and threatens to deteriorate railroad service to shippers and citizens of said states without affording any additional transportation service or other compensating results or substantial benefits to anyone in any manner except the enhancement of the financial position of the Rio Grande.

IV

Movants believe said order is unlawful, null and void and they desire to intervene in the above-entitled proceeding and present to the Court on behalf of the public in their respective states the grounds upon which they contend that said order should be enjoined, annulled and set aside as referred to and shown in the attached pleading.

[fol. 46] Respectfully submitted, Don Eastvold, Attorney General of Washington; Robert L. Simpson,

Asst. Attorney General of Washington, Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington; John H. Carkin, C. W. Ferguson, Attorneys for Public Utilities Commissioner of Oregon, Public Service Building, Salem, Oregon; John H. Riskin, Attorney for Board of Railroad Commissioners of the State of Montana, Helena, Montana; Howard B. Black, Attorney General of Wyoming, Attorney for State Board of Equalization and Public Service Commission of Wyoming, Cheyenne, Wyoming; Clarence S. Beck, Attorney General of Nebraska; Bert L. Overcash, Assistant Attorney General of Nebraska, Attorneys for State of Nebraska and Nebraska State Railway Commission, State Capitol, Lincoln, Nebraska.

[Title omitted]

CLAIMS FOR WHICH INTERVENTION IS SOUGHT AS PLAINTIFFS BY WASHINGTON PUBLIC SERVICE COMMISSION, ET AL.—Filed July 22, 1953

I

Washington Public Service Commission, Public Utilities Commissioner of Oregon, Board of Railroad Commissioners of the State of Montana, State Board of Equalization and Public Service Commission of Wyoming, State of Nebraska and Nebraska State Railway Commission, seek intervention in the above-entitled proceeding upon the claims, and grounds and for the reasons and the purpose set forth in the complaint therein, which are hereby adopted and made the claims, grounds and reasons of these movants, together

with the matters hereinafter set forth, for enjoining, setting aside and annulling the order of the Interstate Commerce Commission dated January 12, 1953, in proceedings entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company vs. Union Pacific Railroad Company, et al.*

[fol. 48]

II

Movants intervened in said proceedings before the Interstate Commerce Commission (hereinafter called "Commission") and presented testimony, written and oral arguments showing that the demands of the Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") in that proceeding, were inconsistent with and contrary to the National Transportation Policy and other legislation enacted by Congress, and granting such demands in whole or in substantial part, would, through the diversion of traffic and revenue from the Union Pacific Railroad Company to the Rio Grande, impair and deteriorate the railroad transportation service of shippers and the public in said states; would jeopardize and impair the ability of the Union Pacific Railroad Company to continue to render its satisfactory and efficient transportation service in those said states; would result in curtailment of train service and railroad employment in numerous cities, towns and communities in said states, thus impairing and deteriorating the economic welfare of their citizens; and would result in wasteful and uneconomic transportation through diversion of traffic to the longer routes of the Rio Grande.

III

The evidence and showing in said proceeding required a finding and conclusion that there is no public need for through routes and joint rates as requested by Rio Grande; that said respective intervener states and the shippers and citizens therein represent and constitute the public interest directly involved and controlling in this case; that the Rio Grande has no remedial interest in the claims of any shippers, cannot maintain this proceeding as a representative of any shipper or public interest and cannot obtain relief herein upon any claims of individual shippers; that

no complaints have been filed with and no demands have been made by any shipper or the public upon the respective [fol. 49] commissions of said states and that the only purpose served by granting the Rio Grande's demands would be to improve its financial position to the harm and detriment of citizens and the public in said states.

IV

Movants by this intervention seek an opportunity to present to the Court their reasons and arguments as indicated above and in the allegations set forth in the complaint in the above-entitled case upon which they believe the Commission's order of January 12, 1953, should be enjoined and annulled.

Respectfully submitted, Don Eastvold, Attorney General of Washington, Robert L. Simpson, Asst. Attorney General of Washington, Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington; John H. Carkin, C. W. Ferguson, Attorneys for Public Utilities Commissioner of Oregon, Public Service Building, Salem, Oregon; John H. Risken, Attorney for Board of Railroad Commissioners of the State of Montana, Helena, Montana; Howard B. Black, Attorney General of Wyoming, Attorney for State Board of Equalization and Public Service Commission of Wyoming, Cheyenne, Wyoming; Clarence S. Beck, Attorney General of Nebraska, Bert L. Overcash, Assistant Attorney General of Nebraska, Attorneys for State of Nebraska and Nebraska State Railway Commission, State Capitol, Lincoln, Nebraska.

MOTION OF UNION PACIFIC RAILROAD COMPANY, ET AL., TO DENY AND STRIKE PETITION OF THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY FOR LEAVE TO INTERVENE—Filed July 23, 1953

Plaintiffs, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; and Wabash Railroad Company, move that the Court deny and strike the document filed July 21, 1953, entitled "Petition of The Denver and Rio Grande Western Railroad Company for Leave to Intervene" in the above-entitled proceeding, on the ground that said petition does not conform to the requirements of Rule 24(c) of the Federal Rules of Civil Procedure (Title 28 U. S. C. A., Federal Rules of Civil Procedure, Rules 17-51).

In support of their motion, plaintiffs invite the Court's attention to the fact that said petition does not inform the Court or the parties to the above-entitled suit of the claim or defense for which intervention is sought and is not accompanied by a pleading setting forth the claim or defense for which intervention is sought. In support of this motion, plaintiffs respectfully invite the Court's attention to *Cowan v. Tipton*, 1 F. R. D. 694; *Mullins v. De Soto Securities Co.*, 2 F. R. D. 502, 507; *Miami County Nat. Bank of Paola, Kan. v. Bancroft*, 121 F. 2d 921, 925; and *Interna-*
[fol. 51] *tional Brotherhood, Etc. v. Keystone F. Lines*, 123 F. 2d 326, 328.

Respectfully submitted, Elmer B. Collins, 1416 Dodge Street, Omaha 2, Nebraska; F. O. Steadry, 400 West Madison Street, Chicago 6, Illinois; Conrad Olson, Northern Pacific Railway Bldg., 5th &

Jackson Streets, St. Paul 1, Minnesota; L. E. Torinus, Jr., 175 East 4th Street, St. Paul 1, Minnesota; Roland J. Lehman, 80 East Jackson Blvd., Chicago 4, Illinois; Carson L. Taylor, 516 West Jackson Blvd., Chicago 6, Illinois; Eugene S. Davis, Railway Exchange Building, St. Louis 1, Missouri, Attorneys for Plaintiffs.

ORDER ALLOWING THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY TO WITHDRAW ITS PETITION OF INTERVENTION—August 14, 1953

On application duly made in court for leave of The Denver and Rio Grande Western Railroad Company to withdraw its petition to intervene heretofore filed in the above-entitled proceeding;

It Is Ordered that leave be and the same is hereby granted to The Denver and Rio Grande Western Railroad Company to withdraw its petition for leave to intervene heretofore filed in this cause.

Dated August 14, 1953.

By the Court, John W. Delehant, United States District Judge.

[fol. 55] [File endorsement omitted]

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

AMENDED PETITION OF THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY FOR LEAVE TO INTERVENE—Filed August 17th, 1953.

To The Honorable Judges of the District Court of the United States for the District of Nebraska, Omaha Division:

Now comes The Denver and Rio Grande Western Railroad Company and represents that it has an interest in the issues and matters involved in the above-entitled proceeding adverse to the interest of the plaintiffs herein and files this its amended petition for leave to intervene in and become a party defendant to said proceeding, with a right to be heard and to file an answer and other pleadings therein; and for cause shows:

1. That the petitioner, a corporation organized and existing under the laws of the State of Delaware, is a common carrier by railroad engaged in the transportation of persons and property in intrastate, interstate and foreign commerce; that it owns and operates approximately 2400 miles of railroad in the States of Colorado, New Mexico and Utah; that it has interchange track connections and interchanges traffic with the Union Pacific at Denver, Colorado, [fol. 56] and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, and with the Western Pacific at Salt Lake City. The Rio Grande also has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, the Santa Fe and the Colorado and Southern, which is a part of the Burlington System. At Colorado Springs the Rio Grande interchanges traffic with the Santa Fe and the Rock Island. At Pueblo, Colorado, it interchanges traffic with the Santa Fe, the Colorado and Southern, and the Missouri Pacific. At Wal-

senburg, Colorado, it interchanges traffic with the Colorado and Southern, and at Trinidad, Colorado, with the Santa Fe and the Colorado and Southern.

2. The petitioner was the complainant in the proceeding before the Interstate Commerce Commission, the decision and order in which the plaintiffs herein seek to enjoin and set aside. By that complaint petitioner sought an order from the Interstate Commerce Commission requiring plaintiffs herein and other defendants in that case to establish joint rates on freight traffic via the route of the complainant through its Colorado and Utah gateways, between (a) points on the Union Pacific or its connections in Utah north of Ogden and in Idaho, Montana, Oregon, Washington and British Columbia, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Trinidad, etc., and points east thereof; and between Utah common points and the northwest territory served by the Union Pacific and its connections already described. In its decision of January 12, 1953, reported in 287 I. C. C. 611, the Commission granted a part of the relief sought by the petitioner as complainant in the proceeding described. It is that decision of the Commission which the plaintiffs seek to annul, set aside and enjoin in the instant proceeding.

3. Under the provisions of Section 2323 of the Judicial Code, 28 U. S. C. 2323, the petitioner is authorized to intervene in the above-entitled proceeding as of right.

[fol. 57] 4. Petitioner, upon intervening herein, will show that, although the order of the Commission here assailed granted only part of the relief sought by petitioner in its complaint before the Commission, that order is not invalid for any of the reasons herein alleged by the plaintiffs, and therefore, the suit of the plaintiffs should be dismissed.

5. Accompanied herewith, pursuant to the provisions of Rule 24 (c) of the Federal Rules of Civil Procedure, 28 U. S. C. A., is the answer of your petitioner, which answer sets forth the defense for which intervention is sought.

Wherefore, petitioner prays for an order granting it leave to intervene as a defendant in the above-entitled case and to file the answer which is tendered herewith, with the right to have notice and to be treated in all other respects as if

it had been named as defendant, and for such other and further relief as the Court shall determine.

Respectfully submitted, Harry L. Welch, 730 Farm Credit Building, Omaha 2, Nebraska; Herbert M. Boyle, 1531 Stout Street, Denver, Colorado; Robert E. Quirk, 1116 Investment Building, Washington 5, D. C., Attorneys for Petitioner.

[Title omitted]

Answer of The Denver and Rio Grande Western Railroad Company, Intervening Defendant—Filed August 17, 1953

To the Honorable Judges of the District Court of the United States for the District of Nebraska, Omaha Division:

Your petitioner, The Denver and Rio Grande Western Railroad Company, hereinafter called the Rio Grande, pursuant to leave granted by this court to become an intervening defendant herein, files this its answer to the complaint of the plaintiffs. In filing this answer the Rio Grande does not waive but reserves the right to assail in a court of competent jurisdiction the validity of that part of the order of the Interstate Commerce Commission which arbitrarily imposed territorial and other restrictions in respect to the joint competitive rates prescribed and arbitrarily failed and refused to prescribe the joint competitive rates and competitive routes on all of the traffic and between all of the points involved in the complaint of the Rio Grande before that Commission. The Rio Grande now and at all times hereafter saving and reserving to itself all rights and all

manner of benefit and advantage of exception to the many [fol. 61] errors and insufficiencies contained in the complaint, for answer thereunto or unto so much of such parts thereof as it is advised that it is material for it to answer, answers and says:

I

The Rio Grande admits the allegations of paragraphs I to III, inclusive, of the complaint.

II

The Rio Grande admits the allegations of paragraph IV of the complaint herein, but refers to its complaint filed with the Interstate Commerce Commission August 1, 1949, described in paragraph IV of the complaint, for a more full and complete statement as to the relief sought by the Rio Grande in that complaint.

III

Answering the allegations of paragraph V of the complaint, the Rio Grande admits that the plaintiffs and 41 other defendants, out of a total of 217 defendants, filed answers to the complaint of the Rio Grande. For answers to the remaining allegations of paragraph V of the complaint, the Rio Grande refers the court to the complaint filed with the Interstate Commerce Commission which is a part of the record before the court, for a statement as to the allegations made therein.

IV

The Rio Grande admits the allegations of paragraph VI of the complaint and avers that the American Short Line Railroad Association also intervened in support of the complaint of the Rio Grande before the Commission.

V

The Rio Grande admits the allegations of paragraph VII of the complaint, except that it alleges that the Rio Grande, [fol. 62] as well as the Union Pacific Railroad Company, has numerous branch lines connecting with and extending from its main lines in Utah and Colorado.

VI

Answering the allegations of paragraph VIII of the complaint, the Rio Grande admits that the first three sentences thereof are substantially correct; the Rio Grande neither admits nor denies the remaining allegations of paragraph VIII because they are conclusions and argumentative in character which require no further answer. The Rio Grande denies that the diversion of traffic to it would short-haul or deprive the Union Pacific Railroad Company of its present haul to the extent of about 1,000 miles, and would deprive other railroad plaintiffs herein of their entire haul on many thousand carloads of traffic annually. The Rio Grande alleges that the joint competitive rates and the competitive routes via the Rio Grande sought by it and approved in part by the Interstate Commerce Commission in its report and order will in numerous instances result in longer hauls and in larger revenue to the Union Pacific than it now obtains in connection with its participation with plaintiffs and other railroads in numerous other joint competitive rates and routes.

VII

Answering the allegations of the first sentence of paragraph IX of the complaint, the Rio Grande admits that the joint rates therein described were canceled in 1906 and in 1912, but denies that the joint rates were canceled with the approval of the Interstate Commerce Commission, and the Rio Grande alleges that the through routes established in the year 1897 on the freight traffic involved via Ogden and Salt Lake City, Utah, and the route of the Rio Grande between points on the Oregon Short Line Railroad and the [fol. 63] Oregon Railroad and Navigation Company and points such as Trinidad, Pueblo, Canyon City, Colorado Springs, Denver and other Colorado common points and points east thereof, were not canceled in 1906 or 1912 by the tariffs which canceled the joint rates, or by any other means then or later adopted by plaintiffs, or any of them, but that such through routes continued in effect and are still in effect. The Rio Grande denies the allegations in the last sentence of paragraph IX.

VIII

The Rio Grande denies the allegations of paragraph X of the complaint and alleges that said allegations are neither relevant nor material to any of the issues that were before the Commission or to any of the issues that are before this court.

IX

The Rio Grande admits the allegations of paragraphs XI, XII and XIII of the complaint, but refers the court to the report and order of the Commission of January 12, 1953, annexed to the complaint as Appendix "B", (287 I. C. C. 611), for a more full and complete statement as to the findings, reasons and conclusions of the Commission than is recited in the excerpt quoted in paragraph XII of the complaint.

X

Answering the allegations of paragraph XIV of the complaint, the Rio Grande denies that the order and decision of the Commission is invalid for any of the reasons set forth in that paragraph. The Rio Grande further alleges that many, if not most of the averments in paragraph XIV of the complaint are mere conclusions and are argumentative in character, which require no further answer.

[fol. 64]

XI

Answering the allegations of paragraph XV of the complaint, the Rio Grande denies that the order of the Interstate Commerce Commission of January 12, 1953, if permitted to become effective, would cause irreparable injury and damage to plaintiffs.

XII

Except as herein expressly admitted, the Rio Grande denies each and every allegation contained in the complaint.

All of which matters and things the Rio Grande is ready to aver, maintain and prove as this Honorable Court shall direct, and hereby prays that said complaint be dismissed.

Harry L. Welch, Farm Credit Building, Omaha, Nebraska; Herbert M. Boyle, The Denver and Rio

Grande Western Railroad Company, 1531 Stout Street, Denver, Colorado; Robert E. Quirk, 1116 Investment Building, Washington 5, D. C.. Attorneys for The Denver and Rio Grande Western Railroad Company, Intervening Defendant.

[Title omitted]

Answer of The United States—Filed August 19, 1953.

The United States of America (hereinafter referred to as the United States), one of the defendants in this action, answering the complaint filed herein, says:

1. Answering the allegations contained in paragraphs I and II of the complaint, the United States admits the same, but respectfully refers the Court to the order of the Commission of January 12, 1953, which is attached as Appendix A to the complaint, for a complete and accurate statement of the matters contained in the order.

2. Answering the allegations contained in paragraph III of the complaint, the United States admits the same.

3. Answering the allegations contained in paragraph IV of the complaint, the United States admits that the Denver and Rio Grande Western Railroad Company filed a complaint before the Commission on August 1, 1949. This complaint is a part of the record before the Commission in this case, which will be submitted at the trial, and the Court is respectfully referred to the complaint for a true and accurate statement of all the matters contained therein. In so far as the allegations in paragraph IV of the complaint are inconsistent therewith, they are hereby denied.

[fol. 70] 4. Answering the allegations contained in para-

graph V of the complaint, the United States admits that answers to the complaint before the Commission were filed by the Union Pacific Railroad Company and numerous other defendants. The Court is respectfully referred to the complaint itself for the matters alleged therein, and in so far as the allegations contained in paragraph V of this complaint are inconsistent with the complaint before the Commission they are hereby denied.

5. Answering the allegations contained in paragraph VI of the complaint, the United States admits the same.

6. Answering the allegations contained in paragraph VII of the complaint, the United States avers that it does not have sufficient knowledge and information to form a belief as to the truth of such allegations and therefore denies the same.

7. Answering the allegations contained in paragraph VIII of the complaint, the United States admits the first four sentences thereof. With respect to the remaining allegations in the paragraph, the United States avers that they are argumentative in character and require no answer.

8. Answering the allegations contained in paragraph IX of the complaint, the United States avers that the allegations in said paragraph, which assert that no through routes and joint rates have ever been established between the Denver and Rio Grande Western Railroad Company and the Union Pacific Railroad Company, involve conclusions of law which require no answer. Further answering paragraph IX of the complaint, the United States denies that the Commission approved the cancellation of any joint rates between the Denver and Rio Grande Western Railroad Company and the Union Pacific Railroad Company in 1906 and 1912. With respect to the other allegations in paragraph IX of the complaint, the United States avers that it does not have [fol. 71] sufficient knowledge and information to form a belief as to the truth of such allegations, and therefore denies the same.

9. Answering the allegations contained in paragraph X of the complaint, the United States avers that it does not have sufficient knowledge and information to form a belief as to the truth of such allegations, and therefore denies the same. The United States further avers that the allegations contained in paragraph X of the complaint are immaterial

to the issues involved in this case, and in many respects are improper in their implications and should be completely disregarded by the Court.

10. Answering the allegations contained in paragraph XI of the complaint, the United States admits the same.

11. Answering the allegations contained in paragraph XII of the complaint, the United States respectfully refers the Court to the report and decision of the Commission attached to Appendix B to the complaint for a complete and accurate statement of the matters contained therein. In so far as the allegations of paragraph XII of the complaint are inconsistent with the report and decision attached to the complaint, they are hereby denied.

12. Answering the allegations contained in paragraph XIII of the complaint, the United States admits the same.

13. Answering the allegations contained in paragraph XIV of the complaint, the United States denies each and every allegation contained therein.

14. Answering the allegations contained in paragraph XV of the complaint, the United States denies that the plaintiffs will be irreparably injured by the order of the Commission of January 12, 1953. All other allegations in this paragraph of the complaint are admitted.

15. For further answer to the complaint, the United States avers that the order of the Commission assailed in this action was entered pursuant to its statutory authority after full and fair hearing upon substantial evidence, that [fol. 72] the report of the Commission is clear and carefully drawn and contains all required findings, and that the order is valid in all respects.

Wherefore, having fully answered the allegations in the complaint, the United States prays that the relief sought be denied, and that the complaint be dismissed with costs to the plaintiffs.

James E. Kilday, E. Riggs McConnell, Special Assistants to the Attorney General, Department of Justice, Washington 25, D. C., Attorneys for the United States of America. Stanley N. Barnes, Assistant Attorney General. Joseph T. Votava, United States Attorney.

AMENDED ORDER ORGANIZING THREE-JUDGE COURT—September 21, 1953

The above named plaintiffs having filed suit which is now pending in the above entitled court, seeking temporary and permanent injunction enjoining, suspending, annulling and setting aside a certain order of the Interstate Commerce Commission dated January 12, 1953, on the grounds, among others, that said order is and the enforcement thereof will be violative of certain provisions of the Constitution of the United States; and said application for temporary injunction having been presented to the Honorable John W. Delehant, United States District Judge for the District of Nebraska, and said Judge having notified the Chief Judge of the United States Court of Appeals for the Eighth Circuit thereof;

It is now here ordered that Honorable Harvey M. Johnsen, United States Circuit Judge, and Honorable John [fol. 74] C. Collett, United States Circuit Judge, be and they hereby are designated to sit with the above named Honorable John W. Delehant, United States District Judge for the District of Nebraska, to hear and determine said action and proceeding.

The order organizing a three-judge court herein, dated July 13, 1953, is hereby revoked and cancelled for the reason that the Honorable John B. Sanborn, United States Circuit Judge, has other engagements making it inadvisable for him to attempt to sit in this case.

Dated this 21st day of September, A. D. 1953.

Archibald K. Gardner, Chief Judge, United States Court of Appeals, for the Eighth Circuit.

PETITION OF SECRETARY OF AGRICULTURE FOR LEAVE TO INTERVENE—Filed October 2, 1953

To the Honorable Judges of the United States District Court for the District of Nebraska, Omaha Division:

I

The Secretary of Agriculture of the United States, under Rule 24 of the Rules of Civil Procedure, hereby moves the Court for an order permitting him to intervene as a defendant in this action so that he may make and establish the defenses in the proposed answer attached hereto.

II

The Secretary of Agriculture was a party in interest in the proceeding before the Interstate Commerce Commis-[fol. 78] sion entitled "Docket No. 30297—*Denver & Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.*, out of which this court action arose; and he may intervene in this action as a matter of right, as contemplated by Title 7, section 1291, and Title 28, section 2323, of the United States Code. For convenience of the Court there is quoted below the said section 1291 of Title 7, being section 201 of the Agricultural Adjustment Act of 1938:

> "(a) The Secretary of Agriculture is authorized to make complaint to the Interstate Commerce Commission with respect to rates, charges, tariffs, and practices relating to the transportation of farm products, and to prosecute the same before the Commission. Before hearing or disposing of any complaint (filed by any person other than the Secretary) with respect to rates, charges, tariffs, and practices relating to the transportation of farm products, the Commission shall cause the Secretary to be notified, and, upon application by the Secretary, shall permit the Secretary to appear and be heard.

"(b) If such rate, charge, tariff, or practice complained of is one affecting the public interest, upon application by the Secretary, the Commission shall make the Secretary a party to the proceeding. In such case the Secretary shall have the rights of a party before the Commission and the rights of a party to invoke and pursue original and appellate judicial proceedings involving the Commission's determination. The liability of the Secretary in any such case shall extend only to liability for Court costs.

"(c) For the purposes of this section, the Interstate Commerce Commission is authorized to avail itself of the cooperation, records, services, and facilities of the Department of Agriculture.

"(d) The Secretary is authorized to cooperate with and assist cooperative associations of farmers making complaint to the Interstate Commerce Commission with respect to rates, charges, tariffs, and practices relating to the transportation of farm products."

Wherefore, the Secretary of Agriculture prays that an order be entered permitting him to intervene in this action and to file the proposed answer attached hereto.

[fol. 79] Respectfully submitted, by direction of the Secretary of Agriculture of the United States.

Charles W. Bucy, Associate Solicitor, Henry A. Cockrum, Attorney, Office of the Solicitor, United States Department of Agriculture, Washington 25, D. C.

[fol. 80] IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

ANSWER OF THE SECRETARY OF AGRICULTURE OF THE UNITED STATES

The Secretary of Agriculture of the United States, intervening defendant in the above-captioned action, for answer to the complaint filed herein states:

I

Answering the allegations contained in paragraphs I to III, inclusive, of the complaint, the Secretary admits the same.

II

Answering the allegations contained in paragraph IV of the complaint, the Secretary admits the same but respect-[fol. 81] fully refers the Court to the Complaint filed on August 1, 1949, in the administrative proceeding before the Commission entitled No. 30297—*Denver & Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.*, referred to in said paragraph, for a full and complete statement respecting the matters contained in the complaint in the administrative proceeding.

III

Answering the allegations contained in paragraph V of the complaint, the Secretary admits the first sentence thereof. The Court is respectfully referred to the complaint filed on August 1, 1949, in the administrative proceeding before the Commission for a full and complete statement respecting the allegations contained therein and insofar as the allegations in paragraph V of the complaint herein are inconsistent with the complaint in the administrative proceeding they are denied.

IV

Answering the allegations contained in paragraph VI of the complaint, the Secretary admits the same.

V

Answering the allegations contained in paragraph VII of the complaint, the Secretary admits the same except that he avers that the Denver & Rio Grande Western Railroad Company and the Union Pacific Railroad Company have numerous branch lines connecting with and extending from their respective main lines in Utah and Colorado.

VI

Answering the allegations contained in paragraph VIII of the complaint, the Secretary admits the statements contained in the first four sentences thereof but avers that the remaining allegations in the paragraph are argumentative in character and require no answer.

[fol. 82]

VII

Answering the allegations contained in paragraph IX of the complaint, the Secretary admits that the joint rates were cancelled but denies that such action was taken with approval of the Commission and denies the remaining allegations in the paragraph.

VIII

Answering the allegations contained in paragraph X of the complaint, the Secretary avers that he does not have sufficient knowledge and information to form a belief as to the truth of such allegations, and therefore denies the same and avers that the allegations are immaterial to any issues before this Court.

IX

Answering the allegations contained in paragraphs XI, XII and XIII of the complaint, the Secretary admits the same but respectfully refers the Court to the decision of the Commission in No. 30297—*Denver & Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.*, attached as Appendix B to the complaint, for a full statement of the conclusions and findings of the Commission.

X

Answering the allegations contained in paragraph XIV of the complaint, the Secretary denies that the order of the Commission is invalid for any of the reasons set forth in the said paragraph.

XI

Answering the allegations contained in paragraph XV of the complaint, the Secretary denies that the Commission's order, if permitted to become effective, would irreparably injure and damage the plaintiffs.

[fol. 83] Wherefore, having fully answered the allegations in the complaint, the Secretary prays that the relief sought be denied and that the said complaint be dismissed.

Respectfully submitted, by direction of the Secretary of Agriculture of the United States. Charles W. Bucy, Associate Solicitor; Henry A. Cockrum, Attorney, Office of the Solicitor, United States Department of Agriculture, Washington 25, D. C.

ORDER GRANTING LEAVE TO INTERVENE TO SECRETARY OF AGRICULTURE—Oct. 8, 1953

On this 8th day of October, 1953, this cause comes on for ruling on the petition for leave to intervene filed herein on October 2, 1953 by the Secretary of Agriculture of the United States.

On consideration of such application, the court finds that it should be granted and allowed.

It is, Therefore, Considered and Ordered:

1. That the Petition for Leave to Intervene filed herein by the Secretary of Agriculture of the United States be and it hereby is granted and allowed; that the Secretary of Agriculture of the United States be and he hereby is permitted to intervene in this action and to file herein his answer, copy of which is attached to his Petition for Leave to Intervene;

2. That the clerk transmit forthwith copies of this order to counsel in the case.

By the Court: John W. Delehant Judge, U.S. District Court.

[Title omitted]

MOTION OF BROTHERHOOD OF LOCOMOTIVE ENGINEERS, ET AL TO INTERVENE AS PLAINTIFFS UNDER RULE 24, AND NOTICE THEREOF—Filed Oct. 15, 1953

I.

This motion to intervene as plaintiffs in the above-entitled proceeding is filed pursuant to Rule 24 (a) and (c) (28 U.S.C.A., Federal Rules of Civil Procedure, Rules 17-51) by M. P. Caveny of Omaha, Nebraska, and the employees of the Union Pacific Railroad Company who are represented by the following standard railroad labor organizations:

Brotherhood of Locomotive Engineers,
Brotherhood of Locomotive Firemen and Enginemen,
Order of Railway Conductors,
Brotherhood of Railroad Trainmen,
American Train Dispatchers Association,
Railroad Yardmasters of America,
Order of Railroad Telegraphers,
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes,
Brotherhood of Railroad Signalmen of America,
Brotherhood of Maintenance of Way Employes,
American Railway Supervisors Association,
International Association of Machinists,
International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America,
[fol. 91] International Brotherhood of Blacksmiths, Drop Forgers and Helpers,
Sheet Metal Workers International Association,
International Brotherhood of Electrical Workers,
Brotherhood Railway Carmen of America,
International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers.

II.

Movants are duly constituted and recognized collective bargaining representatives of employees of Union Pacific Railroad Company, designated as such by the National Mediation Board under the provisions of the Railway Labor Act. The Congress has permitted them to intervene, in Section 17, (11) of the Interstate Commerce Act (49 U.S.C.A. § 17 (11)) reading as follows:

> *Intervention of representatives of employees.* (11) Representatives of employees of a carrier, duly designated as such, may intervene and be heard in any proceeding arising under this chapter and chapters 8 and 12 of this title affecting such employees.

The above right of intervention was held to be absolute, in *Brotherhood of Railroad Trainmen* v. *Baltimore & Ohio R. Co.*, 331 U.S. 519 (526-7). The movants have an interest in the above-entitled civil action because they are adversely affected by the order issued under date of January 12, 1953 by the Interstate Commerce Commission (hereinafter called the Commission) because the placing into effect of that order will result in the loss of employment by many of the movants, and the displacement and downgrading of others, and the necessity of removal of their families and homes by others to different localities of residence. The movants have an interest because this proceeding involves matters which embrace their wages and working conditions and will exercise a vital effect upon the movants, their families and dependents.

M. P. Caveny, of Omaha, Nebraska, is the General Chairman of the Brotherhood of Locomotive Engineers on the Union Pacific Railroad Company, and has been designated to speak for and represent in this action not only the locomotive engineers, but all Union Pacific employees who are represented by the standard railroad labor organizations named in this motion to intervene as plaintiffs. They were duly admitted by the Interstate Commerce Commission as interveners in the proceeding entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company* vs. *Union Pacific Railroad Company, et al,* and were permitted to introduce testimony and evidence at the

hearings, and appeared in oral argument and briefs, as [fol. 92] parties in interest in the proceeding before the Commission, and therefore they have a statutory absolute right under the provisions of U.S.C. Title 28, § 45a to appear as parties in the Civil Action herein.

III.

The complaint in the above-entitled proceeding seeks to enjoin, suspend, annul and set aside an order issued under date January 12, 1953, by the Commission in proceedings entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.* These railroads will be referred to below as the Rio Grande, and the Union Pacific. Because the demands of the Rio Grande in its complaint in said proceedings were proven to seriously jeopardize and harm the interests of the Union Pacific employees, as well as the shippers and the general public, movants intervened in said proceedings before the Commission and presented testimony, written evidence, and oral and written arguments in support of the contention by the Union Pacific employees that the Commission should deny the demands of the Rio Grande and dismiss the complaint. The order of the Commission, however, granted a large part of the Rio Grande's demands, thereby jeopardizing the employment, seniority rights, earnings, pension rights, and other working conditions of the Union Pacific employees because of potential reductions in train service and consequent abolishing of non-operating employment, resulting from the diversion of traffic from the Union Pacific to the Rio Grande.

IV.

Movants verily believe said order by the Commission is unlawful, null and void, and would result in deterioration of railroad service to shippers and citizens in the affected States without providing additional transportation service or substantial advantages to anyone in any fashion except the benefit to the financial position of the Rio Grande. Movants desire to intervene in the above-entitled proceeding and present to the Court on behalf of the approximately [fol. 93] 55,000 employees of the Union Pacific the grounds

upon which they contend that said order should be enjoined, annulled and set aside as referred to and shown in the attached pleading.

Respectfully submitted, M. P. Caveny of Omaha, Nebraska, Chairman of The Union Pacific General, Chairmen's Association on behalf of the employees of Union Pacific Railroad Company who are represented by the following labor organizations: 1. Brotherhood of Locomotive Engineers, 2. Brotherhood of Locomotive Firemen and Enginemen, 3. Order of Railway Conductors, 4. Brotherhood of Railroad Trainmen, 5. American Train Dispatchers Association, 6. Railroad Yardmasters of America, 7. Order of Railroad Telegraphers, 8. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, 9. Brotherhood of Railroad Signalmen of America, 10. Brotherhood of Maintenance of Way Employes, 11. American Railway Supervisors Association, 12. International Association of Machinists, 13. International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America, 14. International Brotherhood of Blacksmiths, Drop Forgers and Helpers, 15. Sheet Metal Workers International Association, 16. International Brotherhood of Electrical Workers, 17. Brotherhood Railway Carmen of America, 18. International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers, Justus R. Moll, 1001 Connecticut Avenue, Washington 6, D. C., J. D. Cranny, 412 Farnham Building, Omaha 2, Nebraska, J. P. Moore, 412 Farnham Building, Omaha 2, Nebraska, Attorneys for said Movants.

[fol. 94] NOTICE OF MOTION (omitted in printing)

[fol. 95] [File endorsement omitted]

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

CLAIMS FOR WHICH INTERVENTION IS SOUGHT AS PLAINTIFFS BY BROTHERHOOD OF LOCOMOTIVE ENGINEERS—Filed Oct. 15, 1953

I.

M. P. Caveny of Omaha, Nebraska, chairman of the Union Pacific General Chairmen's Association, for himself and on behalf of the approximately 55,000 employees of the Union Pacific Railroad Company (hereinafter called the Union Pacific) who are represented by the following standard railroad labor oganizations:

Brotherhood of Locomotive Engineers,
Brotherhood of Locomotive Firemen and Enginemen,
Order of Railway Conductors,
Brotherhood of Railroad Trainmen,
American Train Dispatchers Association,
Railroad Yardmasters of America,
Order of Railroad Telegraphers,
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes,
Brotherhood of Railroad Signalmen of America,
Brotherhood of Maintenance of Way Employes,
American Railway Supervisors Association,
International Association of Machinists,
International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America,
International Brotherhood of Blacksmiths, Drop Forgers and Helpers,
Sheet Metal Workers International Association,
[fol. 96] International Brotherhood of Electrical Workers,
Brotherhood Railway Carmen of America,
International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers,

seek intervention in the above-entitled proceeding upon the claims, and grounds and for the reasons and the purposes set forth in the complaint therein, which are hereby adopted and made the claims, grounds and reasons of these movants, together with the matters hereinafter set forth, for enjoining, setting aside and annulling the order of the Interstate Commerce Commission (hereinafter called the Commission) dated January 12, 1953, in proceedings entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company* vs. *Union Pacific Railroad Company, et al.*

II.

Movants intervened in said proceedings before the Commission and presented testimony, evidence, written and oral arguments showing that the demands of the Denver and Rio Grande Western Railroad Company (hereinafter called the Rio Grande) in that proceeding were inconsistent with and contrary to the National Transportation Policy and other legislation enacted by the Congress of the United States, and that the granting of such demands or any portion of them would, through the diversion of traffic from the Union Pacific to the Rio Grande, result in the impairment and deterioration of railroad transportation service of the shippers and the public. It would jeopardize and impair the ability of the Union Pacific to continue rendition of its efficient and satisfactory transportation service, and result in curtailment of train service, and reduction of railroad employment in many cities and towns, causing drastic adverse effect upon the economic welfare of their citizens. The diversion of traffic from the Union Pacific to the Rio Grande would result in wasteful, uneconomic transportation on the longer, more mountainous routes of the Rio Grande.

III.

In the said proceeding before the Commission the evidence and showing required a finding and conclusion that no public need exists for through routes and joint rates as requested by the Rio Grande. The shippers, citizens, carrier employees and communities affected therein represent and constitute the public interest involved and controlling in this proceeding. The Rio Grande has no remedial in-

[fol. 97] terest in the claims of any shippers and cannot maintain this proceeding as a representative of any shipper or public interest and cannot obtain relief herein upon any claims of individual shippers. No complaints have been filed with the respective State commissions, and no demands have been made by any shipper or the public upon the State commissions. The only purpose served by granting any part of the Rio Grande's demands would be to improve the financial position of the Rio Grande to the harm and detriment of citizens, the employees of the Union Pacific and other carriers who are plaintiffs in this civil action, and the public.

IV.

The National Transportation Policy (49 U.S.C., preceding §§ 1) is the substantive law of the Interstate Commerce Act (hereinafter called the Act). All the provisions of the Act shall be administered within that declaration of policy by the Congress. The policy includes the phrase: "and to encourage fair wages and equitable working conditions;". Regularity of employment by means of seniority rights is an important working condition. Instead of preserving and encouraging regularity and continuity of employment, the Commission's order would destroy it for a large number of Union Pacific employees, thus creating employee wastage. In addition, a large number of other Union Pacific employees would be placed in adverse positions because of reductions in earnings, and being required to move to other localities in order to continue working for the Union Pacific. This would be contrary to the letter and spirit of the National Transportation Policy.

V.

The Commission in its report, January 12, 1953, outlined the disastrous adverse effect upon the conditions of employment of the Union Pacific employees but failed to include them in its General Discussion and Ultimate Fact Findings, or in its Conclusions. It left this problem hanging in the air, stating there is no specific provision in section 15 (3) or (4) requiring that conditions be imposed for the protection of employees who may be affected adversely by diversion of traffic from the Union Pacific to the Rio Grande. The

Commission had taken the same position regarding employee-protection under section 1 (18-20) of the Act, re- [fol. 98] fusing to impose conditions for employees adversely affected by abandonments, but after several years of such decisions, the matter went to the Supreme Court resulting in unanimous decision holding that specific power is not required in the statute and that the employees should be given full consideration under "public convenience and necessity" as well as "public interest." On the same date of the Commission's report and order, January 12, 1953, the Supreme Court upheld the doctrine of implied powers of the Commission in *American Trucking Associations, et al,* v. *United States and Interstate Commerce Commission,* 344 U.S. 298, 73 S. Ct. 307.

Movants believe the order of the Commission is unlawful, null and void, and should be enjoined by the Court, annulled and set aside. But in the alternative, if the Court should permit any part of the Commission's order to become effective, it should impose conditions for the protection of carrier-employees adversely affected pursuant to or as a result of the order, or the Court should remand the problem of employee-proteetion to the Commission with instructions that it shall impose suitable conditions for protection of carrier-employees.

VI.

Movants believe that the order of the Commission is unlawful also in that it failed to follow its own policy and practice in order proceedings which might adversely affect the carrier-employees involved. The practice provides: (1) if definitely shown that no employees will be affected, no condition is necessary; (2) if not definitely shown that no employees will be affected, jurisdiction is reserved for four years; (3) if shown that employees will be affected, conditions for their protection are prescribed (*Chicago & North Western Ry. Co. et al, merger,* 261 I.C.C. 672).

In the proceeding resulting in the Commission's report and order dated January 12, 1953, it was definitely shown that certain trains would be discontinued, and the total potential loss of employment was 5,144 persons. The Commission's order granted sufficient diversion of traffic to amount to 25% of the total potential, which would reduce

the loss in employment to 1,286 jobs. If the Rio Grande should succeed in getting only 20% of this potential traffic it would amount to loss of 257 jobs. The evidence proved that reduction in carloads of freight results in reduction of [fol. 99] carrier-employees. Freight trains are not operated unless there is sufficient freight to justify running a train.

The evidence is clear that under the Report and Order, there will be loss of employment and resulting adverse effects upon the Union Pacific's employees. Under the above-cited policy of the Commission, it should be required to make provisions for employee-protection. The Commission has found that it is not possible to estimate accurately how much traffic might be diverted, and therefore it cannot be said how many Union Pacific employees will be displaced, or to ascertain the names of the individual employees. Such has been true in cases under other sections of the Act, but the Commission has imposed conditions, or reserved jurisdiction therefor. The Court should enjoin the Report and Order, as null and void, or in the alternative, the Court should remand the proceeding to the Commission, instructing that employee-protection be provided.

VII

Although the Commission in its Report indicated that section 15 (3) and (4) do not specify protection for the employees, it is clear that the statutes give the Commission power to impose conditions. The Commission has given consideration to the adverse effect upon carrier-employees in previous orders, such as *Cancelation of Rates and Routes via Short Lines*, 245 I.C.C. 183. This proceeding involved five short line carriers. The through routes and joint rates were cancelled entirely on one of these small carriers, in which the employees made no protest, and the potential loss in revenue did not exceed $500 per year. In the other four carriers involved, cancelation was denied, in full or in part. The Commission stated: "The livelihood of these employees and their home investments are placed in jeopardy by the proposed cancelation, and their representatives appeared in opposition thereto." This is the situation of the Union Pacific employees in this civil action. Their livelihood and their home investments are placed in jeop-

ardy by the Commission's Report and Order dated January 12, 1953. The Order should be enjoined as null and void, or in the alternative, the Court should remand the proceeding and instruct the Commission to provide employee-protection.

VIII

The movants have requested employee-protection. The [fol. 100] measure of such protection has been spelled out by the Congress, in section 5 (2) (f) of the Act. The costs of such protection should be borne by the beneficiary of the Commission's order dated January 12, 1953, i.e., the Rio Grande. This principle is found in several decisions by the Commission, such as *Gulf, Mobile & Ohio R. Co., Purchase Securities*, 267 I.C.C. 145, 151; *Gulf, Mobile & Ohio R. Co., Abandonment*, 282 I.C.C. 311, 337; *International G. N. R. Co. Trustee Trackage Rights*, 282 I.C.C. 30, 37. It would be unjust and unreasonable to deprive the Union Pacific of hundreds of carloads of revenue freight by government order, and also require the Union Pacific to bear the expense of employee-wastage resulting from the order. The beneficiary should bear the expense, as the Commission has decreed in the cases cited. The expense will be reduced year by year through deaths, pensions, and the securing of other employment, and at the end of the protective period there will be no more expense.

Employee-protection is actually the charging of employee-wastage to operating expenses. When the carriers abandoned many steam locomotives which had been made obsolete by diesel power, they charged the steam locomotives to depreciation accounts built up from charges to operating expenses. If certain Union Pacific employees become unemployed because of the diversion of traffic to the Rio Grande, this employee-wastage should be compensated for the protective period from operating expenses of the beneficiary-carrier. It can reduce or eliminate the expense simply by giving employment to the adversely affected Union Pacific employees. The Commission's order will create no new traffic but will divert Union Pacific traffic to the Rio Grande. The Rio Grande will need more employees, and the Union Pacific will require less employees.

Employee-wastage is not a new idea. It has been before

the highest court. The Supreme Court held unanimously that a business may be required to carry the burden of employee-wastage in *United States and Interstate Commerce Commission* v. *Lowden et al*, 308 U.S. 225, 240, 60 S. Ct. 248, 256, 84 L.Ed. 208.

IX

The *Lowden* case was decided prior to the 1940 amendments to the Act. At the time it was decided, the only statutory grounds for employee-protection were "the public [fol. 101] interest" plus a statutory power by which the Commission may attach conditions to its order. In its unanimous decision, opinion by Mr. Justice Stone, the Court held the phrase "'public interest'" as used in the Transportation Act, 1920, includes the interests of the carrier-employees.

It is significant that section 15 (3) was added by the Transportation Act, 1920, and the "public interest" of section 15 (3) comes within the above definition by the Court. And section 15 (3 also includes the statutory power to attach conditions to the Commission's order. Here we find the same two factors which were present in the *Lowden case.*

Three years after the *Lowden* decision, the Supreme Court decided another case. In abandonments under section 1 (18-20) of the Act, the Commission had refused to impose conditions for employee-protection on the ground that section 1 (18-20) did not specifically make such provision, and this section was based upon "public convenience and necessity" rather than upon "public interest." Again the Supreme Court unanimously decided that employee-protection could be imposed, and the Commission has done so in many subsequent proceedings. (*Interstate Commerce Commission and Pacific Electric Ry. Co.* v. *Railway L.E.A. et al*, 315 U.S. 373, 378, 62 S. Ct. 717, 86 L.Ed. 904).

Section 15 (3) has these same factors, the basis for decision being the "public interest", and the power to impose conditions is given the Commission. In this proceeding the Commission has shown that employees of the Union Pacific will be affected adversely, but in its conclusions

it has left this problem unresolved. The Court should enjoin the Report and Order as null and void, or in the alternative, the Court should remand the proceeding to the Commission with directions that employee-protection be imposed.

X

Movants by this intervention request an opportunity to present to the Court their reasons and arguments as indicated above and in the allegations set forth in the com- [fol. 102] plaint in the above-entitled case upon which they believe the Commission's order dated January 12, 1953, should be enjoined and annulled.

Respectfully submitted,

M. P. Caveny of Omaha, Nebraska, Chairman of The Union Pacific General Chairmen's Association, for the employees of Union Pacific Railroad Company who are represented by the following labor organizations: Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, American Train Dispatchers Association, Railroad Yardmasters of America, Order of Railroad Telegraphers, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, Brotherhood of Railroad Signalmen of America, Brotherhood of Maintenance of Way Employes, American Railway Supervisors Association, International Association of Machinists, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America, International Brotherhood of Blacksmiths, Drop Forgers and Helpers, Sheet-Metal Workers International Association, International Brotherhood of Electrical Workers, Brotherhood Railway Carmen of America, International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers, Justus R. Moll, 1001 Connecticut Avenue, Washington 6, D. C., J. D. Cranny, 412 Farnham Building, Omaha 2, Nebraska, J. P. Moore, 412 Farnham

Building, Omaha 2, Nebraska, Attorneys for said Interveners.

ORDER ALLOWING INTERVENTION UNDER RULE 24 OF BROTHERHOOD OF LOCOMOTIVE ENGINEERS, ET AL.—October 19, 1953

On this 17th day of October, 1953 at 10 o'clock a.m., this cause comes on for hearing upon the motion under Rule 24 for leave to intervene, served and filed herein in behalf of M. P. Caveny, Chairman of The Union Pacific General Chairmen's Association, representing sundry labor organizations.

On consideration whereof, the court finds that said motion for leave to intervene is well taken and should be granted and allowed.

It is, therefore, considered and ordered:

1. That said motion for leave to intervene be and it hereby is granted and allowed;

2. That the moving party be and he hereby is given and granted leave to intervene herein, and to serve and file appropriate pleadings in furtherance of his intervention;

3. That the clerk transmit forthwith copies of this order to counsel in the case.

By the Court: John W. Delehaut, Judge, U. S. District Court.

ORDER SETTING ACTION FOR TRIAL—October 17, 1953

On this 17th day of October, 1953 at 10 o'clock a.m., the undersigned, one of the judges of this court, and counsel for sundry parties hereto confer upon the subject of an appropriate date for the trial of this action, after the giving of notice to counsel of such conference.

On consideration whereof, the court finds that an appropriate date for the trial of this action on its merits is Monday, November 23, 1953 commencing at 10 o'clock a.m.

It is, therefore, considered and ordered:

1. That this action be and it hereby is set for trial on its merits before the duly constituted court of three judges, heretofore designated for membership upon the court, commencing at 10 o'clock a.m. on November 23, 1953;

2. That the clerk transmit forthwith copies of this order to counsel in the case.

By the Court: John W. Delehaut, Judge, U. S. District Court.

PETITION OF IDAHO FARM BUREAU FEDERATION FOR LEAVE TO INTERVENE—Filed Nov. 5, 1953

To the Honorable Judges of the United States District Court for the District of Nebraska, Omaha Division.

Comes now The Idaho Farm Bureau Federation and hereby moves the court for an order pursuant to Rules 24 (a) and (c) of the Federal Rules of Civil Procedure permitting petitioner to intervene as a defendant in the above-entitled proceeding.

1. That the Idaho Farm Bureau Federation represents 11,000 farm families who are residents of the State of Idaho and is an Idaho corporation, with offices in Pocatello, Idaho, and has an important and pecuniary interest in the issues involved in the instant proceeding.

[fol. 108] 2. That petitioner was an intervening complainant before the Interstate Commerce Commission in the proceeding in which the order of that Commission is here assailed, and therefore is authorized to intervene in this proceeding as of right under the provisions of Section of 2323 of the Judicial Code, 28 U.S.C. 2323.

3. Accompanied herewith, pursuant to the provisions of Rule 24 (c) of the Federal Rules of Civil Procedure, 28 U.S.C.A., is the answer of the petitioner, which answer sets forth the defense for which intervention is sought.

Wherefore, petitioner prays for an order granting it leave to intervene as a defendant in the above-entitled proceeding and to file the answer which is tendered herewith, with the right to have notice and to be treated in all

other respects as if it had been named as defendant, and for such other and further relief as the court shall determine.

Lloyd D. Browning, General Counsel Idaho Farm Bureau Fed., Raymond E. McGrath, Attorneys for Petitioner.

[fol. 109] IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

ANSWER OF THE IDAHO FARM BUREAU FEDERATION

Your petitioner, The Idaho Farm Bureau Federation, pursuant to leave granted by this court to become an intervening defendant herein, files this its answer to the complaint of the plaintiffs. The Idaho Farm Bureau Federation now and at all times hereinafter saving and reserving to itself all rights and all manner of benefit and advantage of exception to the many errors and insufficiencies contained in the complaint, for answer thereunto or unto so much of such parts thereof as it is advised that it is material for it to answer, answers and says:

I.

For its answer and to avoid reiteration and repetition, petitioner adopts as its own and as if pleaded herein the [fol. 110] answer, together with the reservations in the answer, filed in this court by The Denver and Rio Grande Western Railroad Company, an intervening defendant herein.

Wherefore, having answered the allegations in the complaint, The Idaho Farm Bureau Federation prays that the relief sought be denied, and that the complaint be dismissed with costs to the plaintiffs.

Lloyd D. Browning, General Counsel Idaho Farm Bureau Federation, Raymond E. McGrath, Attorneys for Petitioner.

PETITION OF THE PUBLIC SERVICE COMMISSION OF UTAH FOR LEAVE TO INTERVENE—Filed November 9, 1953

To the Honorable Judges of the United States District Court for the District of Nebraska, Omaha Division:

Comes now The Public Service Commission of Utah and hereby moves the court for an order pursuant to Rules 24 (a) and (c) of the Federal Rules of Civil Procedure permitting petitioner to intervene as a defendant in the above-entitled proceeding.

1. That petitioner is an agency of the state of Utah, with offices in Salt Lake City, Utah. The citizens of the State of Utah have an important and pecuniary interest in the issues involved in the instant proceeding.

2. That petitioner was an intervening complainant before the Interstate Commerce Commission in the proceeding in which the order of that Commission is here assailed, and therefore is authorized to intervene in this proceeding as of right under the provisions of Section 2323 of the Judicial Code, 28 U.S.C. 2323.

[fol. 120] 3. Accompanied herewith, pursuant to the provisions of Rule 24 (c) of the Federal Rules of Civil Procedure, 28 U.S.C.A., is the answer of the petitioner, which answer sets forth the defense for which intervention is sought.

Wherefore, petitioner prays for an order granting it leave to intervene as a defendant in the above-entitled proceeding and to file the answer which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as defendant, and for such other and further relief as the court shall determine.

Public Service Commission of Utah, E. R. Callister, Jr., Attorney General, State of Utah, By Peter M. Lowe, Deputy Attorney General, Raymond E. McGrath, First National Bank Building, Omaha, Nebraska, Attorneys for Petitioner.

[Title omitted]

ANSWER OF THE PUBLIC SERVICE COMMISSION OF UTAH

Your petitioner, The Public Service Commission of Utah, pursuant to leave granted by this court to become an intervening defendant herein, files this its answer to the complaint of the plaintiffs. The Public Service Commission of Utah now and at all times hereinafter saving and reserving to itself all rights and all manner of benefit and advantage of exception to the many errors and insufficiencies contained in the complaint, for answer thereunto or unto so much of such parts thereof as it is advised that it is material for it to answer, answers and says:

I

For its answer and to avoid reiteration and repetition, petitioner adopts as its own and as if pleaded herein the answer, together with the reservations in the answer, filed in this court by The Denver and Rio Grande Western Railroad Company, an intervening defendant herein.

[fol. 122] Wherefore, having answered the allegations in the complaint, the Public Service Commission of Utah prays that the relief sought be denied, and that the complaint be dismissed with costs to the plaintiffs.

Public Service Commission of Utah, E. R. Callister, Jr., Attorney General, State of Utah, By Peter M. Lowe, Deputy Attorney General, Raymond E. McGrath, First National Bank Building, Omaha, Nebraska, *Attorneys for Petitioner.*

ORDER ALLOWING INTERVENTION UNDER RULE 24 OF PUBLIC SERVICE COMMISSION OF UTAH—NOV. 9, 1953

On this 9th day of November, 1953, at 2:58 o'clock p.m., this cause comes on for hearing upon the motion under Rule 24 for leave to intervene, served and filed herein in behalf of the Public Service Commission of Utah which is an agency of the State of Utah with offices in Salt Lake City, Utah.

On consideration whereof, the court finds that said motion for leave to intervene is well taken and should be granted and allowed.

It is, therefore, considered and ordered:

1. That said motion for leave to intervene be and it hereby is granted and allowed;

2. That the moving party be and he hereby is given and granted leave to intervene herein, and to serve and file appropriate pleadings in furtherance of his intervention;

3. That the clerk transmit forthwith copies of this order to counsel in the case.

By the Court: John W. Delehant, Judge, U. S. District Court.

PETITION OF BROTHERHOOD COMMITTEES ON THE DENVER & RIO GRANDE WESTERN RAILROAD CO., FOR LEAVE TO INTERVENE—Filed November 13, 1953

To the Honorable Judges of the United States District Court for the District of Nebraska, Omaha Division:

Come now the following Brotherhood Committees on The Denver and Rio Grande Western Railroad Company, to-wit:

1. General Committee of Adjustment of Brotherhood of Locomotive Engineers;
2. General Grievance Committee of Brotherhood of Locomotive Firemen and Enginemen;
3. General Committee of Adjustment of Order of Railway Conductors;
4. General Grievance Committee of Brotherhood of Railroad Trainmen;
5. General System Committee of American Train Dispatchers Association;
6. General Grievance Committee of Railroad Yardmasters of America;
7. General Committee of System Division 49 of Order of Railroad Telegraphers;
8. System Board of Adjustment of Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees;

[fol. 129] 9. General Committee of Brotherhood of Railroad Signalmen of America;

10. Mountain and Plains Federation of Brotherhood of Maintenance of Way Employees;
11. General Adjustment Committee of Switchmen's Union of North America;
12. District No. 20 of International Association of Machinists;
13. District No. 22 of International Brotherhood of

Boilermakers, Iron Ship Builders and Helpers of America;

14. System Council No. 27 of International Brotherhood of Blacksmiths, Drop Forgers and Helpers;
15. District Council No. 10 of Sheet Metal Workers International Association;
16. System Council No. 21 of International Brotherhood of Electrical Workers;
17. Rio Grande-Western Pacific and Affiliated Lines Joint Protective Board of Brotherhood of Railway Carmen of America;
18. System Council No. 33 of International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers;
19. Protective Order of Dining Car Waiters and Attendants, Local No. 384 of Hotel and Restaurant Employees International Alliance, AF of L;
20. Local No. 383 of Hotel and Restaurant Employees International Alliance, AF of L;

and hereby move the Court for an order pursuant to Rules 24(a) and (c) of the Federal Rules of Civil Procedure permitting petitioners to intervene as defendants in the above entitled proceeding, and as ground therefor state:

1. That petitioners are all the functioning and carrier-wide Brotherhood Committees on The Denver and Rio Grande Western Railroad Company and represent all employees on The Denver and Rio Grande Western Railroad Company system under the Railway Labor Act and have an important interest in this proceeding and in the rights of Labor as these rights will be affected by a decision of the issues here involved;

2. That in the proceeding before the Interstate Commerce Commission in which was entered the order herein [fol. 130] assailed, petitioners were intervening complainants and under the provisions of Sec. 2323 of the Judicial Code 28 U.S.C.A. 2323, petitioners are authorized to intervene in this proceeding as of right;

3. That accompained herewith as required by the provisions of Rule 24(c) of the Federal Rules of Civil Pro-

cedure, 28 U.S.C.A., is the answer of petitioners which answer sets forth the defense for which intervention is sought;

Wherefore petitioners pray for an order granting them leave to intervene as defendants in the above entitled proceeding and permitting them to file the answer tendered herewith, with right to have notice and be treated in all respects as if named defendants, and for such other and further relief as the Court shall deem proper in the premises.

Raymond E. McGrath, First National Bank Building, Omaha, Nebraska; Alden T. Hill, Woolworth Building, Fort Collins, Colorado, Attorneys for Petitioners.

ANSWER OF INTERVENERS, BROTHERHOOD COMMITTEES ON THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

Your petitioners, being all the Brotherhood Committees on the Denver and Rio Grande Western Railroad, those hereinafter named following the signature of their attorneys, pursuant to leave granted by this Court to become an intervening defendants herein, file their answer to the complaint of the plaintiffs as follows and say:

1. That these petitioners and intervening defendants save and reserve all rights and manner of benefits and advantage of exceptions to the errors and insufficiencies in the complaint herein;

2. For their answer and to avoid repetition, these petitioners and intervening defendants adopt as their own answer as if pleaded herein the answer, together with the reservations in the answer, filed in this Court by the Denver and Rio Grande Western Railroad Company, an intervening defendant herein, so that the allegations, admissions and denials, of such answer are the allegations,

[fol. 132]

admissions and denials, made by these intervening defendants.

Wherefore, these intervening defendants pray that the relief sought be denied, and that the complaint be dismissed at plaintiffs costs.

Raymond E. McGrath, First National Bank Building, Omaha, Nebraska; Alden T. Hill, Woolworth Building, Fort Collins, Colorado.

Attorneys for Intervening Defendants:

General Committee of Adjustment of Brotherhood of Locomotive Engineers;
General Grievance Committee of Brotherhood Locomotive Firemen and Enginemen;

PETITION OF NATIONAL LIVE STOCK PRODUCERS ASSOCIATION FOR LEAVE TO INTERVENE—Filed Nov. 19, 1953

To the Honorable Judges of the United States District Court for the District of Nebraska, Omaha Division.

Comes now the National Live Stock Producers Association, and hereby moves the court for an order pursuant to Rules 24 (a) and (c) of the Federal Rules of Civil Procedure permitting petitioner to intervene as a defendant in the above-entitled proceeding.

I

That petitioner is a cooperative organization composed of over 500,000 live stock growers and feeders throughout

the live stock producing areas of the country, and twenty-two cooperative live stock associations, with its principal offices at 139 North Clark Street, Chicago 2, Illinois; it is initially interested in the sale, purchase and transportation of live stock in interstate commerce and has an important and pecuniary interest in the issues involved in the above proceeding.

[fol. 144]

II

That petitioner was an intervening complainant before the Interstate Commerce Commission in the proceeding in which the order of that Commission is here assailed, and therefore is authorized to intervene in this proceeding as of right under the provisions of Section 2323 of the Judicial Code, 28 U.S.C. 2323.

III

That petitioner will receive certain benefits from the order of the Interstate Commerce Commission in Docket No. 30297 (287 I.C.C. 611), wherein the Commission found (interalia) that through routes and joint rates are necessary and desirable in the public interest via Ogden or Salt Lake City, Utah, in connection with the Rio Grande, on ordinary live stock, in carloads, from origins in the Northwest to various destinations in the United States. The joint rates found necessary and desirable in the public interest are not to exceed the joint rates maintained on ordinary livestock from or to the same points over the Union Pacific routes.

IV

Accompanied herewith, pursuant to the provisions of Rule 24 (c) of the Federal Rules of Civil Procedure, 28 U.S.C.A., is the answer of the petitioner, which answer sets forth the defense for which intervention is sought.

Wherefore, petitioner prays for an order granting it leave to intervene as a defendant in the above-entitled proceeding and to file the answer which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as defendant, and

for such other and further relief as the court shall determine.

Raymond E. McGrath, First National Bank Building, Omaha, Nebraska., Lee J. Quasey, Suite 1507, 139 N. Clark St., Chicago 2, Illinois., Attorneys for Petitioner.

[Title omitted]

ANSWER OF NATIONAL LIVE STOCK PRODUCERS ASSOCIATION, INTERVENING DEFENDANT.

Your petitioner, National Live Stock Producers Association, pursuant to leave granted by this court to become an intervening defendant herein, files this its answer to the complaint of the plaintiffs. The National Live Stock Producers Association now and at all times hereinafter saving and reserving to itself all rights and all manner of benefit and advantage of exception to the many errors and insufficiencies contained in the complaint, for answer thereunto or unto so much of such parts thereof as it is advised that it is material for it to answer, answers and says:

I

That petitioner will receive certain benefits from the order of the Interstate Commerce Commission in Docket No. 30297 (287 I.C.C. 611), wherein the Commission found (interalia) that through routes and joint rates are necessary and desirable in the public interest via Ogden or Salt Lake City, Utah, in connection with the Rio Grande, on ordinary live stock, in carloads, from origins in the North-
[fol. 146] west to various destinations in the United States. The joint rates found necessary and desirable in the public interest are not to exceed the joint rates maintained on ordinary live stock from or to the same points over the Union Pacific routes.

II

For its further answer and to avoid reiteration and repetition, petitioner, National Live Stock Producers Association, adopts as its own and as if pleaded herein the answer, together with the reservations in the answer, filed in this court by The Denver and Rio Grande Western Railroad Company, an intervening defendant herein.

Wherefore, having answered the allegations in the complaint, the petitioner, National Live Stock Producers Association, prays that the relief sought be denied, and that the complaint be dismissed with costs to the plaintiffs.

Raymond E. McGrath, First National Bank Building, Omaha, Nebraska., Lee J. Quasey, Suite 1507, 139 N. Clark St. Chicago 2, Illinois., Attorneys for Petitioner.

ORDER ALLOWING INTERVENTION OF NATIONAL LIVE STOCK PRODUCERS ASSOCIATION—NOV. 23, 1953

On this 23rd day of November, 1953, at 10 o'clock, a.m., this cause comes on for hearing upon the motion under Rule 24 for leave to intervene, served and filed herein on behalf of the National Live Stock Producers Association, a cooperative organization composed of live stock growers and feeders throughout the live stock producing areas of the country and of cooperative live stock associations, with its principal offices at Chicago, Illinois.

On consideration whereof, the court finds that said motion for leave to intervene is well taken and should be granted and allowed.

It is, Therefore, Considered and Ordered:

1. That said action for leave to intervene be and it hereby is granted and allowed;

2. That the moving party be and he hereby is given and granted leave to intervene herein, and to serve and file appropriate pleadings in furtherance of his intervention;

3. That the clerk transmit forthwith copies of this order to counsel in the case.

[fol. 155] Mr. Justice R. Moll, Washington, D. C., and Messrs. J. D. Cranny and J. P. Moore, Omaha, Nebraska, for M. P. Caveny of Omaha, chairman of the Union Pacific General Chairmen's Association.

Mr. Ray McGrath for Idaho Farm Bureau, Public Service Commission of Utah, Committees of the Railroad Brotherhoods who work for the D& RG, and National Livestock Producers Association.

Messrs. Warren H. Ploeger and Roland J. Lehman, on the brief, Mesrs. Nye F. Morehouse, M. L. Countryman, Jr. Edwin C. Matthias, J. C. Gibson, M. E. Bluhm, Joseph H. Miller, Of Counsel, for the plaintiffs.

Mr. Edward M. Reidy, Chief Counsel, and Mr. Samuel R. Howell, Asst. Chief Counsel, Of Counsel, for Interstate Commerce Commission.

Mr. Henry B. Cockrum, Acting Assoc. Solicitor, United States Department of Agriculture, Washington, D.C.; Mr. Charles W. Buey, Assoc. Solicitor, was with him on the brief for the Department of Agriculture.

Mr. E. Riggs McConnell, Special Asst. to the Attorney General, Washington, D.C.; Messrs. Stanley N. Barnes,

Asst. Attorney General, James E. Kilday, Special Asst. to the Attorney General, and Donald R. Ross, United States Attorney, were with him on the brief for the United States.

Before JOHNSEN and COLLET, Circuit Judges, and DELEHANT, District Judge.

COLLET, Circuit Judge.

The Denver and Rio Grande Western Railroad Company, hereafter referred to as the Rio Grande, filed a complaint with the Interstate Commerce Commission requesting the Commission to order the Union Pacific Railroad Company (and other lines comprising the Union Pacific System, together with connecting carriers comprising, in all, 221 railroads, which will be referred to as the Union Pacific) to file joint rates over through routes with the Rio Grande for the transportation of freight from and to certain areas. The Commission granted the request as to certain types of freight with substantial territorial limitations. The Union Pacific *Union Pacific* brings this action [fol. 156] to enjoin and set aside the order. A reference to a map of the United States will be helpful in understanding the following summarization of the facts.

The northern terminus of the Rio Grande is Ogden, Utah. From Ogden it runs south through Salt Lake City and Provo, Utah, then southeasterly and east, entering Colorado at about the south central part of that state, thence east and somewhat north through the central part of Colorado to Dotsero, west of Denver, where it divides, one branch going on east to Denver, the other swinging south and east to Pueblo, Colorado. From Denver the Rio Grande line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serve territory in southern Utah, northwestern New Mexico, and southern Colorado. These latter lines are not of special importance in this action. At Denver, Colorado Springs, Pueblo, and Trinidad the Rio Grande maintains joint rates and through routes with lines other than the Union Pacific to destinations east and south of those points.

The Union Pacific (including connecting lines which were defendants in the I.C.C. proceedings) serves the greater part of the east, south and midwestern sections of the United States. Traffic involved in this action from those

sections flowing westward over the Union Pacific and connecting lines converges at Denver and Cheyenne, Wyoming, then moves westwardly across the southern part of Wyoming to Ogden and Salt Lake City. One of its lines runs from Salt Lake City south to Provo, Utah, thence southwest to Los Angeles, California.

[fol. 157] The Union Pacific also serves the northwestern part of the United States, including that part of Utah north of Ogden, Montana, Oregon, and Washington. It is traffic from and to this latter territory, referred to herein as the northwest territory or area, which is the principal subject of the present controversy.

The Union Pacific maintains joint rates and through routes over its lines and with many connecting carriers from and to the northwest territory through Ogden and Salt Lake City, Cheyenne, Denver, and points east and south to the Atlantic Seaboard and the Gulf of Mexico. For a comparatively short distance, from Ogden through Salt Lake City to Provo, where the Los Angeles line swings southwest, the Union Pacific and the Rio Grande parallel and serve some common points. To and from these points, joint rates and through routes are maintained by the Union Pacific over its lines with the northwest territory and the area east of Cheyenne and Denver served by the Union Pacific. The Union Pacific does not maintain joint through rates with the Rio Grande, with certain exceptions not material in this proceeding. Freight moving from the northwest territory to points in southern Utah and Colorado on the Rio Grande, finally destined to points east of the eastern terminl of the Rio Grande, moves on the combination rate, consisting of the total of the Union Pacific rate to Ogden via Union Pacific and the Rio Grande rate from Ogden via Rio Grande to points on the Rio Grande. The same is true of the rates on shipments from points east of Denver to those points on the Rio Grande finally destined to the northwest territory. This combination of rates, or combination rate, as it is called, is considerably higher than a joint [fol. 158] through rate. Freight moving from and to the northwest territory from and to all points east of Denver [1]

[1] "All points east of Denver" will be used as the designation of all points included in the Commission's order to or

served by the Union Pacific and connecting carriers has the benefit of joint through rates via Union Pacific, with accompanying in-transit privileges en route, while freight originating on the Union Pacific in the northewest territory and moving to the area east of Denver, which is routed over the Rio Grande, pays the combination rate without in-transit privileges at points on the Rio Grande. The result is that practically all of the long-haul traffic originating in the northewest area and destined to the area east of [fol. 159] Denver goes over the Union Pacific all the way on the lower joint and through rates. Since the formal record before the Commission consists of 1,957 pages of

---

from which through routes and joint rates were ordered established by the Union Pacific with the Rio Grande. The Commission's order in this respect was: (287 I.C.C. 611, 659)

"We conclude:

"1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, then immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

testimony, 57 exhibits and 74 verified statements, the foregoing statement is obviously only a salient outline of the basis for the Rio Grande complaint. For a complete understanding of the intricacies of the case by one unfamiliar with the record, it will be necessary to refer to the extensive report and order of the Commission reported in 287 I.C.C. 611.

The Commission ordered the establishment of through routes and joint rates via Ogden or Salt Lake City by the Union Pacific with the Rio Grande for the transportation of granite and marble monuments in carloads from points of origin in Vermont and Georgia to destinations in the northwest area, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, in carloads, from points of origin in the northwest territory to destinations "east of Denver." The order is based upon three primary basic findings. First, that the through routes and joint rates are necessary and desirable in the public interest, in order to provide *adequate and more economic transportation*; second, that the existing joint rates maintained by the Union Pacific are and will be *unjust and unreasonable and unduly prejudicial* to shippers and receivers of freight using or desiring to use the Rio Grande and *unduly preferential to shippers and receivers of freight using the Union Pacific*; third, that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad between the northwest area and [fol. 160] points on the Bamberger line between Ogden and Salt Lake City, while refusing to establish joint rates with the Rio Grande to and from the same points on the Rio Grande between Ogden and Salt Lake City, subjects the Rio Grande to discrimination in violation of Sec. 3(4) of the Interstate Commerce Commission Act. Finding No. 1 has heretofore been quoted in footnote 1. Findings 2 and 3 are set out below.[2] To understand the import of these find-

---

[2] "2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferen-

ings it is necessary to explain the factual theory upon which they are based.

First as to the finding that the rates ordered are necessary and desirable to provide adequate and more economic transportation. Located along the route of the Rio Grande, between Ogden on the west and Denver, Pueblo and Trinidad on the eastern termini, are a number of livestock feeders. Some of these are ranchers who graze and feed cattle and sheep. Others are operators of beet sugar plants which produce livestock feed as a by-product and feed the by-product to livestock. These livestock feeders buy cattle and sheep in the northwest area, which are ultimately destined for the market, and ship them to points on the [fol. 161] Rio Grande for feeding. Many of the principal livestock markets of the United States are located east of privileges which would permit these livestock feeders to ship from the northwest area to the feeding points on the Rio Grande and then reship on joint through rates to points east of Denver, Pueblo, and Trinidad, they are at a substantial rate disadvantage with similar livestock feeders following the same practice who are located on the Union Pacific lines between Ogden and Provo, and between Ogden and Salt Lake City and Denver, located on the Union Pacific, who reship to points east of Denver. They are also at a substantial rate disadvantage in purchasing livestock in the northwest area in competition with buyers located on the Union Pacific lines west of Denver and Cheyenne who have the benefit of joint through rates and in-transit privileges over the Union Pacific.

---

tial of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act."

287 I.C.C. 611, 659-660.

Also located on the Rio Grande are a number of industries which clean, package, process, freeze, and store fresh fruits, vegetables, poultry, food products, butter, eggs and beans, and ship them on east to points beyond Denver, Pueblo and Trinidad. These industries are at a comparable rate disadvantage, without in-transit privileges, as livestock feeders, and for the same reasons.

Monument dealers obtaining or shipping granite and marble from Vermont and Georgia are unable to ship full carloads to the northwest territory and have the rate advantage of partially unloading cars at intermediate points on the Rio Grande under in-transit privileges of through routes [fol. 162] and joint rates which are available at points located on the Union Pacific.

This finding, which is finding No. 1 quoted in the footnote, is held by the Commission to justify ordering the establishment of through routes and joint rates under Secs. 15 (3) and 15 (4). Title 49 U.S.C.A. Secs. 15 (3) and 15 (4). Sec. 15(3) empowers the Commission to establish through routes and joint rates when necessary or desirable in the public interest,[3] but Sec. 15 (4) prohibits the Commission from ordering the establishment of through routes by a carrier under Sec. 15 (3) without the carrier's consent if the result would be to short-haul that carrier unless, as provided by Sec. 15 (4), the Commission finds that the through route is needed in order to provide (1) *adequate*, and (2) *more efficient* or *more economic* transportation.[4]

---

[3] "Sec. 15 (3) The Commission may, and it shall whenever, deemed by it to be necessary or desirable in the public interest, * * * establish through routes, * * * and joint rates, * * * applicable to the transportation of * * * property by carriers subject to this part, * * *."

[4] "Sec. 15 (4) In establishing any such through route the Commission shall not * * * require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, * * * (b) unless the Commission finds that the through route

[fol. 163] The Commission accurately states the legal effect of Sec. 15 (4) in its report (Denver & R.G.W. R. Co. v. Union Pac. R. Co., 287 I.C.C. 611) at page 655 as follows:

"Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the 'through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation.' Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In Pennsylvania R. Co. v. United States, 323 U. S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in D. A. Stickell & Sons, Inc., v. Alton R. Co., supra, the supreme Court said that the expressions 'more efficient or more economic transportation, as used in section 15 (4), 'may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found.' These latter considerations are not determinative, however, unless the existing routes can be found not to provide 'adequate' transportation.

"In the proceeding just mentioned, the Supreme

---

proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs, * * *"

Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests."

Was there evidence to support the finding of inadequacy? Only in the event there was inadequacy of transportation can the question of efficiency or economy be reached. It is clear from the report and the evidence that the finding of inadequacy is based upon the lack of in-transit privileges by shippers and receivers located on the Rio Grande as to the commodities embraced in the order. There is no evidence to support a finding that the physical transportation facilities furnished by the Union Pacific between the northwest area, on the one hand, and points east of Denver are [fol. 164] inadequate. There is abundant support, however, for the finding that the service is inadequate to patrons of the Rio Grande, located on the Rio Grande between Ogden on the west and Denver, Pueblo, and Trinidad on the east (not served by the Union Pacific between Ogden and Provo), who do not have in-transit privileges with respect to freight moving from the northwest area which is to be reshipped to points east of Denver, if under the law the lack of in-transit privileges may constitute "inadequacy." That is also true as to the service to shippers of marble and granite from Vermont and Georgia to initial points on the Rio Grande who need the in-transit privileges of partial unloading or processing en route, incident to reshipment to final destination points beyond Ogden in the northwest area. The foregoing inadequacies are based upon the premise that the lack of in-transit privileges constitutes inadequacy of service within the meaning of clause (b) of Sec. 15 (4). The Union Pacific vigorously contends that it does not. This question presents the crux of this case. If, as the Union Pacific contends, in-transit rights and privileges are matters over which the Commission under the law has no control, the existence or granting of which is subject only to managerial discretion of the carrier, and relate only to economy or efficiency of transportation to the exclusion of considerations of adequacy of transportation, then the lack of in-transit privileges will not suffice as a proper basis

for ordering "adequate" transportation. The argument is made to effect that since the transportation facilities are now available over the Union Pacific and the Rio Grande on the higher combination rates, the present nonexistence of in-transit privileges relates only to the cost or economy [fol. 165] of transportation. Reference is made to excerpts from opinions which it is said support the conclusion that the Commission may not under its general regulatory power force a carrier to provide or establish in-transit privileges. The question has many ramifications. We are confronted only with determining whether a finding of inadequacy of transportation may be legally based upon the absence or lack of services which are incidents of and to in-transit privileges. If that be true, the Commission may order the establishment of through routes and joint rates, with their ordinary incidents—in-transit privileges—when such action is necessary in order to provide adequate transportation. We are convinced that the Commission does have that power. Pennsylvania R. Co., et al. v. United States, et al., 323 U. S. 588, 54 F. Supp. 381.

But the inadequacy established by the evidence does not extend to shipments from the northwest area to initial destinations east of Denver. The same is true of shipments of monuments from Vermont and Georgia to points of initial destination in the northwest territory. Transportation service is now adequate between those points. There is ample evidence to support the finding that the establishment of the through routes and joint rates between the northwest area and points on the Rio Grande (not also served by the Union Pacific between Ogden and Provo), as to shipments which require in-transit privileges at points on the Rio Grande for reshipment to points east of Denver, will result in more economical transportation. Differences in mileage and other comparative factors are for the Commission to weigh, evaluate and determine. Its ultimate factual conclusion may not be overturned when supported by the [fol. 166] evidence. But, again, there is no evidence that the service is inadequate or that more economical transportation service will result with respect to shipments from the northwest area to points between Odgen and Provo served by both the Union Pacific and the Rio Grande and to be

reshipped to final points of destination east of Denver. The transportation facilities are shown by the evidence now to be adequate, with in-transit privileges between those points over the Union Pacific. And that service is as economical via the Union Pacific as it would be over the Union Pacific and the Rio Grande if the through route and joint rates were established. The evidence therefore sustains the finding of inadequacy and the need for more economical transportation only as to (1) carload shipments of commodities embraced in the Commission's order from points in the northwest territory destined to points of final destination east of Denver which require in-transit privileges at points on the Rio Grande; (2) shipments of granite and marble monuments from Vermont and Georgia to final destinations in the northwest territory which require in-transit privileges at points on the Rio Grande not also served by the Union Pacific. If the order had been so limited to the evidence it would eliminate short-hauling the Union Pacific except as to shipments requiring service which is now inadequate and which service the Union Pacific cannot now give. It would eliminate the charge made by the Union Pacific that the order was for the purpose of assisting the Rio Grande to meet its financial needs, and, more important, it would have rested squarely within the authority of clause (b) of Sec. 15 (4).

[fol. 167] The second finding, that the combination rates maintained by the Union Pacific and the Rio Grande are unduly prejudicial to shippers using or desiring to use the Rio Grande and unduly preferential to shippers and receivers using the Union Pacific to the extent they exceed the joint and through rates available to shippers located on the Union Pacific, is made for the purpose of bringing the order within the authorization of Sec. 3(1). Title 49 U.S.C.A. Sec. 3 (1). That section is as follows:

> "Sec. 3 (1) It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic in any respect

whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

The situation which this finding seeks to correct, simply stated, is that the shippers and receivers of the designated commodities located on the Rio Grande who do not have in-transit privileges and joint and through rates are at an economic disadvantage compared to shippers and receivers located on the route of the Union Pacific who do have joint and through rates and in-transit privileges.

If the prejudice and preference shown by the evidence falls within the prohibition of Sec. 3 (1) the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15 (3) and 15 (4) heretofore considered. But the prejudice and preference pro-
[fol. 168] hibited by Sec. 3 (1) relate to prejudice and preference shown by one carrier or a combination of carriers between the entities named in 3 (1) which are served by the one carrier or the combination acting as one. The prohibition of Sec. 3 (1) is intended to prevent a carrier from giving preferences or advantages, over which the carrier has control, to one of the entities named and not to another. It does not apply to a situation such as this, where the comparison of preferences and advantages or prejudices and disadvantages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion. Although the factual situation in Central R. Co. of New Jersey v. United States, 257 U.S. 247, was different, the purpose of Sec. 3 (1) was there stated as follows: (Loc. cit. 259-260)

"What Congress sought to prevent by that section, as originally enacted, was not differences between localities in transportation rates, facilities and privileges, but unjust discrimination between them by the same

carrier or carriers. Neither the Transportation Act 1920, February 28, 1920, c. 91, 41 Stat. 456, nor any earlier amendatory legislation has changed, in this respect, the purpose or scope of § 3."

If the Commission could order through routes and joint rates between two or more competing railroads under Sec. 3 (1) merely because a shipper entity described in Sec. 3 (1) located on one railroad had a transportation advantage over such an entity located on the other railroad, the prohibition of Sec. 15 (4) would be practically emasculated. The evidence of preference, advantage, prejudice or disadvantage, under these circumstances, furnishes no basis for the order under Sec. 3 (1).

The third finding, heretofore quoted, to the effect that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad to and from points in the north- [fol. 169] west area and points on the Bamberger line from Ogden to Salt Lake City, inclusive, while refusing to maintain joint rates with the Rio Grande on shipments from the northwest area to the points served by both the Rio Grande and the Bamberger Railroad from Ogden to Salt Lake City, inclusive, discriminates against the Rio Grande, is based on Sec. 3 (4), which is as follows:

"Sec. 3 (4) All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

The Bamberger Railroad is an electric line operating only from Ogden to Salt Lake City, serving those cities and

intermediate points. The Rio Grande serves all points served by the Bamberger. The criterion for determining unlawful discrimination under Sec. 3 (4) is stated by the Commission at page 658 of its order as follows:

> "A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred."

The Commission found there was no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande. Upon this record that factual conclusion may not be disturbed. Section 3 (4) clearly prohibits such discrimination. The Commission's order in this respect is valid under Sec. 3 (4).

[fol. 170] Considerable attention has been given by the Union Pacific in its brief to the action of the Commission in rejecting a portion of evidence offered by it in an attempt to show improper conduct in the preparation and presentation of the Rio Grande's case before the Commission. We do not find justification for serious consideration of that question.

Findings of Fact

I

The finding of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points.

II

The record supports the Commission's finding that present transportation service between the northwest area and points of initial destination on the Rio Grande (not also served by the Union Pacific) between Ogden and Provo) is inadequate and also inefficient and uneconomical as to shipments of the commodities specified by the Commission from [fol. 171] the northwest area to initial points of destination on the Rio Grande west of Denver, which require in-transit privileges enabling their reshipment on joint through rates to points of final destination east of Denver.

III

The record supports the Commission's finding that present transportation service for granite and marble monuments, in carloads, originating in Vermont and Georgia, consigned to initial destination points on the Rio Grande, requiring unloading and in-transit privileges for continued movement to points in the northwest territory, is inadequate and uneconomical and that the establishment of joint rates and through service is necessary in order to provide adequate and more economic transportation for such shipments.

IV

The evidence supports the finding that as to designated items of traffic moving from the northwest area, shippers and receivers of freight located on the Rio Grande are at an economic disadvantage compared with shippers and receivers of freight from the northwest area who are located on the Union Pacific. But there is no community of interest between the Union Pacific and the Rio Grande and hence there is no discrimination by the Union Pacific within the prohibition of Sec. 3 (1).

V

The evidence supports the finding of the Commission, referred to and quoted herein as Finding 3, that unlawful discrimination prohibited by Sec. 3 (4) is being practiced by the Union Pacific in refusing to establish through routes [fol. 172] and joint rates with the Rio Grande comparable to those existing between the Union Pacific and the Bam-

berger Line on traffic moving from the northwest area to points served by both the Bamberger Line and the Rio Grande between Ogden and Salt Lake City.

Conclusions of Law

I

The absence of in-transit and other privileges involved herein, incident to through joint rates will, under the law, support a finding that transportation service without such services and privileges is inadequate within the meaning of Sec. 15 (4). The evidence therefore supports the finding of the Commission that the establishment of through routes and joint rates between the Union Pacific and the Rio Grande is necessary in order to provide adequate and more economic transportation of the designated commodities in carloads originating in the northwest area, consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trinidad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo and Trinidad. As to such commodities the order of the Commission is valid under Secs. 1, 15 (3) and 15 (4) of the Act and does not violate the direction of Sec. 15 (4) that reasonable preference be given the carrier which originates the traffic.

II

The evidence supports the finding of the Commission that it is necessary, in order to provide adequate and more economic transportation of shipments of marble and granite monuments in carloads from points in Vermont and Georgia [fol. 173] to points of final destination in the northwest territory, which require unloading and in-transit privileges at points on the Rio Grande incident to the continuation of the shipment to the northwest area, that through routes and joint rates be established between the Union Pacific and the Rio Grande as to such shipments.

III

To the extent that the order of the Commission requires the establishment of through routes and joint rates between

the Union Pacific and the Rio Grande on carload traffic moving from the northwest area to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such nature or character that it does not require stoppage-in-transit privileges, which are incident to in-transit privileges, and as to all traffic moving from the northwest area to points of original destination east of Denver, Pueblo or Trinidad, said order is not valid, because Sec. 15 (4) constitutes a limitation on the power of the Commission to order establishment of through routes which will result in short-hauling the Union Pacific, unless that be necessary in order to provide, inter alia, adequate transportation. Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destinations specified in this paragraph, that factual premise, essential to the validity of the order, is lacking.

[fol. 174]

IV

To the extent the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande at Ogden on carload traffic moving from the northwest area to points between Ogden and Salt Lake City, inclusive, served by both the Rio Grande and the Bamberger Line, the order is valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3 (4) of the Act.

To the extent stated in the foregoing opinion, findings of fact, and conclusions of law, the order of the Commission will be enjoined. The cause is remanded to the Interstate Commerce Commission for such further proceedings as it may deem appropriate, consistent herewith.

[File endorsement omitted.]

[fol. 175] Civil Action No. 76-53

UNION PACIFIC R. CO.

vs.

UNITED STATES

JOHNSEN, Circuit Judge, dissenting:

The Commission has here used standards and criteria for the exercise of its power to compel through routes and joint rates, which I think are beyond the warrant of the statute. The majority opinion upholds in part the result which the Commission has so reached.

What the Commission purports to make the primary basis for its establishing of through routes and joint rates over the Rio Grande is "perishable food articles". Here, as taken from its Report, are the manner and perspective of its approach to the question.

"Growers [of perishable food articles in Idaho, located on the Union Pacific] * * * market such products throughout the United States. In order to get as wide a distribution as possible, those growers and other growers in the northwestern area [that part of Utah lying north of Ogden, and the States of Idaho, Montana, Oregon and Washington] need as many markets and outlets as possible."[1] 287 I.C.C. at page 642. To comprehend or evaluate that need, says the Commission, "it is necessary to consider the nature, extent and functioning of our intricate and far-flung commodity marketing system." P. 655. The

[1] It should be noted that the situation covered by the Commission's order does not involve the matter of joint rates to intermediate points on the Rio Grande as final destinations. Joint rates already apply to such traffic. The question is one of through routes and joint rates for traffic having a billing origin and destination outside of Rio Grande territory, and for which the Rio Grande therefore would merely be serving as a "bridge" line only, while the Union Pacific, on whose branch lines most of the traffic originates, would be caused to lose a line-haul thereon of 975 miles.

importance, in our condition of growing population and national development, of having "a constantly expanding flow of diverse commodities" and "particularly articles of [fol. 176] food" is emphasized. The comment is made that "A complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible," and the truism is expressed that "Adequate transportation facilities and services are required for the proper functioning of the system." P. 656.

Then follows what seems to me to represent the crux of the Commission's concept and standard in what it did.

1. "Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and *over as many routes as possible*. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that *as much flexibility as possible in the distribution process be permitted*." (Emphasis mine.) P. 656.

2. "A number of services, not only at origin and destination, but enroute, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities." In-transit privileges, "such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit," are available at various points on the Union Pacific to through-shippers, on the basis of the joint rates applicable over that route, and similar privileges exercisable on the Rio Grande could be made available to such shippers, at a lower cost than under the present combination rates, by establishing competitive through routes and joint rates over that road, so that those desiring to have the benefit of these additional facilities would be able to enjoy them on the same basis as those on the Union Pacific. Because the use of such transit facilities on the Rio Grande are not available in the same manner as those on the Union [fol. 177] Pacific, "The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the wide-

spread system developed for the marketing of such commodities." P. 656.

3. The Commission does not attempt to explain how the failure of such through-shippers as a general class to have access to the transit privileges on the Rio Grande on the same rate basis as on the Union Pacific, can thus broadly and absolutely be declared to debar them "from effective participation in the widespread system developed for the marketing of such commodities." In the absence of such an explanation, and on the implication of what the Commission has precedingly said in its Report, as set out above, the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given "as many routes as possible" and "as much flexibility as possible in the distribution process", because otherwise they will be "debarred from effective participation in * * * the marketing of such commodities."

In other words, whenever it is possible physically and practicably to open up a new or an additional through route for such commodities, the Commission apparently feels entitled to exercise its power to do so, in order to make available any increase in the amount of transit privileges en route which can be provided for such through-traffic, on the basis of simply declaring, as it in effect did here, that the previous through routes are inadequate, since they lack the additional transit privileges of the new carrier's route, which some shipper may desire or can solicitedly be persuaded to use, and on the basis of further holding that the other prerequisite of section 15 (4) of the Act, 49 U.S.C.A. § 15 (4), where the element of short-hauling another carrier is involved, as it is here, that such [fol. 178] an added through-route must also provide "more efficient or more economic transportation" than that existing on the present through routes, can sufficiently be satisfied by merely resorting to the Commission's power under section 15 (3) to prescribe joint rates and pointing out that joint rates necessarily in the situation will provide "more economic transportation", since they obviously are lower than the previous combination rates.

I have grave legal doubt whether the Commission's power to establish joint rates under section 15 (3) has any relationship to the term "more economic transportation" in section 15 (4), dealing with the Commission's right to open up through routes. Rather, it seems to me that the term "more economic transportation" in section 15 (4) is intended to have reference to the elements of distance, time, equipment, cost of operation, territorial reach, and all those other quantitative and qualitative factors which are inherent in a transportational comparison from the standpoint of the interests of both the public and the carriers—and that the Commission's power to establish joint rates under section 15 (3) is one which has application only after through routes exist or are established, without the right to use it as a factor under section 15 (4) for satisfying the requirements of opening up a long-haul-depriving, additional through route.

But however this may be, I am at least convinced that, where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term "more economic transportation" under section 15 (4), in the addition of another carrier's route as a mere "bridge" line for such traffic. If that be not so, then there is not any situa-[fol. 179] tion in which the Commission can not make a finding of "more economic transportation" for whatever additional through route it may undertake to open up, since in all cases joint rates necessarily, from their very nature, are lower than combination rates otherwise applying.

Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to "as many routes as possible" and "as much flexibility as possible in the distribution process," so that on this basis, and without regard to any other factor, any existing through route can be called inadequate, because it is possible to create additional transit privileges or facilities for such traffic by opening up another through route over another railroad, serving as a bridge line, and further such new route can be declared to provide "more

economic transportation", because by placing joint rates in effect, the cost of using such new through route for its transit facilities will be less than under the general combination rates previously existing, then the railroads of the country may as well forget section 15 (4) entirely as affording them any protection whatsoever against deprivation of their long hauls.

Here the opening up of a through route over the Rio Grande as a bridge carrier for the transcontinental freight involved will deprive the Union Pacific of a long haul of 975 miles upon such traffic as the Rio Grande is able to solicit away from it. But this is not the sole purport or effect of the Commission's order. If the order is upheld either in whole or in part, on the basis on which the Commission's result has been reached, the Commission can hereafter exercise its power to require through routes and joint rates from every connecting point in the country against every existing carrier, since every new through route necessarily will afford additional transit privileges and every joint rate necessarily will reduce the cost of using the new through route as against the combination rate previously applicable.

[fol. 180] Nor should one allow oneself to be blinded to what the real scope and significance of the Commission's reach here is. What it has purported to paint the picture of, in relation to its standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" is, as previously indicated, "perishable food articles". But it has, by means of some artificial classification, included ordinary livestock as a perishable food article (P. 656), saying merely, before doing so, that "We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden gateway.". And it has further held that a little monument dealer, located on the Union Pacific in Utah, is entitled to have established for him a through route and joint rates on the Rio Grande, in order to have the transit privilege available to him of unloading locally, here and there in Colorado, on a through

rate basis, some individual monuments out of an estimated four-carload lot of monuments per year.[2]

All of this to me is but another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position that it should have the right to put into effect as many new through routes as it deems advisable, without being required to give consideration to the question of short hauling another carrier. It has repeatedly asserted that viewpoint and sought to gain that [fol. 181] end. But Congress has never been willing to accede to that philosophy and position, and the courts have on a number of occasions had to strike down the Commission's efforts in that direction. All this is familiar history in the railroad world, and I shall not bother to go into it further here.

It is on the basis of the unqualified use of that standard here in relation to perishable commodities, and the attempt to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach, that I would strike down the Commission's order. I think that anyone who reads the Commission's Report, in the light of what I have said, and stripped of all the confusion in which the

---

[2] I shall not take the time to go into the details of this trivial monument situation, which the Commission characterized as one of "urgent need" (Page 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones constitute a commodity that is entitled to this extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of "as many routes as possible" and "as much flexibility as possible in the distribution process" for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country.

Report has been wrapped, will have no convictional difficulty as to the implications which I have pointed out.

I do not mean to make any implication, nor do I here assume to pass judgment, on whether the Ogden gateway is in other manner or to other extent subject to being opened up. All I say is that the philosophy and standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" can not be made the basis for overriding the short-hauling provisions of section 15 (4), through the merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term "more economic transportation" to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing.

The philos-phy and standard which the Commission has used are unquestionably sound as a marketing principle, but the railroad transportation system of the country has never yet been relegated by Congress to the full impact of [fol. 182] marketing principles alone. There is not a distributor of any commodity—including perishable foods—who, up to the time at least of the Commission's present order, has had, or has been regarded as being entitled to have, as a matter of sound transportational concept, every avenue and facility that it is possible to open up for him, with a simple brushing aside of transportational conditions, realities and consequences, such as I think the Commission here did.

I have previously referred to the fact that most of the traffic that is here involved originates on the branch lines of the Union Pacific, and that on such of this traffic as the Rio Grande is able to solicit to use its route, the Union Pacific will lose a line haul of 975 miles. The Report of the Commission admits that "the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves" is about 200 miles. Page 654. It also recognizes that the Rio Grande is a mountainous route, of higher grades, more circuity, and greater operational costs than the Union Pacific. "The total rise and fall in

feet on the Rio Grande is 66.3 per cent greater than that of the Union Pacific. Other data as to physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services." Page 648.

All of these matters, however, the Commission lightly brushes aside, as not having relationship to the question of "more economic transportation" in the situation, and so leaving it free to hold, as above indicated, that the new through route provides "more economic transportation", because its joint rates necessarily are lower than the previously applicable combination rates. All that the Commis- [fol. 183] sion says, in brushing aside the transportational differences which I have set out, as not requiring consideration on the question of "more economic transportation" in the situation, is that, when they are spread over hauls of such great lengths as are here involved, "they become relatively insignificant." Page 658.

The Report does not undertake to show what amount of traffic goes where. It merely says that "About 90 per cent of the traffic upon which joint rates are sought via Ogden and the Rio Grande moves to (Missouri River crossings and points east and southeast) and about 10 per cent to the Southwest." Page 626. How much terminates at the Missouri River crossing-points or at other midwestern destinations, the Report does not state. As to livestock, however, it certainly is a matter of common knowledge that the primary markets are Chicago, Omaha, Kansas City and some other Missouri River points. To each of these points, as well as to the Minneapolis and St. Louis markets, the record shows that a haul of 200 miles more, and a transportation time of at least 24 hours longer, as well as at least one or two more terminal-yard services, are involved over the Rio Grande route. I do not believe that without rational demonstration the Commission can say, except arbitrarily, that in relation to hauling distances of 1036 miles (Omaha) or 1153 miles (Kansas City) or 1524 miles (Chicago), the elements of difference which I have set out

are so "relatively insignificant" as to be entitled to be ignored on the question of whether "more economic transportation" is being provided. And in the absence also of some demonstration or analysis of quantities and destinations as to the various other commodities involved, I do not believe that the Commission can be said to have any less arbitrarily brushed off the facts of the transportational and service differences existing, as related to the question of "more economic transportation" under the statute, than in the case of livestock, when it merely attempts to push all of the facts abstractly to a far-distant horizon, without [fol. 184] establishment of the reality of that horizon for lumping purposes.

Incidentally, I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established general livestock scheme, practice and policy which the Commission has previously recognized and accepted. In *Livestock, Western District Rates*, 176 I.C.C. 1, 190 I.C.C. 675, 190 I.C.C. 611, 200 I.C.C. 535, the Commission prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the statute. In establishing the prescribed rates, the carriers limited their application, as the Commission itself has recognized, over routes which did not result in short hauling, and over other and longer routes provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. This the Union Pacific was willing to do in relation to the Rio Grande's route. It would seem to me that the upsetting of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure as against the Union Pacific in its long-hauling of livestock from the northwest territory, as related to the differential permitted to be created by other carriers generally in such situations.

This dissent is being written hastily, in order not to delay the filing of the majority opinion, and I shall accordingly not take the time to go into detail on other matters. I [fol. 185] agree with the majority that the Commission had no right here to find a violation of section 3 (1) of the Act against the Union Pacific and its connecting through-route carriers, but the basis for my view is not that adopted by the majority, that a discrimination under this section cannot at all exist, unless the complaining person or entity is located upon the lines of the carrier or combination of carriers claimed to have committed the discrimination. I do not believe that this viewpoint is tenable on the language of section 3 (1), nor on the expressions contained in St. Louis Southwestern Ry. Co. v. United States, 245 U.S. 136, 144, as well as on the plain, contrary assumptions made in Texas & Pacific Ry. Co. v. United States, 289 U.S. 627. But on the factual elements that are involved in the present situation I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3 (1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at the same rate, over a 200-mile longer route, with a 66.3 per cent greater variation in grade, involving a 24-hour additional hauling time, and necessitating the furnishing of several more terminal-yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3 (1). If the Commission had attempted to predicate the relief which it here granted upon the existence of a violation of section 3 (1), I am certain that its action resting on this basis alone could not on these facial realities be upheld. Only an escape from these facial realities, through a dissolution of them under the considerations open to the Commission in section 15 (4), such as the Commission here attempted, could at all, in my opinion, on the facts of the situation, have furnished a basis for the prescribing of through routes and joint rates in relation to the existing conditions.

[fol. 186] In the pattern of the Commission's apparent

attempt to strike at as much in the present situation as possible, the Commission further, as noted in the majority opinion, required the Union Pacific to establish joint rates with the Rio Grande to and from the same points where it maintained joint rates with the Bamberger Railroad. The Report says: "The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande." P. 659. The brief of the Union Pacific argues pointedly that "No evidence was submitted concerning or comparing transportation conditions on the Bamberger's electric line, between Ogden and Salt Lake City with conditions on the Rio Grande." The brief of the Commission makes no denial of the fact that no such evidence is contained in the record. The most that the Commission could properly have said, I think, was that it had not been made to appear by the evidence that there was any important dissimilarity in the conditions on the two roads. But the lack of any such evidence of dissimilarity could hardly afford a basis for a finding of similarity on the part of the Commisssion. This segment of the Commission's order is perhaps of relatively small importance in the present controversy. I refer to it simply as being characteristic or in the pattern of the loose and improper basis and manner in which it seems to me that the Commission has dealt with the entire situation.

I would strike down the Commission's order generally, on the basis and manner in which its result has been reached. In taking that position, however, I would again emphasize that I intend no implication that there may not exist some proper basis and some proper manner of reach as to some part of the Ogden gateway situation. I have not allowed my mind to look at that avenue, in either one direction or [fol. 187] the other. The pervading infirmities on which the Commission's present order seems to me to rest make it sufficient and compel me to halt my judicial consideration right there.

In the District Court of the United States for the District of Nebraska, Omaha Division

[Title omitted]

Motion of Intervening Defendant Denver and Rio Grande Western Railroad Company for New Trial—Filed November 1, 1954

Comes now the intervening defendant Denver and Rio Grande Western Railroad Company, and moves the Court to grant a new trial herein, or in the alternative to permit reargument of the above cause for the reasons that the Court erred in making certain findings of fact and certain conclusions of law, and erred in failing to sustain the decision of the Interstate Commerce Commission in its entirety insofar as it is attacked herein by the Union Pacific Railroad Company and other intervening plaintiffs.

Harry L. Welch, Harold W. Kauffman, of Gross, Welch, Vinardi & Kauffman, 730 Farm Credit Building, Omaha 2, Nebraska, Attorneys for the Denver and Rio Grande Western Railroad Company, Intervening Defendant.

Herbert M. Boyle, The Denver and Rio Grande Western Railroad Company, 1531 Stout Street, Denver Colorado. Robert E. Quirk, 1116 Investment Building, Washington 5, D. C., Of Counsel.

[fol. 190] Certificate of Service (Omitted in Printing)

[fol. 191] IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

MOTION OF PLAINTIFFS AND INTERVENING PLAINTIFFS FOR A NEW TRIAL OR REARGUMENT AND RECONSIDERATION—Filed November 12, 1954

Plaintiffs, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, and intervening plaintiffs, Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, move the Court, pursuant to Federal Rules of Civil Procedure, 28 U.S.C.A., Rule 59, to grant a new trial in the above-entitled cause, or in the alternative to permit reargument, and to reconsider this cause, for the reason that the majority opinion filed herein by the Court October 22, 1954 contains certain erroneous statements of fact which are vital to the conclusions reached, contains numerous errors of law, and also errs in failing to hold that the order of the Interstate Commerce Commission is null and void and should be enjoined in its entirety for the numerous reasons urged by plaintiffs and intervening plaintiffs.

[fol. 192] More specifically, these Movants respectfully urge in support of this motion that the majority opinion is erroneous in the following particulars:

I

The majority opinion errs in holding that the evidence of record supports the Commission's order to the extent indicated in the opinion, and the opinion clearly discloses that the majority has erred in failing to consider the whole record of evidence and the issues tendered herein, as required by the Administrative Procedure Act and the law of judicial review laid down by the Supreme Court of the United States. *Universal Camera Corp.* v. *Labor Bd.*, 340 U.S. 474, 487-488.

II

Although the majority opinion holds the order valid to the extent indicated therein, solely upon the belief that there are no transit privileges available for the involved traffic at points on the Rio Grande and that the absence of those privileges on the Rio Grande may be made the basis of a lawful order requiring the Union Pacific to short haul itself by making through routes and joint rates with the Rio Grande, the majority has erred in failing to consider and decide whether any of the numerous other grounds urged by these Movants render the order invalid in its entirety.

III

Upon its holding (page 10) that the Commission premised its order on its finding that Union Pacific routes are inadequate for the specified commodities when accorded transit privileges at points on the Rio Grande and that—

> "* * * the finding of inadequacy is based upon the lack of in-transit privileges by shippers and receivers located on the Rio Grande * * *",

the majority opinion errs in failing to hold that the order is entirely void, because, as alleged in the Rio Grande's complaint (pages 9-10) to the Commission and as clearly [fol. 193] shown without dispute in the evidence, and as plainly found and stated at page 634 of the Commission's report, there is no absence or lack of in-transit privileges on the Rio Grande but, instead, the fact is that the Rio Grande publishes and makes available to shippers using its line all transit privileges generally offered by other railroads, including the Union Pacific; hence, both the majority opinion and the Commission's order as construed by the majority are premised entirely upon a completely erroneous assumption of fact and, therefore, the order is necessarily null and void, and the majority opinion is fatally and fundamentally erroneous.

IV

As "transit privileges" are not "transportation" which railroads are required by the Interstate Commerce Act,

Section 1(3)(a) and (4), to provide or furnish, but are "commercial operations" as found by the Commission at page 634 of its report, the majority errs in holding that an absence or a lack of in-transit privileges incident to through joint rates via the Rio Grande supports the Commission's finding that transportation service furnished by Union Pacific routes are inadequate for shipments requiring transit privileges at points on the Rio Grande, and in failing to hold that such finding of inadequacy is arbitrary and capricious, and affords no legal basis for the order.

V

The majority opinion errs in relying upon the decision in *Pennsylvania R. Co., et al.* v. *United States, et al.*, 323 U.S. 588, 54 F. Supp. 381, as authority for its holding that the Commission has power to condemn as "inadequate" existing Union Pacific routes which offer all transit privileges and have been found by the Commission to furnish adequate and efficient service to shippers using those routes, and to order a new through route via the Rio Grande that short hauls existing Union Pacific routes merely to make transit [fol. 194] privileges available at points on the Rio Grande, for the Supreme Court's opinion and the Commission's report (255 I.C.C. 33) in the case cited clearly show that the shipper located at Hagerstown, Maryland, already had ample transit privileges and that Hagerstown was located on the line of the Pennsylvania Railroad and was not, as here, a point located upon and served exclusively by some railroad other than the Pennsylvania. The facts in that case are practically the complete reverse of the facts in this case.

VI

The majority opinion errs in failing to hold that the Commission's finding that the joint rates required via the Rio Grande are necessary and desirable "to provide adequate and more economic transportation" does not justify or support the order and is not the complete finding but is only a part of the full finding required under clause (b) of Sec. 15(4), which empowers the Commission to require

through routes that short haul existing routes only upon a finding that the through route proposed to be established—

> "is needed in order to provide adequate, and more efficient or more economic, transportation,"

for the Commission has not found that the Rio Grande route is "needed" or will be "more efficient or * more economic" [fol. 195] than Union Pacific routes, and its report clearly shows that the longer and more onerous Rio Grande route would be less efficient, and as the rates ordered are to be "the same" as the Union Pacific rates, the Commission's statement that the Rio Grande routes are necessary to provide "more economic" transportation is misleading, erroneous, and a complete nullity.

VII

The majority errs in failing to hold that the order is entirely null and void because it is premised on the erroneous and capricious theory that the statutory standards and limitations in Sec. 1(4) of the Act requiring carriers to establish only "reasonable through routes" and in Sec. 15(4) prohibiting the Commission from requiring through routes that short haul existing routes, except upon specific

---

* *In D. A. Stickell & Sons, Inc.* v. *Alton R. Co.*, 255 I.C.C. 333, at page 343, the Commission said: "We interpret that exception to mean adequate and more efficient *and* more economic from the public's or shippers' as well as the participating carriers' standpoint." (Emphasis supplied.) That is to say, the Commission construes the word "or" just before the words "more economic" as meaning "and." That interpretation was sustained by the three-judge court in *Pennsylvania R. Co.* v. *United States*, 54 F. Supp. 381, in an opinion which was affirmed by the Supreme Court, *Pennsylvania R. Co.* v. *U.S.*, 323 U.S. 588, at page 593. The Commission has consistently adhered to that interpretation. *Richards Milling Co.* v. *Erie R. Co.*, 268 I.C.C. 237, 240; *General Mills, Inc.* v. *Great Northern Ry. Co.*, 269 I.C.C. 456, 465; *Borough of Edgewater, N. J.* v. *Arcade & A. R. Corp.*, 280 I.C.C. 121, 142, (order held valid in *Baltimore & O. R. Co.* v. *United States*, 100 F. Supp. 1002).

conditions stated therein, empower the Commission to condemn existing routes as inadequate and uneconomical and to order "as many routes as possible" for any commodity artificially classified and merely declared by the Commission as requiring "as much flexibility as possible in the distribution" of such commodity, and "as many markets and outlets as possible", because "a complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible." The majority erred in failing to hold that the order is void because the Commission has misconstrued or ignored the statutory standards and limitations upon its power to require through routes and joint rates, *U. S.* v. *Carolina Carriers Corp.*, 315 U.S. 475, 489, and has substituted and been guided by its conception of a need of the "complex but efficient marketing system"—not for "reasonable through routes" or a sufficient number of through routes adequate to haul the traffic efficiently and economically—but for "as many routes *as possible*", and "as much flexibility *as possible*" and "as many markets and outlets *as possible.*" (Emphasis supplied.)

[fol. 196] VIII

The majority opinion errs in failing to hold that the order is void because, in making it, the Commission not only failed to apply the statutory standards and, instead, created and substituted its own new philosophy and standards, namely, that it has power to require additional through routes with joint rates upon its own declaration (regardless of its findings that Union Pacific routes are shorter in mileage and require 24 hours less in transit time, and are adequate, and furnish as satisfactory service as any service the Rio Grande could provide) that perishable articles—

> "must be moved to market with expedition and care, and over as many routes as possible"

in order to permit—

> "as much flexibility as possible in the distribution process",

but the Commission has also ignored the very premise which it created for its order, for the report plainly shows that the indisputable purpose and effect of the order is to permit livestock and other specified articles to move—*not* "with expedition and care" *to markets* in "great consuming areas (which) in many instances are far distant from the points of production"—but to move at equal joint rates *to points on the Rio Grande* for transit privileges—

> "such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande",

under which privileges the articles may be held for storage, feeding or grazing at points on the Rio Grande as long as twelve (12) months, before reshipment to distant markets in the "great consuming areas". Stoppage at points on the Rio Grande for storage until markets can be found for such products, stoppage for feeding or grazing cattle for 6 to 12 months until they are ready for market, are all the very antithesis of the premise that such articles require many routes so their perishable nature requires that they [fol. 197] move to consuming markets "with expedition and care."

IX

The majority errs in failing to hold that not only is the premise on which the order is based, namely, that food articles of a perishable nature "must be moved to market with expedition and care, and over as many routes as possible" to permit "as much flexibility as possible" in the distribution of food commodities", unsound, illogical and furnishes no support for the requirement that through routes and joint rates be established via the Rio Grande so that shippers may hold commodities as long as 12 months under transit privileges at points on the Rio Grande before reshipping to distant consuming markets, but also that the premise is wholly inapplicable to and is completely lacking in any support whatever for the requirement of through routes and joint rates via the Rio Grande for (4 carloads annually) *granite* and *marble monuments* westbound in carloads from Georgia and Vermont to stop off for partial unloading and reshipping the balance to destinations in the

northwest area, because such practically indestructible monuments obviously are not in the category of "perishable" food articles, and as the evidence and the report clearly show that the monument dealer's business along the Rio Grande is too small to require carload shipments, the Commission's only purpose in asserting (page 638) that there is an "urgent need", and (page 656) a "special need" for through routes and joint rates via the Rio Grande with the privilege to stop to partly unload at points on that line, is to give the small monument dealer the benefit of the lower carload rate on his less-than-carload business; and the Commission has no power to require through routes and joint rates to accomplish that purpose. The report shows (page 637) that this little monument dealer is located on the Union Pacific at Brigham City, Utah, and has joint rates with all transit privileges at all points on that line.

[fol. 198] X

The majority erred in failing to hold that the Commission's assertion (page 656) that Union Pacific routes "are inadequate and less economical than are the Rio Grande routes" because, on traffic from and to the northwest area accorded transit privileges at points on the Rio Grande—

> "* * * the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply."

is capricious, mere sophistry, based upon a misconception of law, and affords no support or justification whatever for the order. The sentence just quoted is an irrelevant truism, for it is wholly irrational to expect or imply that Union Pacific routes and rates through Wyoming should be available at points *not* located on those routes, but upon the Rio Grande's line in Utah and Colorado, and any informed person would necessarily expect the combination rates via the Rio Grande to be higher than the joint rates via the shorter Union Pacific routes, for a combination of local rates "is ordinarily, if not always, higher than the joint through rate." *Brown Lumber Co. v. L. & N. R. Co.*, 299 U. S. 393, 396. And it is wholly illogical, fallacious and a complete

non-sequitur for the Commission, after stating the truism that the Union Pacific routes and rates are not available and higher rates apply on traffic transited at points on the Rio Grande, to add that—

> "On such traffic the defendants' (Union Pacific) routes are inadequate and less economical than are the Rio Grande routes."

The intended implication that the Union Pacific is under some legal duty to make its existing routes and rates available at points not located on them, and that its failure to do so renders its own routes "inadequate and less economical" than the Rio Grande route on which such points are located and over which "higher rates apply," is contrary to the law governing a carrier's duty, contrary to fact and reason, and is demonstrative of the deceptive and irrational disguises by which the Commission attempts to justify its order.

[fol. 199] XI

The majority erred in failing to hold that the order is void because it is based on the Commission's erroneous view that it has the power to compel an additional through route and equal joint rates embracing another railroad to serve as a "bridge" line that short hauls existing routes wherever, by doing so, it is possible to make additional transit privileges available for perishable articles, at the same joint rates maintained over existing routes, and that the additional transit privileges and joint rates justify a "finding" that such new route will provide "more economic transportation" merely because the result of requiring equal joint rates via such new route is to make its transit privileges available for the same through traffic moving between the same origins and destinations at a cost which will be less than the cost at the combination rates via that route. In other words, the Commission, by compelling reduction of the Rio Grande's rates to equalize them with rates via Union Pacific routes, creates the very fact or circumstance on which it bases and attempts to justify the prerequisite jurisdictional finding, or assertion, at least in the words of clause (b), that the Rio Grande route will

provide "more economic transportation," regardless of the fact that the shippers' cost (rates) will be exactly the same as it is now via Union Pacific routes.

XII

The majority errs in failing to hold that the Commission acted arbitrarily and unlawfully in exerting its power to prescribe joint rates that would reduce the combination rates via the Rio Grande to the level of joint rates via Union Pacific routes in its efforts to create a factual situation which might justify a finding or declaration that the Rio Grande route with equal joint rates will provide "more economic transportation," and, by that arbitrary subterfuge, manufacture a case within the clause (b) exception to the prohibition in Section 15 (4) against compelling a [fol. 200] proposed through route that would short haul existing routes; and the majority further erred in failing to hold that the Commission's power to prescribe joint rates has no relationship to the term "more economic transportation" in Section 15 (4)(b), and that the Commission has exceeded its authority in attempting to use its joint rate powers to meet and satisfy a condition in Section 15(4) under which, upon a true set of facts, it would be justified in requiring a proposed route that would short haul existing through routes; and the majority erred also in failing to hold that the "more economic transportation" via the Rio Grande which would result from the Commission's reduction of the combination rates via that line to the level of the joint rates via Union Pacific routes, affords no support whatever for the order for the reason that the criterion, "more economic transportation," means that the proposed new route must provide "more economic transportation" than that provided by existing routes, and the criterion is not satisfied by a reduction in the Rio Grande's rates to make them lower than its previous combination rates, or by requiring equal joint rates over the respective routes, and the Commission's findings plainly show that, even with equal joint rates, the transportation over the "more onerous" Rio Grande line would be *less "economical"* than via the shorter, faster and more favorably located Union Pacific routes.

XIII

Under the holding in the majority opinion that absence of in-transit privileges may be made the basis of a finding that transportation service is "inadequate," and even if, as the majority opinion erroneously assumed, transit privileges were not available at points on the Rio Grande, then it would be only the transportation service of the Rio Grande that could be condemned and found to be inadequate, and not the service of the Union Pacific routes on which all transit privileges are admittedly available.

[fol. 201] XIV

Upon the Commission's findings, among others, that Union Pacific facilities—

> "* * * are adequate to move over its own direct routes the present volume of trafic and any additional volume that may be anticipated in the foreseeable future";

that the Union Pacific—

> "* * * has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line" (page 648);

that—

> "* * * through service over defendants' (Union Pacific) routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande * * *" (page 656);

that—

> "Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services" (page 648);

that because of physical and geographic facts recited in its report and its longer mileage—

> "* * * the Rio Grande line is less favorably situated than that of the Union Pacific" (page 648),

and that—

> "* * * as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein";

and upon the findings in the majority opinion (page 17) that for traffic moving between points in the northwest area and points of initial destination east of Denver—

> "* * * present transportation facilities over the Union Pacific between such points are adequate";

and that establishment of the joint rates via the Rio Grande between such points—

> "* * * would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points,"

the majority patently errs in finding (page 17) that the record supports the finding that transportation service via Union Pacific routes "is inadequate and also inefficient [fol. 202] and uneconomical" for shipments between the northwest area and final destinations east of Denver which require stoppage for transit purposes at points on the Rio Grande (not served by the Union Pacific), and in concluding (page 19) that the evidence supports the Commission's finding that establishment of the through routes and joint rates via the Rio Grande—

> "is necessary in order to provide adequate and more economic transportation"

for shipments requiring transit privileges at points on the Rio Grande.

XV

In holding (page 19) that—

> "The absence of in-transit and other privileges involved herein, incident to through joint rates will, under the law, support a finding that transportation service without such services and privileges is inadequate within the meaning of Sec. 15 (4)"

and that, therefore, the evidence supports the order to the extent it compels through routes and joint rates for shipments requiring transit privileges at points on the Rio Grande, the majority opinion is fatally erroneous because (1) as held by the Commission at page 655 of its report and in the majority opinion at page 10, the Commission has no power to require establishment of an additional through route with joint rates that short hauls existing through routes "unless the existing routes can be found not to provide 'adequate' transportation", and (2) since there is no "absence of in-transit and other privileges" on the Union Pacific routes from *the* to the Northwest area, and (3) as the Commission finds unequivocally that the Union Pacific facilities "are adequate" to move all traffic to and from the northwest area that may be offered in the future, that it has surplus capacity, is efficiently operated, and that service via Union Pacific routes—

> "is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande",

there is completely lacking any possible factual basis for the [fol. 203] crucial and essential finding, namely, inadequacy of existing Union Pacific routes, which is prerequisite to an exercise of the authority under Sec. 15(4)(b) to order the Union Pacific to short haul itself by joining in a new through route with joint rates via the Rio Grande.

XVI

The majority opinion erroneously states on page 6 that the Commission found that—

> "* * * the existing joint rates maintained by the Union Pacific are and will be *unjust and unreasonable and unduly prejudicial* * * *"

etc., whereas the fact is that the Commission made no finding that the rates via Union Pacific routes were unreasonable or unlawful in any respect, but instead found that the combination rates via the Rio Grande were unreasonable, unduly prejudicial and unduly preferential, and the majority errs in holding that the Commission has power to require through routes and joint rates via the Rio Grande without having first decided whether, as urged by Movants upon briefs and in oral argument, there is any evidence to support or justify the Commission's finding that the combination rates via the Rio Grande are unjust or unreasonable.

XVII

The majority errs in failing to hold that, in view of the fact proved by abundant uncontradicted evidence that producers and shippers in the northwest area who are now using the Union Pacific routes, market their perishable products in all 48 states and several foreign countries and the Commission's own finding at page 642, that those producers and shippers "market such products throughout the United States", the Commission's assertion (page 656) that those shippers—

> "* * * are debarred from effective participation in the widespread system developed for the marketing of such commodities"

is contrary to the evidence, contradicted by the Commission's [fol. 204] own finding of fact, and is void and therefore furnishes no support whatever for the order.

XVIII

Having held (page 15) that—

> "* * * there is no community of interest between the Union Pacific and the Rio Grande and hence there is no discrimination by the Union Pacific within the prohibition of Sec. 3(1).",

and that if the Commission could order through routes and joint rates because shippers located on one railroad have a transportation advantage over shippers located on another railroad "the prohibition of Sec. 15(4) would be practically emasculated", the majority erred in failing to hold, for the same reason, that the order does emasculate the prohibition in Sec. 15(4) and is void because its sole purpose and effect is—not to accomplish the objectives of the limited through route powers conferred by Sec. 15(3) and (4) to compel an additional route that short hauls existing routes when the latter are inadequate in fact and in truth—but to equalize rates and transit privileges of shippers located on or using the Rio Grande with shippers located on or using Union Pacific routes, and if equalization of rates and transit privileges via the Rio Grande with those on Union Pacific routes justifies compelling the Union Pacific to short haul itself by establishing a through route and joint rates with the Rio Grande for the involved traffic, then the short haul prohibition is completely emasculated.

XIX

The majority erred in failing to hold that the facts shown by the evidence and recited in the Commission's own correct findings of fact establishing vast physical and other dissimilarities between transportation conditions on the Rio Grande compared to those on the Union Pacific preclude any finding by the Commission of a violation of Sec. 3(1) of the Act; and in failing to hold that the Commission has acted arbitrarily and unlawfully in attempting to escape [fol. 205] the compelling legal effect of such dissimilarities (1) by its mere assertion that when "spread over hauls of great lengths * * * they become relatively insignificant", and that, therefore, for such hauls, "the transportation

conditions are substantially similar"; and (2) by resorting to it through routes powers under Sec. 15(3) and (4) and thereupon ignoring the vast differences it found in transportation conditions over the "more onerous" Rio Grande line compared to conditions on the "Union Pacific or any of the other transcontinental defendants herein," by treating such differences as unrelated to and requiring no consideration in determining whether the Rio Grande route would provide "more economic transportation" within the meaning of those words in Sec. 15 (4) (b), than the transportation furnished by existing Union Pacific routes.

XX

Upon its finding (page 18) that an "economic disadvantage" of shippers located on the Rio Grande compared to shippers located on the Union Pacific affords no basis for the Commission's finding of a violation of Sec. 3(1) of the Act because—

> "* * * there is no community of interest between the Union Pacific and the Rio Grande * * *",

the majority errs in holding, in effect, that there is a "community of interest" or some other undefined relationship between those two railroads which legally justifies requiring the Union Pacific to short haul itself 1000 miles, regardless of Sec. 15(4), by establishing joint rates with the Rio Grande to remove the claimed "economic disadvantage" of shippers located on the Rio Grande (so far as it consists of higher rates) by giving those shippers rates which, as correctly stated in the minority opinion, "would only equal the present rates via the Union Pacific" for the same through traffic between the same points of origin and the same final destinations.

[fol. 206]

XXI

The majority opinion errs in sustaining the order as if the Commission made it solely for the benefit of shippers located on the Rio Grande, whereas the Commission's report clearly shows that the order is for the principal purpose of enabling shippers not located on the Rio Grande

but on the Union Pacific and other lines northwest of Ogden, to enable them to route over the Rio Grande as a "bridge" line the traffic which they now ship over Union Pacific routes at the lowest joint rates with complete transit privileges, and as the majority opinion, to the extent it holds the order valid, is premised on the absence or lack of transit privileges, it fails to take into consideration the essential fact that shippers in the northwest area who are said by the Commission (page 656) to be "debarred from effective participation" in the marketing system, already have available to them on the Union Pacific routes the same transit privileges and the same joint rates they would have on the Rio Grande under the Commission's order, and in failing to decide whether, in view of these facts, the order is entirely void.

XXII

The majority opinion at page 8 states that shippers "located on the Rio Grande" are "without joint through rates with in-transit privileges" and, therefore, they "are at a substantial rate disadvantage" compared to shippers located on the Union Pacific who have "joint through rates and in-transit privileges over the Union Pacific". To the extent it sustains the validity of the order, the majority errs in holding that the Commission may use its power to compel through routes and joint rates to remedy a "rate disadvantage" of shippers located on the Rio Grande.

[fol. 207]

XXIII

Inasmuch as the transportation service which shippers located on or using the Rio Grande under the requirements of the Commission's order and as the transit privileges under the order would be identically the same transportation services and transit privileges now performed and offered by the Rio Grande, and since the only change effected by the order is to reduce the present rates via the Rio Grande to the level of rates via Union Pacific routes, the majority opinion errs in failing to hold that the order is void because (1), as shown by the evidence and the report, it will not result in any improvement or any change whatever in transportation services via the Rio

Grande or the Union Pacific but will only result in reducing the rates via the Rio Grande, and (2) because the Commission may not lawfully use its power to establish through routes and joint rates in order to compel a reduction or an equalization of rates.

XXIV

Having held (page 12) that service via the Union Pacific is adequate and as economic as service via the Rio Grande would be for shipments *not* requiring transit at points on the Rio Grande, the majority clearly errs in holding that the evidence supports the finding that establishment of joint rates and through routes for shipments requiring transit at points on the Rio Grande "will result in more economical transportation", because, as correctly found at page 17 of the majority opinion, the joint rates via the Rio Grande required by the order—

> "would only equal the present rates via the Union Pacific".

XXV

The majority erred in failing to hold that the Commission is without power to condemn, as it has done in this case, the Union Pacific routes, as "inadequate and less economical than are the Rio Grande routes", solely because—

> [fol. 208] "the Union Pacific routes and joint rates which apply over them are not available, and higher rates apply"

on traffic moving via the Rio Grande from and to the northwest area which is stopped for transit privileges at some point on the Rio Grande.

XXVI

The majority opinion errs in failing to hold that the inclusion of livestock in the order is without justification or support in the evidence or findings in the Commission's report which, without explanation or reason, treats ordinary livestock as a perishable food article, saying merely that—

> "We think however that the situation here as to livestock is no different from that portrayed as to certain

other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden Gateway."

The report shows there are joint rates via the Rio Grande and the Union Pacific on sheep and goats, established pursuant to the formula prescribed by the Commission in *Livestock, Western District Rates*, 176 I.C.C. 1, which formula resulted in higher rates over the Rio Grande because of its longer route. The report in the case at bar shows at page 641 that the Union Pacific expressed its willingness to establish rates via the Rio Grande in accordance with that formula and make them applicable to cattle as well as sheep and goats but that it has never been requested to do so. Without support of any evidence or finding of basic facts, the Commission's order here arbitrarily and irrationally upsets and departs from its own formula of many years standing by prescribing "the same" joint rates for livestock via the Rio Grande that are maintained via the shorter Union Pacific routes, and this it may not lawfully do. *Agriculture* v. *I.C.C.*, — U.S. —, 71 S. Ct. 326.

[fol. 209]

XXVII

The majority opinion is premised, in part, upon "the factual theory" (pages 7-8) that livestock feeders located on the Rio Grande are at a "substantial rate disadvantage" with similar livestock feeders—

> "* * * located on the Union Pacific lines between Ogden and Provo, and between Ogden and Salt Lake City and Denver, located on the Union Pacific * * *";

and that there "are a number of industries" on the Rio Grande that are "without in-transit privileges" for processing, freezing, storing articles specified in the order and reshipping them to points east of Denver, Pueblo and Trinidad. The majority erred in failing to hold that there is no evidence showing that any livestock feeders are located on the portion of the Union Pacific described in the opinion; and that the evidence and the Commission's report plainly show that there are only four "industries" that process, freeze or store articles on which the order requires

through routes and joint rates, one of which, a small "bean dealer", is located near Grand Junction, two storage plants at Pueblo, and one bean dealer at Colorado Springs, and that the latter three have through routes and joint rates to and from the northwest via the Union Pacific to Denver and railroads that connect with it, including the Rio Grande, to Pueblo and Colorado Springs with ample transit privileges to permit the processing, storing, freezing, etc. of their products and reshipping them from those points at the joint rates; and that the Commission's report at page 644 mentions the Utah Growers' Co-Operative with plants at Midvale, American Forks and Springville, Utah, all three of which points are served by both the Union Pacific and the Rio Grande, the Union Pacific's rate on commodities from the northwest being lower than the combination rates via the Rio Grande through Ogden or Salt Lake.

[fol. 210] XXVIII

The majority errs in failing to hold that the Commission's finding that the Union Pacific discriminates, in violation of Sec. 3(4) of the Act, against the Rio Grande by maintaining joint rates with the Bamberger Railroad at points on that railroad between Ogden and Salt Lake City (most of which points are also served by both the Union Pacific and the Rio Grande) while refusing to establish joint rates with the Rio Grande at those points, (1) is totally void because the record contains no evidence whatever comparing or concerning transportation conditions on the Bamberger, the Rio Grande and the Union Pacific between Ogden and Salt Lake City, and therefore the Commission's statement (page 659) that—

"* * * it appears that there is no important dissimilarity between the transportation conditions * * *"

is wholly lacking in any evidence to enable the Commission to make any finding on that alleged discrimination, and this lack of evidence, as pointed out in Circuit Judge Johnsen's dissenting opinion, was not denied by counsel for either the United States, the Commission in briefs or oral argument to this Court, and, as "a finding without evidence is

beyond the power of the Commission", *U.S. v. Abilene & So. Ry. Co.*, 265 U.S. 274, 288, the majority erred in refusing to hold that the finding is void; and the majority further erred in failing to hold that, even if there had been evidence to support the finding of discrimination in violation of Sec. 3(4), it would not afford any justification for the order requiring through routes and joint rates with the Rio Grande at points between Ogden and Salt Lake City, or any remote semblance of justification for the requirement of joint rates over the entire length of the Rio Grande's lines, and, as stated in the majority opinion, pages 14 and 15, in nullifying the Section 3(1) finding, the Commission has ample power to correct a violation of Section 3(4), and if it could [fol. 211] order through routes and joint rates as a remedy for such discrimination, "the prohibition of Sec. 15(4) would be practically emasculated."

XXIX

The majority erred in failing to hold that, upon its findings that the Rio Grande had not sustained its complaint, the Commission acted arbitrarily and exceeded its power in refusing to dismiss the complaint, and in ordering through routes and joint rates on the theory that because shippers had intervened, the Rio Grande's complaint became a shipper complaint.

XXX

Upon its correct conclusion that Sec. 3(1) of the Act could not furnish any basis for the order, the majority erred in failing to hold that the order is entirely void, since the Rio Grande's complaint and the order also premised relief sought upon Section 3(1).

XXXI

Since the Commission made no findings to sustain any violation of the Act against the Rio Grande (except the trivial unsupported finding of discrimination along the Bamberger Railroad), and could find only a violation of Section 3 involving shippers' rights and relations, which finding the majority holds to be without evidential support and as furnishing no basis for the order, the majority errs

in failing to hold that the order is entirely void because there is no basis or support for it in the evidence or in the Commission's findings.

[fol. 212] XXXII

The majority erred in refusing to consider and decide whether the Commission acted arbitrarily in refusing to dismiss the proceeding upon the ground urged by these Movants that as the sole objective of the Rio Grande in filing the complaint and demanding through routes and joint rates was, as admitted by its President, improvement of its financial condition, the Commission is prohibited by Section 15(4) from ordering through routes and joint rates for that purpose.

XXXIII

The majority erred in failing to hold that the Rio Grande's admitted procurement of shippers and others to testify so as to help it win its case, and that the intrusion of Senator Johnson, while the case was pending before the Commission, vitiated and nullified the whole proceeding before the Commission.

XXXIV

The majority erred in failing to hold that the Commission acted arbitrarily in refusing to give any weight to abundant evidence showing that compelling the through routes and joint rates sought by the Rio Grande would result in wasteful transportation and economic waste, and in serious detriment to the Union Pacific and other railroads and their employees, and in refusing to require as a condition or part of its order that the Rio Grande compensate or protect Union Pacific employees for or against any adverse effect they might suffer in loss of wages, etc., resulting from loss of traffic to the Rio Grande under an order requiring through routes and joint rates via its line for the traffic it seeks.

XXXV

The majority erred in failing, so far as its decision discloses, to give consideration to most of the numerous contentions set forth and discussed in the briefs of the plain-

[fol. 213] tiffs and intervening plaintiffs, as reasons why the Commission's order is void and should be enjoined and annulled. Without repeating each of those contentions, we respectfully refer the Court to them, as set forth in the index of our briefs filed at the trial of this case, and request that each of them be carefully considered and decided, unless the Court, upon this Motion and that of the Rio Grande, decides to enjoin and annul the order in its entirety without the necessity of considering all of the grounds upon which the plaintiffs and intervening plaintiffs contend that the order is void.

Respectfully submitted, Elmer B. Collins, John J. Burchell, James C. Wilson, F. O. Steadry, L. E. Torinus, Warren H. Ploeger, Roland J. Lehman, Eugene S. Davis, Attorneys for Plaintiffs, 1416 Dodge Street, Omaha 2, Nebraska; Don Eastvold, Attorney General of Washington, Robert L. Simpson, Asst. Attorney General of Washington, Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington; C. W. Ferguson, Attorney for Public Utilities Commissioner of Oregon, Public Service Building, Salem, Oregon; James B. Patten, Attorney for Board of Railroad Commissioners of the State of Montana, Helena, Montana; Howard B. Black, Attorney General of Wyoming, Attorney for State Board of Equalization and Public Service Commission of Wyoming, Cheyenne, Wyoming; Clarence S. Beck, Attorney General of Nebraska; Bert L. Overcash, Assistant Attorney General of Nebraska, Attorneys for State of Nebraska and Nebraska State Railway Commission, State Capitol, Lincoln, Nebraska, Attorneys for Intervening Plaintiffs.

[fol. 214] I, Elmer B. Collins, certify that copies of the foregoing Motion are being sent by United States Mail this 12th day of November, 1954, to all interested parties through their counsel.

Elmer B. Collins, Of Counsel.

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

PLAINTIFFS' APPLICATION FOR ORDER STAYING, SUSPENDING THE OPERATION AND ENJOINING AND RESTRAINING ENFORCEMENT OF THE INTERSTATE COMMERCE COMMISSION'S ORDER PENDING FINAL DECISION AND DISPOSITION OF THE CASE BY THIS COURT—Filed November 17, 1954.

Plaintiffs,* Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, respectfully make this application to the specially constituted three-judge Court pursuant to 28 U.S.C.A., Sections 2284(3) and 2324, for an order staying, suspending the operation, and enjoining and restraining enforcement of the order of the Interstate Commerce Commission issued January 12, 1953, in its Docket No. 30297 (copy of which is attached as Appendix A to the complaint praying that said order be permanently enjoined and annulled in the above-entitled suit), pending final decision, determination and disposition of the case by this Court.

In support of this application plaintiffs respectfully show to the Court that said order, by its terms, requires that [fol. 216] 221 railroads, including plaintiffs herein, file tariffs with the Commission publishing rates as specified in the order originally to become effective April 7, 1953, upon 30 days' notice, but that, because of the filing of petitions for reconsideration with the Commission, and upon requests of a member of this Court made since the filing of

---

*For reasons concerning it individually, Chicago, Milwaukee, St. Paul and Pacific Railroad Company has concluded that it can not consistently participate in further proceedings in this case.

the complaint herein on June 25, 1953, the Commission has several times postponed the effective date of said order, and that after the majority and the dissenting opinions were filed in this case on October 22, 1954, upon the request of counsel for the plaintiffs, the Commission, by order dated October 25, 1954, copy of which is attached hereto as Appendix A, further postponed the effective date of its said order of January 12, 1953, so as to become effective February 1, 1955 by filing the required tariffs with the Commission upon 30 days' notice, which means that the tariffs would have to be filed not later than January 2, 1955.

In their complaint filed June 25, 1953, in this suit plaintiffs pray, among other things:

> "That this Court, by temporary stay, preliminary or interlocutory injunction, stay, restrain and suspend the operation of the order of the Commission dated January 12, 1953, pending the final hearing and determination of this action."

Because of the Commission's voluntary postponements of the effective date of said order, the Court did not act upon the prayer just quoted for temporary and interlocutory relief from the order pending hearing and decision of the case by this Court, but now, since the Court has filed its decisions, the Commission will not, according to information of counsel for plaintiffs and their knowledge of the position taken by the Commission in other similar situations, be disposed voluntarily to further postpone the effective date of its said order, particularly in view of the fact that the Court has heard and reviewed the case upon the record before the Commission and has rendered and filed its decisions, in which the majority opinion sustains the validity of the order in part, and the further fact that the Court has ample authority to suspend the operation of the [fol. 217] order and to protect the plaintiffs and numerous other railroads against the penalties provided by Section 16 of the Interstate Commerce Act (49 U.S. Code, Sec. 16), in the amount of $5,000.00 per day for each of the plaintiffs and other railroads that fail to file and publish tariffs as required by the order and on the date therein specified.

The records in the Clerk's office of this Court show that,

although no decree or judgment has yet been entered in this suit, intervening defendant, The Denver and Rio Grande Western Railroad Company, on November 1, 1954, filed its motion for a new trial or in the alternative for reargument, and that on November 12, 1954, the plaintiffs also filed a motion for new trial or in the alternative for reargument and reconsideration by the Court, and that both of said motions are pending consideration, action and final disposition by the Court.

Plaintiffs hereby inform the Court that, unless the interlocutory relief herein sought is granted, relieving plaintiffs of the necessity of preparing and filing the required tariffs, numerous tariff compilers and experts of plaintiffs and other railroads would have to begin work shortly after December 1, 1954, in order to complete the preparation, compiling, printing and filing of the required tariffs by January 2, 1955 as now required by the Commission's order of October 25, 1954.

Plaintiffs further show to the Court that the compilation, preparation, printing and filing of the required tariffs is an unusually burdensome, time-consuming task, and would cost plaintiffs and the other railroads named as defendants in the proceedings before the Commission many thousands of dollars, all of which would be completely wasted and irreparably lost if the Commission's said order is finally annulled and enjoined.

Plaintiffs further show to the Court that, as indicated above, they and numerous other railroads, and each of them individually, will be subjected to the penalty of $5,000.00 [fol. 218] for each day of their failure, if any, to file and publish tariffs on the date and in conformity with the requirements of the Commission's said order, and that said penalties would accrue to the United States and could not be recovered but would be irreparably lost by the plaintiffs and other railroads, even though the Commission's order be finally held void and annulled and enjoined.

Plaintiffs further show to the Court that during the year 1952 there were moved between points in the northwest area and points east and south of Denver 54,664 carloads of the commodities on which the Commission's order requires through routes and joint rates via the Rio Grande, on which traffic the Union Pacific earned revenues esti-

mated at $18,827,148.00; that if this same number of carloads of that traffic were routed via the Rio Grande as permitted by the Commission's order, so as to deprive the Union Pacific of participation in the movement east of Ogden, Utah, Union Pacific would lose revenues estimated at $11,772,986.00; that at page 1,656 of the transcript of record before the Commission (introduced as Exhibit No. 1 before the Court in this case) witness F. C. Hogue, Vice President—Traffic of The Denver and Rio Grande Western Railroad Company, testified that he expected the Rio Grande to divert to its line from the Union Pacific routes approximately 10% of the traffic on which it sought through routes and joint rates in the Commission proceeding; that, based on the 1952 traffic, the diversion to the Rio Grande so estimated would be 5,466 carloads and a loss in revenues by the Union Pacific of $1,177,298.00 annually, or approximately $3,225.00 per day; that other plaintiffs would similarly suffer large losses of revenues, all of which losses would result in irreparable damage and injury to the Union Pacific and other plaintiffs, inasmuch as they would be without any legal remedy to recover such losses.

Plaintiffs further show to the Court that the validity of the Commission's order is unusually and extremely doubt-
[fol. 219] ful, as clearly indicated by the dissenting opinions of several of the Interstate Commerce Commissioners (287 I.C.C. 611), and by the majority opinion of this Court holding the order valid only in part as therein indicated, and by the dissenting opinion holding that the order should be stricken down in its entirety for the reasons therein stated, that present Union Pacific routes have existed for some 40 years, during which time the Rio Grande has never participated as a "bridge" line in through routes and joint rates for the involved traffic, and that justice and equity require that the *status quo* be maintained pending final determination and disposition of this case.

Plaintiffs allege that to subject them to the statutory penalty of 5,000.00 per day for failure to comply with the order, or in the alternative to comply with the order and suffer irreparable loss in revenues, while litigating the question whether the order is valid, would in effect nullify their statutory right to judicial review of the order, thus result-

ing in the taking of their property without due process of law and depriving them of their constitutional rights to equal protection from the law with owners of other kinds of property.

Wherefore, plaintiffs pray that, in view of the necessity of the relief herein prayed being granted as early as possible to avoid irreparable loss to plaintiffs resulting from the work and expense of compiling and preparing tariffs which they would have to begin about December 1, 1954, and to prevent other irreparable injury and damage as shown above, and for other reasons herein stated, the specially constituted three-judge Court reconvene at as early a date as possible to consider this application, and that the Court thereupon issue an order staying, suspending the operation and enjoying and restraining enforcement of the Commis-
[fol. 220] sion's said order pending consideration by the Court of the motions now on file for new trial, and pending final decision and entry of final decree or judgment herein by the Court.

Respectfully submitted, Elmer B. Collins, John J. Burchell, James C. Wilson, F. O. Steadry, L. E. Torinus, Warren H. Ploeger, Roland J. Lehman, Eugene S. Davis, Attorneys for Plaintiffs, 1416 Dodge Street, Omaha 2, Nebraska.

[fol. 222] APPENDIX "A" TO APPLICATION

Order

Interstate Commerce Commission

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY ET AL.

In the Matter of Request of Counsel for Postponement of the Effective Date of the Order.

Present: Charles D. Mahaffie, Acting Chairman, to whom the above-entitled matter has been assigned for action thereon.

Upon further consideration of the record in the above-entitled proceeding and upon consideration of the telegraphic request of Elmer B. Collins, Esq., Assistant Western General Counsel, Union Pacific Railroad Company, for postponement of the effective date of the Commission's order of January 12, 1953, as amended, to afford opportunity for counsel to study and analyze the majority and dissenting opinions of the United States District Court, District of Nebraska, rendered on October 23, 1954, in the suit filed in said Court to set aside the aforesaid order of the Commission in this proceeding, and to allow time for counsel to prepare and file application for stay of the Commission's order pending appeal to the United States Supreme Court; and Robert E. Quirk, Esq., Counsel for the Denver & Rio Grande Western Railroad Company having agreed to the requested postponement.

It is ordered, That the order entered in said proceeding on January 12, 1953, as amended, requiring the carriers to take certain action on 30 days' notice, which was subsequently modified to become effective on December 1, 1954, without change in the notice requirement, be, and it is

hereby, further modified to become effective February 1, 1955, with the same requirements as to notice.

Dated at Washington, D. C., this 25th day of October, A. D. 1954.

By the Commission, Acting Chairman Mahaffie.

George W. Laird, Secretary.

[Title omitted]

RESPONSE OF INTERSTATE COMMERCE COMMISSION TO THE MOTIONS OF PLAINTIFFS AND INTERVENING DEFENDANT THE DENVER AND RIO GRANDE WESTERN RAILROAD FOR A NEW TRIAL OR REARGUMENT AND RECONSIDERATION—Filed November 24, 1954

In response to the motions of plaintiffs and intervening defendant Denver and Rio Grande Western Railroad Company, in the above-styled cause, for a new trial or reargument and reconsideration, the Interstate Commerce Commission, one of the defendants herein, submits that said motions present matters and controversies between the parties to said motions and the Court, which already has given full and mature consideration to the issues raised therein, with respect to which the Commission does not believe it appropriate to express any further opinion, as it has not filed any such motion for a new trial.

However, in taking this position the Commission does not waive any right it may have to file a cross appeal to that portion of the Court's opinion and final judgment that holds the Commission's decision and order invalid, or that it may not want to appear at the hearing on said motions and take such position and answer such inquiries as to the Court may appear proper.

[fol. 224] In view of the fact that plaintiffs have filed an application for an order staying, enjoying and restraining enforcement of the Commission's order pending final decision and disposition of the case by this Court, it is suggested that this application and the aforesaid motions for new trial or reargument and reconsideration be set for hearing at the same time if it meets the convenience of the Court, and if the Court determines that a hearing on such motions and application is necessary or desirable. It should be clearly understood, however, that in making this request, we are not requesting a hearing on either the motions or the application for a stay pending appeal.

Respectfully submitted, Edward M. Reidy, General Counsel. Samuel R. Howell, Assistant General Counsel, Of Counsel.

[Title omitted]

Final Judgment and Decree—December 20, 1954

The above-entitled action having come on for final hearing on November 23 and 24, 1953, before Circuit Judges Johnsen and Collet and District Judge Delehant, constituting a District Court of three judges, convened pursuant to Title 28 U.S.C., Sections 2284 and 2325, and all parties being represented by counsel and the Court having received the evidence offered by the parties and heard the arguments of counsel and having considered the pleadings, the evidence and the arguments and briefs of counsel, and

the Court being fully advised in the premises and having filed its opinions, findings of fact and conclusions of law herein on October 22, 1954, and the majority of the Court being of opinion that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297, is valid and lawful in part and invalid and unlawful in the particulars set forth in the majority opinion;
[fol. 229] Now, therefore, upon the basis of such findings of fact and conclusions of law, and for the reasons set forth in the majority opinion of the Court, heretofore filed; it is ordered, adjudged and decreed that the injunction and other relief prayed for in the complaint be granted and denied, consistent with said findings of fact, conclusions of law and the majority opinion of the Court filed herein;

It is further adjudged and decreed that this Court has no power under the Interstate Commerce Commission Act to determine whether it would be in the public interest and consistent with good transportation practices to put into effect only that part of the order of the Interstate Commerce Commission held to be lawful, without regard to and independent of that part of the order held to be unlawful, and, that question being one which should under the law be determined by the Interstate Commerce Commission in the exercise of its informed judgment in its specialized field;

It is ordered, adjudged, and decreed that this cause be and is hereby remanded to the Interstate Commerce Commission for such further proceedings and orders, consistent with the majority opinion, the findings of fact and conclusions of law, as the informed judgment of the Commission may dictate.

Dated this 20th day of December, 1954.

/S./ John C. Collet, Judge, United States Court of Appeals; /S./ John W. Delehant, Judge, United States District Court.

ORDER DENYING MOTIONS FOR NEW TRIAL—December 20, 1954

Upon consideration of the separate motions for new trial,

It is considered and ordered:

1. That the motions be and they hereby are overruled and denied;

2. That the Clerk transmit forthwith copies of this Order to counsel in this case.

Dated this 20th day of December, 1954.

By the Court: /S./ Harvey M. Johnsen, Judge, United States Court of Appeals; /S./ John C. Collet, Judge, United States Court of Appeals; /S./ John W. Delehant, Judge, United States District Court.

PLAINTIFFS' APPLICATION FOR INJUNCTION PENDING APPEAL

Filed December 20, 1954

Plaintiffs, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, state to the Court that

they will perfect an appeal to the Supreme Court of the United States under Title 28, U.S. Code, Section 1253, from the final decree entered Dec. 20, 1954, by this Court in the above-entitled case, and, pursuant to the provisions of Rule 62(c) of Federal Rules of Civil Procedure (Title 28, U.S. Code), plaintiffs hereby apply for an injunction pending their appeal, staying, suspending the operation and restraining and enjoining the enforcement of the order of the Interstate Commerce Commission issued January 12, 1953, in a proceeding entitled "No. 30297, Denver & Rio Grande Western Railroad Company v. Union Pacific Railroad Company et al." (the validity of which order is the [fol. 232] subject of the above-entitled suit), and enjoining and restraining the defendants herein, United States of America and Interstate Commerce Commission, and each of their officers, agents and employees and any and every person acting under and by virtue of said order, from enforcing or attempting in any way to enforce the provisions of said order, and from taking any action to collect or enforce or attempting to enforce or collect the penalties provided by Title 49, U.S. Code, Section 16 (8) for failure of the railroads, including the plaintiffs herein, named as defendants in the proceeding before said Commission, to comply with the requirements of said order pending final determination of plaintiffs' appeal to the Supreme Court of the United States.

In support of this application and as grounds for the injunction pending appeal herein prayed, plaintiffs state and show to the Court:

I.

This Court has ample power in its discretion to issue an injunction staying and suspending operation and restraining and enjoining enforcement of the Commission's order pending final determination of plaintiffs' appeal to the Supreme Court of the United States.

As an incident of their jurisdiction, the Federal Courts have the power within their discretion to preserve the *status quo* pending appeals from their decisions, and in *Virginian Ry.* v. *United States*, 272 U.S. 658, 668-675, the Supreme Court held that it is within the power and discre-

tion of specially-constituted District Courts of three judges to suspend and restrain enforcement of orders of the Interstate Commerce Commission pending appeals to the Supreme Court. The power sustained in that decision was thereafter enacted by Congress as Rule 62(c) Federal Rules of Civil Procedure, Title 28, U.S. Code, as follows:

> "*Injunction Pending Appeal.* When an appeal is taken from an interlocutory or final judgment grant- [fol. 233] ing, dissolving, or denying an injunction, the court in its discretion may suspend, modify, restore, or grant an injunction during the pendency of the appeal upon such terms as to bond or otherwise as it considers proper for the security of the rights of the adverse party. If the judgment appealed from is rendered by a district court of three judges specially constituted pursuant to a statute of the United States, no such order shall be made except (1) by such court sitting in open court or (2) by the assent of all the judges of such court evidenced by their signatures to the order."

In *Scripps-Howard Radio* v. *Comm'n.*, 316 U.S. 4, at page 10, the Supreme Court said:

> "If the administrative agency has committed errors of law for the correction of which the legislature has provided appropriate resort to the courts, such judicial review would be an idle ceremony if the situation were irreparably changed before the correction could be made. The existence of power in a reviewing court to stay the enforcement of an administrative order does not mean, of course, that its exercise should be without regard to the division of function which the legislature has made between the administrative body and the court of review. 'A stay is not a matter of right, even if irreparable injury might otherwise result to the appellant. *In re Haberman Manufacturing Co.*, 147 U.S. 525. It is an exercise of judicial discretion. The propriety of its issue is dependent upon the circumstances of the particular case.' *Virginian Ry. Co.* v. *United States*, 272 U.S. 658, 672-73; see *Merchants Warehouse Co.* v. *United States*, 283 U.S. 501, 513-14."

The facts and circumstances which justify the exercise of the power and discretion of specially-constituted three-judge District Courts to issue injunctions staying and restraining enforcement of orders such as the instant order of the Commission, pending appeals to the Supreme Court are found in many decisions. In *Virginian Ry.* v. *United States, supra*, the Supreme Court held, at page 673, that:

> "To justify granting the stay after a final decree sustaining the Commission's order, it must appear either that the district court entertains a serious doubt as to the correctness of its own decision; or that the decision depends upon a question of law on which there is conflict among the courts of the several circuits; or that some other special reason exists why the order of the Commission ought not to become operative until its validity can be considered by this Court."

In *Warehouse Co.* v. *United States*, 283 U.S. 501, the validity of an order of the Commission had been sustained by two members of the three-judge District Court, the third judge vigorously dissenting. A stay of the Com-[fol. 234] mission's order pending appeal to the Supreme Court was issued by the District Court under circumstances very similar to those in the case at bar. In disposing of cross-appeals from that action, the Supreme Court held at pages 513-514:

> "The court below was within the limits of its discretionary power in staying the Commission's order pending the appeal. The practice complained of was of long standing, entered into, so far as appears, in good faith, at a time when the discrimination, if it existed, was much less serious than at present, and before the present prohibitions against such discriminations. Its legality now is not free from doubt, as is indicated by the fact that the judges of the court below were not unanimous. The immediate enforcement of the order if the judgment below were not affirmed here would have resulted in a serious and unnecessary disturbance of a course of business, affecting not alone the parties to this litigation, but the patrons of the various ware-

houses, which the court below found would be irreparable. These considerations, taken together, were sufficient to call for the exercise of its discretion. Cf. *Virginian Ry. Co.* v. *United States*, 272 U.S. 658, 672."

In *State of North Carolina* v. *U. S.*, 56 F. Supp. 606, 621, a three-judge District Court sustained the validity of an order of the Commission and denied a stay of the order pending appeal, staing that the order was "clearly valid", but upon appeal the Supreme Court held the order invalid and reversed the lower court on the merits, 325 U.S. 507.

In *Radio Corp. of America* v. *United States*, 95 F. Supp. 660, a majority of a three-judge District Court, one judge dissenting, sustained the validity of an order of the Federal Communications Commission, but issued an injunction staying enforcement of the order pending appeal to the Supreme Court. At page 669, the Court said:

"Even though we propose to allow defendants' motion for a summary judgment, it does not follow that the temporary restraining order heretofore entered should not remain in effect. In fact, we are definitely of the view that it should, until such time as the controversy is before the Supreme Court. While there may appear to be some inconsistency in pursuing this course, we think such procedure is within our discretion. In National Broadcasting Co. v. United States, D.C., 44 F. Supp. 688, a statutory court under circumstances quite similar to those here held it was without jurisdiction to review an order of the Commission, [fol. 235] and dismissed the complaint. Even so, it granted a stay until the matter could be appealed to the Supreme Court. Holding that the District Court had jurisdiction the Supreme Court reversed. 316 U.S. 447, 62 S. Ct. 1214, 86 L. Ed. 1586. In doing so, it suggested, 316 U.S. at page 449, 62 S. Ct. at page 1215, 86 L. Ed. 1586, 'the stay now in effect will be continued, on terms to be settled by the court below.' Thereupon; the case was tried by the District Court on its merits, a summary judgment allowed in favor of the defendants and the complaint again dismissed. And again the Commission's order was stayed pending

appeal to the Supreme Court, and this time the judgment of the court below was affirmed. 319 U.S. 190, 63 S. Ct. 997, 87 L. Ed. 1344. Insofar as we are able to discern from that opinion, the stay order allowed by the District Court remained in effect until the case was finally decided by the Supreme Court."

In that decision the Court pointed out that, if the order were permitted to become effective pending appeal, the resulting changes in the status of the television broadcasting industry would reach vast proportions at great expense to the public and to the great detriment of certain radio and television manufacturers and broadcasters.

The language just quoted from the decision in that case shows that administrative orders such as that of the Interstate Commerce Commission in this case have been stayed and prevented from becoming effective long enough for a case to be twice considered by a three-judge District Court and twice by the Supreme Court of the United States.

II.

Upon the facts and circumstances in this case, this Court should unhesitatingly grant this application for an injunction suspending and restraining enforcement of the Commission's order pending determination of plaintiffs' appeal to the Supreme Court.

In the light of facts and circumstances disclosed in cases cited above upon which the Federal Courts have exercised their discretion to issue orders staying and restraining enforcement of orders of the Interstate Commerce Commission and other administrative bodies pending appeals, we point to the following facts and circumstances in the instant case which we think should convince this Court that a grave mis-[fol. 236] carriage of justice will result if the Commission's order in this case is not stayed and its enforcement restrained pending plaintiffs' appeal to the Supreme Court:

1. Counsel for defendants and intervening defendants have expressly stated that they do not request opportunity to be heard in opposition to this application, and have thereby tacitly consented to the issuance of the injunction herein prayed.

2. There is no "public interest" requiring that the order become effective pending final determination by the Supreme Court of plaintiffs' appeal. The Denver and Rio Grande Western Railroad Company filed the complaint with the Commission which resulted in the order involved in this suit. It was not and is not a "public" complaint, for the record shows that there were no complaints of shippers or "public" representatives against Union Pacific routes, nor requests demanding through routes via the Rio Grande for the involved traffic, and that, to the contrary, the complaint was the result of a planned program of the Rio Grande to divert traffic from Union Pacific routes for a "bridge" haul over its lines in order "to improve the financial condition" of the Rio Grande (R. 23, 32-33). It clearly appears from the majority opinion, sustaining the Commission's order only insofar as it requires through routes and joint rates with in-transit privileges at points on the Rio Grande "not also served by the Union Pacific", and in the report of the Commission, that Union Pacific routes afford all transit privileges at joint rates to shippers located at points served by both Union Pacific and the Rio Grande, and that the only shippers indicating a desire for transit privilege under joint rates at points on the Rio Grande "not also served by the Union Pacific" routes, are one or two livestock feeders or grazers and a fruit freezing plant at Delta, and one small "bean dealer" near Grand Junction, Colorado, neither of whom made any complaint [fol. 237] but merely testified, after being agitated and persuaded by the Rio Grande to help it win its case, and there is no evidence whatever of any urgent or immediate need by those shippers or by the little monument dealer *located on the Union Pacific* at Brigham City, Utah, for the order to become effective pending appeal, particularly since the only result would be a reduction in their freight rates to the extent of the difference between the combination of local rates and the joint rates required by the order.

3. Unless the order is stayed and its enforcement restrained pending appeal to the Supreme Court, plaintiffs and all other of the 221 railroads named in the Rio Grande's complaint to the Commission will be subjected to the alternatives, (1) of penalties of 5,000.00 per day (49 U.S.

Code, Section 16(8)) by each of those carriers for each day of their failure or refusal to comply with the order, or (2) preparing, compiling, printing, publishing and filing tariffs in conformity with the order, at an expense of thousands of dollars, and disruption of their routes and the flow of traffic over them, and loss of large amounts of revenues on traffic that might be diverted from them to the Rio Grande, which is estimated at $1,177,298.00 annually, or $3,225.00 per day for the Union Pacific alone, based upon testimony of the Rio Grande's Vice President-Traffic (R. 1656). Thus, unless this Court stays and enjoins the order pending final determination of their appeal, plaintiffs will suffer inevitable and irreparable injury, loss and damage; either from the statutory penalties, or from the cost and expense of preparing and filing tariffs required by the order and loss of traffic and revenues which the Rio Grande expects to divert to its line, as plaintiffs would be without any legal remedy to recover either or any of such losses if the order is finally held to be entirely null and void.

[fol. 238] 4. There is exceptionally grave and serious doubt of the correctness of the majority opinion and of the validity of the Commission's order, as indicated:

(a) By the fact that the majority opinion holds the major portion of the order invalid, sustains the validity of the order only in part, and that part is sustained solely upon the *unprecedented* ground that Union Pacific routes are inadequate because shippers located at points on the Rio Grande not also served by the Union Pacific do not have transit privileges at joint rates equal to those available at points on Union Pacific routes;

(b) By Circuit Judge Johnsen's unusually strong and vigorous dissenting opinion, which would hold the order invalid and strike it down entirely because of the "pervading infirmities" on which it rests;

(c) By the contrariety and divergence of views expressed by individual Commissioners in the Commission's report;

(d) By the fact shown in plaintiffs' briefs to this Court that in the four decisions the Supreme Court has rendered concerning the Commission's orders which involved the prohibition in Section 15(4) of the Act against short hauling existing routes, that Court has enjoined and annulled

three such orders (*Interstate Comm. Comm.* v. *Nor. Pac. Ry.*, 216 U. S. 538; *United States* v. *Mo. Pac. R. Co.*, 278 U. S. 269; *Thompson* v. *United States*, 343 U. S. 549), and sustained the validity of only one (*Pennsylvania R. Co.* v. *U. S.*, 323 U. S. 588), and in that case the order was not [fol. 239] based upon a lack of in-transit privileges at equal joint rates at a point not on the lines of existing routes, for the Commission's report (255 I.C.C. 333) plainly shows that the shipper was located on a line of the Pennsylvania Railroad at Hagerstown, Md., and already had full transit privileges with through routes and equal joint rates, but that application of the rates was restricted so as to give the Pennsylvania its longest possible haul over a longer route than the route required by the order. The through routes required by the order in that case eliminated four extra days' time in transit, a 149-mile out-of-line haul costing 90¢ per ton, and two switching interchanges, in contrast with a completely reverse set of facts in the instant case, where the longer Rio Grande route required by the order would result in 200 additional miles of transportation over the most "onerous" operating conditions of any western railroad, two additional interchanges between carriers and at least one or two days' more time in transit, and would short haul existnig routes at least 975 miles, and would deprive some of the plaintiffs of their entire hauls;

(e) Neither the Supreme Court nor any of the District Courts have ever sustained the validity of an order requiring an additional longer route which short hauls shorter existing routes found expressly by the Commission, as in this case, to be efficiently operated, more favorably located than the proposed route, furnishing good service to shippers located on or using those routes, having surplus capacity, and "adequate to move over its own direct routes the present volume of traffic and any additional volume that [fol. 240] may be anticipated in the foreseeable future," and the Commission has in many cases definitely and positively laid down its own prevailing rule—which it completely ignored and practically reversed in the instant case—that there is no justification for requiring an additional through route which is *longer* than, and which short hauls existing routes that are capable of hauling the traffic, for

such longer routes would "encourage wasteful and uneconomic transportation", and "would not give reasonable preference to the originating carrier", *Adrian Grain Co.* v. *Ann Arbor R. Co.*, 276 I.C.C. 331, 333-334. Only last June the Supreme Court condemned such unexplained departure by the Commission from "the prevailing rule of its prior cases", saying, "the Commission has not adequately explained its departure from prior norms and has not sufficiently spelled out the legal basis of its decision", *Agriculture* v. *I.C.C.*, 74 S. Ct. 826;

(f) The grave doubt of the valdiity of the part of the order sustained by the majority opinion is further indicated by the holding in the majority opinion at page 10 that——

> "It is clear from the report and the evidence that the finding of inadequacy is based upon the lack of in-transit privileges by shippers and receivers located on the Rio Grande as to the commodities embraced in the order."

and the forthright and specific admissions in oral argument to this Court by counsel for the United States (Tr. 171-177) that the dominating consideration, if not the sole basis for the order, is in-transit privileges and the greater utilization of them at points on the Rio Grande, but that "it has never been decided" and "there is no case" holding that the Commission may use its through route powers to accomplish that purpose, and that "the Commission may [fol. 241] be entirely wrong" in requiring through routes and joint rates via the Rio Grande for the purpose of enabling the monument shipper located on the Union Pacific at Brigham City, Utah, to stop-to-partly-unload westbound carloads of monuments at points on the Rio Grande. Not only is there grave and serious doubt of the Commission's power, and no decision holding that the Commission has power, to require *any* through route for the purpose of providing more transit privileges or greater utilization of them on an additional route, even if the new route would *not* short haul existing routes, but the doubt of the power exerted by the Commission and sustained by the majority opinion in this case is increased immeasurably by the fact that, notwithstanding the express, though qualified, pro-

hibition in Section 15 (4) of the Act against short hauling existing routes, the Rio Grande route required by the order would short haul Union Pacific routes a minimum of 975 miles in every instance, leaving them hauls of a few miles in many instances, and would deprive some of the plaintiffs of their entire hauls as to practically all of the traffic the Rio Grande would divert to its line;

(g) The serious doubt of the validity of the order and of the correctness of the majority opinion insofar as it sustains the order, is further indicated by the fact that the majority opinion sustains the Commission's view that it has power to require through routes and joint rates with the Rio Grande, *not* because transportation service via Union Pacific routes is inadequate, inefficient or uneconomical, or because the Rio Grande will provide more adequate, more [fol. 242] efficient or more economic service than that provided by Union Pacific routes, but because, since the required joint rates are lower than the Rio Grande's combination rates, the order "will result in more economical transportation" via the Rio Grande than the same transportation service for which shippers over the Rio Grande must now pay the higher combination rates, whereas Section 15 (4) of the Act plainly prohibits the Commission from requiring a new route that short hauls existing routes unless the existing routes are incapable of providing adequate transportation service, and unless the new route will provide *more* efficient and *more* economic transportation service than that provided by the existing routes. As the term "more economic transportation" clearly is not met by merely reducing the Rio Grande's rates so as to equalize them with rates on Union Pacific routes, the doubt of the legality of the order and of the correctness of the majority opinion is made more serious by the fact that the required joint rates via the Rio Grande will be merely *equal* to, or "the same", as the rates via Union Pacific routes, and by the impossibility, in the face of the Commission's own correct finding that the 200-miles longer Rio Grande route has "more onerous" operating conditions than any other western line, that shipments could move *more* economically or efficiently over that line than over existing shorter Union Pacific routes.

5. The refusal of the Union Pacific and other participating carriers to short haul themselves by making through routes and equal joint rates with the Rio Grande for traffic to and from points located on their lines in the northwest has been continuous for three-quarters of a century without [fol. 243] interruption except when, as shown in the Commission's report (p. 621), the Union Pacific and the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company were in separate receiverships and the joint rates then established via the Rio Grande when those lines were in the hands of the receivership court were canceled in 1906 and 1912 upon termination of the receiverships, and the cancellation of the joint rates was without protest or with the approval of the Commission (*The Ogden Gateway Case*, 35 I.C.C. 131). To permit the order to become effective pending final determination of its validity by the Supreme Court will result in serious and unnecessary disturbance of the course of business and in the disruption of these century-old routes and channels of commerce, to the irreparable injury of the plaintiffs and to the serious detriment of shippers located upon or using Union Pacific routes. (See *Warehouse Co.* v. *United States*, 283 U. S. 501, 513-514.)

6. To subject plaintiffs and the numerous other carriers involved to the statutory penalty of $5,000.00 per day for failure to comply with the order or, in the alternative, to comply with the order pending appeal and suffer inescapable and irreparable loss while litigating the question whether the order is valid would, in effect, not only nullify and make "an idle ceremony" of their statutory right to judicial review of the order, *Scripps-Howard Radio* v. *Comm'n.*, *supra*, but would also result in the taking of their property without due process of law and deprive them of their constitutional rights to equal protection of the law with owners of other kinds of property, *Ex Parte Young*, 209 U. S. 123, 147-148.

7. Plaintiffs further state to the Court that, since any benefit which the Rio Grande or any shippers might realize from immediate enforcement and operation of the Commission's order pending appeal would be the direct loss in the [fol. 244] same amount by carriers participating in the

Union Pacific routes of traffic and revenues which they have enjoyed without complaint of shippers or the public for three-quarters of a century, and because of other facts recited and shown above, no bond of the plaintiffs is required or justfiied for the security of the rights of any of the parties to this suit, and that since Rule 10(4) of the Revised Rules of the Supreme Court of the United States, effective July 1, 1954, abolishes bonds for costs on appeal in cases of this nature, no cost bond is required; however, if the Court considers that any bond of the plaintiffs is necessary or justified on this appeal or upon the injunction pending appeal, plaintiffs will give such bond in such amount as the Court may determine and order.

Wherefore, plaintiffs respectfully pray for an injunction staying and suspending the operation, enforcement and execution of the order of the Interstate Commerce Commission hereinbefore described pending final determination of plaintiffs' appeal to the Supreme Court of the United States from the final judgment and decree entered herein by this Court; and since, as shown in Appendix A hereto, said order is now scheduled to become effective February 1, 1955, upon 30 days' notice, plaintiffs further pray that the Court act upon this application and issue such injunction as early as its convenience may permit.

Respectfully submitted, Elmer B. Collins, John J. Burchell, James C. Wilson, F. O. Steadry, L. E. Torinus, Warren H. Ploeger, Roland J. Lehman, Eugene S. Davis, Attorneys for Plaintiffs, 1416 Dodge Street, Omaha 2, Nebraska.

INJUNCTION PENDING APPEAL—December 20, 1954

Plaintiffs, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, having filed their application stating that they will appeal to the Supreme Court of the United States from the final judgment and decree entered herein by this Court on December 20, 1954, and praying for an injunction, pursuant to Rule 62(c) of Federal Rules of Civil Procedure, staying and suspending the operation, enforcement and execution, pending final determination of their appeal to the Supreme Court, of the Interstate Commerce Commission's order which is sustained in [fol. 248] part by the majority opinion and final decree of this Court;

And it appearing to this Court that unless said order is stayed and its operation suspended and enjoined pending determination of their appeal, each of the plaintiffs and numerous other railroads may be subjected to a penalty of $5,000.00 per day if they do not comply with the requirements of the order, or to irreparable injury from loss of large sums of money in compiling and publishing the required rates and from loss of traffic and revenues, if they do comply with the order;

And the Court, finding no reason for permitting the order to become effective while its validity is being litigated, and being of opinion that the *status quo* should be preserved by staying and suspending the operation and enforcement of said order pending final determination of plaintiffs' appeal to the Supreme Court, it is hereby

Ordered, adjudged and decreed that the order of the Interstate Commerce Commission dated January 12, 1953,

in its Docket No. 30297, Denver & Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al., be and it is hereby stayed and suspended and the defendants and their officers, agents and employees are enjoined and restrained from enforcing or attempting in any way to enforce said order or any part thereof pending final determination of the plaintiffs' appeal to the Su-
[fol. 249] preme Court of the United States.

Dated December 20, 1954.

Harvey M. Johnsen, Judge, United States Court of Appeals; John C. Collet, Judge, United States Court of Appeals; John W. Delehant, Judge, United States District Court.

[Title omitted]

Notice of Appeal by Denver and Rio Grande Western Railroad Co., to the Supreme Court of the United States—Filed February 3, 1955

I.

Notice is hereby given that the Denver and Rio Grande Western Railroad Company, an intervening defendant in the above-entitled cause, hereinafter called the Rio Grande, hereby appeals to the Supreme Court of the United States from the Final Judgment and Decree entered in this cause on December 20, 1954, which set aside and enjoined, in part, the order of the Interstate Commerce Commission of January 12, 1953, in Docket No. 30297, *Denver & R. G. W. R.*

Co. v. *Union Pac. R. Co., et al.*, 287 I.C.C. 611, and remanded the cause to the Commission for such further proceedings consistent therewith as the Commission may deem appropriate.

This appeal is taken pursuant to Title 28 U.S.C. § 1253.

II

The Clerk will please prepare a transcript of the record in this cause, for transmission to the Clerk of the Supreme [fol. 258] Court of the United States, and include in that transcript the same record as is designated by the Union Pacific Railroad Company, et al., plaintiffs in the above-entitled cause, from that part of the decision and judgment of the Court as to which said plaintiffs appeal.

III

The following questions are presented by this appeal:

1. Whether the Court erred in disregarding and overruling the findings of fact and conclusions of law of the Interstate Commerce Commission.

2. Whether the Court erred in holding in paragraph III of its Conclusions of Law that there is no substantial evidence to support the findings and order of the Commission which required the establishment of through routes and joint competitive rates between the Union Pacific Railroad Company, the Rio Grande and other railroads with respect to the commodities and the areas specified in the order, and in substituting its own findings by which the Court modified and restricted the relief granted by the Commission to shipments consigned in the first instance to points on the Rio Grande, are there subject to in-transit privileges, and are later reshipped to points beyond the Rio Grande.

3. Whether the Court erred in interpreting and in applying to the evidence of the case, the provisions of Section 3(1), 15(3) and 15(4) of the Interstate Commerce Act. (49 U.S.C. §§ 3(1), 15(3) and 15(4)).

4. Whether the Court erred in granting an injunction enjoining and in setting aside, in part, the order of the Commission already described, which requires the Union Pacific Railroad Company and the other defendants before the Commission to participate with the Rio Grande in the es-

[fol. 259] tablishment and the maintenance of through routes and joint rates on the commodities described by the Commission to and from the northwest restricted area and the designated area east of Denver, Pueblo and Trinidad, Colorado.

5. Whether the Court erred in ruling, contrary to the findings of the Interstate Commerce Commission and the evidence, that on the commodities specified by the Commission the establishment of through routes and joint rates via the Rio Grande to and from the northwest area and a designated area east of Denver, Pueblo and Trinidad, Colorado, are not needed in order to provide adequate and more economic transportation.

6. Whether the Court erred in ruling, contrary to the findings of the Interstate Commerce Commission and the evidence, that on the commodities specified by the Commission the present transportation services and facilities were inadequate and uneconomical between the northwest area and points of destination in a designated area east of Denver, Pueblo and Trinidad and in substituting its own finding that the present transportation facilities over the Union Pacific Railroad Company are adequate.

7. Whether the Court erred in overruling the findings and conclusions of the Interstate Commerce Commission that the existing rates assailed are and will be unjust and unreasonable, and duly prejudicial to shippers and receivers using or desiring to use the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes in and to the extent that such rates exceed, [fol. 260] or may exceed, the joint rates maintained on the specified commodities from and to the same points over the Union Pacific routes.

Dated this 1st day of February, 1955.

Harry L. Welch, Farm Credit Building, Omaha, Nebraska, Harold W. Kauffman, Farm Credit Bldg., Omaha, Neb., Dennis McCarthy, Walker Bank Building, Salt Lake City 1, Utah, Robert E. Quirk, 1116 Investment Building, Washington 5, D. C., Attorneys for The Denver and Rio Grande Western Railroad Company, Intervening Defendant.

[Title omitted]

NOTICE OF APPEAL BY THE UNITED STATES OF AMERICA TO THE SUPREME COURT OF THE UNITED STATES—Filed February 17, 1955

I. Notice is hereby given that the United States of America, a defendant in the above-entitled action, hereby appeals to the Supreme Court of the United States from that portion of the final judgment and decree setting aside in part the order of the Interstate Commerce Commission, entered in this action on December 20, 1954.

This appeal is taken pursuant to 28 U.S.C. § 1253.

II. The clerk will please prepare a transcript of the record in this cause, for transmission to the Clerk of the Supreme Court of the United States, and include in said transcript the entire record before the district court.

III. The following questions are presented by this appeal:

1. Whether there was substantial evidence to support the Commission's finding that establishment of through routes and joint rates between the Union Pacific Railroad and the [fol. 266] Rio Grande Western Railroad with respect to the commodities and the areas specified in such findings was "necessary and desirable in the public interest, in order to provide adequate and more economic transportation."

2. Whether the prohibitions in Section 3(1) of the Interstate Commerce Act against any carrier giving any undue or unreasonable preference or advantage to any particular

person, locality, etc., or subjecting any person, locality, etc. to any undue or unreasonable prejudice or disadvantage, apply even though the persons or localities subjected to such preference or prejudice are located on the lines of two different carriers.

3. Whether the district court erred in holding that the through routes and joint rates prescribed by the Commission should be limited to shipments which are stopped for in-transit service on the line of the Rio Grande Western Railroad.

Daniel M. Friedman, E. Riggs McConnell, Special Assistants to the Attorney General, Attorneys for the United States, Address: Department of Justice, Washington 25, D. C.

[fols. 267-269] Proof of Service (Omitted in Printing)

[fol. 270] In the District Court of the United States for the District of Nebraska, Omaha Division

Notice of Appeal by Union Pacific Co., et al., to the Supreme Court of the United States—February 18, 1955

I

Notice is hereby given that Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, plaintiffs in the above-entitled cause, and Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, intervening plaintiffs therein, hereby

appeal to the Supreme Court of the United States from that part of the final judgment and decree entered in this cause December 20, 1954, which orders, adjudges and decrees that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297, *Denver & R. G. W. R. Co.* v. *Union Pac. R. Co. et al.*, 287 I.C.C. 611, "is valid and lawful in part", and that the injunction and [fol. 271] other relief prayed for in the complaint be denied, "consistent with said findings of fact, conclusions of law and the majority opinion of the Court filed herein". This appeal is taken pursuant to 28 U.S. Code, Section 1253.

II

The Clerk will please prepare a transcript of the record in this cause, for transmission to the Clerk of the Supreme Court of the United States, and include in said transcript the entire record of the proceedings before the specially constituted three-judge Court, including all of the record of proceedings before the Interstate Commerce Commission introduced in evidence before the Court and marked Exhibits Nos. 1-A to 1-I inclusive.

III

The following questions are presented by this appeal:

(1) Whether the Court erred in refusing to hold that, in this proceeding, brought by the Rio Grande for the admitted purposes of enhancing its financial position by diverting for a "bridge" haul over its line transcontinental through traffic now and for some 50 years moved over Union Pacific routes between points on those routes in the far northwest and points in the eastern and southern parts of the United States, the Commission was prohibited from issuing the order in this case by the provision of Section 15(4) of the Interstate Commerce Act that, "No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs", and that this prohibition may not be evaded or circumvented by the Commission's assertion that in making the order

"no consideration has been given to financial needs" of the Rio Grande.

(2) Whether the Court erred in refusing to hold that, in view of the provisions of Section 15(4) of the Interstate Commerce Act (49 U.S.C., § 15(4)), the Commission acted [fol. 272] arbitrarily and unlawfully in issuing the order short hauling Union Pacific routes at least 975 miles, since the Commission found:

(a) That Union Pacific routes have lower rates than the Rio Grande and are shorter, faster, efficiently operated, adequate and have surplus capacity to haul any foreseeable volume of the through traffic involved;

(b) That movement of the same through traffic via the Rio Grande would require over 200 miles additional transportation, at least 24 hours more time in transit, and one or two additional interchange services; and that the Rio Grande maintains higher rates, is less favorably located and has more onerous operating conditions than the Union Pacific or any of the other Western lines.

(3) Whether the Court erred in failing to hold that the entire order is void because the Commission misconstrued, departed from and failed to observe the rule and norm of its previous decisions and the controlling statutory standards and criteria of Sections 1(4), 3(1) and (4) and 15(3) and (4), in basing its order:

(a) Upon the premise that the standards and conditions of Section 15(4)(b) [which permit establishment of a proposed route short hauling existing routes of other railroads, *only* if "the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation"] are lawfully observed and applied by the Commission's findings here:

1. of a need for "more" adequate and economic service than that afforded by Union Pacific routes, and

2. that the Rio Grande route is "necessary and desirable" to provide "adequate and more economic transportation",

without any finding by the Commission that the Rio Grande route is "needed" or that it will provide "more efficient" transportation than Union Pacific routes for the involved through traffic between the same origins and the same ultimate destinations;

(b) Upon the premise that the conditions which permit short hauling other carriers under Section 15(4)(b) can be met and satisfied by merely substituting the lower joint rates applicable over Union Pacific routes for the higher combination rates via the proposed Rio Grande route;

[fol. 273] (c) upon the premise that, under Section 15(4)(b), service over Union Pacific routes may lawfully be condemned and found "inadequate and less economical" than the Rio Grande route for through traffic because, *at points located on and served only by the Rio Grande,* "the Union Pacific routes and the joint rates that apply over them are not available, and higher rates apply";

(d) Upon the premise that the Commission may invoke its power under Section 15(3) and (4)(b) for the purpose of making additional transit privileges available by equalizing rates via the Rio Grande with rates applicable over Union Pacific routes;

(e) Upon the criteria that the marketing system for food articles of a perishable nature requires "as wide a distribution as possible", "as many routes as possible", "as much flexibility as possible" and "as many markets and outlets as possible", although Section 1 (4) and the prevailing rule of the Commission's prior decisions require carriers to establish only "reasonable" through routes;

(f) Upon the inconsistent criteria that:

1. food articles of a perishable nature must move to markets "with expedition and care" and "without unnecessary interruptions";

2. the longer Rio Grande route is necessary to permit the through transportation of such articles to be interrupted so that the articles may be held as long as 12 months at points on the Rio Grande for

"commercial operations" called transit privileges, and

3. ordinary livestock to stop for grazing or feeding, and marble and granite monuments to stop for partial unloading at points on the Rio Grande fall within the category of perishable food articles found by the Commission to require expeditious, careful and uninterrupted transportation;

(g) Upon the premise that the Commission may lawfully invoke its powers under Section 15(3) and (4) to obtain the remedy it desires for rates found violative of Sections 1 and 3, and that findings of violations of the latter sections afford a lawful basis for ordering the through routes and joint rates.

(4) Whether the Commission may require Union Pacific routes to short haul themselves by establishing through routes and joint rates with the Rio Grande for the sole purpose of permitting through traffic to be stopped at points on the Rio Grande, not served by the Union Pacific, for "commercial operations" (known as transit privileges), such as storing, processing and cattle grazing, at the same [fol. 274] rates the same shippers have when using Union Pacific routes between the same points of origin and the same ultimate destinations.

(5) Whether the Court's finding that transportation service via the *proposed* Rio Grande route is "inadequate and also inefficient and uneconomical" for through shipments requiring transit at points on the Rio Grande and re-shipment to final destinations beyond its termini, affords a lawful basis for the order short hauling Union Pacific routes under Section 15(4)(b), which permits short hauling other railroads only if "the Commission finds that the through route *proposed* to be established is needed in order to provide adequate, and more efficient or more economic, transportation."

(6) Whether the Court erred in failing to review and consider the whole record of evidence and all the issues tendered by the pleadings and arguments of the parties,

and in failing to hold that the order is entirely null and void, because:

(a) The order is based upon erroneous interpretations of law, and there is no rational basis or support for the order or any part of it, in the evidence or in the findings made by the Commission;

(b) The Commission did not make, and the evidence does not justify or support findings essential to the validity of the order, among others:

1. that the Rio Grande route is "needed", and that it will provide "more efficient" transportation service than Union Pacific routes (Section 15(4)(b)),

2. that diverting traffic and revenues from Union Pacific routes to the Rio Grande would serve such beneficial purpose as maintaining good service or improving it,

3. that the Rio Grande is efficiently operated, furnishes satisfactory service or has surplus capacity or ability to haul any additional volume of traffic,

4. that diverting the traffic to the Rio Grande's longer route will speed up its movement,

5. that the Rio Grande will generate new or additional traffic or contribute additional transportation facilities in the northwest area, or that existing routes [fol. 275] are insufficient or incapable of moving the traffic to and from that area,

6. that by including the Rio Grande route shippers to and from the northwest area will have lower rates than they have via Union Pacific routes,

7. that the overall transportation system or shippers using it would benefit by including the longer Rio Grande line in present routes for a "bridge" haul over its line,

8. that shippers have ever made complaint against service rendered by Union Pacific routes for the traffic involved, or demanded that the Rio Grande be included in present through routes;

(c) The evidence does not support or justify the Commission's findings—

1. that the combination of local rates via the Rio Grande are unjust and unreasonable,

2. that the joint rates which now apply over Union Pacific's shorter and more direct routes are reasonable for application via the longer and more onerous Rio Grande route,

3. that the combination rates via the Rio Grande are unduly prejudicial of shippers and receivers using or desiring to use the Rio Grande route or unduly preferential of shippers and receivers using the Union Pacific routes,

4. that the Union Pacific and other railroads discriminate against the Rio Grande in violation of Section 3(4) in maintaining through routes with the Bamberger Railroad at points on its line between Ogden and Salt Lake City, while refusing to make like joint rates with the Rio Grande at the same points,

5. that through routes and joint rates with the Rio Grande are "necessary and desirable" in the public interest to provide "adequate and more economic transportation",

6. that shippers in the northwest producing area (who testified that they sell their products in all markets in all the 48 states and 5 foreign countries) "are debarred from effective participation" in the marketing system, because they must pay higher rates if they ship through traffic via the Rio Grande than the joint rates available to them via Union Pacific routes for the same through traffic moving between the same origins and the same destinations;

[fol. 276] (d) The Commission arbitrarily refused to give effect to the requirement in Section 15(4) that reasonable preference be given the originating carriers;

(e) The Commission refused to consider or give effect to the National Transportation Policy and to the evidence showing that diversion to the Rio Grande of any substantial part of the traffic would result in waste-

ful transportation and economic waste and in serious detriment to Union Pacific service and its employees, to certain other railroads and their employees and would inflict serious economic injury to numerous communities and the public served by Union Pacific routes;

(f) The Commission arbitrarily commingled and misused its authority under, and the remedies for violations of the separate and independent provisions of Sections 1(4), 3(1) and (4) and Section 15(3) and (4), and its order is vague, uncertain, indefinite and conflicting in its requirements;

(g) Upon its findings that the Rio Grande had not sustained its complaint, the Commission acted arbitrarily and contrary to law in failing to dismiss the complaint and in ordering through routes and joint rates on the theory that because shippers had intervened and testified, that Rio Grande's complaint became a shipper complaint;

(h) The Commission acted arbitrarily and unlawfully in refusing to dismiss the entire proceeding on the ground that it was vitiated and nullified by the fact that shipper witnesses on whose testimony the order is based were admittedly solicited and procured by the Rio Grande for the purpose of helping it win its case.

[Title omitted]

MOTION TO HAVE CERTAIN ORIGINAL RECORDS IN THIS COURT TRANSMITTED TO THE CLERK OF THE SUPREME COURT OF THE UNITED STATES—Filed February 18, 1955

Plaintiffs-Appellants in the above-entitled cause petition the Court, pursuant to Rule 12, Paragraph 4, of the Rules of the Supreme Court of the United States, to authorize and instruct the Clerk of this District Court to transmit as a part of the record on appeal to be filed in the Supreme Court of the United States:

> Original Exhibits Nos. 1-A to 1-I, inclusive, being the certified transcript of the record of proceedings before the Interstate Commerce Commission introduced and received in evidence by the Court at the trial of the above-entitled case beginning November 23, 1953.

As grounds for this motion, Plaintiffs-Appellants represent to the Court that said exhibits consist of numerous documents, many of which are quite voluminous, including a number of exhibits which would be very difficult and ex-[fol. 282] pensive to copy or reproduce. Such expense and the unusual burden and work which would be imposed upon the office of the Clerk of this Court to reproduce or prepare copies of said exhibits will be obviated by the granting of this motion.

Wherefore, Plaintiffs-Appellants pray that the Court grant this motion and issue the accompanying order directing that the originals of the above-described exhibits, in lieu of copies thereof, be forwarded to the Clerk of the Supreme Court of the United States, as a part of the transcript of record on the appeal herein.

Elmer B. Collins, Attorneys for Plaintiffs-Appellants.

[Title omitted]

ORDER DIRECTING THAT CERTAIN ORIGINAL RECORDS BE FORWARDED TO THE CLERK OF THE SUPREME COURT OF THE UNITED STATES IN LIEU OF COPIES THEREOF—February 18, 1955

In accordance with the motion of Plaintiffs-Appellants in the above cause to transmit the original in lieu of copies of the documents hereinafter described to the Clerk of the Supreme Court of the United States:

It is Hereby Ordered, That original exhibits numbered 1-A to 1-I, inclusive, received in evidence in this Court at the trial of this cause on November 23, 1953, may all be forwarded in lieu of copies thereof to the Clerk of the Supreme Court of the United States as a part of the transcript of the record on the appeal herein.

Dated this 17th day of February, 1955.

(S.) Harvey M. Johnsen, United States Circuit Judge.

[Title omitted]

NOTICE OF APPEAL BY INTERSTATE COMMERCE COMMISSION TO THE SUPREME COURT OF THE UNITED STATES—February 18, 1955

I. Notice is hereby given that the Interstate Commerce Commission, defendant in the above-entitled action, hereby appeals to the Supreme Court of the United States from the final judgment setting aside the order of the Interstate Commerce Commission in part and remanding the case to

the Commission for further consideration. The judgment was entered on December 20, 1954.

This appeal is taken pursuant to 28 U.S.C. § 1253.

II. The clerk will please prepare a transcript of the record in this cause, for transmission to the Clerk of the Supreme Court of the United States, and include in said transcript the following:

The same record as designated by the Union Pacific Railroad Company, et al., plaintiffs in the above suit, from that portion of the court's decision and judgment as to which said plaintiffs appeal.

III. The following questions are presented by this appeal:

[fol. 285] 1. Was the Court in error in holding in Paragraph III of the Conclusions of Law filed with its opinion that there was no substantial evidence to support the Commission's findings that through routes and joint competitive rates should be established between the Union Pacific Railroad Company and the Denver and Rio Grande Western Railroad Company with respect to the commodities and the areas specified in the order, and in substituting its own findings by which it modified and limited the relief granted by the Commission to shipments initially consigned to points on the Rio Grande, which are there incident to in-transit privileges, and later reshipped to points east of Denver?

2. Did the Court err in construing Section 15(4) of the Interstate Commerce Act (49 U.S.C. § 15(4)) and in holding that the Commission's finding that certain through routes should be established "in order to provide adequate, and more efficient or more economic, transportation," is jurisdictionally defective because the Commission did not first find that existing transportation is inadequate?

3. Did the Court err in substituting its judgment for that of the Commission in resolving the question whether the through routes between the Northwest area and the designated territory east of Denver, Pueblo and Trinidad, via the Rio Grande, are needed under Section 15(4) of the Interstate Commerce Act (49 U.S.C. § 15(4)) in order to provide adequate and more efficient or more economic transportation?

4. Did the Court err in enjoining and setting aside, in part, the Commission's order which requires the Union Pacific to establish and maintain, in connection with the Rio Grande, through routes and joint rates on the commodities named in the order and to and from the Northwest area and that designated east of Denver, Pueblo and Trinidad, Colo.?

[fol. 286] 5. Did the Court err in holding, contrary to the Commission's finding and the evidence, that as to the commodities specified in the Commission's order the establishment of through routes and joint rates via the Rio Grande are not needed in order to provide adequate and more economic transportation to and from the Northwest area and the area described in the order east of Denver, Pueblo, and Trinidad?

6. Did the Court err in holding, contrary to the findings of the Commission and the evidence, that, with respect to the commodities named in the order and the territory designated therein (between the Northwest area and points of destination east of Denver, Pueblo and Trinidad) the present transportation services and facilities via the Union Pacific route are inadequate and uneconomical, and in substituting for the finding made by the Commission its own finding that such services and facilities via the Union Pacific route are adequate?

7. Did the Court err in failing to sustain the Commission's finding that the assailed combination of local rates on the commodities and from and to the areas described in the order "are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes"? (287 I.C.C. 611, 659-660.)

(S.) Edward M Reidy, General Counsel, (S.) Samuel R. Howell, Assistant General Counsel, Attorneys for Interstate Commerce Commission.

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

[Title omitted]

NOTICE OF APPEAL BY SECRETARY OF AGRICULTURE TO THE SUPREME COURT OF THE UNITED STATES—Filed February 18, 1955

I. Notice is hereby given that the Secretary of Agriculture of the United States, an intervenor-defendant in the above-entitled action, hereby appeals to the Supreme Court of the United States from the final judgment setting aside the order of the Interstate Commerce Commission in part and remanding the case to the Commission for further consideration. The judgment was entered on December 20, 1954. The Secretary of Agriculture intervened, as a matter of right under Rule 24(a) of the Federal Rules of Civil Procedure, in the action in the District Court. The right of the Secretary of Agriculture to intervene in the proceeding before the Commission, and in the review in the District Court, and to appeal from the judgment of the District Court is conferred by § 201 of the Agriculture Adjustment Act of 1938, as amended (52 Stat. 31, 36, 7 U. S. C. 1952 ed. § 1291), in which it is provided, *inter alia*, that the Secretary may, as a matter of right, intervene in a proceeding before the Interstate Commerce Commission relative to the regulation of the transportation of agricultural commodities and products and in "such case the Sec-
[fol. 292] retary shall have the rights of a party before the Commission and the rights of a party to invoke and pursue original and appellate judicial proceedings involving the Commission's determination" (7 U. S. C. 1952 ed. § 1291 (b)). The Secretary's participation in this case is also authorized by § 203 (j) of the Agricultural Marketing Act of 1946 (60 Stat. 1087, 1088-1089, 7 U. S. C. 1952 ed. § 1622 (j)), by § 17 (9) of the Interstate Commerce Act (54 Stat. 916, 49 U. S. C. § 17 (9)), by 28 U. S. C. 1952 ed. §§ 1253 and 2323, and by § 10 of the Administrative Procedure Act (60 Stat. 243, 5 U. S. C. 1952 ed. § 1009).

II. The Secretary of Agriculture of the United States designates, as the record on appeal, for transmission to the Clerk of the Supreme Court of the United States the entire record in this cause in the District Court, including all the pleadings, evidence, and proceedings.

III. The following questions are presented by this appeal:

1. Did the District Court err in holding that under § 15 (4) of the Interstate Commerce Act (49 U. S. C. 1952 ed. § 15 (4)), the Commission cannot require the establishment of through routes—based upon a finding that such routes are needed in order to provide "adequate, and more efficient or more economic, transportation"—unless the Commission first finds that existing transportation is inadequate?

2. Did the Court err in substituting its judgment for that of the Commission in resolving the question whether the through routes between the northwest area and the designated territory east of Denver, Pueblo, and Trinidad, via the Rio Grande, are needed under section 15 (4) of the Interstate Commerce Act (49 U. S. C. 1952 ed. § 15 (4)) in order to provide adequate and more efficient or more economic transportation?

3. Did the Court err in holding that the undue or unreasonable prejudice or preference prohibited by § 3 (1) of the Interstate Commerce Act (49 U.S.C. 1952 ed. § 3 (1)) applies only to prejudice and preference shown [fol. 293] by one carrier or a combination of carriers between the entities named in § 3 (1) of the Act which are served by the one carrier or the combination acting as one?

4. Did the District Court err in holding that there is no substantial evidence to support the Commission's finding that establishment of through routes and joint rates between the Union Pacific Railroad and the Rio Grande Western Railroad with respect to the commodities and the areas specified in such finding was "necessary and desirable in the public interest, in order to provide adequate and more economic transportation"?

5. Did the District Court err in holding that the through routes and joint rates prescribed by the Commission should be limited to shipments which are stopped for in-transit service on the line of the Rio Grande Western Railroad?

6. Did the District Court err in the respects enumerated in the questions presented by the appeals of the United States and the Interstate Commerce Commission, which are adopted by reference?

Neil Brooks, Associate Solicitor, Carl R. Bullock, Henry A. Cockrum, Donald A. Campbell, Attorneys, U. S. Department of Agriculture, Attorneys for the Secretary of Agriculture of the United States.

Dated February 17, 1955.

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

Civil Action No. 4492

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Plaintiff,

vs.

UNITED STATES OF AMERICA and INTERSTATE COMMERCE COMMISSION, Defendants

COMPLAINT—Filed October 22, 1953

I

Plaintiff, The Denver and Rio Grande Western Railroad Company, hereinafter called the Rio Grande, brings this suit against the United States of America, to enjoin, annul and set aside in part, as hereinafter more particularly described, the order of the Interstate Commerce Commission of January 12, 1953, made and entered upon the complaint of the Rio Grande against the Union Pacific Railroad Company and 217 other railroad companies. Plaintiff has a pecuniary interest in the issues and the matter and things involved in this suit. The findings, conclusions and decision of the Interstate Commerce Commission are reported in *Denver & R. G. W. R. Co. v. Union Pac. R. Co.*, 287 I. C. C. 611. Printed copies of that report, as well as the record on which it is based, will be made available to the members of the Court. For the convenience of the Court, there is reproduced as Appendix "A" the pertinent provisions of the Interstate Commerce Act.

A copy of the order of the Commission of January 12, 1953, is attached hereto and made a part hereof as Appendix [fol. 2] "B". The essential requirements of that order are set forth below:

> "*It is ordered*, That the defendants named in the complaint, according as they participate in the transportation, be, and they are hereby notified and required

to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

"*It is further ordered;* That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

"*It is further ordered*, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

"*And it is further ordered*, That this order shall continue in force until the further order of the Commission."

II

Plaintiff, a corporation organized and existing under the laws of the State of Delaware, is a common carrier by rail-[fol. 3] road engaged in the transportation of persons and property in intrastate, interstate and foreign commerce, and as such, is subject to the provisions of the Interstate Commerce Act. Plaintiff owns and operates approximately 2400 miles of railroad in the states of Colorado, New Mexico and Utah. Its principal eastern terminals are at Denver, Colorado Springs, and Pueblo, Colorado, and its principal western terminals are Ogden, Salt Lake City, and Provo, Utah. Plaintiff has interchange track connections and interchanges traffic with the Union Pacific Railroad Company at Denver, Colorado and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific Company at Ogden, Utah, and with the Western Pacific Railroad Company at Salt Lake City, Utah. It also has interchange track connections and interchanges traffic at Denver, Colorado with the Chicago, Rock Island and Pacific Railroad Company, the Chicago, Burlington & Quincy Railroad Company, and The Atchison, Topeka and Santa Fe Railway Company, and The Colorado and Southern Railway Company, which is a part of the Burlington System. At Colorado Springs the Rio Grande interchanges traffic with The Atchison, Topeka and Santa Fe Railway Company and the Chicago, Rock Island and Pacific Railroad Company. At Pueblo, Colorado, it interchanges traffic with The Atchison, Topeka and Santa

Fe Railway Company, The Colorado and Southern Railway Company, and the Missouri Pacific Railroad Company. At Walsenburg, Colorado it interchanges traffic with The Colorado and Southern Railway Company; and at Trinidad, Colorado, with The Atchison, Topeka and Santa Fe Railway Company and The Colorado and Southern Railway Company. Plaintiff is an important and necessary part of the railroad transportation system of the United States.

[fol. 4] In 1934 the Rio Grande established a new through route between Denver, Colo., Salt Lake City and Ogden, Utah, via Dotsero, Colorado. The distance between Denver and Ogden via that route is 175 miles shorter than the distance of plaintiff through Pueblo and the Royal Gorge route, and is 43 miles shorter than the route of any other railroad between Denver and Salt Lake City. The route via Dotsero cut-off has enabled plaintiff to establish greatly improved local and through freight and passenger service not only between Denver, Salt Lake City and Ogden, but also on interline traffic between points west and east of those points. Since 1935 the main line of plaintiff has been virtually rebuilt.

III

The principal office of plaintiff is at 1531 Stout Street, Denver, Colorado, which establishes venue of this action in this court pursuant to Title 28, U. S. Code, Section 1398. [fol. 5] Jurisdiction of this court over this cause of action is provided by Title 28, U. S. Code, sections 1336, 2284 and 2321-2325 inclusive, which authorizes suits to be brought in the District Court of the United States against the United States of America to enjoin, annul, suspend and set aside in whole or in part, orders of the Interstate Commerce Commission.

IV

August 1, 1949, plaintiff filed a complaint with the Interstate Commerce Commission which alleged inter alia that the failure and the refusal of the Union Pacific Railroad Company, and some 217 other railroad companies, to establish joint competitive rates and charges via the Ogden gateway and the Rio Grande on domestic, interstate and foreign freight traffic in carload or trainload quantities, in any

quantity lots, or in less-than-carload lots resulted in through rates which were excessive, unjust, unreasonable and discriminatory in violation of section 1, section 3 and section 15 of the Interstate Commerce Act, and was and is contrary to the national transportation policy since it deprives the public, shippers, and the Rio Grande of the use of available and reasonable through routes and rail facilities at just, reasonable and non-discriminatory through joint rates which were and are necessary and desirable in the public interest.

Plaintiff requested the Interstate Commerce Commission to enter an order requiring the Union Pacific Railroad Company and other railroad defendants to establish and maintain for the future just, reasonable, and non-discriminatory joint rates on freight traffic via the route of the Rio Grande through its Colorado and Utah gateways between (a) points on the Union Pacific Railroad Company and its connections in Utah north of Ogden, Utah, and in Idaho, Montana, Oregon, Washington and British Columbia, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, Colorado and points east [fol. 6] thereof; and between Utah common points and the northwest territory served by the Union Pacific railroad and its connections heretofore described.

V

Answers to the complaint were filed by the Union Pacific Railroad Company and 48 other railroads. Only the Union Pacific and eleven other railroads appeared at the hearings, and only five railroads presented testimony, namely, the Union Pacific, which assumed the burden of the defense, and the Chicago and North Western, the Great Northern, and Northern Pacific, and the Wabash railroads.

VI

The following shippers and commercial interests intervened in the proceedings before the Interstate Commerce Commission in support of the complaint of the Rio Grande:

American National Live Stock Association.
Colorado Cattlemen's Association.

Idaho Cattlemen's Association.
National Live Stock Producers Association.
Utah Cattle and Horse Growers Association.
The Arkansas Valley Stock Feeders Association.
The Arnold Milling Company.
The Buhler Mill & Elevator Company.
The Consolidated Flour Mills Company.
Dixie Portland Flour Company.
The Arkansas City Flour Mill.
The Kansas Milling Company.
The William Kelly Milling Company.
Lawrence Milling Company, Inc., d/b/a Moundridge Mill & Elevator Co.
Light Grain and Milling Company.
The New Era Milling Company.
The Wall Rogalsky Milling Company.
The Walnut Creek Milling Company.
Colorado Wool Growers' Association.
Executive Committee Utah State Farm Bureau Federation.
The Grand Junction Chamber of Commerce.
Holly Sugar Corporation.
Idaho State Farm Bureau.
Producers Live Stock Marketing Association.
Idaho Wool Growers Association.
The Pueblo Chamber of Commerce.
Western Forest Industries Association.

Intervening also were the Secretary of Agriculture of the United States, the Public Utilities Commissions of the [fol. 7] States of Colorado and Utah, organizations representing employees of the Rio Grande, and the American Short Line Railroad Association. The Public Utilities Commissions of the States of Idaho and Kansas supported the Rio Grande in part.

The interveners and the 57 witnesses who testified for interveners and for plaintiff represent more than 300,000 persons engaged in various activities.

VII

The complaint alleged that joint competitive freight rates with the Rio Grande via Ogden and Salt Lake City, Utah, were established in 1897 by the Oregon Short Line Railroad Company and the Oregon Railroad and Navigation Company on practically all freight traffic moving eastbound and westbound. The joint rates to and from points on the Oregon Short Line and the Oregon Railroad and Navigation Company applicable on freight traffic moving eastbound and westbound between practically all points were maintained via the Rio Grande until August 25, 1906. By that time the Union Pacific Railroad Company had again acquired dominance over the Oregon Short Line and the Oregon Railroad and Navigation Company, and between August 1906 and December 1912 the Union Pacific Railroad Company caused to be cancelled the joint freight rates via the Rio Grande, which had been established in 1897; but no action was taken by the Union Pacific or other defendants then or later to cancel the through routes. Through routes now exist and have existed for many years for the interchange of freight traffic by the Rio Grande with the Union Pacific Railroad at Provo, Ogden and Salt Lake City, Utah, and the Union Pacific Railroad Company and other railroads heretofore named at Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, Colorado as to freight traffic.

[fol. 8] (a) between points on or via the Union Pacific Railroad in Utah, north of Ogden, Utah, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof, and

(b) as to freight traffic between Utah common points on the one hand and points on or via the Union Pacific in Utah, north of Ogden, Utah, Idaho, Montana, Oregon, Washington and British Columbia, on the other hand.

The complaint also alleged that the present through rates and charges applicable to such traffic between the points described via such through routes were and are based upon the combination of the intermediate, local or other rates, which rates and charges in the aggregate were and are substantially higher than the joint through rates maintained

by defendant railroads on similar freight traffic between the same origin and destination places and territories which moves via the Union Pacific and the other defendant railroads; that the combination rates applicable on the traffic and between the territories described via said through routes of the Rio Grande and defendant railroads were and are unjust, unreasonable, and discriminatory and unduly prejudicial as compared with the competitive joint rates maintained by the Union Pacific railroad or via the Union Pacific and other defendant railroads on like freight traffic via other competitive routes.

VIII

Hearings on the complaint were conducted by Examiner Frank E. Mullen at Salt Lake City, Utah, Boise, Idaho, and Cheyenne, Wyoming. In his report the examiner found for the complainants. If the findings and conclusions of the examiner had been sustained by the Interstate Commerce Commission, the Rio Grande and the intervening complainants would have been granted all of the relief sought by them. For the convenience of the court, the ultimate findings of the examiner are set forth below:

[fol. 9] "The Commission should find:

1. That the routes via Salt Lake City or Ogden in connection with the Rio Grande over which joint rates are sought in this proceeding are not unreasonably long or unduly circuitous.

2. That the failure and refusal of the Union Pacific and the other defendants, to the extent they participate in the traffic, to join with the Rio Grande in joint rates over such routes from and to the Northwest territory, described herein, via Salt Lake City or Ogden in connection with the Rio Grande to and from Utah common points and to and from Colorado common points and points each thereof, result in undue disadvantage and undue prejudice to shippers and receivers of freight and to the localities and districts in Utah and Colorado served by the Rio Grande.

3. That in the exercise of the Commission's authority under section 15 (1) of the Act the establishment

of joint rates upon the same level as those concurrently maintained over the Union Pacific and its connecting lines, defendants herein, from and to the described territories should be required in order to remove the undue disadvantage and undue prejudice to shippers and receivers of freight on the Rio Grande and to the localities and districts in Utah and Colorado served by that railroad, which result from the refusal and failure of defendants to join in and maintain such joint rates over the said routes.

4. That it is necessary and desirable in the public interest that such joint rates over through routes over the Union Pacific and its connecting railroads, defendants herein, via Salt Lake City or Ogden in connection with the Rio Grande from and to points in Utah north of Ogden, Idaho, Montana, Oregon and Washington to and from Utah common points and to and from Colorado common points and points east thereof should be established and maintained.

5. That such joint rates over the through routes via Salt Lake City or Ogden in connection with the Rio Grande are needed to provide adequate and more efficient and more economic transportation for the shippers and receivers of freight on the Rio Grande in Utah and Colorado and for the localities and districts in those States served by that railroad.

6. That such joint rates over said routes are needed to provide adequate and more efficient and more economic transportation to the shippers and receivers of freight and localities and districts in the Northwest in order that they may ship over those routes at the joint rates, livestock, agricultural commodities, lumber and lumber products and other commodities, to points on the Rio Grande under marketing and transit arrangements with right to reship beyond to Colorado points and points east thereof.

[fol. 10] 7. That the joint rates now in effect over the Union Pacific and its connecting lines, defendant herein, from and to the territories described are just and reasonable for application to traffic that may be routed from and to the same origins and destinations in said territories over the Union Pacific and its con-

necting lines, defendants herein, via Salt Lake City or Ogden in connection with the Rio Grande."

IX

The Commission substantially modified the findings and conclusions of the examiner (287 I.C.C. 611, 659). The conclusions of the Commisison are set forth below:

"1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kansas, to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the lower peninsula of Michigan and in Oklahoma and Texas.

"2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and

other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

"4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

[fol. 11] The minutes of the Commission record that its entire membership of eleven commissioners were present when the case was disposed of, but that one Commissioner did not vote. The minutes also show that six of the ten members approved and adopted the report and order as made. The report itself, 287 I.C.C. 611, at page 665, shows that Commissioner Arpaia is of the opinion that through routes did exist as claimed and that Commissioner Patterson, at page 664, stated that the findings of the Commission were inconsistent and incomplete in that they failed to include lumber in the relief granted. Since Commissioners Lee, Mahaffie, Splawn and Cross by separate opinions found that through routes existed and that the Rio Grande is entitled to the competitive joint rates sought via Ogden and Salt Lake on all of the traffic and between all of the points involved, it will seem that on the question of the existence of through routes and of the inclusion of lumber in the relief granted, there is an even division of views among the ten commissioners who participated in the disposition of the case which was not resolved.

X

That part of the order of the Commission here assailed as invalid was unsatisfactory to the Rio Grande and to the interveners who supported the Rio Grande. In other respects the order was also unsatisfactory to certain defendants and the interveners who supported them. For these reasons, petitions were filed with the Commission by the Rio Grande and intervening complainants and by the Union Pacific Railroad and other defendants for reconsideration, reargument and modification of the order of the Commis-

sion. By its order of June 10, 1953, attached hereto as Appendix "C" the Commission denied all of the petitions for reconsideration, etc.

[fol. 12]

XI

The order of the Commission dated January 12, 1953, (Appendix "B") required that the joint rates prescribed become effective April 7, 1953, by publishing and filing tariffs with the interstate Commerce Commission on not less than 30 days' notice. Further orders of the Interstate Commerce Commission dated February 13, April 15 and June 24, 1953, modified the order of January 12, 1953, so that the joint rates prescribed now are to become effective on January 7, 1954, by publishing and filing tariffs on at least 30 days' notice, unless that effective date is further postponed by the Commission.

XII

The Commission prescribed joint competitive rates and through routes applicable to fruits and vegetables, livestock and certain other commodities for eastbound movement, and on tombstones from points in Vermont and Georgia to the destination territory involved, on the finding, *inter alia,* that such joint rates and through routes are necessary and desirable in the public interest, in order to provide adequate and more economic transportation. Plaintiff alleges that the part of the order of the Commission here assailed is unlawful, arbitrary, capricious and contrary to the evidence and the statute, in that the Commission failed and refused to treat the evidence of record as typical and representative of all of the traffic and the territory involved, and failed and refused to prescribe joint competitive rates and through routes on all of the traffic eastbound and westbound and between all of the points involved. Plaintiff further alleges that the order of the Commission is unlawful, arbitrary, capricious and contrary to the evidence and the statute, in that in prescribing joint competitive rates and through routes on fruits and veg-

[fol. 13] etables, livestock and certain other commodities for eastbound movement, the Commission imposed a restricted intermediate territory, including points in eastern

Colorado, such as Denver, Colorado Springs, Pueblo, Trinidad, served by plaintiff, and points in Nebraska, Kansas, northern Iowa, Minnesota and the Dakotas, to which the prescribed rates do not apply.

The order of the Commission is also unlawful, arbitrary and capricious, and is contrary to the evidence and to the statutes in the following additional respects:

1. In failing and refusing to give serious or any real consideration to the findings and conclusions of the examiner, the only officer of the Commission who heard all of the testimony and saw all of the witnesses, and in that respect acting contrary to the spirit if not the letter of the Administrative Procedure Act. 5 U.S.C.A. § 1001, et seq., § 1009 (e). *United Camera Corp.* v. *National Labor Rel. Bd.*, 340 U.S. 474, 496.

2. In failing and refusing to find that through routes exist on the traffic involved via the Union Pacific through Ogden and the Rio Grande between Colorado common points and points east thereof, on the one hand and points in the closed door territory in northern Utah, Idaho, Montana, Oregon and Washington on the other hand; and in finding that because such routes are not open on a commercial basis at competitive joint rates, they may not be considered through routes under the Interstate Commerce Act because that would give them "a character which they do not now possess."

3. In failing and refusing to find that the refusal of the Union Pacific and the other defendant railroads to establish joint competitive rates on the traffic and between the territories involved in this case via the Ogden Gateway and the Rio Grande on the same level that are now maintained by the Union Pacific with other defendant railroads via numerous other routes via which the distance is as great, and in some instances substantially greater, than are the distances via the Ogden Gateway and the Rio Grande constitutes a violation of Section 3 (4) of the Interstate Commerce Act.

4. In finding that a violation of Section 3 (4) exists by virtue of the maintenance by the Union Pacific and the other defendants of joint rates between points in the

closed door territory on the traffic involved and points, [fol. 14] on the Bamberger Railroad south of Ogden while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, the Commission erred in restricting that finding to and from points between Salt Lake City and Ogden since the Rio Grande serves many other shippers in Utah south of South Lake City, at such points as American Fork, Springville and Midvale, which are vitally interested in the competitive rates sought.

5. In finding on pages 656-659 of its printed report (287 I.C.C. 611) that the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental railroads and to support that finding by relying on *Livestock-Western District Rates*, 176 I.C.C. 1, decided in June, 1931, and 190 I.C.C. 175, decided in December, 1932, and in *W. H. Bintz Co.* v. *A. & S. Ry. Co.*, 216 I.C.C. 481, 486, decided in June, 1936, which decisions merely leaned for support on the older cases cited, as the record shows that the operating conditions, including distances of the Rio Grande, have been substantially improved and shortened since the date of the decisions cited. In fact, the record shows that the main line of the Rio Grande which would be used in connection with the traffic involved has been practically rebuilt since the period covered by the decisions cited.

6. In failing and refusing to find that the through rates based on the combination of intermediate rates via Ogden and the Rio Grande on the traffic and between the territories involved are unjust and unreasonable to the extent they exceed the joint competitive rates of the other railroads and the Union Pacific which apply via routes other than the Rio Grande generally on transcontinental traffic and other traffic, and which also apply via the route of the Rio Grande through Salt Lake and Ogden and on traffic to and from points in California and certain western Pacific coast points in Oregon and Washington.

XIII

Wherefore, plaintiff, being without adequate remedy at law, respectfully prays:

First. That process may issue against the defendants, the United States of America and the Interstate Commerce Commission.

Second. That upon the filing of this complaint the presiding judge of this court shall call to his assistance in the hearing and determination thereof two other judges, of whom at least one shall be a circuit judge, and the court thus constituted and convened shall hear this complaint upon due and legal notice to the defendants. 28 U.S.C.A. § 2284 and 2321-2325.

[fol. 15] Third. That the court, upon final hearing of this case of action, enter a decree which shall adjudge that the order of the Interstate Commerce Commission of January 12, 1953, in the respects hereinbefore described is unlawful, null and void, and that in these respects it be set aside and their enforcement forever enjoined.

Fourth. That the plaintiff have recovery of the defendants' proper costs of this cause of action; and

Fifth. That plaintiff have such other and further relief in the premises as this court may deem fit, appropriate and proper.

Respectfully submitted, The Denver and Rio Grande Western Railroad Company, Herbert M. Boyle, 1531 Stout Street, Denver, Colorado, Robert E. Quirk, 1116 Investment Building, Washington, D. C., Attorneys for Plaintiff.

[fol. 16] APPENDIX A TO COMPLAINT

Section 1 (4) of the Interstate Commerce Act, reads as follows:

"'(4) It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifica-

tions applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3 (1) of the Interstate Commerce Act, reads as follows:

"(1) It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Section 3 (4) of the Interstate Commerce Act, reads as follows:

"(4) All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and de-

livering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15 (1) of the Interstate Commerce Act, reads as follows:

"(1) That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and [fol. 17] hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for

such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3) of the Interstate Commerce Act, reads as follows:

"(3) The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. The Commission shall not, however, establish any through route, classification, or practice, or any rate, fare, or charge, between street electric passenger railways not engaged in the general business of transporting freight in addition to their passenger and express business, and railroads of a different character. If any tariff or schedule canceling any through route or joint rate, fare, charge, or classification, without the consent of all carriers parties thereto or authorization by the Commission, is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancelation to show that it is consistent with the public interest, without regard to the provisions of paragraph (4) of this section.

Section 15 (4) of the Interstate Commerce Act, reads as follows:

"(4) In establishing any such through route the Commission shall not (Except as provided in section 3, and except where one of the carriers is a water line)

require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire [fol. 18] length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

[fol. 19] APPENDIX B TO COMPLAINT

Order

At a General Session of the Interstate Commerce Commission, Held at Its Office in Washington, D. C., on the 12th Day of January, A. D. 1953

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY, et al.

This proceeding being at issue upon complaint and answers on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination:

It is ordered, That the defendants named in the complaint, according as they participate in the transportation, be, and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which ex-

ceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the des-ribed excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points [fol. 20] on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue

prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

George W. Laird, Acting Secretary. (Seal.)

[fol. 21] APPENDIX TO COMPLAINT

ORDER

At a General Session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 10th day of June, A.D. 1953.

No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY, ET AL.

Upon further consideration of the record in the above-entitled proceeding, and upon consideration of petitions for reconsideration, and for modification of the findings and order filed by complainant, defendants and various interveners, and the several replies to the petitions, and it appearing that none of the petitions presents matters that are materially different from those of record in the proceeding, or offers new or additional contentions or arguments that vary substantially from those previously advanced and considered by the Commission in disposing of the issues;

It is ordered, That said petitions be, and they are hereby, denied.

By the Commission.

George W. Laird, Acting Secretary. (Seal)

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

[Title omitted]

ORDER CONVENING THREE-JUDGE COURT—October 26, 1953

Honorable William Lee Knous, United States District Judge for the District of Colorado, having notified me that an application for injunction has been filed in the above matter, and that it is an action required by Act of Congress to be heard and determined by a District Court of three judges:

Now, therefore, it is ordered that said Court shall be constituted as follows: Honorable Orie L. Phillips, Chief Judge of the United States Court of Appeals, Tenth Circuit; Honorable Royce H. Savage, United States District Judge, and Honorable William Lee Knous, United States District Judge.

Dated at Denver, Colorado, October 26, 1953.

Orie L. Phillips, Chief Judge, United States Court of Appeals, Tenth Circuit.

[fol. 23] [File endorsement omitted]

IN THE UNITED STATES DISTRICT COURT

[Title omitted]

SUMMONS AND RETURN—Filed October 27, 1953

To the above named Defendants:

You are hereby summoned and required to serve upon Herbert M. Boyle plaintiff's attorney, whose is 1531 Stout Street, Denver, Colorado, and file with the Clerk of the United States District Court for the District of Colorado, at Denver, Colorado, an answer to the complaint which herewith served upon you, within 60 days after service of this summons upon you, exclusive of the day of service.

If you fail to do so, judgment by default will be taken against you for the relief demanded in the complaint.

G. Walter Bowman, Clerk of Court; William Graf, Deputy Clerk. (Seal of Court.)

Date: October 22nd, A.D. 1953.

Note.—This summons is issued pursuant to Rule 4 of the Federal Rules of Civil Procedure.

[fol. 23a] RETURN ON SERVICE OF WRIT

DISTRICT OF COLORADO, ss:

I hereby certify and return, that on the 22nd day of October 1953, I received this summons and served it together with the complaint herein as follows: upon the therein named United States of America by handing to and leaving true and correct copies thereof with Charles S. Vigil, United States Attorney for the District of Colorado, At Denver, in said District, on the 22nd day of October, A. D. 1953.

Upon the therein named Interstate Commerce Commission by mailing by Registered Mail, return receipt requested, to said Commission, Washington, D. C., on the 22nd day of October, A. D. 1953.

I further certify and return that I mailed two true and correct copies thereof by registered mail, return receipt requested, to The Attorney General of the United States, at Washington, D. C., on the 22nd day of October, A. D. 1953.

Maurice T. Smith, United States Marshal, By Oscar A. Crist, Deputy Unite States Marshal.

Marshal's Fee: Service, $2.00.

IN UNITED STATES DISTRICT COURT

[Title omitted]

MOTION OF UNION PACIFIC RAILROAD CO., ET AL., TO INTERVENE AS DEFENDANTS UNDER RULE 24, AND NOTICE THEREOF—Filed November 12, 1953

I

Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; and Wabash Railroad Company, file this motion pursuant to Rule 24(a) and (c), (28 U. S. C. A., Federal Rules of Civil Procedure, Rules 17-51), to intervene as defendants in the above-entitled proceeding in which complaint was filed October 22, 1953.

II

Movants are corporation common carriers by railroad, and each of them is engaged in transportation of property and passengers in interstate and intrastate commerce over their respective lines of railroad in and between several states in the Midwestern and Western part of the United States. Union Pacific Railroad Company, and The Atchison, Topeka and Santa Fe Railway Company operate and conduct business in the District of Colorado. In the order named in the preceding paragraph they were incorporated, [fol. 25] respectively, in the States of Utah, Wisconsin, Wisconsin, Wisconsin, Minnesota, Kansas, Wisconsin and Ohio.

III

As shown by the allegations therein, the complaint of The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande" or "Plaintiff") seeks to enjoin, annul and set aside, "in part", the order issued January 12, 1953, by the Interstate Commerce Commission

in a proceeding entitled "No. 30297, *Denver & Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al.*"

Movants were defendants, along with some 200 other railroads in that proceeding before the Commission, and, therefore, are entitled to intervene in this suit as of right, pursuant to the provisions of 28 U. S. C. A., section 2323.

IV

Further demonstrating their interests in this suit, Movants show that in the proceeding before the Commission the Rio Grande demanded that the Commission issue an order which would enable it to divert to its line from the lines of these Movants as much as possible of more than 157,000 carloads of transcontinental freight traffic consisting of all commodities originated and terminated, principally on the lines of Union Pacific Railroad Company and certain others of these Movants in the States of Utah, north of Ogden, Idaho, Montana, Oregon and Washington, and transported by them and other carriers, except the Rio Grande, to or from points located principally in the eastern part of the United States.

The order issued by the Commission (Appendix B to the complaint) requires these Movants and other railroads to establish on the several commodities named therein the through routes and joint rates demanded by the Rio Grande via its line. As the commodities named in the order constitute approximately one-third of the total traffic which the Rio Grande seeks to divert to its line and as such diversion would deprive or threaten to deprive the Union Pacific and [fol. 26] others of these Movants of many millions of dollars annually in earnings and revenues from that traffic which is now transported by them, they filed suit on June 25, 1953, to enjoin, annul and set the order aside, in the District Court of the United States for the District of Nebraska, Omaha Division. The suit is entitled "*Union Pacific Railroad Company, et al., Plaintiffs v. United States of America, and Interstate Commerce Commission, Defendants*, Civil Action No. 76-53." Trial of that suit is set for November 23, 1953, before United States Circuit Judges Collet and Johnsen and United States District Judge Delehant. Copy

of the complaint in that suit is attached hereto as Appendix A.

By petition filed August 17, 1953, the Rio Grande sought and has been permitted to intervene as a defendant in that suit and has thus voluntarily submitted itself to the jurisdiction of that Court. Having done so, the Rio Grande was and is under obligation pursuant to the intendment and purpose of Rule 13 of Federal Rules of Civil Procedure to avoid multiplicity of suits and to dispose of all questions concerning the validity of the Commission's order in one action, to present its claims and contentions in the suit to which it has become a party in the District of Nebraska. The issues tendered by the complaint which the Rio Grande has filed in this Court could conveniently be presented to and decided by the Nebraska District Court along with the issues raised by the complaint these Movants have filed in that Court. As that Court has jurisdiction to review and decide all issues concerning the validity of the Commission's order, and as all necessary parties are now before that Court, these Movants suggest that this Court, in the exercise of its authority under 28 U. S. Code, section 1404(a), transfer this suit to the United States District Court for the District of Nebraska. Such cases are tried upon the record of evidence heard by the Interstate Commerce Commission, and no witnesses are required in presenting the cases to the Courts.

V

The Commission's order does not require establishment of through routes and joint rates, nor does it have any effect on approximately two-thirds of the traffic and revenues that [fol. 27] the Rio Grande seeks to divert to its line. It is that additional part of the traffic on which the Commission does not require through routes and joint rates that the Rio Grande seeks to compel through routes and joint rates via its line.

If the Rio Grande should succeed in accomplishing its full objectives to divert to its line all of the traffic and revenues it seeks, the Union Pacific would be threatened with a total possible loss of earnings and revenues of approximately $50,000,000 annually, and its loss of the part of the traffic involved in this suit would be more than $30,000,000

annually, and others of these Movants would lose relatively large portions of the revenues they now earn from the traffic sought by the Rio Grande. It is to protect themselves from such potential financial loss, or any part thereof, and to safeguard their future financial ability to provide and render adequate and efficient transportation service to the public that these Movants desire to intervene as defendants in this suit.

Wherefore, these Movants pray for an order of this Court permitting them to intervene as defendants in this suit, to file the motion to dismiss and answer to the complaint tendered with the attached Statement of Claims for Which Intervention is Sought as Defendants, to submit oral arguments and briefs, and to be treated in all respects as defendants in this suit.

Respectfully submitted, Elmer B. Collins, F. O. Steadry, Warren H. Ploeger, L. E. Torinus, Jr., Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, E. G. Knowles, 300 International Trust Bldg., Denver, Colorado, Attorneys for Movant Railroads.

[fol. 28] NOTICE OF MOTION (omitted in printing)

[fol. 29] [Stamp:] Filed United States District Court, Denver, Colorado, Nov. 20, 1953. G. Walter Bowman, Clerk.

APPENDIX "A" TO MOTION

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

Civil Action No. 76-53

UNION PACIFIC RAILROAD COMPANY; CHICAGO AND NORTH WESTERN RAILWAY COMPANY; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; and Wabash Railroad Company, Plaintiffs,

vs.

UNITED STATES OF AMERICA, and INTERSTATE COMMERCE COMMISSION, Defendants

(Filed June 25, 1953 2:30 p. m.)

COMPLAINT

Plaintiffs, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; and Wabash Railroad Company, bring this suit to enjoin, annul, suspend and set aside the order issued by the Interstate Commerce Commission (hereinafter called the "Commission") on January 12, 1953, in a proceeding entitled Docket No. 30297, The Denver and Rio Grande Western Railroad Company vs. Union Pacific Railroad Company, et al. The order, copy of which is attached and made a part hereof as Appendix A, requires:

[fol. 30] "*It is ordered*, That the defendants named in the complaint, according as they participate in the

transportation, be, and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

"*It is further ordered*, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the

lines of the Union Pacific Railroad Company through Wyoming.

"*It is further ordered*, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

"*And it is further ordered*, That this order shall continue in force until the further order of the Commission."

II

Union Pacific Railroad Company (hereinafter called "Union Pacific") is a corporation under the laws of the State of Utah, and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the State of Nebraska and other states hereinafter mentioned.

[fol. 31] Chicago and North Western Railway Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Wisconsin, Illinois, Minnesota, Iowa, South Dakota, Nebraska and other states.

Chicago, St. Paul, Minneapolis & Omaha Railway Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Nebraska, Iowa, Minnesota, and other states.

Northern Pacific Railway Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Minnesota, North Dakota, Montana, Idaho, Washington and other states.

Great Northern Railway Company is a corporation under the laws of the State of Minnesota and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Minnesota, North Dakota, Montana, Idaho, Washington, Oregon, California and other states.

The Atchison, Topeka and Santa Fe Railway Company is a corporation under the laws of the State of Kansas and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Illinois, Missouri, Kansas, New Mexico, Arizona, California, and other states.

Chicago, Milwaukee, St. Paul and Pacific Railroad Company is a corporation under the laws of the State of Wisconsin and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Illinois, Indiana, Wisconsin, Minnesota, North Dakota, South Dakota, Montana, Idaho, Washington and other states.

Wabash Railroad Company is a corporation under the [fol. 32] laws of the State of Ohio and is a common carrier by railroad engaged in the transportation of property and passengers in interstate and intrastate commerce in the States of Michigan, Indiana, Illinois, Missouri and other states.

III

Jurisdiction of this Court over this cause of action is provided by Title 28 U. S. Code, Sections 1336, 2284 and 2321-2325, inclusive, which authorizes suits to be brought in the District Courts of the United States against the United States of America to enjoin, annul, suspend and set aside orders of the Interstate Commerce Commission. Venue of this action is in this Court pursuant to Title 28 U. S. Code, Section 1398, because of the fact that the principal office of the Union Pacific is at 1416 Dodge Street, Omaha, Nebraska.

IV

The proceeding before the Commission in said Docket No. 30297 was initiated by a complaint filed August 1, 1949, by The Denver and Rio Grande Western Railroad Company, as complainant (hereinafter called "Rio Grande") against

the Union Pacific and some 200 other railroads, including the plaintiffs herein, alleging, among other things, that the Union Pacific and other railroads, or some of them, failed and refused—

> "* * * to join with complainant in establishing competitive joint rates for the transportation of the freight traffic involved between
>
> "(a) points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof,
>
> "and
>
> "(b) on freight traffic between Utah common points on the one hand, and places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia, on the other hand,
>
> "which failure and refusal by the defendants constitute violations of Section 1(4), Section 3, Section 15(1) and Section 15(3) of the Interstate Commerce Act, and is contrary to the National Transportation Policy."

The complaint also alleged that freight rates and charges via the Rio Grande on traffic to and from the territories [fol. 33] described were so much greater than rates and charges via routes of the Union Pacific and other defendants as to prevent the Rio Grande from obtaining a haul "on an unknown volume of competitive traffic" because shippers will not route their traffic via the Rio Grande at the higher rates and charges.

V

Answers to the complaint were filed by the Union Pacific and numerous other defendant railroads denying the allegations of the complaint. The complaint did not allege that through routes via the Rio Grande are necessary or desirable in the public interest, or that existing routes of the Union Pacific and other railroads are unreasonably long compared to routes via the Rio Grande, or that through routes and joint rates via the Rio Grande to and from the described territories are needed to provide adequate and more efficient or more economic transportation.

[fol. 34]

VI

Intervenors opposing the complaint and supporting the Union Pacific and other defendants named in the complaint include the State of Nebraska, City of Cheyenne, Wyoming, the Public Service Commissions of the States of Montana, Washington, Oregon, Wyoming, Nebraska and Kansas, chambers of commerce and other associations, certain industrial employe groups in Wyoming, and employe groups of the Union Pacific, the Chicago and North Western Railway Company and the Wabash Railroad Company.

Intervenors in support of the Rio Grande's complaint include the Secretary of Agriculture of the United States, the Public Utilities Commissions of Colorado and Utah, which intervened as their interests might appear, but later fully supported the complaint, the American National Live Stock Association, other live stock and stock feeder associations, various shippers' and producers' associations, milling companies, farm bureaus, chambers of commerce and certain groups of employes of the Rio Grande. The Public Utilities Commission of Idaho intervened without stating its position, but later took the position that the demands of the Rio Grande's complaint should be denied except with respect to live stock and fruits and vegetables.

VII

Union Pacific owns and operates nearly 10,000 miles of railroad serving more than 1,700 cities, towns and stations in the States of Iowa, Missouri, Nebraska, Kansas, Colorado, Wyoming, Utah, Nevada, California, Idaho, Montana, Oregon and Washington. Its eastern termini are at Council Bluffs, Iowa, and Kansas City, Missouri, and its western termini are at Los Angeles, California, Portland, Oregon, and Seattle, Washington, and at Ogden, Utah, where it made connection with what is now the Southern Pacific Company on May 10, 1869, to form the first transcontinental railroad in the United States. Beginning in 1878 the Union Pacific constructed and acquired railroad lines north of Ogden in Utah, Idaho, Montana, Oregon and Washington and now owns and operates 5,606.7 miles of railroad in the states just named of which 2,913.19 miles, or over .50

[fol. 35] per cent, consist of numerous branch lines connected with and extending from its main lines in those states.

The standard gauge lines of the Rio Grande, completed in 1890, extend from Ogden through Utah and Colorado to Denver, approximately 600 miles, and to Pueblo and Trinidad, Colorado. The Rio Grande connects with the Union Pacific at Denver, and interchange of traffic between the two railroads can be made at Ogden through the facilities of the Ogden Union Railway & Depot Company, a terminal facility owned and maintained by the Southern Pacific company and the Union Pacific for the interchange between them of eastbound and westbound transcontinental and other traffic.

VIII

In the States of Utah north of Ogden, Idaho, Montana, Oregon and Washington (designated by the Commission as the "northwest area" or "excluded territory"), more than 157,000 carloads of freight originate and terminate annually at stations on the main and branch lines of the Union Pacific. Most of this traffic now moves and for many years has moved over the lines of the Union Pacific through Pocatello, Idaho, and Granger, Wyoming, to or from the termini of the Union Pacific at Council Bluffs, Iowa, or Kansas City, Missouri, and the lines of connecting railroads at those two points. A portion of the traffic is moved by the Union Pacific to junctions with other railroads in Oregon, Washington and Montana, and by those railroads to points on their lines or to connections with still other railroads. By far the greater portion of the traffic moves between the northwest area and the area east of Missouri River and north of the Ohio River. It is this traffic and the revenue derived from it, or as much thereof as possible, which the Rio Grande seeks through its complaint to the Commission to divert to its line for a "bridge" haul over the entire length of its line between Ogden and Denver for the purpose, as testified by its president, of improving the financial condition and position of the Rio Grande. Routes via the Rio Grande are from 33 to 219 [fol. 36] miles longer than Union Pacific routes and division of the traffic to the Rio Grande would short haul or deprive

the Union Pacific of its present haul to the extent of about 1,000 miles and would deprive other railroad plaintiffs herein of their entire haul on many thousand carloads of such traffic annually.

[fol. 37] IX

Union Pacific and other railroads have never established or maintained any through routes and joint rates with the Rio Grande via Ogden on traffic from and to the described territories, except on eastbound sheep or goats and except during a period when the Union Pacific and the Oregon Short Line Railway Company, which is wholly owned by the Union Pacific, were in separate receiverships, at the conclusion of which period, the through routes and joint rates with the Rio Grande were cancelled in 1906 and 1912 with approval of the Commission. No complaints have been filed by shippers or the public or by any state public service commission demanding the through routes and joint rates which the Rio Grande seeks to compel via its line as a result of its complaint to the Commission.

X

Concurrently with the filing of the complaint August 1, 1949, and thereafter, officials of the Rio Grande conducted a vigorous and wide-spread campaign in Colorado, Utah, Idaho, Oregon and other northwestern states in which it solicited, agitated and sought to persuade and procure shippers located upon and served by the Union Pacific and public service commissions of those states to joint with the Rio Grande by intervention and testimony of such nature as to help it win its case. In that campaign, the Rio Grande condemned and vilified the Union Pacific, accused it of violations of law and of the rights of shippers served by it and urged upon shippers that they would benefit by joining with the Rio Grande in supporting its case. Some evidence of that campaign was received by the Commission at hearings hereinafter mentioned, but the Commission excluded and refused to receive most of the evidence offered by the Union Pacific disclosing and portraying the nature, vigor and extent of the Rio Grande's efforts to procure testimony of shippers to help it win its case before the Commission.

After the Examiner's proposed report and recommendations were issued November 20, 1950, U. S. Senator Edwin [fol. 38] C. Johnson of Colorado, then Chairman of the Senate Committee on Interstate and Foreign Commerce which approves or disapproves appointments and reappointments of persons nominated by the President of the United States for positions as Interstate Commerce Commissioners, made radio broadcasts on January 27 and February 2, 1951, over radio station KFEL at Denver, Colorado, in which he praised the Examiner's recommendations as "a great victory for Colorado shippers," denounced the desire of the Union Pacific to retain to its shorter route the traffic originated and terminated on its main line and numerous branch lines in the northwest as "the selfish interests of the Union Pacific" and announced that "I am, and will continue to do all that I can to rid my people of such economic tyranny." Again, on October 28, 1952, immediately following reargument of the case before the Commission on October 15 and 16, 1952, and while the case was under consideration and pending decision by the Commission, Senator Johnson caused or permitted to be published over his signature in the newspaper, Wichita Beacon, Wichita, Kansas, an "editorial" in which he charged Union Pacific with discrimination against shippers located on its own railroad, with maintaining a "transportation monopoly" by refusing to voluntarily deprive itself of revenues from traffic originated and terminated on its own railroad and refusing to join in the Rio Grande's plan to divert the traffic to its line for its financial improvement, asserted that he had "investigated" the case then pending before the Commission and concluded "that the public interest was on the side of the Rio Grande."

The Commission rejected the Union Pacific's petition to reopen the record and receive copies of the radio broadcasts and "editorial" in evidence.

XI

Hearings upon the complaint were conducted by an Examiner of the Commission at Salt Lake City, Utah, Boise, Idaho, and Cheyenne, Wyoming, after which a proposed report of the Examiner was served upon the parties No-

vember 20, 1950, recommending that the Commission grant the full demands of the Rio Grande's complaint. Except-
[fol. 39] tions to the proposed report of the Examiner were filed by the Rio Grande with respect to one feature of the proposed report and by the Union Pacific, other railroad defendants, the six state commissions, and other parties supporting the defendants. Oral arguments upon the exceptions were heard by the entire Commission October 11 and 12, 1951, and reargument ordered by the Commission was heard October 15 and 16, 1952.

XII

On January 12, 1953, a majority of the Commission, with certain of the Commissioners dissenting, issued the report and decision attached and made a part hereof as Appendix B hereto in which it announced the following "Conclusions":

"1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the lower peninsula of Michigan and in Oklahoma and Texas.

"2. That the assailed rates on the commodities and from and to the points described in the foregoing find-

ing are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act.

"4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

Upon the same date the Commission entered its order [fol. 40] mentioned above and attached as Appendix A to this complaint.

XIII

Petitions for reopening, reargument and reconsideration of its decision and order were filed with the Commission by the Union Pacific and several other railroads, by the public service commissions of Nebraska, Wyoming, Idaho, Montana, Oregon and Washington, and by Union Pacific employees. In those petitions, the Commission was urged to reverse its findings and order and to dismiss the complaint. Petitions for reconsideration were also filed with the Commission by the Rio Grande and a number of shippers and others. On June 22, 1953, the Commission issued and made public its order dated June 10, 1953, denying all the petitions for reconsideration. Copy of that order is attached hereto as Appendix C and made a part hereof.

XIV

Plaintiffs allege that said order of the Commission dated January 12, 1953, is based upon errors of law, is not sup-

ported by evidence or adequate findings, exceeds the statutory power of the Commission, and is unlawful, arbitrary, null and void and should be set aside for the following reasons:

1. In rejecting testimony timely offered to prove that the Rio Grande agitated, solicited and procured shippers and others as witnesses to intervene and testify in such manner as to help it win its case and in rejecting transcripts of radio broadcasts over station KFEL at Denver, and an "editorial" by Senator Ed. C. Johnson, published in the Wichita Beacon, the Commission acted arbitrarily, unreasonably and unlawfully.

2. The Commission acted arbitrarily, unreasonably and unlawfully in refusing to accept and consider court decisions and other authorities offered by the Union Pacific in support of the contention that the Rio Grande's solicitation and procurement of shippers to intervene and testify so as to help it win its case, and that the intrusion of and utterances by Senator Johnson vitiated and nullified the proceeding requiring its dismissal by the Commission.

[fol. 41] 3. The Commission acted arbitrarily, erroneously and contrary to law in overruling plaintiffs' motion to dismiss the complaint on the ground that the Rio Grande seeks only to obtain additional revenues to improve its financial position and that the Commission is prohibited by section 15(4) of the Interstate Commerce Act from compelling through routes for that purpose.

4. In holding that, despite the fact that the Rio Grande's complaint did not and could not raise an issue of undue preference and prejudice among shippers under section 3(1) of the Interstate Commerce Act, such issue nevertheless was tendered for decision because of testimony submitted by shippers, the Commission acted arbitrarily, erroneously and contrary to law.

5. In finding that the combination rates via the Rio Grande are unjust and unreasonable and that joint rates applicable via the Union Pacific and other defendants are reasonable for application via the Rio Grande, the Commission acted arbitrarily, unreasonably and unlawfully in that there was no evidence before it to justify or support such findings.

6. The Commission acted arbitrarily, erroneously and contrary to law in failing to find and hold that the refusal of the Union Pacific and other defendants named in the complaint to equalize shippers in the matter of transit privileges offered by the Rio Grande by joining in lower rates via the Rio Grande does not and cannot violate section 3(1) of the Interstate Commerce Act.

7. The Commission's finding that the combination rates applicable via the Rio Grande on traffic from and to the northwest area or "excluded territory" are unduly prejudicial of shippers and receivers using or desiring to use the Rio Grande's routes and unduly preferential of shippers and receivers using the Union Pacific's routes, is arbitrary, capricious, erroneous and contrary to law in that shippers in said northwest area using or desiring to use the Rio Grande's routes are the same shippers who were found by the Commission to be unduly preferred because they have available and make use of Union Pacific routes at lower joint rates.

8. After correctly finding that there are substantial differences and dissimilarities in transportation conditions [fol. 42] over the Union Pacific compared with those over the Rio Grande, the Commission acted arbitrarily, erroneously, contrary to and without support of evidence in finding that those substantial differences and dissimilarities in transportation conditions "become relatively insignificant" and that "transportation conditions are substantially similar" for the longer hauls and greater distance between points in the northwest area and points in the southern and eastern part of the United States.

9. The finding that through routes and joint rates via the Rio Grande are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" is contrary to the overwhelming preponderance of the evidence, contrary to and inconsistent with facts clearly found and stated in the Commission's report and is based upon an erroneous interpretation of the words "needed in order to provide adequate, and more efficient or more economic, transportation" used in section 15(4) of the Interstate Commerce Act.

10. The finding that, regardless of the fact that there is

no allegation or contention by the Rio Grande that through routes and joint rates via its line for the involved traffic are needed to provide adequate and more efficient or more economic transportation, or that routes of the Union Pacific and other railroads are not adequate, testimony of shippers raises "a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities" is arbitrary, erroneous in law and is not supported by evidence.

11. The basic facts found by the Commission are inconsistent with and do not justify or support, but are contrary to its ultimate conclusions and the order based thereon is arbitrary, erroneous and void.

12. The finding that the commodities specified in the order must be moved over as many routes as possible is arbitrary, erroneous and in conflict with and contrary to the provisions of sections 1(4) and 15(4) of the Interstate Commerce Act.

13. The Commission acted arbitrarily, capriciously, er- [fol. 43] roneously, and contrary to the evidence of record in finding that because of the refusal of the Union Pacific and other railroads to join with the Rio Grande in through routes and equal joint rates so that the specified commodities may move over the Rio Grande instead of routes of the Union Pacific and other railroads "the shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the wide-spread system developed for the marketing of such commodities."

14. The finding that for traffic reconsigned or accorded transit privileges at points on the Rio Grande "defendants' routes are inadequate and less economical than are the Rio Grande routes" because higher rates apply via the Rio Grande and "the Union Pacific routes and the joint rates which apply over them are not available" at such points on the Rio Grande, is arbitrary, capricious, erroneous and is based upon a misinterpretation of law.

15. The finding that the situaiton as to the commodities specified in the order is similar to that in *D. A. Stickell & Sons, Inc. v. Alton R. Co.*, 255 I. C. C. 333, is erroneous, contrary to the facts stated in the decision in that case and contrary to the evidence of record in this case.

16. In view of the facts correctly found that there are substantial dissimilar transportation conditions over the Rio Grande compared with those over the Union Pacific, that operating conditions on the Rio Grande are "more onerous" than those on the Union Pacific, that Union Pacific routes are shorter, that the line of the Rio Grande is less favorably situated than that of the Union Pacific and that traffic diverted to the Rio Grande would require at least 24 hours more time in transit and two more terminal yard or interchange services than presently required for movement of traffic over the Union Pacific, the further finding that those substantially different transportation conditions become relatively insignificant when spread over long hauls between the northwest area and the eastern and southern part of the United States, is arbitrary, erroneous, capricious, contrary to law and without any evidence to support or justify it, and is based on an erroneous assumption that the Commission [fol. 44] may lawfully ignore the substantial differences and more onerous transportation conditions of the Rio Grande for longer hauls.

17. The Commission acted arbitrarily, unlawfully and contrary to the evidence in refusing to find and hold that the joint rates via the Union Pacific and other railroads are too low for application via the longer route of the Rio Grande and that such application of the joint rates would result in wasteful and uneconomic transportation which the Interstate Commerce Act intends to prevent.

18. The findings that the combination rates via the Rio Grande are unreasonable because they are higher than the joint rates applicable via Union Pacific routes and that said joint rates are reasonable for application via the longer routes of the Rio Grande because although depressed and sub-normal the joint rates are the "going rates", and have been in effect for many years, are arbitrary, erroneous, capricious and contrary to law and the evidence of record.

19. The finding that "there is no claim that any of those (joint) rates is below a minimum reasonable level. It follows that the joint rates sought, as presently applied, are within the zone of reasonableness and must be regarded as reasonable rates" is arbitrary, capricious, erroneous in law and contrary to the evidence.

20. The Commission acted arbitrarily and unlawfully in failing and refusing to give effect to the requirement in section 15(4) of the Interstate Commerce Act that reasonable preference be given the originating carrier.

21. The Commission misconstrued and misapplied section 15(4) of the Interstate Commerce Act and exceeded its power in finding and requiring that the shorter Union Pacific routes may be short hauled because routes not more than 37 per cent longer could be made via the Rio Grande and because the Union Pacific would still retain a substantial haul after being short hauled approximately 1,000 miles.

[fol. 45] 22. The Commission acted arbitrarily, erroneously and contrary to the evidence in finding that the additional traffic which will be diverted to the Rio Grande under the order can be interchanged through present terminal facilities at Ogden or Salt Lake City without serious detriment to operating efficiency, and in ignoring evidence portraying obstacles of interchange of traffic between the Union Pacific and the Rio Grande at Denver.

23. The Commission acted arbitrarily, capriciously and erroneously in failing to consider the probable injurious effect that any substantial diversion of traffic and revenues from the Union Pacific to the Rio Grande would have upon the Union Pacific, its employes and its service on cities, towns and communities served by it and in failing to find that the probable diversion of traffic to the Rio Grande would impair and deteriorate service required by shippers and a large segment of the commerce of the country and the national defense.

24. The finding that maintenance by the Union Pacific of joint rates with the Bamberger Railroad at points between Ogden and Salt Lake City, Utah, while refusing to participate in like rates with the Rio Grande discriminates against the latter in violation of section 3(4) of the Interstate Commerce Act is without support of any evidence.

XV

Plaintiffs will be irreparably injured and damaged if the Commission's said order of January 12, 1953, is not re-

strained, suspended, enjoined, set aside and annulled. Plaintiffs would have no remedy at law to recover such loss or damage.

Said order of January 12, 1953, was originally made to become effective on April 7, 1953, by publishing and filing tariffs with the Commission on not less than 30 days' notice. [fol. 46] Further orders of the Commission dated February 13, April 15, and June 24, 1953, modified the order of January 12, 1953, so that it will become effective on October 7, 1953, by publishing and filing tariffs on September 7, 1953, unless the effective date thereof is further postponed by the Commission, or unless this Court restrains, enjoins, suspends and prevents said order from becoming effective.

If said order becomes effective and plaintiffs have not complied with its requirements, they and each of them will be subject to a penalty of $5,000.00 provided by Title 49, U. S. Code, Section 16(8) for each day they fail to comply with the order.

XVI

Wherefore, Plaintiffs pray:

1. That process may issue against the United States of America and Interstate Commerce Commission;

2. That this Court, by temporary stay, preliminary or interlocutory injunction, stay, restrain and suspend the operation of the order of the Commission dated January 12, 1953, pending the final hearing and determination of this action;

3. That a Court constituted as required by U. S. Code, Title 28, Sections 2284, and 2321-2325, consisting of three Judges, of whom at least one shall be a Circuit Judge, be convened, and that said Court so constituted and convened shall hear this petition upon due and legal notice to defendants;

4. That said Court, upon final hearing of this suit, enter a decree herein permanently suspending, enjoining, setting aside and annulling the said order of the Commission;

5. That Plaintiffs have recovery of the defendants of the proper costs of this suit; and

[fol. 47] 6. That the Plaintiffs have such other and further

relief in the premises as to equity may pertain and as may be deemed by this Court fit and proper.

Respectfully submitted, Elmer B. Collins, Attorney for Union Pacific Railroad Company, Plaintiff, 1416 Dodge Street, Omaha 2, Nebraska; F. O. Steadry, Attorney for Chicago and North Western Railway Company, and Chicago, St. Paul, Minneapolis & Omaha Railway Company, Plaintiffs, 400 West Madison Street, Chicago 6, Illinois; Conrad Olson, Attorney for Northern Pacific Railway Company, Plaintiff, 5th & Jackson Streets, St. Paul 1, Minnesota; L. E. Torinus, Jr., Attorney for Great Northern Railway Company, Plaintiff, 175 East 4th Street, St. Paul 1, Minnesota; Roland J. Lehman, Attorney for The Atchison, Topeka and Santa Fe Railway Company, Plaintiff, 80 East Jackson Blvd., Chicago 4, Illinois; Carson L. Taylor, Attorney for Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Plaintiff, 516 West Jackson Blvd., Chicago 6, Illinois; Eugene S. Davis, Attorney for Wabash Railroad Company, Plaintiff, Railway Exchange Building, St. Louis 1, Missouri.

Of Counsel: W. R. Rouse, 1416 Dodge Street, Omaha 2, Nebraska, for Union Pacific Railroad Company; Nye F. [fol. 48] Morehouse, 400 West Madison Street, Chicago 6, Illinois, for Chicago and North Western Railway Company, and Chicago, St. Paul, Minneapolis & Omaha Railway Company; M. L. Countryman, Jr., 5th & Jackson Streets, St. Paul 1, Minnesota, for Northern Pacific Railway Company; Edwin C. Matthias, 175 East 4th Street, St. Paul 1, Minnesota, for Great Northern Railway Company; J. C. Gibson, 80 East Jackson Blvd., Chicago 4, Illinois, for The Atchison Topeka and Santa Fe Railway Company; M. L. Bluhm, 516 West Jackson Blvd., Chicago 6, Illinois, for Chicago, Milwaukee, St. Paul and Pacific Railroad Company; Joseph H. Miller, Railway Exchange Building, St. Louis 1, Missouri, for Wabash Railroad Company.

IN UNITED STATES DISTRICT COURT

[Title omitted]

CLAIMS FOR WHICH INTERVENTION IS SOUGHT AS DEFENDANTS BY UNION PACIFIC RAILROAD CO., ET AL.—Filed November 12, 1953

Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; and Wabash Railroad Company, Movants herein, if permitted to intervene as defendants in this suit, will file the Motion to Dismiss and Answer tendered herewith, and will claim and show to the Court:

I

That the complainant, The Denver and Rio Grande Western Railroad Company (herein called "Rio Grande"),

has no legal right or standing to maintain this suit, and for that reason the suit should be dismissed.

II

The Rio Grande's complaint presents nothing that is reviewable by this Court or any other Court.

III

The decree prayed in the complaint would be futile and this Court is without power to issue any decree that would [fol. 54] be effective to aid the Rio Grande in accomplishing its desire for through routes and joint rates via its line on commodities not included in the Interstate Commerce Commission's said order of January 12, 1953.

IV

That this suit should be dismissed by this Court and transferred under 28 U. S. Code, section 1404(a) to the District Court of the United States for the District of Nebraska, Omaha Division, in which there is pending a suit, in which the Rio Grande is an intervening defendant, by these Movants to enjoin and annul the same order of the Interstate Commerce Commission which the Rio Grande assails, "in part" in this suit.

V

That, if the suit is not dismissed for the reasons stated above, this Court should not proceed to hear and determine the merits of the suit, but should stay proceedings therein, pending final decision in the above-mentioned suit now pending in the District Court of the United States for the District of Nebraska, Omaha Division.

VI

That "the part" of the Commission's said order of January 12, 1953, assailed by the complaint is not unlawful or invalid for the reasons alleged in the complaint.

VI

Movants by this intervention seek an opportunity to present their reasons and arguments in support of these [fol. 55] claims.

Respectfully submitted, Elmer B. Collins, F. O. Steadry, Warren H. Ploeger, L. E. Torinus, Jr., Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, E. G. Knowles, 300 International Trust Building, Denver, Colorado, Attorneys for Movant Railroads.

[fol. 56] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT

[Title omitted]

MOTION OF INTERVENORS, UNION PACIFIC RAILROAD COMPANY; CHICAGO AND NORTH WESTERN RAILWAY COMPANY; CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY; NORTHERN PACIFIC RAILWAY COMPANY; GREAT NORTHERN RAILWAY COMPANY; THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY; CHICAGO, MILWAUKEE, ST. PAUL AND PACIFIC RAILROAD COMPANY; AND WABASH RAILROAD COMPANY, TO DISMISS, OR IN THE ALTERNATIVE TO STAY PROCEEDINGS HEREIN—Filed November 12, 1953

These intervenors respectfully file this motion to dismiss the complaint herein on the following grounds, or in the alternative, to stay proceedings herein until after final decision in the suit described in their Motion to Intervene. In support of this motion, these intervenors show:

I

The Rio Grande Has No Right or Standing to Maintain this Suit

This suit to enjoin and annul, "in part", the order of the Commission "is a plenary suit in equity", and it "cannot be maintained unless" the complaint "states a cause of

action in equity", *Columbia System v. U. S.*, 316 U. S. 407, 415.

The complaint must be dismissed for lack of merit if it fails to set forth "the various elements which enter into or qualify the plaintiff's right to the relief sought" for "there may be jurisdiction and yet an absence of merits * * * as [fol. 57] where the plaintiff seeks preventive relief against a threatened violation of law of which he has no right to complain, either because it will not injure him" or for some other reason, and "whether a plaintiff seeking such relief has the requisite standing is a question going to the merits, * * *", *General Inv. Co. v. N. Y. Central R. R.*, 271 U. S. 228, 230-231.

The Act invoked by and cited in the complaint requires "that the petition [complaint] shall set forth 'the facts constituting petitioner's cause of action,' and by other provisions shows that for failure so to do the suit shall be dismissed. * * * Consequently the complaint must show that plaintiff has, or represents others having, a legal right or interest that will be injuriously affected by the order," *Moffat Tunnel League v. U. S.*, 289 U. S. 113, 119.

While the complaint alleges that the Rio Grande has a "pecuniary interest" in the matters involved in this suit, the allegations of the complaint and the statements and recitals in the Commission's report, 287 I. C. C. 611, copy of which is attached hereto as Appendix A, show that the alleged "pecuniary interest" of the Rio Grande consists only of its desire and purpose to improve its financial position by diverting traffic and revenues to its line from the lines of these intervenors, but the complaint fails to show or allege any legal right of the Rio Grande to demand through routes and joint rates, or to divert traffic and revenues to its line from other railroads, or that it represents others who have any legal right that would be affected by the order.

The complaint further fails to allege or show that the Commission's order results in "actual or threatened legal injury" to the Rio Grande, *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 486; or that because of the order the Rio Grande is "subjected to or threatened with any legal wrong", *Sprunt & Son v. United States*, 281 U. S. 249, 257, or "to any liability, civil or criminal," *United States v. Los*

Angeles R. R., 273 U. S. 299, 310. The Rio Grande cannot maintain this suit merely by showing, even if it were true, that the Commission acted erroneously or contrary to law, or committed errors of law in making the order, *Schenley* [fol. 58] *Distillers Corporation v. United States*, 326 U. S. 432, 435. To maintain the suit it "must show also that the order alleged to be void subjects them (it) to legal injury, actual or threatened," *Edward Hines Trustees v. U. S.*, 263 U. S. 143, 148. "* * * [J]udicial review is provided in order to protect a legal right of the plaintiff alleged to have been infringed by an order" of the Commission, but not for the purpose of rendering what the Rio Grande here seeks, in substance and effect, a declaratory judgment, *Piedmont & Nor. Ry. v. United States*, 280 U. S. 469, 478; *Boston Tow Boat Co. v. United States*, 321 U. S. 632; or an advisory opinion, or a futile judgment, which the Courts will not issue, *C. & S. Air Lines v. Waterman Corp.*, 333 U. S. 103, 113-114. As the Rio Grande has no legal right to improve its financial position by through routes and joint rates diverting traffic and revenues to its line from the lines of these intervenors, it has no basis upon which to maintain this suit, *U. S. v. American Ry. Exp. Co.*, 265 U. S. 425.

The fact that the Rio Grande was a party to the proceeding before the Commission as complainant "or otherwise" has no bearing on the question whether it has a right to maintain this suit, *Sprunt & Son v. United States*, 281 U. S. 249, 255; for that fact "does not entitle it to institute an independent suit to set aside the Commission's order in the absence of resulting actual or threatened legal injury to it," *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 487, as in *Chicago Junction Case*, 264 U. S. 258, 266, where the plaintiffs were not only parties to the Commission proceeding but suffered irreparable loss of $10,000,000 annually from the diversion of traffic from their lines as a result of the Commission's order.

The Rio Grande's lack of a right to maintain this suit is not overcome, cured or aided by the fact alleged in paragraph VI of the complaint, that shippers and their organizations, the Secretary of Agriculture of the United States and the public utilities commissions of Utah and Colorado, and others intervened, appeared and were heard in the proceed-

ings before the Commission in support of the Rio Grande, nor would its lack of such right be cured even if those groups or parties should intervene in this suit, for "the right so [fol. 59] to appear and be heard" before the Commission "or so to intervene in a suit brought by another is to be distinguished from an authorization to bring suit," *Moffat Tunnel League v. U. S.*, 289 U. S. 113, 120. Those shippers and other parties have no "independent right" to maintain their own suit to annul and enjoin the order for it does not affect any legal right of theirs or threaten to inflict injury upon them, and their intervention before the Commission gave them no legal right to maintain a suit to enjoin the order, *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 487; *Sprunt & Son v. United States*, 281 U. S. 249, 254-255; *Edward Hines Trustees v. United States*, 263 U. S. 143. Even if they should intervene in this suit the parties that intervened in the Commission proceeding could not carry on this litigation in the absence of a right in the Rio Grande to maintain its suit, *Boston Tow Boat Co. v. United States*, 321 U. S. 632.

The absolute necessity of alleging and showing that the order will, or threatens to, inflict legal injury upon the Rio Grande by violation of some legal right of its own is not modified or affected by the decision in *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125, which merely holds that a party having such right to maintain a suit may do so even though the Commission's order is "negative", but under that decision such party may not be heard to urge alleged errors of law committed in issuing a "negative" order, without first making the showing that such errors threaten violation of a legal right of his own of which he has a right to complain.

II

The Rio Grande's Complaint Presents Nothing That Is Reviewable by or Subject to Injunctive Decree of any Court

The complaint says it seeks to enjoin the Commission's order "in part", and that "the part of the order of the Commission here assailed is unlawful" etc., but it does not specify the "part" assailed, nor does it point to any lan-

guage in the order that directs or requires enforcement of or compliance with the matters set out in the allegations of the complaint. The order, *in toto*, is entirely favorable to [fol. 60] the Rio Grande. The order does not, *in terms*, dismiss any part of the Rio Grande's complaint. All the order does is to grant a part of the Rio Grande's demands. It requires through routes and joint rates on some of the commodities the Rio Grande seeks to divert to its line, but it says nothing nor does it make any commitment concerning commodities not specified in the order.

The Rio Grande's complaint seeks to enjoin and annul something that does not exist,—namely, an order of the Commission dismissing its complaint in part, or as to commodities *not* named in the order the Commission has issued. What the Rio Grande complains of is not embraced or touched upon in the order.

In reality, the Rio Grande complains of certain "conclusions" stated in the report, among them, the conclusion at page 619, that "there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned"; the conclusion at page 656, that "the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein"; the conclusion at page 657, that "the differences in transportation conditions" over the Union Pacific routes and over the Rio Grande routes "are substantial for hauls" between the northwest area and points in the area described on that page of the report; and the conclusion at page 660, "That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

As these "conclusions" make no requirement of the Rio Grande, infringe none of its legal rights, nor subject it "to any liability, civil or criminal" they are not subject to judicial review or to injunction, *United States v. Los Angeles R. R.*, 273 U. S. 299, 310, 314, *Virginian Ry. v. United States*, 272 U. S. 658, 665-666. In such conclusions "there is nothing for a court of equity to enjoin," *Lehigh Valley R. R. Co. v. United States*, 243 U. S. 412, 414.

[fol. 8] III

The Decree Prayed Would Be Futile, and the Court is Without Power to Issue Any Decree That Would be Effective to Accomplish the Rio Grande's Objective.

The prayer of the complaint is that the Court adjudge that the Commission's order "in the respects hereinbefore described is unlawful, null and void, and that in these respects it be set aside and their enforcement forever enjoined." The "respects hereinbefore described" are not embraced or touched upon in the order. They are mere utterances or conclusions in the report, and the order makes no requirement of the Rio Grande or anyone else concerning them. They are "not susceptible of violation and cannot call for enforcement," *Piedmont & Nor. Ry.* v. *United States*, 280 U.S. 469, 477.

The Rio Grande seeks to compel through routes and joint rates via its line on *all* commodities. The power to grant the Rio Grande's demands lies exclusively in the Commission under section 15(3) and (4) of the Interstate Commerce Act, 49 U. S. Code, section 15(3) and (4). The Court has no such power, and as it has no power to compel the Commission to order establishment of through routes and joint rates, a decree in conformity with the prayer of the complaint "would be futile", *Sprunt & Son* v. *United States*, 281 U.S. 249, 258. "Congress did not confer upon the courts power either to direct what" the Commission "shall find, or to annul the report, because of errors committed in making it" and the "mere existence of error" in the report "is not a wrong for which Congress provides a remedy under the Urgent Deficiencies Act", *United States* v. *Los Angeles R. R.*, 273 U.S. 299, 311, 313. A court has no more power to direct or control the Commission's administrative judgment and discretion in a suit to enjoin an order than it has "to compel an adjudication in a particular way" by mandamus, and this it has no power to do. *I.C.C.* v. *United States*, 289 U.S. 385, 394; *United States Ex Rel.* v. *I.C.C.*, 294 U.S. 50, 61. In effect the complaint seeks merely an advisory opinion but the statute invoked by the complaint empowers the courts only to enjoin, set aside, annul or suspend in whole or in part any order of the Commission, and the

[fol. 62] Federal Courts will issue no advisory opinions, and will "render no judgments not binding and conclusive on the parties and none that are subject to later review or alteration by administrative action," *C. & S. Air Lines* v. *Waterman Corp.*, 333 U.S. 103, 113-114.

As the Commission is the only tribunal having authority to require through routes and joint rates and as it has, in the exercise of its administrative discretion, declined to do so to the extent indicated in the complaint herein, the decree prayed would leave the Rio Grande's situation precisely where it now stands. Its only chance of obtaining the through routes and joint rates it desires lies with the Commission and it may pursue its efforts with the Commission as well without the decree prayed as with it.

IV

On June 25, 1953, these intervenors filed suit in the District Court of the United States for the District of Nebraska, Omaha Division, to enjoin, annul and set aside the same order of the Commission which is assailed by the Rio Grande in this suit. The complaint in that case is entitled "*Union Pacific Railroad Company, et al.* v. *United States of America, and Interstate Commerce Commission*", Civil Action No. 76-53. Copy of the complaint is attached to Motion to Intervene as Appendix A. The court of three judges has been designated and trial has been set for November 23, 1953, at Omaha, before Circuit Judges Collet and Johnsen, and District Judge Delehant. By petition filed August 17, 1953, the Rio Grande has been permitted to intervene as a defendant in that suit, and, having voluntarily submitted itself to the jurisdiction of that Court, the Rio Grande was and is under obligation, pursuant to Rule 13, Federal Rules of Civil Procedure, to present to that Court all its claims and contentions concerning the validity of the Commission's order, instead of filing an additional and independent suit in this Court. These Intervenors request that this Court dismiss the Rio Grande's suit and direct that it present its claims and contentions in the above-mentioned suit, to which it is a party, in the United States District Court for the District of Nebraska, Omaha Division.

The complaint in that case having been filed nearly four

[fol. 63]–months before the Rio Grande filed its complaint attacking the same order in this Court, it is respectfully requested, if this Court declines to grant the foregoing motion to dismiss, that it stay further proceedings in this case pending final decision in the suit of these Intervenors now pending in the District of Nebraska, in accordance with procedure outlined by the Supreme Court in *Kansas City Southern Ry.* v. *U. S.*, 282 U.S. 760.

WHEREFORE, these Intervenors pray that the complaint be dismissed or, in the alternative, that proceedings in this suit be stayed until after final decision is reached in the above-mentioned suit of these Intervenors.

Elmer B. Collins, F. O. Steadry, Warren H. Ploeger, L. E. Torinus, Jr., Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, E. G. Knowles, 300 International Trust Building, Denver, Colorado, Attorneys for Intervening Railroads.

November 12, 1953.

APPENDIX A TO MOTION

26423

INTERSTATE COMMERCE COMMISSION

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY v. UNION PACIFIC RAILROAD COMPANY ET AL.

Submitted October 16, 1952. Decided January 12, 1953

1. Through routes and joint rates found necessary and desirable in the public interest via Ogden or Salt Lake City, Utah, in connection with complainant, on certain commodities from and to points in the excluded territory in the northwest area as described in the report, to and from points in official, southern, and southwestern territories, including Missouri and a portion of Iowa.
2. Rates on the same commodities from and to the same points over complainant's routes via Ogden or Salt Lake City, found unreasonable and unduly prejudicial to and preferential of shippers and receivers.
3. Maintenance by defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the line of complainant south of Ogden, found to subject complainant to unlawful discrimination.
4. Order entered requiring removal of unlawfulness found to exist and establishment of through routes and joint rates found reasonable.

Robert E. Quirk, *Otis J. Gibson*, and *H. L. Mulliner* for complainant.

Elmer B. Collins, *L. H. Anderson*, *John B. Burchell*, *Robert H. Bierma*, *L. E. Clarahan*, *F. H. Cole*, *Jr.*, *Eugene S. Davis*, *Lee S. Davis*, *P. H. Draver*, *F. G. Fitzpatrick*, *P. F. Hawley*, *T. S. Wood*, and *Ralph Sargent*, *Jr.*, for Public Utilities Commission of the State of Colorado; *W. B. Joy*, *H. N. Beamer*, *B. Auger* and *L. F. Purvis* for Public Utilities Commission of Idaho; *Byron M. Gray* for State Corporation Commission of the State of Kansas; *Edwin S. Booth* and *Sidney T. Smith* for Board of Railroad Commissioners of the State of Montana; *Clarence S. Beck*, *Harold A. Palmer*, *Bert L. Overcash*, and *Harry C. King* for State of Nebraska and Nebraska State Railway Commission; *John H. Carkin* and *Thomas W. Dench*

for Public Utilities Commissioner of Oregon; *Smith Troy*, *Phil H. Gallagher*, *Joseph Starin*, and *Bartlett Burns* for Washington Public Service Commission; *Norman B. Gray* and *Jefferson C. Church* for the State Board of Equalization and Public Service Commission of Wyoming; *Hal S. Bennett*, *Donald Hacking*, *W. R. McEntire*, and *Chas. A. Root* for Public Service Commission of Utah; and *George F. Guy* for the city of Cheyenne, Wyo., interveners.

Calvin L. Blaine, *Chas. E. Blaine*, *Maurice H. Greene*, *Alden T. Hill*, *E. K. Kohlwes*, *Lowe P. Siddons*, *Reginald T. Titus*, and *Lee J. Quasey* for other interveners.

REPORT OF THE COMMISSION

BY THE COMMISSION:

Exceptions to the report proposed by the examiner were filed by the complainants, the defendants, and certain interveners and the issues were twice argued orally. Our conclusions differ in part from those recommended. Exceptions and requested findings not discussed in this report nor reflected in our findings or conclusions have been given consideration and found not justified.

The complainant, sometimes called the Rio Grande, a common carrier by railroad operating in interstate commerce within the States of Colorado, Utah, and New Mexico, requests us to order the Union Pacific Railroad Company, which with its leased lines is referred to as the Union Pacific system or the Union Pacific, and the other defendants to establish and maintain for the future just, reasonable, and nondiscriminatory competitive joint through rates[1] and charges for the transportation of freight in connection with the complainant through Salt Lake City or Ogden, Utah, referred to as the Ogden gateway. More particularly, we are asked to require the defendants to establish such joint rates on freight traffic in connection with the complainant through its Colorado and Utah gateways, (1) between (*a*) points on the Union Pacific or its connections in Utah north of Ogden and in Idaho, Montana, Oregon, Washington,[2] and British Columbia, Canada, and (*b*) Colorado common points and points east thereof; and (2) between Utah common points and the northwest territory specified in 1 (*a*).

No evidence was submitted with respect to rates from or to British Columbia, and such rates will not be considered.

Interveners in support of the complaint include the Secretary of Agriculture of the United States, the public utility commissions of the States of Colorado and Utah, the American National Live Stock Asso-

[1] Rates and rate differences named herein are per 100 pounds and are those in effect at the time of the hearing herein.

[2] This area is referred to in this report as the northwest area or territory.

ciation, other livestock and stock-feeder associations, various shippers' and producers' associations, milling companies, farm bureaus, chambers of commerce, and certain groups of employees of the complainant.

Interveners in support of the defendants include the State of Nebraska, city of Cheyenne, Wyo., the public utility commissions of the States of Montana, Washington, Oregon, Wyoming, Nebraska, and Kansas, various chambers of commerce and other associations, certain employee groups in Wyoming, and employee groups of the Union Pacific, the Chicago and North Western Railway Company, and the Wabash Railroad Company.

In its exceptions to the proposed report, the State Corporation Commission of the State of Kansas took the position that the recommended finding that joint rates should be established over the existing through routes by way of Ogden and the Rio Grande is amply sustained by the evidence with respect to the rates on wheat and livestock but not otherwise, and that the recommended findings as to commodities generally are too broad in scope.

The Public Utility Commission of the State of Idaho intervened but presented no evidence. It filed a brief in which it took the position that the relief sought by the complainant should be denied, except that joint through competitive rates should be required to be established via Ogden and the Rio Grande on livestock and fruits and vegetables.

We granted a petition for leave to intervene filed by the American Short Line Railroad Association. That association appeared in support of the complaint and was represented at the hearing and the oral argument, but offered no evidence. The defendants filed a petition for reconsideration of the order permitting intervention. The request was denied at the hearing, but it is renewed on brief. It appears that 44 of the defendants named in the complaint are members of the association and that 8 defendant members are subsidiaries under common control and management with other defendants. Additional facts were developed at the hearing with respect to the relation of certain members of the association as defendants and indicating that they, as well as some others, opposed the complaint. The association filed a brief from which it appears that it has a current membership of 314 common carriers by railroad and that the association as such and many of its members are interested in the issues presented in the complaint. The intervention sought and granted was by the association as such, and not by or in behalf of the respective members thereof named herein as defendants. The petition of intervention was properly granted, and the petition for reconsideration is denied.

Immediately prior to the oral argument, counsel for the defendants submitted a memorandum of additional authorities and discussion

relating to certain exceptions filed by the Union Pacific to the proposed report of the examiner. The complainant and certain interveners objected to the receipt of the document. Our rules of practice do not permit the submission of such a document so late in the proceeding. Permission to file it was not requested in time to permit opposing parties to examine it and to make reply thereto prior to the oral argument when the proceeding was finally submitted. The objection to its receipt in the proceeding is sustained.

The complainant alleges that the defendant's failure and refusal to join with it in establishing joint rates to and from the territories described on transcontinental and other traffic through the gateways referred to result in violations of sections 1 (4) and 3 of the Interstate Commerce Act, and is contrary to the national transportation policy as declared by the Congress. We are asked to prescribe just and reasonable rates over the Rio Grande routes to remove the alleged unlawfulness.

Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, but there are many exceptions. The principal ones of importance in this proceeding are those under which the Union Pacific for the most part restricts routing on traffic to and from points in Utah north of Ogden and in Idaho, Montana, Oregon, and Washington over its lines so that it may obtain the long haul from and to the Missouri River. On transcontinental traffic that moves over its lines to and from California, Nevada, and portions of Utah, the Union Pacific participates in through routes and joint rates with other lines, including the Rio Grande. On that traffic interchange is made with the Rio Grande at Salt Lake City and Provo, Utah.

As hereinafter explained, the Rio Grande participates in joint rates on transcontinental traffic with all of its connections at its Utah junctions, except the Union Pacific, from and to the western portions of the northwest area. Routes are available to and from points in the northwest area over the Union Pacific from and to Ogden and the Rio Grande and its eastern connections beyond, but generally shippers must pay combination rates when using such routes. The maintenance of those rates produces higher charges than those resulting from the joint rates maintained by the defendants over other routes. The higher rates and charges act as deterrents to shippers and, in effect,

close the Ogden gateway in a commercial sense. We are asked to exercise our authority under section 15 (3) of the act by requiring the establishment of joint rates through that gateway upon findings that such rates are necessary or desirable in the public interest.

The power to establish through routes and joint rates is limited by the provisions of section 15 (4), which declares that, except as provided in section 3 of the act, and except where one of the carriers is a water line, we may not require a railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (*a*) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (*b*) unless we find that the through route proposed is needed in order to provide "adequate, and more efficient or more economic, transportation." The foregoing provisions are subject to the further proviso that in prescribing through routes, we shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (*a*) and (*b*), give reasonable preference to the carrier by railroad which originates the traffic. The section further provides that no through route and joint rates applicable thereto shall be established by us for the purpose of assisting any carrier that would participate therein to meet its financial needs.

The complainant contends that because the routes over which joint rates are sought are in existence and open to traffic at combination rates, we are not called upon to require the establishment of through routes and, therefore, the limitations on our power to do so in section 15 (4) are not applicable and need not be considered. It further contends that the principal task here is to determine whether the through rates resulting from the combination or aggregate of intermediate rates over such through routes are unjust, unreasonable, or discriminatory, in violation of sections 1 and 3 of the act, and contrary to the national transportation policy. The complainant argues that there is public need for joint rates via the Ogden gateway equal to the joint rates now maintained by the defendants over the competitive routes, and that the public interest as well as the national transporation policy will be served by the establishment of such rates.

THROUGH ROUTES

The first question for our determination, therefore, is whether or not the present routes by way of the Ogden gateway constitute "through routes" as that term is used in section 15 (3) and (4) of the

act. As above stated and as testified by numerous shippers in this proceeding, the Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be opened to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess.

In *Thompson* v. *United States*, 343 U. S. 549, decided June 2, 1952, the Supreme Court considered the question of the content of the term "through route" as used in the act, upon an appeal from a decision of a lower court sustaining our order in *Omaha Grain Exc. of Omaha, Nebr.* v. *Missouri Pac. R. Co.*, 278 I. C. C. 519. Therein, we had affirmed a prior finding of division 2 that a through route on grain from points on the Central branch of the Missouri Pacific Railroad Company in Kansas, Concordia and west thereof (Lenora, Kans., was used as a typical origin), to Omaha, Nebr., and Council Bluffs, Iowa, in connection with the line of the Chicago, Burlington & Quincy Railroad Company beyond Concordia, was already in existence and therefore did not have to be established preliminary to the exercise of our power to prescribe reasonable rates under sections 1 and 15 (1) of the act. The Court held:

> In short, the test of the existence of a "through route" is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.
>
> In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such through route. * * * Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha * * *. Since there is admittedly no evidence that the Missouri Pacific ever offered through transportation service over the route in question, the Commission's order is without evidentiary support under the accepted tests for determining the existence of a through route.

The Court cited with approval *Beaman Elevator Co.* v. *Chicago & N. W. Ry. Co.*, 155 I. C. C. 313, wherein the Commission held that proof of one shipment on a through bill of lading over a particular route was not sufficient to show the existence of a through route, because, as stated by the Court, "that one shipment was not representative of the carriers' course of business." It thus becomes necessary to determine whether the carriers in this proceeding "hold themselves out as offering through transportation service" from and to the points here concerned via the Ogden gateway as indicated by their "course of business" in respect of traffic over the routes in question.

The evidence shows that 37 carload shipments were made in 1948, which may be accepted as a representative year, on through bills of lading from origins in Utah, Idaho, Oregon, and Washington to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific, except three which originated on its connections in Oregon or Washington. Twenty-three moved to Salt Lake City (via Ogden), Provo, Midvale, Murray, and Springville, Utah, and 14 to Denver, Louviers, Pueblo, and Trinidad, Colo., on the complainant's line from Denver to Trinidad. The commodities shipped were canned goods, canned salmon, machinery, contractors' equipment, paper bags, lumber, wallboard, flour, roofing, acid, newsprint, and sheep. The shipments of canned goods and canned salmon, 10 in number, were stopped at intermediate points on the Rio Grande for partial unloading. The 37 shipments moved from or to separate points, except that 2 carloads of canned salmon moved from Seattle, Wash., to Provo, 2 carloads of acid from Dupont, Wash., to Louviers, 2 carloads of canned goods from Logan, Utah, to Denver, 2 carloads of sheep from Bellevue, Idaho, to Pueblo, 3 carloads of lumber from McCall, Idaho, to Salt Lake City, 3 carloads of canned goods from Logan to Pueblo, and 6 carloads of lumber from Emmett, Idaho, to Midvale. No through shipments are shown to have moved from the northwest area over the Union Pacific and the Rio Grande via Ogden or Salt Lake City to any destination east of Colorado common points.

West-bound, in the same year, 18 carload shipments were made on through bills of lading from points in Illinois, Indiana, Michigan, Ohio, Pennsylvania, New Jersey, Arkansas, and Texas over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond to destinations in Utah, Idaho, Montana, Oregon, and Washington. These shipments consisted of tractors, dessert preparations, furniture, canned goods, agricultural implements, soap, cattle, castings, feed, rubber, cottonseed hull bran, and tile. The shipments of tractors, dessert preparations, furniture, canned goods, agricultural implements, and feed were stopped at intermediate points on the Rio Grande or the Union Pacific, or both, for partial unloading. Two of the shipments destined to Idaho points were delivered at Salt Lake City and trucked to destination so as to avoid paying the applicable combination rates on Ogden.

In that same year, 21 carload shipments moving on through bills of lading from various origins east of the Rocky Mountains to destinations in Idaho, Oregon, and Washington, which were routed over the Rio Grande and the Union Pacific, were held by the Rio Grande at Denver or Pueblo for correction of the routing because the joint

through rates were not applicable over that road via the Ogden gateway. Under service orders issued by us during and subsequent to World War II, a substantial number of shipments were diverted from the regularly used routes to the routes here sought to be opened commercially. For example, in February 1949, when the main line of the Union Pacific in Wyoming was blocked by snowstorms, the traffic was diverted to the route of the Rio Grande between Denver and junctions with the Union Pacific in Utah. During World War II, special combination trains of troops in passenger cars and of military supplies in freight cars from eastern and southern origins to destinations in the northwest area were initially routed and moved over the Rio Grande via Ogden and the Union Pacific. The rates and charges for these freight movements were not filed with us and were adjusted, under the authority of section 22 of the act, on the basis of the joint rates applicable over the Union Pacific routes through Wyoming. These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable, and have no bearing upon the issue of whether or not those routes constitute "through routes" within the meaning of that term as used in the act.

So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so by routing specified by the shipper or by a prior connecting carrier. In other words, so far as this record shows, "the carriers' course of business" has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads east-bound, none to destinations east of Colorado common points, and 18 carloads west-bound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

Thus, all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the

same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co.* v. *Chicago & N. W. Ry. Co.*, *supra*, cited with approval by the Supreme Court in *Thompson* v. *United States, supra.* Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15 (3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15 (4) made in 1940 (see *D. A. Stickell & Sons, Inc.*, v. *Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson* v. *United States, supra.*

We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic [3] here concerned, and that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation.

The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15 (3) and (4). In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower than the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together.

Before proceeding to a discussion of the evidence relating to the foregoing issues, we shall give consideration to a procedural contention and a motion made by the defendants. The contention is that an allegation of undue prejudice and preference under section 3 (1) of the act is not properly before us. As stated, the complaint embodies an allegation, among other things, of violation of section 3, without specifying any particular paragraph or paragraphs of that section. We agree that complainant, a railroad, could not raise, in its own behalf, an issue under section 3 (1) against another railroad. Intervening shippers, however, have raised such an issue. Testimony, pro and con, was received on this issue and we think it has been fairly tendered here for decision.

[3] Except on east-bound shipments of sheep or goats, to which reference is made later in this report.

The motion is that the complaint be dismissed on the ground that the request of the complainant for joint rates over the Rio Grande via the Ogden gateway is for the purpose of assisting that carrier to meet its financial needs. As stated, section 15 (4) of the act forbids us to require the establishment of any through route and joint rate applicable thereto for the purpose of assisting any carrier that would participate therein to meet its financial needs. Consistently throughout the proceeding, the complainant disclaimed any intent to prosecute the complaint with the object of assisting it in meeting its financial needs. The prohibition referred to is directed to us; not to any complaining carrier. In reaching our conclusions herein, no consideration has been given to the financial needs of the complainant. The motion is overruled.

PROPONENTS' TESTIMONY

Joint rates now apply via the Ogden gateway over the Rio Grande on traffic from and to Colorado common points and points east thereof to and from California and certain Pacific coast points in connection with the Union Pacific, the Southern Pacific Company, The Western Pacific Railroad Company, and The Great Northern Railway Company, as more particularly described later.

The Union Pacific with its leased lines has operated since January 1936 as a single system. It consists of the Union Pacific Railroad Company operating from Omaha, Nebr., and Kansas City, Mo., to Ogden via Julesburg, Colo., Cheyenne and Granger, Wyo., and via Limon and Denver, Colo., and Cheyenne; the Oregon Short Line Railroad Company operating in Utah north of Ogden, and in Wyoming, Idaho, Oregon, Montana, and Nevada, extending from Salt Lake City to Butte, Mont., and Huntington, Oreg.; the Oregon-Washington Railroad and Navigation Company operating in Idaho, Oregon, and Washington north and west of Huntington to Spokane, Wash., Portland, Oreg., and Seattle, Wash.; the Los Angeles & Salt Lake Railroad Company from Salt Lake City to Los Angeles, Calif.; and the St. Joseph & Grand Island Railroad Company in Kansas, Nebraska, and Missouri from St. Joseph, Mo., and Grand Island, Nebr. Lease of the properties of the foregoing roads, which had been operated with the Union Pacific under common control and management, was considered and approved in *Union Pac. R. Co. Unification*, 189 I. C. C. 357 (1933) and 207 I. C. C. 543 (1935).

The railroad now operated by the complainant was originally the Denver, Rio Grande Railway organized in 1870 as a narrow-gage line. After passing through various hands and receiverships, the Denver and Rio Grande Railroad Company was organized in 1886 to operate the property. When the main line was converted to standard gage

in 1890, the railroad was opened for through traffic between Denver and Ogden by way of Pueblo, Rio Grande, and Tennessee Pass, Colo. Prior to that date, the Rio Grande could participate in transcontinental traffic only by transferring the lading to its narrow-gage cars. In 1901, it acquired the Rio Grande Western Railroad Company operating between Grand Junction, Colo., and Ogden via Provo and Salt Lake City.

Although opened for through business, the line was handicapped by the fact, among others, that traffic originated at or destined to its Colorado gateways or east thereof could not be interchanged at joint through rates at Ogden or Salt Lake City with its connections, the Oregon Short Line, to or from points on that line in Utah north of Ogden and through southern Idaho to Butte and Huntington. Also, traffic from and to Oregon over the Southern Pacific, to or from Colorado common points and east, could not be transported over the Rio Grande at joint rates equal to those over competitive routes. In 1897, however, the Union Pacific and its controlled lines, the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company operating north and west of Huntington, were in separate receiverships. In that year the two lines last named established joint through rates to and from points in the northwest area with the Rio Grande via Ogden and thus opened that gateway at rates equal to the rates then in effect over the Wyoming line of the Union Pacific through Cheyenne and Granger. Those rates applied on traffic between the Pacific coast terminals, including Portland, Tacoma, and Seattle, and Missouri and Mississippi River points and numerous points east thereof.

In the same year, the Oregon-Washington Railroad and Navigation Company established joint through rates between its Oregon and Washington stations and points on, or reached by, the lines of the Great Northern and Northern Pacific Railway Company through Spokane and Wallula, Wash. Joint rates through those junctions from and to Union Pacific stations have been continued in effect.

Ogden remained as an open gateway through which joint rates over the Rio Grande applied until 1906, when such rates were canceled by the Union Pacific from and to Colorado common points and east, to and from points in Montana, Idaho, and Oregon on the Oregon Short Line and its connections. In 1912, transcontinental freight rates to and from points on the Oregon-Washington Railroad and Navigation Company (resulting from reorganizations in the interval) over the Rio Grande and its Utah junctions were also canceled. During this period the Southern Pacific was controlled by the Union Pacific and that circumstance greatly influenced the routing of freight and passenger traffic over the Union Pacific to and from

Oregon and California. As a result of competitive stresses, as well as for other reasons, the Rio Grande financed the construction of a new railroad, the Western Pacific, to obtain an outlet to the Pacific coast. The Western Pacific was opened in July 1911 and participates in through routes and joint rates on transcontinental traffic via Salt Lake City with the Rio Grande and the Union Pacific, its two connections at that point. In 1912, the Union Pacific was required to divest itself of control of the Southern Pacific. *United States* v. *Union Pac. R. Co.*, 226 U. S. 61.

Through passenger fares also were in effect over the lines of the Union Pacific and the Rio Grande via the latter's Colorado and Utah junctions from 1897 to 1915, when they were canceled by the Union Pacific. *Ogden Gateway Case*, 35 I. C. C. 131.

In 1915, the Western Pacific and, in 1918, the Rio Grande, went into receivership. After various changes, the latter was reorganized on April 11, 1947, as The Denver and Rio Grande Western Railroad Company. *Denver & R. G. W. R. Co. Reorganization*, 267 I. C. C. 862. As a part of its reorganization on that date, the Rio Grande merged with the Denver and Salt Lake Railway Company, and thereby acquired the Moffat tunnel line of that carrier. By that line and the Dotsero cut-off, completed in 1934, from Orestod, Colo., on the Denver & Salt Lake to Dotsero, Colo., on its own line, the Rio Grande obtained a route from Denver to Ogden 175 miles shorter than its route through Pueblo.

The Rio Grande now operates between Denver and Ogden over the two routes. By way of the Moffat tunnel the distance is 607 miles, and the other route through Pueblo is 782 miles. These two are the main lines and constitute 951 miles, or 51 percent, of the Rio Grande standard-gage tracks. In addition, there are 1,452 miles of branch lines, of which 527 miles are narrow gage serving western Colorado and northwestern New Mexico in areas of small population and light traffic. In all, it operates about 2,400 miles of road.

Eastern connections of the Rio Grande are in Colorado at Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad. At Denver, it connects and interchanges traffic with the Union Pacific, the Chicago, Burlington & Quincy Railroad Company, called the Burlington, the Chicago, Rock Island and Pacific Railroad Company, called the Rock Island, The Atchison, Topeka and Santa Fe Railway Company, called the Santa Fe, and The Colorado and Southern Railway Company, of the Burlington system. At Colorado Springs, 75 miles south of Denver, it interchanges with the Rock Island and the Santa Fe. At Pueblo, 119 miles south of Denver, it interchanges with the Missouri Pacific Railroad Company (Guy A. Thompson, trustee), the Santa Fe, and the Colorado & Southern. At Walsenburg, 51

miles farther south, it interchanges with the Colorado & Southern. At Trinidad, a short distance from the Colorado-New Mexico State line and 92 miles south of Pueblo, it interchanges with the Colorado & Southern and the Santa Fe.

Western connections of the Rio Grande are in Utah at Ogden, Salt Lake City, and Provo. At Ogden, the connecting lines are the Union Pacific and the Southern Pacific. At Salt Lake City, 37 miles south of Ogden, the connections are the Western Pacific and the Los Angeles line of the Union Pacific. At Provo, 44 miles south of Salt Lake City, it again connects with the Union Pacific's Los Angeles line.

Since 1890, when its standard-gage line was completed between Denver and Ogden via Pueblo, the Rio Grande, through its eastern and western connections, has been a part of several transcontinental routes. It now participates in through routes and joint rates on equal terms with other carriers on transcontinental traffic between (1) points in an area generally described as west of a line beginning at Vancouver, British Columbia, thence south, just east of Seattle and Portland, and southeasterly to a point west of Ogden and Salt Lake City, crossing the line of the Union Pacific at Lynndyl, Utah, 118 miles west of Salt Lake City, and thence southwesterly, east of the Union Pacific's Los Angeles line, to a point south of San Diego, Calif., and (2) all points in the United States east of a line beginning at the Canadian border and extending southward along the Montana-North Dakota State line and the western border of South Dakota, thence southwesterly through the extreme southeastern portion of Wyoming, west of Cheyenne, and the eastern part of Colorado just west of Denver, Pueblo, and Trinidad, thence southwest and south through the central or western part of New Mexico to a point just west of El Paso. However, joint rates generally do not apply in connection with the Rio Grande on transcontinental traffic originating at or destined to points in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington east of the line first described. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande such traffic would move at higher combinations of rates to and from Ogden or Salt Lake City.

The area in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington, to and from which joint rates generally do not apply in connection with the Union Pacific and the Rio Grande, will be referred to as the excluded territory. Transcontinental traffic to or from such territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather than over the Rio Grande route, because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio Grande route. The Rio Grande desires to participate as a bridge line on such traffic via

its Colorado gateways and Ogden at the joint through rates. This also would include traffic to or from points in the excluded territory on lines which join with the Union Pacific in joint rates.

Representative origins, destinations, commodities, rates, distances, average loadings per car, and revenues per car-mile are shown in an appendix to this report, for east-bound and west-bound movements, compiled from exhibits of record. The distances shown are those over existing routes over the Union Pacific and its connections by which joint through rates apply, and over the Rio Grande and its connections over which combination rates apply. Revenues per car-mile are computed for such rates and distances and, in addition, for the distances over the Rio Grande at joint rates on the same basis as those over the Union Pacific routes, as sought herein.

Traffic between the excluded territory and Colorado common-point territory (points in eastern Colorado from Denver south to Trinidad and west to Canon City) generally must move over the Union Pacific through Denver to get the lowest rate. Similarly, traffic between the excluded territory and Utah common-point territory (points in Utah from Ogden south to Provo and Payson) generally must move over the Union Pacific to get the lowest rate. There are some exceptions, however, with respect to rates between Utah common points on the Rio Grande and the northwest area on livestock, lumber, grain, and other commodities.

An analysis of distances from and to 5 representative points[4] on the Union Pacific in Utah north of Ogden, and in Idaho and Washington, to 14 destinations, Denver and east, over restricted routes of the Union Pacific for distances, computed over the short routes, ranging from 649 miles to Denver to 3,279 to Boston, Mass., shows that routes via Ogden and the Rio Grande to the same points are longer by from 1 percent (from Spokane to New Orleans, La.) to 16 percent (from Idaho Falls to Kansas City). To the same destinations from nine other representative points[5] on the Union Pacific, from which through routes and joint rates are available in connection with the Chicago, Milwaukee, St. Paul, and Pacific Railroad Company, referred to as the Milwaukee, the Great Northern, the Northern Pacific, or the Southern Pacific, the routes via Ogden and the Rio Grande would be longer than the short workable and service routes by from 1 percent (from Seattle to Fort Worth, Tex., and Oklahoma City, Okla.) to 37.5 percent (from Yakima to Minneapolis, Minn.). To Minneapolis from seven of the nine origin points, the routes via the Great Northern form the short workable and service routes.

[4] Logan, Utah; Boise, Idaho Falls, and Twin Falls, Idaho; and Spokane, Wash.

[5] Hood River, Milton, Pendleton, Portland, Elgin, and Redmond, Oreg., and Yakima, Kent, and Seattle, Wash.

The Ogden-gateway routes of the Union Pacific consist of two lines. The Los Angeles line runs southwesterly through Salt Lake City, Provo, and Delta, Utah, Caliente and Las Vegas, Nev., and Barstow, Calif., to Los Angeles. Through routes with joint rates are maintained over that route in connection with the Rio Grande, as hereinbefore described. The other line of the Union Pacific runs north from Ogden, 111 miles to McCammon in southeastern Idaho. At that point it meets the Wyoming line of the Union Pacific leading west 186 miles from Granger, the junction point with the main line through Cheyenne to Ogden from the east. From McCammon the line extends north to Pocatello, Idaho, 22 miles, and from that point the main line runs in a northwesterly direction across Idaho into Oregon and Washington. From Pocatello another line extends northerly to Butte. From Cheyenne, the main line extends east across Nebraska to Omaha, 507 miles, and south to Denver, 109 miles. From Ogden through Granger to Cheyenne the distance is 483 miles.

All shipments to or from points in Idaho, Montana, Oregon, and Washington north or west of McCammon over present Union Pacific routes, or over routes through Ogden and the Rio Grande, must pass through McCammon. That point therefore, is used as the point of divergence in computing distances over the Union Pacific routes and the routes over the Rio Grande by way of Ogden. A shipment from McCammon over the Union Pacific to Cheyenne would move 529 miles; and to the Denver gateway, also over the Union Pacific, 623 miles. But over the Union Pacific to Ogden, thence the Rio Grande to the Denver gateway, the shipment would move 718 miles, or 198 miles farther than over the Union Pacific route to Cheyenne and 95 miles farther than over its route to Denver. On shipments carried through to the Missouri River and points east, the Union Pacific route through Cheyenne also has the advantage in distance.

From Cheyenne to Kansas City a shipment would move 624 miles, as compared with 636 miles for a movement off the Rio Grande from Denver to Kansas City over the Rock Island, its short-line connection. A through shipment, therefore, from McCammon to Kansas City over the direct line of the Union Pacific through Granger and Cheyenne would move 1,153 miles, as compared with 1,352 miles, 199 miles longer, via Ogden and the Rio Grande to Denver, thence the Rock Island. The latter route on such a shipment would be 17.2 percent circuitous. To points east of Kansas City the maximum excess mileage from McCammon over the Rio Grande route is on a haul to Pittsburgh, Pa. Over the Union Pacific to Omaha, thence the Chicago & North Western to Chicago, Ill., and The Pennsylvania Railroad Company beyond, the haul would be 1,991 miles, and over the Union Pacific to Ogden, the Rio Grande to Denver, the Burlington to Chi-

cago, thence the Pennsylvania, the haul would be 2,203 miles, 212 miles longer, or a circuity of 10.7 percent.

In the following table are shown representative destinations and the distances from McCammon over routes using the Rio Grande from Ogden to Denver, as compared with distances over routes using the Union Pacific through Wyoming. Joint through rates apply over the latter routes. Over routes that include the Rio Grande higher combination rates apply. The table does not contain complete routing, except over the Union Pacific direct to Omaha and Kansas City. The last column of the table shows the percentages by which the Rio Grande routes are longer, or the circuity, from the point of divergence, McCammon, to the points shown.

From McCammon, Idaho to—	Via Union Pacific	Distance	Via Rio Grande	Distance	Difference	Circuity via Rio Grande
		Miles		*Miles*	*Miles*	*Percent*
Omaha, Nebr	(1)	1,036	(2)	1,255	219	21.1
Kansas City, Mo	(3)	1,153	(2)	1,352	199	17.2
Minneapolis, Minn	(3)	1,396	(2)	1,593	197	14.1
St. Louis, Mo	(3)	1,428	(2)	1,627	199	13.9
Chicago, Ill	(1)	1,524	(2)	1,735	211	13.8

(1) Union Pacific through Wyoming to Omaha.
(2) Union Pacific to Ogden, Rio Grande to Denver.
(3) Union Pacific through Wyoming to Kansas City.
(4) Union Pacific to Pacific Junction, Kans.
(5) Union Pacific to Ogden, Rio Grande to Pueblo.
(6) Union Pacific to Denver, Colorado & Southern to Sixala, N. Mex.

The differences in the distances to destinations in the Southwest over routes including the Rio Grande from points in the excluded territory, as compared with the Union Pacific routes through Wyoming, are much less than they are to Missouri River crossings and points east and southeast. About 90 percent of the traffic upon which joint through rates are sought via Ogden and the Rio Grande moves to the latter areas, and about 10 percent to the Southwest.

Over its routes through Wyoming, the Union Pacific gets its long haul from McCammon to Omaha, 1,036 miles, and to Kansas City, 1,153 miles. If joint rates were prescribed over the Union Pacific to Ogden and the Rio Grande to Denver, the Union Pacific's haul from McCammon to Ogden on traffic to Omaha or Kansas City and beyond would be 111 miles. However, if such traffic were routed beyond Denver over the Union Pacific, the latter would get a further

haul of 560 miles to Omaha via Julesburg, or 640 miles to Kansas City via Salina, Kans., a total haul from McCammon of 671 miles to Omaha or 751 miles to Kansas City. Joint through rates are in effect over that route on sheep from Union Pacific origins in southern Idaho and eastern Oregon, but are 19 cents higher to the Missouri River and east (20 cents to Chicago) than rates over more direct routes of the Union Pacific. That railroad would establish a similar basis on cattle if requested. Over the route in connection with the Rio Grande, it would lose its haul of 529 miles from McCammon to Cheyenne, or 623 miles to Denver. On traffic routed via Ogden, the Rio Grande, and Pueblo to destinations east thereof, the Union Pacific would not be in a position to get any additional haul.

All of the foregoing distances, as stated, are computed from McCammon as the point of divergence. The great bulk of the traffic, however, from the excluded territory in Idaho, Montana, Oregon, and Washington originates or terminates on the Union Pacific or its connections west and north of that junction. On such traffic the Union Pacific would have a substantial haul in addition to that of 111 miles from McCammon to Ogden.

The hauls to Ogden would be, for example, from Lewiston, Idaho, 847 miles; from Centralia, Wash., 937 miles; and from Seattle, 1,029 miles. Over the Union Pacific direct from those respective origins to Omaha, the hauls would be 1,772, 1,862, and 1,954 miles. Those figures show the extent to which the Union Pacific would lose its long haul, the loss in mileage being 925 miles in each instance.

From and to points in the excluded territory in Oregon and Washington, and on the Burke and Headquarters branches of the Union Pacific in northern Idaho, the Union Pacific and certain other defendants have arrangements for the interchange of traffic in various commodities at junctions or gateways in Oregon, Washington, and Idaho, under joint rates. On traffic through such gateways moving under the joint rates, the Union Pacific in many instances foregoes its long haul. The gateways through which the rates are in effect, with certain limitations upon their application specified in the tariffs, are: Portland, in connection with the Southern Pacific; Marengo, Wash., and Plummer, Idaho, in connection with the Milwaukee; Spokane, in connection with the Great Northern; Wallula, Wash., and Spokane, in connection with the Northern Pacific; and Spokane, in connection with the Spokane International Railroad Company connecting with the Canadian Pacific Railway Company at Eastport, Idaho, at the Canadian border.

Illustrative of the hauls over the Union Pacific on traffic routed through these gateways are the following: From Lewiston, 132 miles via Marengo or 193 miles via Spokane; from Centralia, 393 miles

200071—53—No. 155——3

80

on a route through Marengo; from Seattle, 184 miles through Portland; and from Pendleton, Oreg., 165 miles via Marengo, 227 miles via Spokane, or 70 miles via Wallula, Wash., on traffic routed over its connections at such points. If joint rates were established from the same origin points to Omaha and beyond via Ogden and the Rio Grande, the hauls of the Union Pacific to Ogden would be substantially greater than many of its hauls via other junctions with its connections, as illustrated.

For example, from Pendleton, a representative point, on traffic to Chicago the Union Pacific has a haul of 1,560 miles on its route through Omaha, but only 70 miles over an established through route via Wallula and the Northern Pacific and connections. The rates are the same over both routes. Over a route via Ogden and the Rio Grande to Denver, thence the Burlington, the distance is 2,257 miles, or 6.4 percent longer than the route via Wallula and 10.4 percent longer than the Union Pacific route through Omaha. The Union Pacific's haul over the Rio Grande route would be 633 miles. From Pendleton to St. Louis, the Rio Grande route sought would be shorter by 168 miles than a through route now available via Spokane and the Spokane International and its connections, and would be 201 miles, or 10.3 percent, longer than the Union Pacific route through Kansas City. To Oklahoma City, Okla., the haul of the Union Pacific would be increased from 227 miles, over the present route via Wallula and the Northern Pacific and connections, to 633 miles via Ogden and the Rio Grande to Pueblo and the Santa Fe beyond. The distance over the latter route is 1,910 miles, or only 34 miles, 1.3 percent, longer than the route which gives the Union Pacific its long haul, and 692 miles, or 36.2 percent, shorter than the foregoing route through Wallula.

The foregoing are illustrative of numerous established through routes in which the Union Pacific participates from points in the excluded territory which short haul that carrier. Many of such routes are longer than those here sought via Ogden and the Rio Grande, and this is true to all sections of the country east of the Rocky Mountains, except western trunk-line territory. To the latter territory the short-hauling routes are generally shorter than the routes by which the Union Pacific retains its long haul, and considerably shorter, for example, by 37.5 percent from Yakima to Minneapolis, than the routes sought via Ogden and the Rio Grande. As indicated, the portion of the excluded territory from and to which this short hauling of the Union Pacific occurs does not include points in Utah nor points in Idaho, except on the Burke and Headquarters branches of the Union Pacific in the northern portion of that State.

These short-hauling routes have been in effect for many years. Most of them were established prior to the dates when the Union

Pacific assumed control of the portions of its line west of Huntington and south of Salt Lake City. Joint rates with the Southern Pacific through Portland have been in effect since about 1910, with the Milwaukee through Marengo and Plummer since about 1902, with the Great Northern through Spokane since about 1894, with the Northern Pacific through Wallula since about 1883, and with the Spokane International through Spokane since about 1907.

On some of the traffic interchanged at these gateways the Union Pacific obtains a short haul, as compared with its connections, and on other traffic a long haul. East-bound traffic through the specified Washington and Idaho gateways consists of apples, pears, lumber and other forest products, some steel products, and miscellaneous commodities. A large portion of the traffic, particularly lumber, moves to North and South Dakota, Minnesota, and Wisconsin over the northern routes. Traffic over such routes moves also to Midwestern States and to States east of the Mississippi River. West-bound traffic through the same gateways consists of manufactured products and miscellaneous commodities from the Middle West and from eastern and southern territories.

These interchange arrangements are warranted and in the public interest, according to the defendants, because each carrier shares in long hauls on some traffic as well as short hauls on other traffic, and because the arrangements make it possible for the carriers to handle traffic over shorter routes in many instances. This latter statement, however, applies only, except to an insignificant extent, to such routes to and from points in western trunk-line territory.

As indicated, through routes and joint rates apply in connection with the Rio Grande through Provo on traffic to or from points on the Los Angeles line of the Union Pacific. Such routes generally are shorter than routes over the Union Pacific direct to or from Omaha, Kansas City, or Denver. The following is illustrative:

From Los Angeles, Calif., to—	Via Union Pacific	Distance	Via Rio Grande	Distance
		Miles		*Miles*
Omaha, Nebr.	(1)	1,808	(2)	1,813
Minneapolis, Minn.	(1)	2,168	(2)	2,152
Kansas City, Mo.	(3)	1,925	(2)	1,911
St. Louis, Mo.	(3)	2,200	(2)	2,185
Denver, Colo.	(4)	1,395	(2)	1,276
Chicago, Ill.	(1)	2,296	(2)	2,293
Atlanta, Ga.	(3)	2,816	(5)	2,762
Little Rock, Ark.	(3)	2,430	(5)	2,272
Dallas, Tex.	(4)	2,226	(5)	2,045

[1] Union Pacific to Omaha.
[2] Union Pacific to Provo and Rio Grande to Denver.
[3] Union Pacific to Kansas City.
[4] Union Pacific to Denver.
[5] Union Pacific to Provo and Rio Grande to Pueblo.

Other defendants also participate in through routes with joint rates on traffic moving to or from points on the Union Pacific in the excluded territory from and to eastern points and voluntarily forego their long hauls. For example, the Burlington, the Rock Island, the Santa Fe, and the Missouri Pacific participate in joint rates with the Union Pacific through Kansas City and Omaha. The railroads named could haul the traffic for longer distances over their own rails to Pueblo, Denver, or Cheyenne, instead of permitting shippers to route through Kansas City and Omaha in connection with the Union Pacific.

The total amount of traffic moving between the four Northwestern States and points east of the Colorado common points is substantial. According to figures computed by the Union Pacific, transcontinental carload traffic from the East in the year 1948 over the Union Pacific through Wyoming to those Northwestern States totaled 55,631 cars. of these, (1) 81.7 percent originated in eastern Colorado, Kansas, Missouri, Kentucky, Virginia and all States north thereof, (2) 10.8 percent in Texas, Oklahoma, Arkansas, and Louisiana, and (3) 7.5 percent in Tennessee, Mississippi, Alabama, Georgia, Florida, North Carolina, and South Carolina. About 62 percent of the total consisted of manufactures and miscellaneous traffic, most of which originated in group (1). East-bound traffic from the four States to the same three groups in the same year totaled 116,278 carloads, of which 84.1 percent went to group (1), 10.5 percent to group (2), and 5.4 percent to group (3). About 75 percent of that total consisted of agricultural and forest products.

Of the total carloads, 171,909 in both directions, 121,909 originated or terminated in the excluded territory and the remainder, 50,000, originated or terminated at points in Oregon and Washington west of that territory. The Rio Grande is in a position to solicit movements of the latter traffic over its line at competitive joint through rates in connection with longer routes over the Southern Pacific from Portland to Odgen or over the Great Northern to Bieber, Calif., and the Western Pacific to Salt Lake City. These joint rates are the same as the rates which apply over the direct routes of the Union Pacific from origins on that road in the same area west of the excluded territory. For example, from Seattle to Denver the distance is 1,538 miles over the Union Pacific direct and 1,894 miles over the Union Pacific to Portland, the Southern Pacific to Odgen, and the Rio Grande beyond. In addition to the joint rates sought via the Ogden gateway from the excluded territory, the complainant is also seeking joint rates from the northwest area west of the excluded territory, the same as those in effect over the Union Pacific, Southern Pacific, and Great Northern-Western Pacific routes, for application in connection with the Union Pacific via the Ogden gateway.

A substantial volume of traffic is handled by the Rio Grande in connection with the described routes over which it participates in competitive joint through rates to and from Oregon, Washington, and British Columbia. For example, in 1948 the Rio Grande handled 30,486 carloads in connection with the Southern Pacific and 7,152 carloads in connection with the Western Pacific-Great Northern. In 1947, the volume was 22,722 and 8,909 carloads over the respective routes. Most of this consisted of lumber from Southern Pacific origins south of Portland.[6]

The complainant's estimate of the traffic in carloads that would be potentially available to and from the excluded territory for solicitation by the Rio Grande, in the event competitive joint rates were established over its line via Ogden, from Idaho, Montana, Oregon, and Washington is about 29 percent greater than the volume of traffic, according to the Union Pacific, that moved in 1948 over its Wyoming lines. The estimate was based upon the total carload traffic originated and terminated by the Union Pacific in the years 1944 to 1948, inclusive. It included commodities within the description of products of agriculture, animals and animal products, products of mines, products of forests, and manufactures and miscellaneous commodities. The total carloads estimated as originated by the Union Pacific annually in the area specified was 101,476 and the number terminated 56,286, a total "potential" of 157,762 carloads.

This estimate did not include any shipments that might originate or terminate off the line of the Union Pacific and mover over that carrier as part of a longer haul. Although stated to be a conservative estimate of potential traffic, it was computed from a substantial number of reliable sources, and represents the complainant's best analysis of the traffic considered available for solicitation. No attempt was made to estimate the amount of traffic that the Rio Grande might actually obtain from these potential sources other than a statement that there was no probability that it would get more than 10 percent and that the amount probably would be less than 10 percent because of the vigorous competition of the Union Pacific. This figure of 10 percent as a maximum was derived from the experience of the Rio Grande in obtaining other transcontinental traffic now moving at joint rates in competition with the Santa Fe, Southern Pacific, Union Pacific, Great Northern, Northern Pacific, and Milwaukee. If the Ogden gateway were opened to traffic to and from the four States named, there would be active

[6] Prior to February 1, 1949, joint rates applied over the Bieber route in connection with the Rio Grande to competitive territory in Colorado and east thereof on lumber from certain origins in Oregon and Washington on the Oregon Trunk Railway and the Spokane, Portland and Seattle Railway Company (subsidiaries of the Great Northern and Northern Pacific). Those rates were canceled on February 1, 1949, in connection with the Rio Grande; there is no indication that the cancellation was protested.

competition with the Union Pacific, the Wabash, the Chicago & North Western, and the Missouri River connections that favor Union Pacific routing. At the present time the Rio Grande gets less than 5 percent of the traffic to and from California over the available through routes, with joint rates in connection with its line, because of competition with other routes.

A transportation specialist of the United States Department of Agriulture testified that the Rio Grande would be doing well if it obtained 1,000 cars additional annually from this traffic, an amount that is less than 1 percent of the estimated potential total traffic.

Whatever the amount, it would be the result mainly of (*a*) active solicitation by the Rio Grande to persuade shippers and receivers of freight to use its line as an overhead or bridge route, and (*b*) the value of its service to shippers. It would also depend upon the extent to which the Rio Grande and receivers of freight on its line use, and can induce shippers to use, transit facilities available on that line so as to attract the movement of commodities thereto for various purposes for subsequent reshipment beyond at the balance of the joint through rates from the point of origin. The development of such activities is of particular interest to shippers and receivers of freight on the Rio Grande. This is indicated by the growth of traffic over that railroad in the 15-year period, 1934 to 1948, inclusive, and by the testimony of shippers and receivers served by it.

Since 1934, when the Dotsero cut-off was constructed, affording a shorter route by the Rio Grande between Denver and the Utah gateways, there has been a marked increase in the traffic carried over that railroad. For the 2 years prior thereto, the total tons carried were less than 6,000,000 although the tons carried exceeded that figure in each year before that, back to 1924. Beginning in 1934, the traffic gradually increased and reached a maximum of 18,517,000 tons in the war year of 1944. In 1945 it dropped to 14,213,000 tons, but increased in 1947 to 18,331,000 tons and in 1948 to 18,473,000 tons. This tonnage has shown a considerable increase percentagewise in traffic received from connecting lines and a decrease in traffic originated. In 1924, 23.2 percent was received from connections and 76.8 percent originated. In 1934, the respective percentages were 39.3 and 60.7. In 1947, they were 49.8 and 50.2, and in 1948 they were 52.3 and 47.7 percent. This traffic in 1948 did not differ markedly from the traffic handled in the four war years 1942–45, when the percentages of traffic received from connections ranged from 52.6 percent in 1942 to 58.2 percent in 1945.

Of the traffic received from connections in the 15-year period 1934 to 1948, inclusive, the percentage terminated on the line of the Rio Grande has ranged from 16.4 percent in 1941 to 20.7 percent in

1948. In the war years the percentages were 16.7 to 19.9 percent. In the same 15-year period, of the traffic received from connections, the amount delivered to connections, that is, bridge traffic, ranged from 20.7 percent in 1935 to 39.6 percent in the war year of 1945. Excluding the war years, the percentage of traffic received from connections that was delivered to connections was 30.1 percent in 1947 and 31.6 percent in 1948. In 1934, the corresponding percentage was 21.7 percent and in 1924 it was 9 percent. These percentages show the increasing importance of the Rio Grande as a bridge line. In tons of freight carried in 1947, such traffic accounted for 5,519,239 tons out of a total of 18,331,176 tons, and in 1948 accounted for 5,846,793 tons of a total of 18,473,356 tons carried. In revenue, the Rio Grande received in 1947 from its bridge traffic $22,894,412, which was 43.3 percent of its total revenue of $52,883,339; and in 1948, $27,654,086 or 44.2 percent of its total revenue of $62,505,951.

Although the percentage relation of the traffic originated on the Rio Grande to the total traffic of that carrier has decreased, such traffic both in tonnage and revenue has increased in the same 15-year period. In 1934, the tons originated were 3,826,049 and the revenue received therefrom was $8,311,254; in 1947, the tons originated were 9,202,867 and the revenue therefrom $20,190,318; and in 1948, the corresponding figures were 8,804,334 tons and $22,018,519. The 1947 and 1948 figures exceeded those of the war years. The volume of strictly local traffic; that is, traffic both originated and terminated on the line, also increased; this traffic in 1934, for example, accounted for 2,048,544 tons and $4,351,807 in revenue, and in 1948, for 3,307,374 tons and $7,630,587. Strictly local traffic was less annually throughout the 15-year period, including the war years, than during the 6-year period 1924 to 1929, inclusive.

The reasons given for the decline or lack of proportionate growth in traffic originated are (1) depletion of nonferrous ores in Colorado and the closing of smelters, except one now operating at Leadville, Colo.; (2) decline in the amount of coal originating on the road; (3) decline in production of lumber and its products in the area served, and the discontinuance of operation by many sawmills; and (4) loss of local traffic to other forms of transportation.

The relative decline in strictly local traffic has been offset by increases in traffic originated and shipped out over connecting lines, and traffic received from connecting lines and terminated. Such traffic affords a measure of the increasing importance of the Rio Grande to the shippers and receivers of freight in the localities and areas in the States of Colorado and Utah served by it. Although percentagewise, bridge traffic in relation to the total was greater in 1948 than in 1934,

and increased by over 326 percent in the 15-year period, traffic originated or terminated also increased by substantial amounts, or over 155 percent. In terms of revenue, however, less was received from bridge traffic than from the other traffic. In 1934, for example, the Rio Grande received from bridge traffic $5,648,891, and in 1948 it received $27,654,086; from the other traffic, it received $11,519,335 in 1934 and $34,851,865 in 1948.

The record shows that both the Rio Grande and the Union Pacific sought to interest the public in the controversy and to inform other persons, especially shippers, as to the merits of their respective views. For example, the Rio Grande issued a pamphlet entitled "20 Questions" as a means of informing the public of the Rio Grande's side of the case and its reasons for seeking opening of the gateway. In its brief, the Railroad Commission of the State of Montana states that it had informal conferences with official representatives of both the complainant and the defendants before it intervened in the proceeding. A number of witnesses related that they had listened to representatives of both sides before appearing to give testimony. All witnesses were men of responsibility in their communities and were successfully engaged in their respective occupations. Many appeared and testified as representatives of large groups of producers, shippers, and receivers of freight in their areas. There is no indication that these witnesses, whether for or against the complaint, were improperly influenced, or that their respective interests in the subject matter of the controversy had been stimulated in any questionable manner.

Transit.—In transportation by rail, arrangements offered by railroads to shippers under which shipments may be stopped in transit for various commercial operations and reshipped at the balance of the joint rate from the point of origin are of great value to shippers, receivers, and distributors of freight. They are of substantial value in many marketing operations and permit a freer flow of traffic through the transit points.

The Rio Grande, like other railroads, offers a large number of such transit arrangements, including stops for partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling, fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding. Such arrangements are of importance to shippers and receivers in the territory served by the Rio Grande. Traffic from the excluded territory consists of perishable commodities, other agricultural products, milled products, livestock, and lumber and its products. West-bound traffic to that territory is made up for the most part of manufactures and partially manufactured articles, some of

which are stopped for storage, partial unloading at a number of points, and fabrication in transit.

On traffic from Colorado common points and points east thereof through Pueblo, Colorado Springs, or Grand Junction, and Price, Utah, to final destinations north or west of Ogden on the Union Pacific or points on its connecting lines, failure to have joint through rates in connection with the Rio Grande hinders the use of the stoppage-in-transit arrangements offered by that railroad at such Rio Grande points. Pueblo has a population of about 75,000; Colorado Springs, 50,000; Grand Junction, 17,500; and Price, 5,000. All of these are distributing points for surrounding areas. A shipper at Chicago, for example, may have a carload containing shipments for consignees at Pueblo and Boise, Idaho. If the car is partially unloaded at Pueblo, it cannot be reshipped over the Rio Grande to Boise at a joint through rate; but the car can be moved to Boise via Pueblo and Denver, thence the Union Pacific, at a joint through rate. If stops are desired on the Rio Grande at Grand Junction, Price, or Provo, for example, joint through rates would not be available.

A discussion of the evidence offered by shippers and receivers of particular commodities who testified in support of the complainant follows.

Building materials.—A dealer in and distributor of general building materials in Salt Lake City, who handles from 400 to 500 carloads annually, obtains from 150 to 200 cars from points east of Colorado common points, including cellotex from Marrero, La., roofing from Cincinnati, Ohio, doors from Louisville, Ky., hardwoods and plywoods from Algoma, Wis., and Orangeburg, N. C., asbestos products from St. Louis, and asphalt siding from Minneapolis. Distribution is made in carloads, from pool cars, and from warehouses to customers located on the Rio Grande on the western slope of Colorado, such as Glenwood Springs and Grand Junction, Colo., and in Utah, such as Price, Helper, Ephraim, and Manti; and also on the Union Pacific in northern Utah; in Wyoming, Rock Springs and west; and in southern Idaho northward to and including Ashton on the West Yellowstone branch and westward to and including Magic, Shoshone, and Buhl. This dealer cannot now serve these customers from shipments made in through cars at joint rates over the Rio Grande when such cars also carry shipments for points on the Union Pacific beyond Ogden. Ephraim and Manti are on a branch line about 52 and 59 miles, respectively, south of Thistle, Utah.

In some instances this shipper has had to forego business east of Salt Lake City at points as far as Glenwood Springs because of the rate situation. If joint through rates were established, this distribu-

tor could give customers at a number of intermediate points on the Rio Grande, who generally are small dealers and can take only less-than-carload quantities, better service through partial unloading in transit and more efficient service by frequent deliveries under more flexible schedules, instead of being limited, as at present, to furnishing service in connection with pool cars consigned to Salt Lake City as the ultimate destination. Pool cars with partial loads for that point or Ogden and points on the Union Pacific beyond do not now move over the Rio Grande, but are routed over the Union Pacific to get the benefit of joint rates.

Of the 150 or more cars annually from the east, this distributor estimated that he would have stopped for partial unloading about 25 percent. Witness made no mention of commercial competition, but indicated that his chief concern was better service to his customers and a saving in cost to his company if such carloads could be stopped for partial unloading at intermediate points on the Rio Grande while moving at the through rates to Union Pacific destinations in the area served by him.

Farm machinery.—A distributor of farm machinery and equipment at Salt Lake City receives carloads of these commodities from eastern origins, including farm tractors from Detroit, Mich., and distributes them by his own motor vehicles to points in Utah and Idaho. This business was established in 1947, at which time the production of these commodities was insufficient to meet all demands, and a system of allocations based on prior needs was introduced. While the system of allocations was in effect, it was found to be more convenient and efficient to bring all shipments to Salt Lake City and distribute them by truck. This distributor is located on the Rio Grande at Salt Lake City and all shipments move over that line. He expressed a desire for joint through rates from eastern origins to points in Utah and Idaho in connection with the Rio Grande, but admitted that no attempt was being made to partially unload shipments at points on the Rio Grande south of Salt Lake City when carloads are consigned to the latter point, or to ship over the Union Pacific to Salt Lake City where carloads could be partially unloaded or stored and later shipped to Union Pacific destinations in Utah and Idaho at joint through rates. The witness for this distributor stated that he preferred to ship in-bound over the Rio Grande and forego the stopping-in-transit provisions that are now in effect at Salt Lake City and other points on the Union Pacific when traffic is routed over that line.

A factory branch of a large manufacturer of farm machinery and equipment which distributes in the intermountain area is located on the Rio Grande at Salt Lake City. In 1949 it received 369 carloads

from its eastern manufacturing points. Of these, 70 percent were sold at points north of Salt Lake City, mostly at points served by the Union Pacific as far as Ontario, Oreg., and the remainder in Utah and western Colorado. About one-half of the shipments to Salt Lake City moved over the Rio Grande route and one-half over the Union Pacific. Shipments which move in over the Union Pacific may be stopped at Salt Lake City for partial unloading or storage in transit at the joint through rates when the ultimate destinations are on the lines of that carrier, but combinations of rates to and from Salt Lake City apply when such shipments move into that point over the Rio Grande. The manager of this branch testified that it would be desirable to establish joint through rates over the Rio Grande so that shipments moving over that line could be stored in transit at Salt Lake City and later reshipped, or partially unloaded thereat and the remainder forwarded, to points on the Union Pacific at charges no greater than apply on similar shipments moving over the Union Pacific. However, he did not know what effect this would have on the parent company, as some shipments have been routed over the Rio Grande when Union Pacific routing was requested. To indicate a need for joint through rates, reference was made to a shipment of tractors which were routed over the Rio Grande to Salt Lake City. At that time a customer at Ontario needed two tractors, and it cost about $50 each to ship them from Salt Lake City by motor carrier. If joint through rates had been in effect, the car could have been partially unloaded at Salt Lake City and the two tractors could have been forwarded to Ontario at the joint rate from origin to Ontario. The record fails to show the difference in the joint rates to Salt Lake City and to Ontario. On a 34,000-pound shipment of tractors from Chicago, the joint through rate is $2.68 to Ogden and $2.98 to Boise, which is southeast of Ontario, representing a difference of $102 in charges.

Monuments.—A fabricator and wholesaler of granite and marble monuments at Brigham City, Utah, on the Union Pacific 21 miles north of Ogden, obtains his stone from Vermont, Georgia, Wisconsin, and Minnesota and sells in Colorado, Utah, Idaho, Wyoming, Montana, Oregon, and Washington. This dealer has keen competition with dealers in like articles in Salt Lake City. Its business is such that straight carloads rarely can be shipped to retailers. If joint through rates were established over the Rio Grande through Ogden, cars could be stopped in transit at Colorado points, such as Grand Junction. A retailer at the latter point testified that he finds it impracticable, except in unusual instances, to purchase the various kinds of monuments needed in the trade in carloads, and that the keen

competition cannot be met when shipments are made in less than carloads. There is thus an urgent need for the establishment of joint through rates on this traffic to destinations in the excluded territory with stop-off privileges at intermediate points on the Rio Grande. A substantial portion of this traffic has been lost to the trucks, chiefly because of rate differences and the lack of stop-off privileges on the Rio Grande at competitive through rates.

Livestock.—Large volumes of traffic are involved in connection with the livestock industry and with the processing and marketing of agricultural products. With respect to livestock, evidence was submitted by producers, feeders, and marketers. A number of producers in the northwest area, particularly in Idaho at such points as Pocatello, Burley, Soda Springs, and Blackfoot, desire joint rates via Ogden and the Rio Grande to markets in Denver, Pueblo, and east thereof on the same basis that applies on shipments moved over the Union Pacific through Cheyenne. Much of the evidence dealt with the advantages from such joint rates when applied on livestock shipped to grazing and feeding areas in Utah and Colorado on the Rio Grande for reshipment beyond under transit arrangements. In the areas in Utah and Colorado served by the Rio Grande are good pasture lands for grazing livestock. In addition to livestock produced locally in those areas, substantial quantities are shipped in the summer season from other sections in Colorado, Utah, and surrounding States, both for feeding in feed lots and pastures and for grazing on the livestock ranges. Movements of livestock, both sheep and cattle, into and out of Colorado are substantial in volume.

Evidence as to the needs of raisers of livestock and operators engaged in fattening livestock for markets was submitted by persons engaged in those pursuits, individually and as representatives of livestock and feeder associations. These came from several representative points or districts served by the Rio Grande, such as Heber City and La Sal, Utah, and Burns, Lamar, and Las Animas, Colo. Those served only by the Rio Grande generally buy from areas from which joint rates apply in connection with that road in order to obtain the benefit of grazing or feeding in transit on feeder stock when the fattened animals are shipped to Denver or markets east thereof. The evidence shows that such operators have to absorb the difference in transportation costs and are not able to purchase cattle or sheep economically in the northwest area in competition with buyers from Iowa, Wyoming, Nebraska, Colorado, and Kansas that have the benefit of competitive joint rates from the excluded territory over Union Pacific routes with grazing or feeding in transit arrangements.

Due to the curtailment of the use of grazing lands in national forests in Colorado, as part of a general policy for all such forest

lands, livestock raisers in Colorado have curtailed their operations in raising livestock, and have engaged more in fattening stock by grazing in private pastures or feeding in feed lots. They purchase most of their feeder stock in Colorado and surrounding areas, but for supply, quality, and price reasons they have been seeking some feeder stock from more distant origins, and the need for doing so, particularly by reason of the curtailment of the pasture area, has been increasing. Livestock produced in the northwest area, particularly in Idaho, Montana, and Oregon, is of excellent grade, does well on the range, and is considered very desirable for feeding and breeding purposes. About 90 percent of the sheep produced in Colorado are produced in the area served by the Rio Grande, and the operators in this territory purchase replacement or breeding ewes in the excluded territory for summer grazing and the production of white-faced or mutton-type lambs. One witness indicated that in-bound billing on breeding ewes is used under the feeding-in-transit arrangements, when available, at points on the Rio Grande when the newborn, fattened lambs are shipped to markets, but the feeding-in-transit arrangements apparently do not apply for breeding in transit.

Operators on the Rio Grande in western Colorado and those in the eastern Arkansas Valley sections (in southeastern Colorado east of Pueblo and in southwestern Kansas) feel that they cannot now profitably purchase stock in the excluded territory for feeding in transit in competition with similar operators on the Union Pacific in Wyoming, Colorado, Nebraska, and Kansas, due to the rate situation. For example, from Dillon, Mont., to Kansas City the rate on sheep or goats in double-deck cars is $1.21 over the Union Pacific direct and $1.40 over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond, a difference of 19 cents. The 19-cent differential over the latter route applies generally on sheep and goats from Union Pacific origins in the excluded territory to Missouri River markets and points east thereof. These rates are published as joint rates over through routes via Ogden and the Rio Grande. On sheep and goats to destinations west of the Missouri River, including Colorado common points, and on cattle to all of the territory Colorado common points and east theref, via Ogden and the Rio Grande, the rates are on a combination basis. Cattle and sheep may be shipped from the excluded territory over the Union Pacific to Denver and connecting lines beyond to points in the Arkansas Valley, such as Lamar, for feeding in transit and subsequent reshipment to Missouri River markets, or markets east thereof, at the rates applicable over the Union Pacific direct to the Missouri River markets, plus an arbitrary of 8.5 cents per 100 pounds. Feeders of livestock located on the Union Pacific in northern Colorado and Nebraska are

now able to overbid the Arkansas Valley feeders on northwest stock when destined to the Missouri River and east thereof, and the latter are thus unable to compete successfully because of their unfavorable rate situation. The northern Colorado-Nebraska operators feed a majority of the lambs fattened for market in the United States.

A packing plant at Pueblo purchases lambs at the Ogden market, some of which originate at points on the Union Pacific in Idaho and Oregon. These shipments are routed over the Rio Grande from Ogden even though it costs from $70 to $80 per car more than the total charges would be if the shipments were routed over the Union Pacific to Denver at the transit balance of the through rate. The Rio Grande is used from Ogden because shipments do not have to be stopped for feed and water en route to Pueblo, whereas shipments routed from Ogden over the Union Pacific usually require feed and water at Denver. There is less shrinkage on shipments moved over the Rio Grande, but not enough to offset the additional freight charges.

The rates on livestock in western territory were prescribed in *Livestock, Western District Rates*, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535. Generally, the rates are predicated on the shortest routes over which carload traffic can be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the act. The rates on stocker or feeder livestock were prescribed on a basis not in excess of 85 percent of the rates prescribed on the same kind of stock when fit for slaughter, and the carriers were authorized to establish tariff provisions which allow stock moving toward a market to be fed in transit at intermediate points on the basis of the through rates plus a reasonable charge for such privilege. On December 6, 1932, the Rio Grande was authorized (190 I. C. C. 175) to add certain arbitraries to the rates prescribed for mountain-Pacific territory for hauls over its standard-gage lines between Pueblo and Walsenburg on the east, and Provo on the west, including branch lines connecting with the main lines between those points. For hauls of 500 miles or more, the arbitrary authorized at that time was 6 cents on cattle and on hogs and sheep, double deck. Later, these same arbitraries were authorized for application between Denver and Provo over the Dotsero cut-off (200 I. C. C. 535).

In establishing the prescribed rates on livestock, the carriers appear to have limited their application over routes which do not result in short hauling, and over other and longer routes to have provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the dis-

tance involved. As indicated, operators in the Arkansas Valley may now obtain cattle and sheep in the excluded territory for feeding in transit at an arbitrary of 8.5 cents, and this same arbitrary applies when the stock originates on the Burlington in Montana and Wyoming. On the other hand, such operators may obtain feeder stock in other areas, such as Texas and New Mexico, for feeding in transit and reshipment to the Missouri River markets or markets east thereof, at lower rates than would apply if the same stock were fed in transit by operators on the Union Pacific in Colorado, Nebraska, or Kansas. For example, the rate on cattle from Las Vegas, N. Mex., to Chicago is $1.13 when stopped for feeding at Lamar, but if the same cattle were fed at Barton, Nebr., just east of Julesburg on the Union Pacific, the rate would be $1.26, of 13 cents higher. On cattle from Raton, N. Mex., fed in transit at Lamar, the rates are $1.07 to Chicago and 76 cents to Kansas City, but if the same cattle were fed in transit at Barton the rates would be $1.21 and 89 cents, respectively. Many other examples of a similar nature are shown.

The arbitrary of 19 cents, originally 13 cents, applicable on lambs from the northwest area and moving over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond was established prior to the opening of the Dotsero cut-off, and was based in part on the mileage over the Rio Grande via Pueblo. The evidence indicates that this arbitrary was based on the difference between the prescribed scale rates for the average distance from 12 representative origins, on the line of the Union Pacific from Pocatello north to Butte and west to Pendleton, to the several Missouri River markets over the Union Pacific direct and over that road to Ogden, the Rio Grande to Denver via Pueblo, and the Union Pacific beyond. Using the same formula, but giving consideration to the shorter distance over the Rio Grande's Dotsero cut-off, the Union Pacific states that the arbitraries on traffic routed over the Rio Grande should be 5 cents to Denver and Pueblo and 15 cents to the Missouri River markets, and it is willing to establish these arbitraries and make them applicable to cattle as well as sheep. The arbitrary of 8.5 cents on cattle and sheep from origins on the Union Pacific and the Burlington when fed in transit at points in the Arkansas Valley and reshipped to the Missouri River and beyond apparently is based on a similar formula. Reasonable groupings were authorized in *Livestock, Western District Rates*, *supra*.

In seeking to have the rates on livestock which apply over the Union Pacific made applicable over its lines from Ogden, the Rio Grande indicates a desire to waive the arbitraries which were authorized over its line from Provo to Denver and Pueblo and, in addition, to have estab-

lished over its routes lower rates than would result from the application of the prescribed scales for the distances over its routes. On shipments moving over the Union Pacific-Ogden-Rio Grande route, this would result in short hauling the Union Pacific by 512 miles to Denver and 1,042 miles to Kansas City, which are the differences in the Union Pacific distances from McCammon to Ogden and from McCammon to Denver and Kansas City.

Reference is made to *Crouch* v. *Nevada N. Ry. Co.*, 208 I. C. C. 586, which concerned the rates on feeder cattle moved from East Ely, Nev., to Davis, Calif., over the lines of the Nevada Northern Railway Company to Shafter, Nev., thence the Western Pacific to Sacramento, Calif., and the Southern Pacific beyond, 760.4 miles. A rate of 47.5 cents was applicable over the Nevada Northern to Shafter and the Southern Pacific beyond, 705 miles. This rate was collected, but the defendants later sought to collect a rate of 58 cents, which was the combination rate based on Sacramento. Division 4 found that the combination rate was applicable but unreasonable to the extent that it exceeded 49.5 cents, which was the prescribed scale rate for distances of 775 miles and over 750 miles. See also *Routing Livestock to and from Oregon Points*, 209 I. C. C. 349. We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive rates over the Rio Grande via the Ogden gateway.

Agricultural commodities.—Growers of wheat, potatoes, onions, peas, other vegetables, and fresh fruits at Idaho Falls, Burley, Twin Falls, Blackfoot, Aberdeen, Caldwell, and Parma on the Union Pacific, and also those engaged at such points in buying, selling, packing, and distributing vegetables and fresh fruits, market such products throughout the United States. In order to get as wide a distribution as possible those growers and other growers in the northwest area need as many markets and outlets as possible.

In marketing the large production of such products, particularly Idaho potatoes, it is the general practice to divert carloads in transit as markets are found and sales are made. Routes over which joint through rates apply are generally used so that a shipment can be diverted or reconsigned without the application of a combination of rates. If a shipment reaches a point through which a combination of rates applies and the sale is lost, it is frequently necessary to dispose of the shipment at that point at a forced or distress price. Such points are called closed or pocket markets.

The principal outlets for Idaho fruits and vegetables vary from year to year, but large markets are in the Central, Southwestern, and Southeastern States. Carloads moved over the Union Pacific to the

Central States can be diverted to the Southeastern States at the joint through rates if they move east through Omaha, Kansas City, St. Louis, or Chicago, but if the cars are routed to points in the Southwest over the Union Pacific and connections through Denver they cannot be diverted to southeastern markets east of New Orleans at joint through rates. The southwestern markets are pocket markets in that respect. Idaho producers are in competition with shippers in other producing areas and find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City. One Idaho shipper has made few sales of potatoes in the Southwest in the last several years because of pocket markets there.

Wichita and Liberal, Kans., are described as pocket markets on potatoes and other vegetables originating in Idaho because they cannot be diverted or reconsigned therefrom to points east of the Missouri River at joint through rates. However, the record indicates that shipments refused at these two points may be diverted or reconsigned to destinations in the Southwest at the joint through rates. Wichita is not located on the direct line of any carrier operating between the Colorado common points and the Missouri River gateways, and Liberal is located in the southwestern part of Kansas near the Oklahoma border. Shipments to Kansas City and east thereof would require an out-of-line haul via Wichita and a substantial back haul via Liberal.

Storage facilities are available at Pueblo for the storage of perishables, including potatoes, onions, apples, pears, frozen poultry, frozen foods, butter, and eggs. Joint through rates are applicable from the excluded territory via Pueblo on shipments routed over the Union Pacific to Denver and connecting lines beyond to destinations in the Southwest and to points west of the Missouri River. The route of the Rio Grande from Ogden would be used if joint through rates were available over that route to additional destinations with storage in transit at Pueblo. Storage operators at Pueblo are now handicapped, in relation to two competitors at Denver, because the through rates do not apply via Pueblo to Denver and other northern destinations where a back haul would be required on shipments routed to Pueblo via Denver, whereas the competitors can ship at the through rates in all directions, except westward. The application of the through rates via Ogden and the Rio Grande is sought so that these shippers may have available the same distribution markets as their competitors.

A shipper who deals in dried beans from Idaho and other Western States is located at Colorado Springs. His principal markets are in southeastern territory. Beans which originate in California, Colorado, and Wyoming may be stopped at Colorado Springs for cleaning and packaging and reshipped at the balance of the joint through rates.

Beans which originate in Idaho may be shipped over the Union Pacific to Denver and the Rio Grande or other connections to Pueblo and reshipped therefrom at the balance of the through rates, except to points east of the Missouri River. The route of the Rio Grande from Ogden would be used on Idaho beans if it would result in the application of joint through rates to points east of the Missouri River on the same competitive basis as is now applicable when such beans are transited at points on the Union Pacific. Another bean dealer at Fruita, Colo., on the Rio Grande about 10 miles west of Grand Junction, would like to transit Idaho beans on the same competitive basis as is applicable at Union Pacific points. This dealer is now engaged primarily in buying pinto beans from growers in the vicinity of Fruita and shipping them in carload lots to others, including the shipper at Colorado Springs. These dealers in dried beans are in competition with like dealers at points on the Union Pacific who have the benefit of transit at the through rates to destinations, among others, east of the Missouri River.

A company which is engaged in the purchase and sale of dried beans and peas maintains plants in Nebraska at Morrill on the Burlington and at Gering on the Union Pacific. Carloads of dried beans and peas originating in California, Utah, Oregon, Washington, Idaho, Colorado, Wyoming, Montana, and Nebraska are shipped to Morrill and Gering where they are cleaned, sorted, and packaged, and reshipped generally eastward and to Oklahoma and Texas. This company can obtain Idaho beans and reship them from Gering to eastern and southern destinations at the joint through rates. It was stated, however, that a substantial amount of pinto beans (about 6,000,000 pounds per year) are obtained from Colorado, mostly on the Rio Grande, on which an out-of-line charge of 7 cents per 100 pounds is applicable in addition to the joint through rates over direct routes when such beans are processed at Gering and reshipped to the Missouri River and points east thereof; also that when such beans are processed at Gering and reshipped to destinations west of the Missouri River, combinations of rates to and from Gering are applicable.

The Utah Growers' Cooperative operates throughout Utah in the production and shipment of vegetables, including potatoes and onions. It has two branches on the Union Pacific and three on the Rio Grande in Utah, the latter at Midvale, American Fork, and Springville, all south of Salt Lake City. These three points are served by the Union Pacific and the Rio Grande, but track connections exist only at Midvale. Shipments of box shooks and of seed potatoes from Idaho and of fertilizer from Montana may move into American Fork and Springville over the Union Pacific at lower rates than when they are

interchanged with the Rio Grande at Ogden or Salt Lake City, but when they are received over the Union Pacific they must be trucked to the plants on the Rio Grande. The differences in the rates are not shown.

Various flour mills at southern Kansas points, such as Moundridge and Wichita, support the complaint because they cannot at present purchase wheat at points on the Union Pacific in Idaho, Oregon, and Washington, mill it in transit, and reship to the Missouri River and points east thereof at the same rates that are applicable when similar wheat is milled at points on the Union Pacific. A specific instance was shown where nine carloads of wheat moved from Ogden to Moundridge on which the Ogden shipper applied in-bound transit billing on wheat originating at Idaho Falls. The shipments moved from Ogden over the Union Pacific to Denver, the Rio Grande to Pueblo, and the Missouri Pacific beyond. Moundridge is a local point on a branch line of the latter carrier north of Eldorado, Kans. After the wheat was milled at Moundridge the in-bound billing thereon was applied against an out-bound movement of flour to New Cumberland, Pa. The rate on flour from Idaho Falls to New Cumberland over the route of movement through Denver and Moundridge was $1.335, or 12.5 cents higher than the rate would have been if the same wheat had been milled at a point on the Union Pacific. The distances over the route of movement through Denver and Moundridge and the more direct route of the Union Pacific are not shown.

The rate restrictions complained of by shippers of and dealers in fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from the excluded territory to Colorado common points and east thereof have placed these shippers and dealers at a serious disadvantage in marketing their products, as compared with competing shippers and dealers located on the Union Pacific and having the benefit of the lower joint through rates from and to the same points. Some of these restrictions complained of, such as those by operators of flour mills in southern Kansas, could be remedied by the establishment of additional joint through rates from the excluded territory over routes of the Union Pacific to Denver and connecting lines beyond. From McCammon and points north thereof such routes would in all instances be shorter than the routes over the Union Pacific to Ogden, the Rio Grande to Denver or Pueblo, and connecting lines beyond. The Union Pacific states that it has not been requested to establish additional joint through rates via Denver. Its position with respect thereto is that the rates on agricultural commodities are on a low basis and, therefore, the carriers should be permitted to limit their application to more direct routes, thereby maintaining their long

hauls and preventing undue circuity. For example, it believes that if competitive joint through rates were established on grain for milling at Wichita and other southern Kansas points and reshipment beyond to the Missouri River and east, other and longer routes probably would be demanded on the same basis at points in Oklahoma and Texas where competing mills are located.

The establishment of additional routes and rates by way of the Union Pacific, however, would not remedy the disadvantage complained of by the shippers of and dealers in these products in the excluded territory who are compelled to pay combination rates on shipments diverted or reconsigned at intermediate points on the Rio Grande, including those stored at Pueblo or Colorado Springs on that road, and reshipped to Colorado common points and east thereof. The only effective remedy in those instances would appear to be the establishment of through rates, the same as those over the Union Pacific routes, over Rio Grande routes via Ogden or Salt Lake City.

Lumber.—A number of lumber dealers and lumber mills are located at Grand Junction and other points, and a wood-treatment or preserving plant is located at Salida, Colo., all on the Rio Grande. Generally, the complaints of these parties relate to their inability to ship lumber and millwork from the excluded territory on competitive joint rates via Ogden and the Rio Grande with stoppage in transit for partial unloading, storage, milling, or treatment and reshipment beyond to Colorado common points and east thereof at the balance of the joint rates. Mention also was made of a handicap in diverting or reconsigning at the joint rates to such points carloads originally shipped to local stations on the Rio Grande via Ogden. As previously indicated, joint through rates apply on lumber and millwork from points in California and in Oregon and Washington west of the excluded territory, including areas around Seattle, Tacoma, and Portland, over the Southern Pacific or the Western Pacific and the Rio Grande through the Utah gateways to points on the Rio Grande and east thereof, with storage, milling, and treatment under transit arrangements. Lumber may also be shipped at joint through rates from the excluded territory when the final destinations are local points on the Rio Grande, but such rates are not applicable from that territory over the Union Pacific to Ogden and the Rio Grande when the final destinations are Colorado common points or points east thereof, whether the shipments move direct or are stopped for milling or other transit purposes.

A lumber company with a wholesale yard, a box factory, a mill, and a storage and drying yard is located at Grand Junction. This company buys most of its lumber, both rough and dressed, and plywood and doors at points west of the excluded territory and sells in Colorado

and points east and south thereof. This company also has a financial interest in a wholesale lumber company at Colorado Springs. It has purchased some lumber at points in the excluded territory, such as Cascade and Winchester, Idaho, Burns, Oreg., and Metaline Falls, Wash. Lumber shipped from Cascade, Winchester, and other points in the excluded territory over the Union Pacific to Ogden and the Rio Grande to Grand Junction could not be stored in transit at the latter point and later reshipped to Colorado common points or points east thereof at the joint through rates as those rates apply only over the Union Pacific routes.

Another lumber company on the Rio Grande at Military Junction, Colo., about 10 miles south of Denver, purchases lumber in California and Oregon; also a small amount in Washington, for milling in transit and reshipment beyond. Lumber from the excluded territory can now be milled in transit at Military Junction and reshipped to Colorado points south thereof and to points in the Southwest at the joint through rates to final destination, but this is not true to other destinations east of the Rocky Mountains. Military Junction is about 1 mile outside of the Rio Grande's switching limits at Denver.

The wood-treatment plant at Salida purchases some lumber, poles, piling, and cross ties in Colorado, Utah, and New Mexico, but most is obtained from points in Oregon and Washington west of the excluded territory. This plant has a contract for treating cross ties for the Rio Grande, but about 60 percent of the forest products which it treats are reshipped to points outside of Colorado. It has not purchased products in the excluded territory, but probably would do so if the joint through rates to eastern and southern destinations were made applicable over the Union Pacific to Ogden and the Rio Grande through Salida. The company which owns the plant at Salida has a similar plant at Denver and 22 others scattered throughout the country. The plant at Denver can perform treatment in transit at the joint through rates from the excluded territory to final destinations in the East, South, and Southwest, and apparently joint through rates apply on about 40 percent of the business at Salida which does not move outside of Colorado.

OPPOSITION TESTIMONY

The Union Pacific operates about 9,724 miles of railroad serving over 1,700 points in 13 States.[7] It reaches the Pacific coast at Seattle, Portland, and Los Angeles, and the Missouri River at Council Bluffs, Iowa, and Kansas City. Its line between Pocatello and North Platte,

[7] Iowa, Nebraska, Wyoming, Idaho, Oregon, Washington, Missouri, Kansas, Colorado, Montana, Utah, New Mexico, and California.

Nebr., the point of divergence of traffic via Council Bluffs and Kansas City, runs through a substantial portion of the territory principally involved in this proceeding. It has over $600 million invested in the routes concerned. Its present facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future.

Evidence of the amounts expended by the Union Pacific for improvements in line, heavier tracks, yard facilities, traffic control, and other facilities, and as to its capacity and efficiency in operation, shows that the railroad has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line.

The maximum elevation on the Union Pacific route between Pocatello and Cheyenne is 8,013 feet at Sherman, Wyo., for 1 mile, as compared with the maximum elevation of 9,239 feet between Ogden and Denver on the line of the Rio Grande, which operates at an elevation of 8,000 feet or more for about 35 miles. East-bound on the Union Pacific the maximum grade at any point is 1.52 percent and westbound 1.55 percent. The Rio Grande's maximum grade is 2 percent over substantial mileage. There is much greater curvature in the Rio Grande line than in that of the Union Pacific. The total rise and fall in feet on the Rio Grand is 66.3 percent greater than that of the Union Pacific. Other data as to the physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services.

The Union Pacific objects to the establishment of joint through rates to points beyond Denver or Pueblo via Salt Lake City or Ogden over the Rio Grande upon the principal grounds that such routes would short haul the Union Pacific and that the diversion of traffic over such route from the Union Pacific routes now available would curtail the service and growth of the Union Pacific in the territories it alone serves and in which it pioneered in railroad construction. Such diversion, it fears, would adversely affect the operation of its numerous branch lines in Idaho, Montana, Oregon, and Washington, which are feeders for its main line and are not self-sustaining. In those States the Union Pacific operates a total of 5,606 miles of railroad, with 2,913 miles of branch lines upon which about 46 percent of the total traffic in that territory originates or terminates. It contends that unless it has a substantial main-line haul on branch-line traffic, the operation of many, if not most, of such branches would not long be justified.

Another objection is that yard facilities of the Ogden Union Railway and Depot Company, referred to as the Depot Company, jointly owned by the Southern Pacific and the Union Pacific, at Ogden terminal are inadequate to interchange any additional volume of traffic with the Rio Grande that may be routed to or from the northwest area through Ogden, and that expansion of facilities there is not possible. Several instances of delays to trains, particularly in the fall when traffic is heavy, are shown. The record describes in detail the yard and track lay-out at this terminal and interchange point. At present the Union Pacific finds it necessary to bypass the Ogden terminal as much as possible by taking its trains for Pocatello, Salt Lake City, or Green River over an outside wye track which avoids the terminal proper. In addition to these deficiencies, icing facilities now maintained at Ogden for east-bound and west-bound traffic are not considered adequate for icing perishable commodities from Idaho and the Pacific Northwest for delivery to the Rio Grande. The Depot Company estimated that the cost of interchanging cars between the Rio Grande and the Union Pacific and Southern Pacific is at least twice the average cost of cars in the terminal because of the additional handling required.

The largest volume of traffic was moved through the Ogden terminal in the war year 1945, when a total of 2,847,277 cars were handled. In July, the peak month in that year, the total was 284,741 cars in 2,966 trains, an average of 96 trains daily, which required an average of 70 switching shifts a day. Of that number in July, 894 were solid trains that moved through the terminal without switching. The handling of such a large volume caused considerable congestion and delays to trains. In 1949, the total number of cars handled was 1,955,219. In the peak month of that year, 2,359 trains were handled, an average of 76 trains per day, requiring about 59 switching shifts daily. These figures show that 892,058 fewer cars were handled in 1949 than in the peak year of 1945.

To show that the Union Pacific cannot afford to lose any part of its haul on traffic, attention is directed to the large deficits which the Union Pacific incurred in its passenger service. In 1948, that deficit amounted to $28,462,000, equivalent to $4,291 per mile of road operated, as compared with a passenger deficit incurred by the Rio Grande of $4,954,000, equivalent to $3,127 per mile of road. In the last 20 years the Union Pacific in only 6 years, principally in the war years, has had railway operating income sufficient to pay fixed charges plus declared dividends, and in 1949 it had a net railway operating income of $21,707,437, which was not sufficient by $10,269,865 to pay declared dividends and interest on funded debt. This is contrasted with the

results on the Rio Grande, which in 1948 had a net railway operating income of $12,156,284, out of which it provided for all fixed charges, paid a declared dividend, provided for sinking-fund requirements, and had left for its surplus account $5,167,148.

The Wabash and the Chicago & North Western, important eastern connections of the Union Pacific, furnished estimates of the possible loss of traffic to those roads, and its effect upon train service and employment on their lines in the event that the volume of traffic embraced in the Rio Grande estimate of potential traffic were diverted over the Rio Grande route.

The Wabash in 1948 participated in 9.07 percent of the total traffic handled by the Union Pacific from the Northwest and about one-half of that on west-bound traffic to that area. It estimates the value to it of the potential traffic which it might lose at $1,602,000.

The revenue derived by the Chicago & North Western from the traffic to and from the northwest territory handled in connection with the Union Pacific in 1948 was about $4,000,000. Based on the loss of the potential traffic as estimated by the Rio Grande, it urges that it will lose that amount of revenue if the joint through rates sought in this proceeding are established.

The Great Northern, Northern Pacific, Santa Fe, and Milwaukee oppose granting the Rio Grande's request for the establishment of competitive joint through rates via Ogden. Neither of these defendants, except the Santa Fe, connects with the Rio Grande. They participate, however, in joint rates with the Union Pacific on traffic between the northwest area and eastern points, but there are numerous exceptions. For example, from origins on the Great Northern joint rates are not applicable via Spokane and the Union Pacific on wool, livestock, ores, concentrates, or smelter products, and the joint rates east-bound on fruits and vegetables over that route are limited to destinations reached by the Union Pacific. These restrictions became effective on September 15, 1932, although they were protested by various shipping interests. On lumber from origins on the Great Northern, joint rates apply over that line to Spokane and the Union Pacific only when the traffic is destined to points on and west of the Missouri River, Council Bluffs to Kansas City, thence the line of The Kansas City Southern Railway Company to the Gulf of Mexico. Reference is made also to *Transcontinental Traffic Routed via Bieber, Calif.*, 213 I. C. C. 487, wherein the Great Northern was permitted to cancel joint rates via Bieber and Salt Lake City on transcontinental traffic originating at or destined to various points on the Great Northern in Idaho and Washington.

The Milwaukee, the Santa Fe, and the Wabash, in a joint brief, contend, as does the Great Northern, that upon the evidence submit-

ted the establishment of joint rates which would short haul the defendants is not warranted.

A large number of shippers and representatives of communities served by the Union Pacific, and traffic associations, opposed the complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado. Those three supported the complaint in whole or in part, and as indicated, the Kansas commission later qualified its opposition by supporting the position of the complainant insofar as it pertains to wheat and livestock.

It is not practicable to deal with all of this evidence in detail, but the testimony and position of the parties have been considered. Most of the shippers in opposition to the complaint commented upon the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. Many of them testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event. Most of the opposition arises from the assumed effects of the diversion from the Union Pacific of the full amount, or a very large portion, of the traffic estimated by the Rio Grande as the potential traffic that would be subject to solicitation by that carrier for movement over its lines if the joint rates sought should be established. Upon the assumption that the Union Pacific would lose its long haul on the full estimated potential traffic of 101,476 carloads originated and 56,286 carloads terminated annually on the Union Pacific in the four Northwestern States, a total of 157,762, that number was used as a base by the Union Pacific to determine possible revenue losses. These were computed as amounting, in the aggregate, to $49,880,000 yearly.

Diversion of traffic with such a large loss in revenue would result, according to Union Pacific estimates, in (*a*) the discontinuance of four trains daily east-bound and four trains daily west-bound between Pocatello and North Platte; (*b*) three trains east-bound and three west-bound daily between North Platte and Council Bluffs; and (*c*) one train east-bound and one west-bound daily between North Platte and Kansas City. Extending this loss to show the direct effect upon employment, it was calculated that 1,240 employees, with annual payroll earnings of $5,000,000 yearly, would be laid off, with additional losses in employment by employees in other departments, bringing the total to about 5,300. Other losses are calculated, such as loss of employment of Union Pacific employees engaged in moving fuel coal from the company's mines in Wyoming. Based on

these assumptions, derivative losses were computed by communities and localities on the Union Pacific's line whose local industries and merchants depend more or less upon the wages paid to railroad employees.

Considerable evidence of the same general character was submitted by representatives of employees of the Union Pacific, to show the effect upon them if all of the potential traffic were routed via Ogden and the Rio Grande. The number of employees that might be laid off was computed as 5,144, with a total loss of wages of $21,080,400. Losses by reason of possible loss of homes due to forced changes in places of employment, decline in real-estate values, and other contingent losses were calculated. Similar figures for possible loss of employment were calculated for certain lines connecting with the Union Pacific, such as the Wabash, the Chicago & North Western, and the Milwaukee.

The record contains detailed computations and estimates upon all of these matters. Employee representatives contend that if joint rates are required to be established we must determine what would be the probable extent of diversion of traffic from one or more routes to the route via Ogden and the Rio Grande. Based on such a finding, they further contend that we must determine the probable adverse effects of the diversion on employees of the railroads affected and impose measures to compensate or to protect such employees from loss, as conditions upon the establishment of the joint rates and through routes.

There is no specific provision in section 15 (3) or (4) requiring that such conditions be imposed, but it is argued that in finding joint rates and through routes necessary and desirable in the public interest, as required by section 15 (3), the interests of employees must be considered as they are in proceedings involving consolidations, mergers, and abandonments. Reference is made to the decision in *Cancelation of Rates and Routes via Short Lines*, 245 I. C. C. 183. In that proceeding certain carriers sought to cancel their joint rates over through routes with specified short lines. It was found that cancellation of the rates and routes would result in abandonment of the short lines with resulting inconvenience and loss to shippers and to carrier employees. Permission to cancel certain of the routes was denied.

Upon the record before us it is impossible to find definitely, or to estimate with any degree of accuracy, how much traffic might be diverted to the Rio Grande if all of the rates sought were to be made applicable over that carrier, nor how much traffic will be diverted to the Rio Grande under the restricted findings herein made. Shippers have a right to route their own traffic, and where traffic is not routed

by the shipper, the originating carrier has the right to control the routing within certain limitations.

GENERAL DISCUSSION AND ULTIMATE FACT FINDINGS

In support of its contention that the assailed rates over its line are unreasonable, the Rio Grande submitted a large number of comparisons showing the differences in such rates and the competitive joint through rates on various commodities, together with the car-mile and ton-mile revenue under the respective rates and what the revenue would be if the lower joint rates were made applicable over its line. Neither factor of the combination rates is assailed, but the aggregates of such factors are alleged to be unreasonable to the extent that they exceed the competitive joint rates.

Many of the present joint rates on the transcontinental traffic here affected are commodity rates which were established originally on particular commodities to meet water competition. Others, such as those applicable on agricultural commodities, were established from producing areas in the excluded territory to enable growers and shippers to market such commodities in eastern and midwestern territories. For these reasons, and others, the defendants contend that it would be unreasonable to require the application of the joint rates over the Rio Grande, as it would result in depleting their revenues and in wasteful transportation over circuitous routes, as well as in short hauling the defendants, especially the Union Pacific. For example, the rates on potatoes to Chicago are 96 cents from Monte Vista and Greeley, Colo., and $1.14 from Idaho Falls, Idaho, a difference of 18 cents, although the distance from Idaho Falls to Chicago, 1,597 miles, is 315 miles greater than from Monte Vista and 590 miles greater than from Greeley. Computations were submitted which indicate that on a carload of potatoes weighing 45,120 pounds from Idaho Falls to Chicago the joint rate of $1.14 would yield a net profit of $1.97 per car when moved over the Union Pacific to Omaha and the Chicago & North Western beyond, and a net loss of $62.93 per car if routed over the Union Pacific to Ogden, the Rio Grande to Denver, and the Burlington beyond, 1,809 miles. The computed costs were based on general cost scales compiled by our Bureau of Accounts and Cost Finding and were not based on studies of particular movements of traffic over the respective routes. Many other examples of this nature were submitted.

With unimportant exceptions, the only rates of record with which comparison is made by or in behalf of the complainant are the joint rates in effect over routes embracing the lines of the Union Pacific which are sought for application over the lines of the Rio Grande and

the Union Pacific via Ogden or Salt Lake City. As above indicated, many of those rates are the result of competition. However, they are the going rates on this traffic and, except for authorized general increases therein, have been in effect for many years. There is no claim that any of those rates is below a minimum reasonable level. It follows that the joint rates sought, as presently applied, are within the zone of reasonableness and must be regarded as reasonable rates.

With respect to the issue under section 15, the facts before us here are in some respects similar to those considered in *United States* v. *Union Pac. R. Co.*, 28 I. C. C. 518, and *Western Pac. R. Co.* v. *Northwestern Pac. R. Co.*, 191 I. C. C. 127, in both of which the complaints were dismissed. In the first, the complainant sought through routes and joint rates over the Rio Grande, among others, in connection with the Santa Fe at Pueblo or Denver on the east and the Oregon Short Line at Salt Lake City or Ogden on the west, on traffic moving between Chicago and certain Mississippi and Missouri River points, on the one hand, and stations on the Oregon Short Line, on the other. The joint rates sought were the same as those then in effect over generally shorter routes of the Union Pacific and other defendants. The short-hauling provision of the statute was held to be a bar to the establishment of the routes and rates sought.

In the second proceeding, the Western Pacific alleged that the failure of the defendants to join with it in the establishment and maintenance of joint rates between points in California on the Northwestern Pacific Railroad Company, controlled by the Southern Pacific, on the one hand, and eastern defined groups, on the other hand, over routes in which the Western Pacific would be an intermediate participating carrier, was discriminatory and prejudicial, and that the combination rates between such points over such routes were unreasonable. Therein, division 2 said, at pages 136 and 137:

> In requesting the application of the joint rates over its line complainant is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic which, under the act, belongs, in the absence of emergency, to the Northwestern Pacific and Southern Pacific.

The instant complainant likewise is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic on which the Union Pacific refuses to relinquish its long haul. In that proceeding, the distance over the Southern Pacific route to Ogden was about 200 miles shorter than the route sought, which is substantially the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves. Again, the short-hauling provision was held to be a bar to the relief sought.

Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the "through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation." Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in *D. A. Stickell & Sons., Inc.*, v. *Alton R. Co.*, *supra*, the Supreme Court said that the expressions "more efficient or more economic" transportation, as used in section 15 (4), "may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found." These latter considerations are not determinative, however, unless the existing routes can be found not to provide "adequate" transportation.

In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests.

There is no contention here by complainant that the present routes of the defendants are not adequate for the traffic hauled, and no finding is sought by complainant to that effect. The absence of such a request may well be due to complainant's contention, not sustained herein except as to sheep and goats to points on the Missouri River and east thereof, that through routes via Ogden and the Rio Grande already exist within the meaning of section 15(3) of the act. Testimony on behalf of shippers, however, does raise a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities.

In order properly to evaluate the testimony of shippers it is necessary to consider the nature, extent, and functioning of our intricate and far-flung commodity marketing system. The growth of our population and the development of the country have required a constantly expanding flow of diverse commodities. Great consuming areas in many instances are far distant from the points of production of the necessities of every-day life, particularly articles of food. Movements of transcontinental proportions are involved in important instances. That is true here. A complex but efficient marketing

system has been evolved to provide as orderly a distribution of food commodities as possible. Adequate transportation facilities and services are required for the proper functioning of the system. Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and over as many routes as possible. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that as much flexibility as possible in the distribution process be permitted. A number of services, not only at origin and destination, but en route, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities. *Southeastern Vegetable Case*, 200 I. C. C. 273, and *Routing Lumber and Fruits, South to C. F. A. Territory*, 256 I. C. C. 223.

While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated. The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities. This conclusion is also supported and emphasized by the situation with respect to the operation of many of the in-transit privileges and services which are generally accorded such traffic and are necessary for its efficient marketing. For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply. On such traffic the defendants' routes are inadequate and less economical than are the Rio Grande routes.

In addition to the above-mentioned commodities, we are of the opinion that a special need for joint routes and joint rates on granite and marble monuments, in carloads, from origins in Georgia and Vermont to destinations in the excluded area, has been established.

The situation as to the commodities above named, as to which the defendants' routes are inadequate, is largely similar to that considered in *D. A. Stickell & Sons, Inc.*, v. *Alton R. Co.*, *supra*. There is one point of difference. There, the operating conditions, mile for mile, on the respective routes were substantially similar. Here, as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein. This fact was recog-

nized by the Commission in prior proceedings. See *Livestock, Western District Rates, supra*, and *W. H. Bintz Co.* v. *Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486. There is before us no data from which the exact differences in the costs over the Union Pacific routes and the Rio Grande routes can be determined. Several estimates were made by witnesses for both the Rio Grande and the defendants, but the estimates vary so widely and are so obviously incomplete as to be practically useless. The record is sufficiently complete, however, to enable us to make a rough approximation of the differences in the operating conditions and to appraise the weight which should be given to those differences, as well as to the differences in the distances over the respective routes, in determining the issues before us.

The differences in the distances between the Union Pacific routes through Wyoming, on the one hand, and the Rio Grande routes sought, on the other, using Boise, Idaho, as a representative point in the excluded territory, vary approximately from 95 miles or 11 percent to Denver, short-route distance 880 miles; 200 miles or 14 percent to Kansas City, 1,410 miles; 211 miles or 8 percent to New York, N. Y., 2,691 miles; 200 miles or 9 percent to Atlanta, Ga., 2,289 miles, to 33 or 35 miles, or 2 percent, to New Orleans, and to Fort Worth and other points in the Southwest, with short-route distances varying from 1,612 miles at Oklahoma City to 2,282 miles at New Orleans. From most of the excluded territory to western trunk-line destinations north of the route of the Union Pacific and Chicago & North Western between Omaha and Chicago, and in the Dakotas, the short routes are in connection with the Northern Pacific, Great Northern, or Milwaukee, and to such destinations the Rio Grande routes sought via Ogden are longer generally by at least 33 percent, and range up to more than 50 percent, than the short routes. From many points in the excluded territory to points in Colorado east of and including the common points, Kansas west of points on the Missouri River, and Nebraska, except Omaha, the short-route distances are less than 1,000 miles. We are of the view that the differences in transportation conditions, by which is meant operating conditions and lengths of hauls, over the Union Pacific routes and over the Rio Grande routes via the Ogden gateway are substantial for hauls between the excluded territory, on the one hand, and points in Colorado east of and including the common points, Kansas west of points on the Missouri River, Nebraska, except Omaha, the Dakotas, Minnesota, Wisconsin, and Iowa and Illinois north of points on the route of the Union Pacific and the Chicago & North Western extending between Omaha and Chicago, on the other hand, but that for hauls between points in the excluded territory and points in the United

States east and south of the points and territory above described, the differences in the transportation conditions are, in general, spread over hauls of such great lengths that, considered as a whole, they become relatively insignificant. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar.

As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments west-bound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs east-bound, who reconsign such shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3 (4) of the act.

As before indicated, on a number of commodities, from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections here defendant, its long haul, while refusing to apply the same joint rates over routes in connection with the Rio Grande via the Ogden gateway. Such routes by which the Union Pacific and certain of its connections short haul themselves are generally about as long as, and in many instances substantially longer than, the Rio Grande routes here sought, and the hauls of the Union Pacific, as well as of certain of the other defendants, are shorter over such established routes than over routes in connection with the Rio Grande via Ogden.

There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than the over routes said to be preferred. No such a showing has here been made.

The situation is different with respect to traffiic between Utah common points, on the one hand, and the northwest area, on the other. On such traffic the Union Pacific interchanges with the Bamberger Railroad Company at Ogden at joint through rates to and from

points on that line, including Salt Lake City. There is no apparent reason why similar arrangements should not apply on like traffic interchanged with the Rio Grande. The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande.

The evidence is convincing that the joint rates sought, which now apply over the Union Pacific routes, would be reasonable for application also over the Rio Grande routes via the Ogden gateway on the traffic, and from and to the points, embraced within the findings of unlawfulness herein made.

The testimony dealing with the terminal facilities at Ogden has been carefully considered. We are persuaded that the additional traffic over the Rio Grande routes which will result under the findings herein made can be interchanged at that point or at Salt Lake City by the use of the present facilities and without serious detriment to the operating efficiency of the railroads concerned.

CONCLUSIONS.

We conclude:

1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas.

2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and

unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

An appropriate order will be entered.

LEE, *Commissioner*, concurring in part:

I concur in the conclusions of the majority that joint rates the same as apply over the Union Pacific and its connecting lines should be established via Ogden or Salt Lake City, in connection with the Rio Grande, on the commodities and from and to the origins and destinations specified by the majority; that the rates assailed on such commodities from and to such origins and destinations are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes; and that the maintenance by the Union Pacific and other defendants of joint rates from and to points on the Bamberger Railroad south of Ogden, while refusing to participate in like rates from and to the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act. The decision in this case will correct in part, a long-standing, unlawful rate adjustment, an adjustment which has discriminated against the industries and people of Washington, Oregon, Idaho, Montana, and Utah, the area from and to which such unlawful adjustment applies being referred to in the report as the "excluded territory." However, I am of the opinion that the action of the Commission should not be limited to a partial correction of this unlawful rate adjustment. On the facts shown in the record, the act requires that the rates on all commodities, between points in the excluded territory and Colorado common points and points east thereof, over the Rio Grande routes shall be no higher than those over the Union Pacific routes. The act contemplates that there shall be no excluded territory with respect to any commodity or persons.

Transcontinental joint rates on freight traffic were established in 1897, from and to the territory here considered, applicable over the Rio Grande routes via Ogden. These joint rates were in effect for many years, until 1906 from and to some points and until 1912 from and to other points, when they were canceled by the Union Pacific and higher combination rates became effective. However, the through routes were not closed. Numerous shippers testified that these routes are open and available and that they can route traffic over them. This testimony was not challenged or contradicted. On the contrary, a responsible traffic official of the Union Pacific testified that the Rio Grande routes are "actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon, and Washington." That these routes are open and used is proved by evidence in the record (1) of east-bound shipments of various commodities made in 1948 from points on the Union Pacific in the excluded territory to Colorado common points, and which moved over the Rio Grande routes, including the entire length of the Rio Grande line, on through bills of lading issued by the Union Pacific, (2) of west-bound shipments of various commodities made in the same year from various eastern points to points in the so-called excluded territory, and which moved on through bills of lading over carriers east of Colorado junctions to the Rio Grande at such junctions and thence over the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond, and (3) of numerous shipments moved over the Rio Grande routes between eastern points and the excluded territory during World War II and in 1949 when the Union Pacific main line in Wyoming was blocked by snow. The year 1948, the calendar year immediately preceding the hearing, was selected as typical of the situation which prevailed in the prior years and which continued up to the time of the hearing.

I am unable to agree with the majority that the shipments referred to above must be regarded as of an isolated nature and as falling in the same category as the single shipment considered in the *Beaman Elevator case*, 155 I. C. C. 313, referred to in a footnote to the opinion of the United States Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. In the *Beaman* case a single carload shipment of grain moved over the lines of two connecting railroads from Beaman, Iowa, via Clinton, Iowa, to St. Louis, Mo. The evidence plainly showed that the bill of lading covering this shipment was issued and recognized by these railroads through error. There was no evidence "of any like movement before or since." Adequate service was available over nine other routes. A wholly different situation is before us in this proceeding. Numerous shipments of a variety of commodi-

ties have been transported in both directions over the Rio Grande routes on through bills of lading deliberately issued and recognized by the Union Pacific and the other participating carriers. The situation here before us is similar to that considered by the Supreme Court in *Virginia Ry.* v. *United States*, 272 U. S. 658, also referred to in a footnote to the decision in *Thompson* v. *United States*, *supra*, in which, in referring to the route over which the Commission there prescribed reasonable and nondiscriminatory rates, the Court stated that "that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive." The Court held however, that even though the route was closed commercially, open through routes to the West were in existence.

In the *Thompson* case the court pointed out that "there is no evidence that any shipment has ever been made from Lenora to Omaha via the Burlington line" or that the carriers have ever offered through service over the Missouri Pacific-Burlington route. Thus, the facts before the Court in that case likewise were wholly different from those before us in this proceeding. I think that the Court's opinion in that case supports the conclusion that through routes on freight traffic over the Rio Grande routes have existed for many years and now exist and that the short-hauling provision of section 15 (4) is not applicable.

If, however, the Rio Grande routes were actually closed, the short-hauling provision of section 15 (4) of the act would not be a bar to the correction in full of the present discriminatory rate adjustment. The discrimination in violation of section 3 of the act, shown by the evidence, makes that provision of section 15 (4) inapplicable. In any event, the Rio Grande routes are shown to be needed in order to provide adequate, and more efficient and more economic transportation, and, if they were not already open through routes, we could and should require that they be opened.

As stated in the report of the majority, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments, livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, who reconsign shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific. The evidence is equally impressive with respect to the disadvantage or handicap to shippers

or receivers of lumber, building materials, farm machinery, and other commodities. For instance, the lumber company at Military Junction, Colo., referred to in the majority report, is handicapped in its efforts to compete with mills at Denver and Kansas City because it cannot obtain lumber from the excluded territory for milling in transit on the same basis as these competing mills. A representative of that company testified that it would purchase several million feet of lumber annually from points in the excluded territory if it had available reasonable and nonprejudicial joint rates over the Rio Grande routes. By reason of the rate situation complained of, the lumber dealer at Grand Junction, Colo., who is also referred to in the majority report, has lost business to competitors who have the benefit of transit at the joint rates applicable over the Union Pacific routes. This evidence is only typical; it was presented as representative of the prevailing situation.

Shippers and receivers of freight at points in eastern Oregon and southern Idaho, on the line of the Union Pacific, have been, and are, excluded from additional markets that would be available to them if reasonable and nonprejudicial joint rates were in effect over the Rio Grande routes. Some of these shippers express the belief that the establishment of such joint rates would provide them with a better car supply, in that the Rio Grande would furnish additional cars to move out shipments routed over its line. It is common knowledge that a better supply of cars is available to shippers who have competitive routes to the consuming markets. The record clearly establishes that the present rate adjustment results in a substantial disadvantage to the industries, shippers, and receivers located in the considered territory, and in undue prejudice to them.

Likewise, the evidence establishes that the defendant railroads discriminate against the Rio Grande, in that from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections, its long haul, while refusing to establish the same joint rates over the Rio Grande routes. The routes by which defendants short haul themselves are generally as long as, and in many instances substantially longer than, the Rio Grande routes, and the hauls of the Union Pacific and of other defendants are shorter over such established routes than over the Rio Grande. The evidence does not establish that transportation conditions are more favorable over these routes

than over the Rio Grande routes which are discriminated against by defendants. On the contrary, the record, in my opinion, warrants finding that the transportation conditions over such routes are, in general, no more favorable than over the Rio Grande routes. The Union Pacific and the other defendants are, and for the future will be, violating section 3 (4) of the act by failing and refusing to participate in joint rates with the Rio Grande, from and to points in the excluded territory, to and from points in official, southern, and southwestern territories, while participating with each other in joint rates from and to the same points, over routes over which the Union Pacific and other defendants short haul themselves.

The Union Pacific is a strong and progressive railroad. It is ably managed and efficiently and economically operated. Being the only railroad in southern Idaho, every shipper in that area is dependent on it for rail service. I am persuaded that, instead of being allowed to continue to maintain an "excluded territory," it should be required to provide these shippers with joint rates which will enable them to buy and sell in all markets on an equality with other shippers, and that such joint rates will not result in any substantial diversion of the traffic now moved over its lines.

The joint rates now in effect on freight traffic over the Union Pacific routes are shown by the record to be reasonable for application over the Rio Grande routes. We should require that these rates be maintained over the latter routes.

PATTERSON, *Commissioner*, concurring in part:

I concur in the relief granted to the Rio Grande and transit operators thereon who are handicapped by the lack of through routes and joint rates the same as those over the Union Pacific routes. It seems to me, however, that the findings of unlawfulness are inconsistent in that they fail to include lumber and articles taking lumber rates in the relief granted.

The showing made of a need for such through routes and joint rates, in my opinion, is more persuasive as to lumber and articles taking lumber rates than as to any of the commodities included in the foregoing findings, with the possible exception of livestock. The record shows that at least one lumber dealer at Grand Junction, another at Military Junction, near Denver, and a wood-treatment plant at Salida, all on the Rio Grande, are handicapped in their efforts to compete with like dealers on the Union Pacific routes, and that at least the dealer at Grand Junction has lost business, by reason of the rate situation complained of, to competitors who have the benefit of transit at the joint rates over the Union Pacific routes. I

believe this evidence is adequate support for the inclusion of this commodity group in the findings of unlawfulness made.

The order entered in connection with this report requires the establishment on particular commodities, in connection with the Rio Grande, of through routes and joint rates the same as those now in effect over the Union Pacific routes. The formation of those through routes is appropriately left, in large measure, to the carriers. I want to make it clear that in my view, on traffic to or from the area east of the Colorado common points, where the provisions of the order so permit, these new routes should be formed in such a manner as to short haul the Union Pacific only to the extent necessary to afford the Rio Grande its line haul and avoid unduly circuitous routes.

ARPAIA, *Commissioner*, concurring:

In my opinion there are through routes over the Rio Grande and the Union Pacific via the Ogden Gateway on traffic between the territories included in this proceeding, and therefore a finding under the provisions of section 15 (4) of the Interstate Commerce Act is not required.

The evidence of record shows that these routes presently are open and available to shippers on combination rates. The history of the relationship between these carriers leaves no doubt as to that fact.

When joint rates over these routes, which were in effect from 1897 to 1906 and 1912, were canceled by the Union Pacific, no specific cancellation was made of the through routes over which the joint rates applied. To my mind it would be necessary for the Union Pacific to have shown affirmatively that it refused traffic on through billing over the Ogden Gateway in order to negative the existence of such through routes. Instead, the record shows information elicited from an official of the Union Pacific to the effect that routes via Ogden were available subject to the application of combinations of local rates.

The question then is to what extent should we compel joint rates. Joint rates over the routes through Ogden, I believe, are warranted in the public interest only on the commodities for which relief is included in the majority report.

We should interfere in the management of a railroad only when the reasons for doing so are clear and compelling, as they are here, and only to the extent the public interest actually requires.

MAHAFFIE, *Commissioner*, dissenting in part:

I dissent from the majority report insofar as it fails to find that the existing routes to and from the northwest territory, described in

the report, via the Rio Grande through the Ogden gateway are effective through routes and that the failure of the Union Pacific and other defendant railroads to establish joint rates with the Rio Grande via Ogden unjustly discriminates against that carrier. I disagree also because the report does not find that it is necessary and desirable in the public interest that joint rates on commodities generally, in addition to those specified, should be established over such through routes.

We are not called upon in this proceeding to exercise our authority, under section 15 (4) of the Interstate Commerce Act, to establish new through routes via that gateway. Therefore, the conditions in that paragraph are not applicable. We are free to exercise our power under section 15 (3) to establish joint rates unhampered by those restrictions.

A finding that these routes are open and freely available to shippers today is fully supported by the evidence. It was acknowledged by a freight traffic official of the Union Pacific that a shipper has the right under the act (section 15 (8)), to specify such routes for the carriage of his shipments. That right, it should be noted, can be availed of only when two or more through routes and through rates are actually established and in existence.

The record shows that some joint through rates, as distinguished from combination rates, are in fact now published in a Union Pacific tariff for application through Ogden over the entire length of the Rio Grande to Denver and the Union Pacific beyond. These apply on shipments of sheep or goats originating on the Union Pacific in southern Idaho and eastern Oregon, billed to destinations on the Missouri and Mississippi Rivers and to Chicago and other points. The joint rates are higher than rates on like livestock moved over the direct route of the Union Pacific and, therefore, retard use of the Rio Grande route. But the publication of such joint rates in connection with transportation over the whole length of the Rio Grande is proof of the consent of the Union Pacific for the use of that rail line as part of a through route at joint rates. And it was further stated by the same witness that the Union Pacific has no objection to publishing the same joint rate arrangement on shipments of cattle.

In 1941–42 mixed military trains with troops in passenger cars and military supplies in freight service were transported over this route on through billing. Four examples of such trains are described in the record. These moved from Fort Sill, Okla., and Camp Claiborne, La., to Fort Lewis, Wash., in December 1941 and February 1942. The trains were routed and moved to Colorado junctions of the Rio Grande, thence over that railroad to Ogden and the Union Pacific

beyond. Unlike certain other movements to and from the northwest area via Ogden in the war period in connection with these two lines, the military trains were not routed under service orders issued by us or the Office of Defense Transportation. Arrangements for the through movements were made with the railroads and the rates charged were settled on the basis of the joint rates applicable in connection with the Union Pacific routes through Wyoming.

The existence of the route as an established through route was undoubtedly an important consideration for its use in February 1949, when the line of the Union Pacific was blocked by snow. In that emergency, freight cars, passenger cars, express and mail were promptly diverted by the Union Pacific through Denver over the Rio Grande to Salt Lake City and to Ogden for movement beyond. Of the freight cars diverted, 1,493 were for destinations in Idaho on the Union Pacific and in the northwest area.

Actual and continuous use of the Rio Grande route at through rates made by combinations of separate rate factors via Ogden to and from the Northwest without opposition or objection by the Union Pacific or other participating railroads is amply shown by the evidence of typical movements of numerous commodities. The calendar year 1948 was used by the Rio Grande as a representative year. In that year 16 carloads of various commodities were shipped from the northwest territory over the Union Pacific to Ogden and the Rio Grande beyond to Denver, Louviers, Pueblo and Trinidad, Colo., over the entire length of the Rio Grande. They originated on the Union Pacific and moved on through bills of lading. Some of the cars were partly unloaded at Rio Grande points and then continued through to their destinations. Seventeen carloads of various commodities moved, from late in December 1947, and in the year 1948, from various eastern points on through bills of lading at through combinations of rates over rail lines east of the Colorado junctions to the Rio Grande at such junctions thence over that line to Salt Lake City or Ogden and the Union Pacific beyond. Some of the cars were stopped for partial unloading at stations on the Rio Grande or the Union Pacific.

The same kinds of movements as those exhibited in 1948 prevailed to about the same extent in years prior to 1948 and continued into 1949 at the time of the hearings.

All of this evidence clearly supports a finding that the routes are existing established through routes over which through rates apply and that the railroads participating therein consent to their use as through routes and freely hold themselves out to shippers as ready and willing to perform transportation service over them. They meet completely the requirements necessary as prerequisites for a finding that

120

they are established through routes announced by the United States Supreme Court in *Thompson* v. *United States*, 343 U. S. 549. In that case, the Court said "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service." However, as stated by the Court, there was no evidence that any through transportation had ever been offered from and to the points involved in the suit and, therefore, no through routes existed between those points.

The situation here is in striking contrast to that in the *Thompson* case. Here there is substantial evidence of a holding out that through transportation will be furnished and of execution of such offers by the issuance of through bills of lading and the performance of through service over many years. We cannot ignore the fact that the joint rates over these routes that were in effect from 1897 to 1906 and 1912 were canceled by the Union Pacific without canceling its participation in the same through routes thereafter at higher through combination rates. That railroad's course of conduct evidenced no more than a desire to discontinue joint rates so as to make the higher combinations applicable. Its action in canceling its participation in joint rates did not, without more, cancel its participation as a carrier in the through routes. The latter were never disestablished but continued to exist. The record taken as a whole inevitably leads to that conclusion. To find under such a state of facts that no through routes exist for commodities generally is directly contrary to the evidence.

Even if a finding that no through routes exist over this line be sustained, there is substantial evidence that the rate situation results in undue prejudice and undue disadvantage to shippers and to districts and localities in Utah and Colorado dependent upon the Rio Grande for rail service, in violation of section 3 (1) of the act. Such violation removes the restrictions imposed in section 15 (4) upon our authority to establish through routes. That undue prejudice and undue disadvantage exist is fully supported by the testimony of numerous witnesses. Briefly, the testimony shows that livestock producers in Utah and Colorado, in areas served by the Rio Grande, are not able, due to the combination through rates via Ogden, to buy on a reasonably competitive basis, cattle and sheep in Idaho, Montana, Oregon, and Washington for grazing and feeding in transit on the ranges in Utah and Colorado, in competition with buyers and stock feeders in northern Colorado, Nebraska, and northern Kansas. The same undue prejudice and undue disadvantage is experienced by buyers and feeders in southeastern Colorado east of Pueblo, Colo., and

in southwestern Kansas served by the Santa Fe and the Missouri Pacific railroads. Their failure to obtain joint through rates from the producing areas in the Northwest over the Union Pacific to Ogden, Rio Grande to Pueblo and its connections beyond places them at an undue disadvantage.

The record contains convincing evidence by representatives of large groups of shippers that there is undue prejudice and undue disadvantage to wool producers, as well as to livestock operators in Colorado served by the Rio Grande; also to lumber dealers and processors; dealers in farm machinery and other commodities, and to a cold storage warehouse operator in Pueblo. There is substantial evidence from producers and shippers of agricultural commodities in the Northwest, particularly in Idaho, to support findings that the refusal of the defendant railroads to join in joint through rates via Ogden and the Rio Grande to and from points beyond the Colorado gateways of that carrier exclude them from additional markets needed for their products. All of that evidence sustains and fully supports the finding that there is a violation of section 3 (1) of the act and justifies a general finding that joint through rates via the Ogden gateway should be established on commodities generally. The findings should not be limited, as are the findings of the majority, to particular commodities as to which evidence was offered but should be broadened to include all commodities.

We are fully warranted in dealing with this situation broadly, in considering what is necessary and desirable in the public interest, with respect to joint rates over these established through routes. We are not limited to consideration of proof as to every rate on every commodity from every origin to every destination. Such a view of our authority is too narrow and is not justified by the law or the evidence.

In other types of proceedings where we found it necessary to deal generally with a comprehensive rate situation, the Supreme Court has held that we may properly make general findings upon typical evidence representative of the situation as a whole.

In exercising authority under section 13 (4) as to the lawfulness of rail rates on intrastate traffic in a State and under section 15 (6) as to divisions of joint rates of rail carriers we may make general findings when the evidence is shown in numerous and representative instances that are typical of the rate situation as a whole. Similarly we need not attempt the impracticable, if not impossible, task of examining every rate on every commodity and class of commodities, from every origin to every destination in the large areas and territories under scrutiny here. We can adjust the remedy to the evil and make our order as broad as the discrimination and undue prejudice. See *Illinois*

Central R. Co. v. *Public Utilities Commission*, 245 U. S. 493, 507. In *Wisconsin Railroad Comm.* v. *Chicago, B. & Q. R. Co.*, 257 U. S. 563, 579, a proceeding dealing with intrastate rates on a State-wide basis, the Court stated that "any rule which would require specific proof of discrimination as to each fare or rate and its effect would completely block the remedial purpose of the statute." In *Georgia Public Service Comm.* v. *United States*, 283 U. S. 765, 774, the Court said that "when an investigation involves shipments from and to many places under varying conditions, typical instances justify general findings." That case also arose under section 13 (4) of the act with respect to intrastate rates. There the order related to a few commodities but the rates prescribed were State-wide in operation and applied to shipments between hundreds of points of origin and destination. Under those circumstances the Court held that "To require specific evidence and separate adjudication in respect of each would be tantamount to denying the possibility of granting relief."

To the same effect is the holding of the Court in *New England Divisions Case*, 261 U. S. 184, 197. There the Court had under consideration contentions with respect to the nature of the evidence in support of our order as to divisions of joint rates between groups of rail carriers. The Court pointed out that our order was based on evidence which we assumed was "typical in character, and ample in quantity, to justify the finding made in respect to each division of each rate of every carrier." That method of proof was found to be our common practice in adjudicating comprehensively upon substantially all rates in a large territory, and that the actual necessities of procedure and administration had led to the adoption of that method also in passing upon the reasonableness of proposed rate increases. That method was found equally appropriate in passing upon multitudes of divisions of joint rates. That it has similar application in a comprehensive case such as we have here where we are called upon to establish joint rates via a gateway through which substantially all joint rates have been refused, is equally clear. In the case cited, the Court said that there was no constitutional obstacle to the adoption of the method pursued and that only in the way could the task be performed.

The same rule should be applied in the instant case, in order to carry out effectievly our authority to prescribe, in the public interest, joint rates by way of the Ogden gateway. The report of the majority finds it necessary in the public interest that joint rates via that gateway be established on particular commodities as specified in the report. The same evidence is, and should be concluded to be typical of the rate situation as a whole. In accordance with our practice in other types of comprehensive proceedings which has been found lawful and neces-

sary under principles announced in the Supreme Court cases cited, that evidence should be found adequate to support an order that joint rates be established via that gateway on commodities generally.

I am authorized to state that COMMISSIONERS SPLAWN and CROSS join in this expression.

COMMISSIONER KNUDSON did no participate in the disposition of this proceeding.

[fol. 128] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT

[Title omitted]

PETITION OF PUEBLO CHAMBER OF COMMERCE, ET AL., FOR LEAVE TO INTERVENE—Filed November 13, 1953

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the Pueblo Chamber of Commerce, the Arkansas Valley Stock Feeders Association, and the Colorado Wool Growers Association, and hereby move this Honorable Court for an order pursuant to Rules 24(a) and (c) of the Federal Rules of Civil Procedure permitting petitioners to intervene as plaintiffs in the above entitled proceeding.

I

A. That petitioner Pueblo Chamber of Commerce is a Colorado corporation, with its principal place of business at Pueblo, Colorado, whose members are concerned with the economic advancement of the City of Pueblo as well as the general welfare and betterment of the community, and, as such, have an important and pecuniary interest in the issues involved in the instant proceeding.

B. That the Arkansas Valley Stock Feeders Association is an association of stock feeders in southeastern Colorado and western Kansas., It is located in the valley of the Arkansas River and its principal office is at Lamar, Colorado. Its purpose is to aid, and assist fellow members in the feeding, sale and transportation in interstate commerce of livestock and who have an important and pecuniary interest [fol. 129] in the issues involved in the instant proceeding.

C. The Colorado State Wool Growers Association is a Colorado corporation, whose purposes and objects is to assist its members in the production, marketing and transportation of sheep, lambs and wool, and its principal office is

at 1408 East 47th Avenue, Denver, Colorado. The members and the association have an important and pecuniary interest in the issues involved in the instant proceeding.

II.

That the petitioners were intervening complainants before the Interstate Commerce Commission in the proceeding in which the order of that Commission is here assailed, and therefore are authorized to intervene in this proceeding as a right under the provisions of Section 2323 of the Judicial Code (28 U.S.C.A., Section 2323).

III

Accompanied herewith, pursuant to the provisions of Rule 24(c) of the Federal Rules of Civil Procedure (28 U.S.C.A., Rule 24) is the Complaint of the petitioners, which complaint sets forth the claim for which intervention is sought.

Wherefore, Petitioners pray for an order granting them leave to intervene as plaintiffs in the above entitled proceeding and to file the complaint which is tendered herewith with the right to have notice and to be treated in all other respects as if they had been named as plaintiff, and for such other and further relief as the Court may deem requisite in the premises.

Barry and Hupp, Attorneys at Law, 738 Majestic Building, Denver 2, Colorado, By John R. Burry, Attorneys for Petitioners, Arkansas Valley Stock Feeders Association, Colorado State Wool Growers Association, Pueblo Chamber of Commerce.

IN THE UNITED STATES DISTRICT COURT

[Title omitted]

AMENDMENT OF COMPLAINT UNDER RULE 15—Filed November 17, 1953

Plaintiff, The Denver and Rio Grande Western Railroad Company, hereby amends the complaint in the above-entitled proceeding, as of course, under Rule 15(a) (28 U.S.C.A. Federal Rules of Civil Procedure) by adding thereto a paragraph designated as Paragraph XII (a) on page 13 of the complaint as follows:

XII (a)

Plaintiff represents and alleges that it has a pecuniary interest, which exceeds the sum of $3,000, in the rates, through routes, charges, practices and issues which are concerned with, and affected by, the order of the Interstate Commerce Commission hereinbefore described; and that unless that order is restrained, enjoined, annulled or set aside by this Court in the respects herein requested the resulting and existing rates and charges on the traffic and between the territories involved are and will continue to be unjust, unreasonable, and unjustly discriminatory to plaintiff and to intervening shippers who desire to use the route and services of plaintiff, contrary to the national transportation policy, and will cause plaintiff irreparable injury and damage in that such unjust, unreasonable and unjustly discriminatory rates, charges, and practices violate the [fol.131] statutory right of plaintiff to participate on equal terms in the revenues from through traffic to which it is entitled under just, reasonable, non-discriminatory and non-prejudicial competitive joint rates and competitive through routes under the provisions of the Interstate Commerce Act, and that upon adjudication of the issues herein this Court remand the proceedings to the Interstate Commerce

Commission for such action as the Court may direct that Commission to take in the premises.

Dated November 17, 1953.

Respectfully submitted, the Denver and Rio Grande Western Railroad Company, Herbert M. Boyle, 1531 Stout Street, Denver, Colorado; Robert E. Quirk, 1116 Investment Building, Washington, D. C., Attorneys for Plaintiff.

[Title omitted]

MOTION OF INTERSTATE COMMERCE COMMISSION TO TRANSFER SUIT—Filed November 17, 1953

Comes now the Interstate Commerce Commission and moves the Court for an order transferring the above-entitled cause from the United States District Court for the District of Colorado to the United States District Court for the District of Nebraska, Omaha Division, for the reason said cause involves the same order of the Interstate Commerce Commission, the same parties, and, in part, the same issues as are involved in a suit now pending in said United States District Court for the District of Nebraska, Omaha Division, entitled *Union Pacific Railroad Company et al.* v. *United States of America and Interstate Commerce Commission*, Civil Action No. 76-53, which is now set for hearing on November 23, 1953, before three judges under the provisions of Sections 1336, 2284, and 2321-2325, Title 28 U. S. Code.

Interstate Commerce Commission, by Edward M. Reidy, Chief Counsel; Samuel R. Howell, Assistant Chief Counsel.

[fol. 155] IN UNITED STATES DISTRICT COURT

[Title omitted]

POINTS AND AUTHORITIES

The Interstate Commerce Commission relies upon the following in support of its foregoing motion:

Title 28, U. S. Code, Section 1404 (a);
Rule 13 (g), Federal Rules of Civil Procedure;
Kansas City Southern Ry. v. *United States*, 282 U.S. 760.

PETITION OF PUBLIC UTILITIES COMMISSION OF COLORADO TO INTERVENE—Filed November 17, 1953

Comes now The Public Utilities Commission of the State of Colorado (hereinafter referred to as the Colorado Commission), by its counsel, under Rule 24 (a) and (c) (28 U. S. C. A. Federal Rules of Civil Procedure Rule 17-31) and petitions this Honorable Court to allow the Colorado Commission to intervene as a Plaintiff in the above entitled matter and for reasons therefor state:

1. Under Section 66, Chapter 137, 1935 Colorado Statutes Annotated, the Colorado Commission is authorized and empowered to appear and represent the interests and welfare of the people of the State of Colorado in all matters and proceedings involving any public utility or carrier pending before any Court, officer, department, board, com-

mission, or Court of the United States and to intervene in, protest, resist, or advocate the granting or denial of any petition, application, or complaint, or other proceeding affecting the people of the State of Colorado or some portion thereof as the public interest, convenience, or necessity may appear.

2. The Colorado Commission appeared and participated in the proceeding under Docket No. 30297 before the Interstate Commerce Commission as an intervener in support of the position of the Denver and Rio Grande Western Railroad Company, and in which the order of the Interstate Commerce Commission, in the above Docket Number, is here assailed and, therefore, the Colorado Commission is authorized to intervene in this proceeding as a right under the provisions of Section 2323 of the Judicial Code (28 [fol. 158] U. S. C. A., Section 2323).

3. The within proceeding will affect the people of the State of Colorado, or some portion thereof.

Wherefore, The Colorado Commission, as a State regulatory body of the State of Colorado, having jurisdiction to regulate intrastate railroad freight rates and charges within the State of Colorado, respectfully petitions this Court to allow the Colorado Commission to intervene in the above entitled action as a Plaintiff and to be permitted to file a Complaint, which is tendered herewith, pursuant to the provisions of Rule 24 (c) of the Federal Rules of Civil Procedure (28 U. S. C. A. Rule 24), with the right to have notice and to be treated in all other respects as if they had been named as Plaintiff, and for such other and further relief as the Court may deem proper.

Respectfully submitted, Duke W. Dunbar, Attorney General; William T. Secor, Assistant Attorney General, on behalf of The Public Utilities Commission of the State of Colorado and the individual members thereof.

PETITION OF WESTERN FOREST INDUSTRIES ASSOCIATION FOR LEAVE TO INTERVENE—Filed November 19, 1953

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the Western Forest Industries Association, and hereby moves this Honorable Court for an order pursuant to Rules 24(a) and (c) of the Federal Rules of Civil Procedure permitting petitioner to intervene as party plaintiff in the above entitled proceeding.

I

That petitioner Western Forest Industries Association is an Oregon corporation with its principal place of business at 704 U. S. National Bank Building, Portland, Oregon. Its purpose is to aid and assist fellow members in the production, processing, marketing, and transportation in interstate and foreign commerce of lumber and lumber products and has an important and pecuniary interest in the issues involved in the instant proceeding.

II

That the petitioner was an intervening complainant before the Interstate Commerce Commission in the proceeding in which the order of that Commission is here assailed, and therefore is authorized to intervene in this proceeding as a matter of right under the provisions of Section 2323 of the Judicial Code (28 U. S. C. A., Section 2323).

[fol. 161] III

Accompanied herewith, pursuant to the provisions of Rule 24 (c) of the Federal Rules of Civil Procedure (28 U. S. C. A., Rule 24) is the Complaint of the petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, Petitioner prays for an order granting it leave to intervene as plaintiff in the above entitled proceeding and to file the complaint which is tendered herewith with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and further relief as the Court may deem requisite in the premises.

Barry and Hupp, Attorneys at Law, 738 Majestic Building, Denver 2, Colorado, by John R. Barry, Attorneys for Petitioner, Western Forest Industries Association, 704 U. S. National Bank Building, Portland, Oregon.

PETITION OF KOPPERS COMPANY, INC. FOR LEAVE TO INTERVENE—Filed November 19, 1953

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now Koppers Company, Inc., and hereby moves this Honorable Court for an order pursuant to Rule 24(b) and (c) of the Federal Rules of Civil Procedure permitting petitioner to intervene as party plaintiff in the above entitled proceedings.

I

That petitioner, Koppers Company, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Delaware, with its principal place of business in the City of Pittsburgh, Pennsylvania; that petitioner is, among other things, engaged in the business of processing wood and wood products at various points throughout the United States and maintains a plant at Salida, Colorado for this purpose; and that petitioner is engaged in the processing, marketing, and transportation

of wood and wood products in interstate commerce and foreign commerce, and has an important and pecuniary interest in the issues involved in the instant proceeding.

II

That petitioner, through its District Manager, Robert C. Johnson, of Denver, Colorado, entered testimony in Docket [fol. 163] No. 30297, the proceeding in which the order of the Interstate Commerce Commission is here assailed, and by such testimony duly showed that petitioner is vitally interested in the above proceedings; that petitioner has a wood-treating plant at Salida, Colorado, which is served exclusively by The Denver and Rio Grande Western Railroad; that a major source of supply of lumber for treatment at petitioner's Salida plant is in the states of Idaho, Oregon and Washington; that petitioner is unable to secure lumber in the above states for movement on or via the Union Pacific Railroad and the Denver and Rio Grande Western Railroad, through its Salida plant, at competitive joint rates, which situation unduly discriminates against petitioner's operation of its Salida plant, and unduly prefers petitioner's competitors located at points served by the Union Pacific Railroad, in the States of Colorado, Wyoming, Nebraska, Kansas and Missouri, in violation of Section 3(1) of the Interstate Commerce Act; that petitioner's plant at Salida, Colorado, was built in the year 1925 at an estimated cost of one-half million dollars and that the full benefits of this investment have never been and cannot be fully realized until such time as the source of lumber along the lines of the Union Pacific Railroad, in the states of Idaho, Oregon and Washington, is made available to petitioner at its Salida plant at joint competitive through rates; that 60% of the wood and wood products processed at petitioner's Salida plant moves to points beyond, and east and south of the State of Colorado; that the Chief Examiner of the Interstate Commerce Commission, in his proposed report in Docket No. 30297, realized the handicap under which petitioner operates, and would remove the unlawful discrimination by relief in the form of joint competitive through rates via Salida, Colorado; that The Interstate Commerce Commission failed to grant the relief recom-

mended by its Chief Examiner and continued the undue [fol. 164] discrimination against petitioner, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that petitioner will be bound by a judgment in this action and that its interest and the main action have questions of law and fact in common, and that petitioner's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

III

That pursuant to Rule 24(c) of the Rules of Civil Procedure (28 U. S. C. A., Rule 24) there is attached hereto the complaint of petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, Petitioner prays for an order granting leave to intervene as plaintiff in the above entitled proceedings, and to file its complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and further relief as the Court may deem requisite in the premises.

Respectfully submitted, Barry and Hupp, by John R. Barry, Attorneys for Petitioner, 738 Majestic Building, Denver 2, Colorado.

Address of Petitioner: Pittsburgh, Pennsylvania.

ORDER GRANTING MOTIONS FOR LEAVE TO INTERVENE—November 20, 1953

The above-entitled cause came before this statutory Court, convened pursuant to the provisions of applicable statutes for a hearing of this suit wherein certain motions

and petitions were filed and heard this day, and the Court being fully advised in the premises, it is

Ordered:

1. That the motion of the Union Pacific Railroad Company; Chicago and Northwestern Railway Company; Chicago, St. Paul, Minneapolis and Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company, and Wabash Railroad Company to intervene as defendants under Rule 24 be granted, and they are herewith made parties to the actions and their motions and answer shall be filed.

2. That the petition of the Pueblo Chamber of Commerce, the Arkansas Valley Stock Feeders Association and the Colorado Wool Growers' Association for leave to intervene as plaintiffs be granted and they are herewith joined as parties plaintiff and their complaint shall be filed.

3. That the petition of The Public Utilities Commission of the State of Colorado to intervene as a plaintiff be granted and they are herewith joined as party plaintiff and their complaint shall be filed.

[fol. 166] 4. That the petition of Western Forest Industries Association for leave to intervene as a plaintiff be granted and it is herewith joined as a party plaintiff and its complaint shall be filed.

5. That the petition of Koppers Company, Inc., for leave to intervene as a plaintiff be granted and it is herewith joined as a party plaintiff and its complaint shall be filed.

Dated at Denver, Colorado, this twentieth day of November, 1953.

Orie L. Phillips, Chief Judge, Tenth Circuit, United States Court of Appeals; Walter A. Huxman, Judge, Tenth Circuit, United States Court of Appeals; William Lee Knous, United States District Judge.

Approved as to Form: H. M. Boyle, Attorney D. & R. G. W.; Elmer B. Collins, Counsel for U. P. R. R. Co. and Other Railroads Intervening; Barry & Hupp, by Paul M.

Hupp, Counsel for Western Forest Industries, Koppers Company, Inc., Pueblo Chamber of Commerce, Arkansas Valley Stock Feeders Assn., Colorado State Wool Growers Assn., Intervenors, Interstate Commerce Commission; Geo. Howard, Atty.; Charles S. Vigil, U. S. Attorney, Colorado.

AMENDED ORDER CONSTITUTING THREE-JUDGE COURT—November 19, 1953

Heretofore, on October 26, 1953, I made an order constituting a three-judge court to hear the above matter and designated Honorable Royce H. Savage, United States District Judge, as one member of such court. It appearing that Judge Savage will be unable to sit as a member of such court in certain matters in the above case, coming on for hearing at Denver, Colorado, on Friday, November 20, 1953.

Now, therefore, I designate Honorable Walter A. Huxman, a Judge of the United States Court of Appeals, Tenth Circuit, as a member of such three-judge court in the place of Honorable Royce H. Savage, to sit and hear the matters coming on for hearing on Friday, November 20, 1953.

Dated at Denver, Colorado, November 19, 1953.

ANSWER OF UNION PACIFIC RAILROAD COMPANY; CHICAGO AND NORTH WESTERN RAILWAY COMPANY; CHICAGO, ST PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY; NORTHERN PACIFIC RAILWAY COMPANY; GREAT NORTHERN RAILWAY COMPANY, THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY; CHICAGO, MILWAUKEE, ST. PAUL AND PACIFIC RAILROAD COMPANY; AND WABASH RAILROAD COMPANY, INTERVENING DEFENDANTS.—Filed November 20, 1953

The above-named Intervening Defendants, for answer to the complaint filed herein, say:

I

These intervenors admit the allegations of paragraph I of the complaint, except that they deny that the plaintiff

(hereinafter called "Rio Grande") has any such "pecuniary" or other legal interest or legal right as to entitle it to maintain this suit; and they further deny that any "part" of or language in the Commission's said order of January 12, 1953, denies any right or makes any requirement of the Rio Grande, or embraces or makes any commitment concerning the grievances alleged in the complaint.

II

These intervenors admit the allegations of paragraph II of the complaint, except that they deny the allegation therein that "Plaintiff is an important and necessary part of the railroad transportation system of the United States;" [fol. 176] deny that the Rio Grande is either important or necessary for the transportation of the traffic it seeks to divert to its lines from the lines of these intervenors; and deny that the statements in the last paragraph of said paragraph II are either relevant or material to the issues which the complaint attempts to raise.

III

These intervenors admit the allegations of paragraphs III and IV of the complaint.

IV

These intervenors deny that the allegations of paragraphs V and VI of the complaint are either relevant or material to any issue which the complaint attempts to raise.

V

These intervenors admit the allegations of paragraph VII of the complaint, except that they deny that Union Pacific Railroad Company "or other defendants" did not cancel the through routes and joint rates therein mentioned; deny that through routes now exist or have existed for many years between the points indicated in "(a)" and "(b)" of said paragraph; and deny that the Rio Grande's complaint to the Commission alleged that said combination of rates via its line were "unduly prejudicial".

VI

These intervenors admit the allegations of paragraph VIII of the complaint, but deny that said allegations are either relevant or material to any issue which the complaint attempts to raise.

VII

Answering the allegations of paragraph IX, these intervenors admit that the Commission stated the "conclusions" set forth in said paragraph, but deny that the allegations in the last sub-paragraph of said paragraph IX are either relevant or material to any issue which the complaint attempts [fol. 177] to raise.

VIII

Answering paragraph X, these intervenors admit that petitions for reconsideration of various parties to the Commission proceding were filed with and denied by the Commission.

IX

These intervenors admit the allegations of paragraph XI, of the complaint.

X

These intervenors deny that the Commission's said order is unlawful for any of the reasons alleged in paragraph XII of the complaint, deny that said allegations correctly describe the Commission's action concerning the matters therein alleged, and deny that any "part" of the order embraces, or makes any requirement of the Rio Grande concerning, any of the matters with respect to which the complaint alleges the order to be unlawful. These intervenors admit that the Commission prescribed through routes and joint rates applicable to the commodities specified in the order (Appendix B to the complaint) but deny that it acted lawfully in doing so.

XI

Except as herein expressly admitted, these intervenors deny each and every allegation made in the complaint.

Wherefore, having fully answered the allegations of the complaint, these intervenors pray that the relief sought be

denied and that the complaint be dismissed with costs to the plaintiff.

IN UNITED STATES DISTRICT COURT

STATEMENT OF UNITED STATES IN RESPONSE TO THE COURT'S REQUESTS AT THE HEARING ON THE MOTIONS TO TRANSFER THE ABOVE-ENTITLED CASE TO THE DISTRICT COURT IN NEBRASKA—Filed December 7, 1953

At the hearing held at Denver on Friday, November 20, 1953, to transfer this case to the district court of Nebraska, the Court reserved its ruling and asked the various counsel to prepare briefs or statements of views with respect to three questions:

1. Whether or not the provisions of section 1398 of the Judicial Code are jurisdictional or relate only to venue.

2. If section 1398 is a venue section, does the Court have the power to transfer the action without the consent of those opposed to transfer?

3. Does the intervention of the Rio Grande in the suit brought by the Union Pacific in the district court of Nebraska, attacking the same order of the Interstate Commerce Commission, constitute a submission to the jurisdiction of the Nebraska court, or in any way affect venue under section 1398?

The Interstate Commerce Commission has filed a brief dealing with these three questions, and the United States has expressly adopted this brief in so far as it relates to the power of the Court. In accordance with the Court's further request, this memorandum is submitted as a brief supplemental statement of the considerations which have led the United States to its views with respect to the questions. Since the cases are collected in the brief of the [fol. 180] Commission and the other briefs filed, no effort will be made to compile the authority. The questions will be taken up in order.

1. Is section 1398 a jurisdictional or venue section?

Although it is possible to argue plausibly from a strict interpretation of the words used in this section and in related sections that the requirements of the section are jurisdictional,[1] it is our very definite opinion that the sec-

---

[1] It will be noted that section 1398 provides that the actions "*shall* be brought *only*" in the judicial district of the plaintiff's place of business. Thus the section uses the mandatory "shall," and grammatically emphasizes the mandatory quality by the adverb "only." It will be noted that all other sections in chapter 87 use the permissive term "may," except section 1403, which relates to eminent domain, of necessity a local action. Likewise, the only other section in the chapter which uses the word "only" is section 1402, which relates to suits against the United States. Under a strict application of the maxim of construction, *ut res magis valeat quam pereat*, it is certainly logical to contend that section 1398 localizes an action to set aside an order of the Interstate Commerce Commission in a jurisdictional sense. This position would seem to be further strengthened by the fact that section 43 of the 1940 edition of the Judicial Code, from which the present action was drawn, provided that "venue . . . shall be" in the district of the residence or principal place of business. Thus the revision of 1948 deleted the word "venue" and added the word "only" in re-enacting the parent section of the Code. Under the doctrine of *In re Collett*, 337 U.S. 55, and *National City Lines* v. *United States*, 337 U.S. 78, changes of

tion relates to venue only. The following considerations lead to this conclusion:

(a) Strong force should be given to the fact that chapter 87 of the Judicial Code relates expressly to venue, and all of the other sections in the chapter, with the possible exception of the section relating to eminent domain, are clearly venue provisions. The maximum *ejusdem generis* is certainly peculiarly applicable to a close-knit statutory chapter of the type involved.

(b) The revisers' notes clearly indicate that it was the intention of the revisers of 1948 to re-enact and rewrite the provisions of section 43 of the Code of 1940. This was expressly a venue section. Of course, it is established that the revisers' notes are authoritative in so far as interpretation is concerned.

[fol. 181] (c) It will be noted that section 1398 was originally proposed by the Judicial Conference in a form different from that finally enacted. The proposal of the Judicial Conference expressly stated that the provision was one of "venue." The deletion of the term "venue" from the proposal is without explanation in the legislative history, and undoubtedly took place at that phase of the legislative process where the technical staff employed to draft the Code reworked the various sections. Thus at the heart of the legislative process there seems to have been no doubt in the mind of anybody concerned that the section related to venue.[2]

---

this character in the revision of 1948 are to be given their logical and plain effect, the theory being that the revision was a carefully worked out, scientific piece of legislation, and that the changes were not accidental or thoughtless. As an illustration of the difficulty of interpreting the words "shall" and "may" in a venue statute, see *Mosley* v. *Sunshine Biscuits*, 107 F. Supp. 164.

[2] In *Spiegel, Inc.* v. *United States et al.*, Civil Action No. 2785-51, decided in the district court for the District of Columbia in 1951, a Chicago corporation brought an action in the district court of the District of Columbia invoking the jurisdiction to set aside orders of the Interstate Commerce Commission. The particular case involved a suit

(d) Where a statute is ambiguous with respect to the question of jurisdiction or venue, the courts usually construe the provisions liberally as relating to venue. Although no Federal cases have been found which make a clear statement of this rule, it is accepted doctrine in the State courts and seems implicit in the Federal decisions of the type cited in the brief of the Union Pacific.

(e) There seems to be no valid reason why an action to set aside an order of the Interstate Commerce Commission should be mandatorily localized. For many years the statute providing for the place for such a suit was clearly one of venue. An intentional change of this long-established policy would certainly have been noted by someone in the process of the enactment of the revision.

2. If section 1398 is properly a venue section, could the Court transfer the action without the consent of those opposed to transfer?

[fol. 182] We take it to be clear that the consent of the intervening defendants is not necessary. Since both the United States and the Interstate Commerce Commission, the two primary defendants, expressly consent to the transfer, it seems that the question is academic. Of course, the question was expressly left open by Judge Biggs in *Paramount Pictures* v. *Rodney*, 186 F. 2d 111, and has never been unequivocally answered by the courts. Under these circumstances, the Department would prefer not to express a categorical opinion with respect to the question, since of course it cannot completely predict the position it may be called upon to take in the future. We do call the Court's attention to *Wiren* v. *Laws*, 194 F. 2d 873. In this case Judge Laws, the Chief Judge of the District Court for the

---

to set aside joint action by the Interstate Commerce Commission and the Postmaster General promulgating parcel-post rates. At this time consideration was given to whether or not section 1398 was jurisdictional, even to the point of inquiring about the change in the language from persons who were intimately connected with the final drafting. No explanation of the change was found, and the Department proceeded on the theory that the section related to venue. The case was finally disposed of in the District of Columbia.

District of Columbia, ordered the transfer of a case to a district court in New York under section 1404 (a) "sua sponte," apparently without the consent of either party. On petition for writ of mandamus, the Court of Appeals held that under the peculiar circumstances of the case the order of transferral was improper. It was expressly recognized in the opinion, however, that transfers could be made under section 1404 (a) without the consent of the parties. See opinion, page 875.[3] A removal under the section without consent seems reasonable, because the defendants' right to plead venue would seem to have no more weight in reason than the plaintiff's right to select venue, and section 1404 (a) of course overrides the latter.

3. Does the intervention of the Rio Grande in the suit brought by the Union Pacific in the district court of Nebraska, attacking the order of the Interstate Commerce Commission involved in the instant case, constitute a submission to the jurisdiction of the Nebraska court, or in any way constitute a relinquishment of its right to claim venue under section 1398?

[fol. 183] Since it is the Department's view that section 1398 is a venue section, the question with respect to the submission to jurisdiction seems moot. With respect to the effect of intervention in Nebraska on the plaintiff's right to claim venue in Colorado in a separate case and rely on the attendant doctrines in its favor on the motion to transfer, it is our opinion that the intervention does not affect the plaintiff's position on the motion. Although the two cases involve the same order of the Commission, the actions are quite distinct and are in reality at opposite poles with respect to theory, gravamen, and relief sought. The Rio Grande was of course the railroad primarily con-

---

[3] It should be noted that *Wiren* v. *Laws* was a well-considered case by a court made up of judges who have shown a particular interest in matters of procedural form. Likewise, the court had the advantage of very able counsel on both sides: one was a former dean of Harvard Law School, and the other a leading trial lawyer at the Washington Bar, assisted by the professor of federal procedure at Georgetown University.

cerned with the attack on the Commission's order in Nebraska, and certainly it was entitled to make its position clear in that case, and the Nebraska court was entitled to a full presentation of its position. A doctrine which would require the Rio Grande to waive its right to claim venue in its separate action, when out of practical necessity it joined in the Nebraska case, would seem clearly inequitable. No authority has been found on this point.

Respectfully submitted, E. Riggs McConnell, Special Assistant to the Attorney General, Department of Justice, Washington 25, D. C.

December 4, 1953.

EVIDENCE OF SERVICE OF MEMORANDUM OF PLAINTIFF ON MOTION TO TRANSFER—Filed December 14, 1953

Law Offices of Norman & Quirk, Investment Building, Washington 5, D. C.

Honorable Orie L. Phillips,
Circuit Court of Appeals,
Denver, Colorado.

Dear Sir:

There is enclosed herewith a copy of a Memorandum Brief for the plaintiff, The Denver and Rio Grande Western Railroad Company, in Civil Action No. 4492, filed in response to the request of the three-judge court, composed of the Honorable Walter A. Huxman, of Topeka, Kans., of the Hon. William Lee Knous, of Denver, Colo., and yourself, which was made during the oral hearing at Denver, Colo., November 20, 1953, on the motion of the Interstate Commerce Commission to transfer the suit to the District Court of Nebraska, Omaha Division.

A copy of the enclosed brief has been sent to Judge Huxman at Topeka, Kans., and to Judge Knous at Denver. A

copy has also been sent to the Clerk of the United States District Court at Denver and to each of the interest parties.

Very truly yours, Robert E. Quirk, Attorney for the Plaintiff.

ANSWER OF THE UNITED STATES—Filed December 21, 1953

Now comes the United States of America, defendant, and answering the amended complaint filed in this action admits, denies, and avers as follows:

1. Answering the allegations contained in paragraphs I, II, III, IV, V, and VI of the amended complaint, the United States admits the same, except that the United States respectfully refers the Court to the order of the Commission of January 12, 1953, which is attached to the original complaint as appendix B, for a complete and accurate statement of the matters contained therein.

2. Answering the allegations contained in paragraph VII of the amended complaint, the United States admits that the complaint of The Denver and Rio Grande Western Railroad Company, filed with the Commission as alleged, contained the various allegations stated in said paragraph, but denies any implication that through routes now exist and have existed between the points indicated in subparagraphs (a) and (b) of paragraph VII.

3. Answering the allegations contained in paragraphs VIII, IX, X, and XI of the amended complaint, the United States admits the same.

4. Answering the allegations contained in paragraph XII of the amended complaint, the United States admits that the order of the Commission which is the subject of [fol. 186] this action prescribed through routes and joint routes with respect to certain commodities, but respectfully refers the Court to the order itself for a full and complete

statement of the matters contained therein. Further answering the allegations contained in paragraph XII of the amended complaint, the United States denies each and every allegation contained therein.

Wherefore, having fully answered the amended complaint, the United States prays that the relief therein sought be denied and the complaint dismissed, with costs to the plaintiff.

Respectfully submitted, James E. Kilday, E. Riggs McConnell, Special Assistants to the Attorney General, Department of Justice, Washington 25, D. C., Attorneys for the United States of America.

Stanley N. Barnes, Assistant Attorney General. Donald E. Kelley, United States Attorney.

Answer of Interstate Commerce Commission—Filed December 21, 1953

The Interstate Commerce Commission, one of the defendants in the above-entitled case, hereinafter called the Commission, now and at all times hereafter saving and reserving to itself all and all manner of benefit and advantage of exception to the many errors and insufficiencies in the complaint and amended complaint contained, for answer thereunto or unto so much or such parts, thereof as it is advised that it is material for it to answer, answers and says:

First Defense

Plaintiff is without right or standing to maintain this suit in that the complaint and amended complaint fail to allege and state a cause of action. *Columbia Broadcasting System*

v. *United States*, 316 U. S. 407, 415; *General Investment Co.* v. *New York Central R. R.*, 271 U. S. 228, 230-231; *Moffat Tunnel League* v. *United States*, 289 U. S. 113, 119; *Pittsburgh & W. Va. Ry.* v. *United States*, 281 U. S. 479, 486; *Sprunt & Son* v. *United States*, 281 U. S. 249, 257; *Edward Hines Trustees* v. *United States*, 263 U. S. 143, 148.

[fol. 188] Second Defense

Without waiving the first defense, the Commission answers the complaint as amended filed herein as follows:

I

Answering the allegations of paragraph I of the complaint, the Commission admits the same, except that it denies that plaintiff has any right or standing to maintain this suit as alleged in its first defense stated above. Further answering paragraph I, the Commission denies that any part of, or language in, its said order of January 12, 1953, contravenes any right of plaintiff.

II

Answering the allegations of paragraphs II, III, IV, V and VI of the complaint, the Commission admits the same.

III

Answering the allegations of paragraph VII of the complaint, the Commission admits that the complaint of The Denver and Rio Grande Western Railroad Company filed in the Commission proceedings contained the allegations stated in said paragraph, except it denies any implication that through routes now exist and have existed between the points indicated in subparagraphs (a) and (b) of said paragraph VII.

IV

Answering the allegations of paragraphs VIII, IX, X and XI of the complaint, the Commission admits the same.

V

Answering the allegations of paragraph XII of the complaint and the amendment thereto, the Commission admits that in its order here under attack through routes and joint

rates were prescribed as alleged but respectfully refers the [fol. 189] Court to the order for a full, true and accurate description of the commodities involved in the territory covered by said order. Further answering said paragraph, the Commission denies that its order of January 12, 1953, is unlawful, arbitrary, capricious or contrary to the evidence and the law for any of the reasons stated in said paragraph, or for any other reason or reasons and denies the allegations contained in the amended complaint designated as "Paragraph XII (a)."

VI

Except as herein expressly admitted, the Commission denies the truth of each of and all the allegations contained in the complaint and amended complaint, insofar as they conflict with the allegations herein.

All of which matters and things the Commission is ready to aver, maintain, and prove as this Honorable Court shall direct, and hereby prays that said complaint and the amended complaint be dismissed.

Interstate Commerce Commission, by Edward M. Reidy, Chief Counsel; Samuel R. Howell, Assistant Chief Counsel.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF WESTERN FOREST INDUSTRIES ASSOCIATION—Filed December 21, 1953

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of the Western Forest Industries Association, intervening plaintiff herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and

Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering paragraph 1 of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII, inclusive, of said plaintiff's complaint as amended.

[fol. 191] Wherefore, having fully answered the allegations of the intervening complaint herein, the Commission prays that said complaint be dismissed.

Interstate Commerce Commission, By: Edward M. Reidy, Chief Counsel. Samuel R. Howell, Assistant Chief Counsel.

[Title omitted]

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF THE PUBLIC UTILITIES COMMISSION OF THE STATE OF COLORADO—Filed December 21, 1953

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of The Public Utilities Commission of the State of Colorado, intervening plaintiff herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering paragraph 1 of the intervening complaint, the Commission admits that the Colorado Commission has au-

thority "to appear and represent the interests and welfare of the people of the State of Colorado in all matters and proceedings involving any public utility or carrier pending before any Court," and to intervene in such proceedings "as the public interest" may require, in all cases wherein it has a legal right or standing to do so, but it is denied that it [fol. 193] has such a right or standing in this case. Therefore, in respect to the question of the right or standing to maintain this suit, the Commission relies on its aforesaid "First Defense."

III

Answering paragraph 2 of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII, inclusive, of said plaintiff's complaint as amended.

Wherefore, having fully answered the allegations of the intervening complaint herein, the Commission prays that said complaint be dismissed.

Interstate Commerce Commission, By: Edward M. Reidy, Chief Counsel. Samuel R. Howell, Assistant Chief Counsel.

[fol. 194] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT

[Title omitted]

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF KOPPERS COMPANY, INC.—Filed December 21, 1953

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of the

Koppers Company, Inc., intervening plaintiff herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering paragraph I of the intervening complaint, the Commission admits the same, except that it denies that the intervening plaintiff has any standing to intervene in this suit, and it, therefore, relies on its aforesaid "First Defense."

III

Answering paragraph II of the intervening complaint, the Commission admits that intervening plaintiff entered testi- [fol. 195] mony in the proceedings in Docket No. 30829, out of which this suit arises; that it has a wood-treating plant at Salida, Colo., which is served by the Rio Grande Railroad; that a source of its supply of lumber is in Idaho, Oregon and Washington, and that it does not have joint rates applicable to the movement of lumber via the Union Pacific and the Rio Grande, from origins on the Union Pacific in the aforesaid States, through Salida, Colo., to destination points east of the Missouri River; that the Commission did not approve the recommendation of its Chief Examiner to authorize through rates on many of the commodities involved in the proceeding in Docket No. 30829, including lumber, but the Commission denies that the absence of joint rates on lumber from origins on the Union Pacific in the States of Idaho, Oregon and Washington via the Union Pacific and the Rio Grande through Salida unduly discriminates against intervening plaintiff's operations at that point and unduly prefers its competitors located at points served by the Union Pacific in the States of Colorado, Wyoming, Nebraska, Kansas, and Missouri in violation of Section 3(1) of the Act; and further denies that the results of the Commission's action herein causes, or will cause, undue discrimination against intervening plaintiff.

IV

Answering paragraph III of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII of said plaintiff's complaint as amended.

Except as herein expressly admitted, the Commission denies the truth of each of and all the allegations contained in the intervening complaint, insofar as they conflict with the allegations herein.

[fol. 196] All of which matters and things the Commission is ready to aver, maintain, and prove as this Honorable Court shall direct, and hereby prays that said intervening complaint be dismissed.

Interstate Commerce Commission, By: Edward M. Reidy, Chief Counsel. Samuel R. Howell, Assistant Chief Counsel.

PETITION OF HOLLY SUGAR CORPORATION FOR LEAVE TO INTERVENE—Filed January 7, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now Holly Sugar Corporation and hereby moves this honorable Court for an order pursuant to Rule 24(a) and (c) of the Federal Rules of Civil Procedure permitting petitioner to intervene as a party plaintiff in the above entitled proceedings.

1. Petitioner is a corporation organized under the corporate laws of the State of New York. Petitioner is authorized to and does engage in, among other things, the buying, selling and shipping of livestock in interstate commerce and therefore has an important and pecuniary interest in the issues involved in the instant proceeding.

2. Petitioner was an intervener before the Interstate Commerce Commission in the proceeding in which the order of that Commission is here assailed; and therefore is authorized to intervene in this proceeding as a matter of right under the provisions of Section 2323 of the Judicial Code (28 U.S.C. Section 2323).

[fol. 207] 3. Accompanying this petition, pursuant to the provisions of Rule 24(c) of the Federal Rules of Civil Procedure (28 U.S.C. Rule 24), is the complaint of petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, petitioner prays for an order granting it leave to intervene as plaintiff in the above entitled proceeding and to file the complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and further relief as the Court may deem requisite in the premises.

PETITION OF IDAHO FARM BUREAU FEDERATION FOR LEAVE TO INTERVENE—Filed March 5, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now The Idaho Farm Bureau Federation and hereby moves this Honorable Court for an order pursuant to Rule 24(a) and (c) of the Federal Rules of Civil Procedure permitting petitioner to intervene as party plaintiff in the above entitled proceeding.

1. Petitioner, The Idaho Farm Bureau Federation, represents 11,000 farm families who are residents of the State of Idaho, and is an Idaho corporation, with offices in Pocatello, Idaho. Petitioner has an important and pecuniary interest in the issues involved in the instant proceeding.

2. Petitioner was an intervening complainant before the Interstate Commerce Commission in the proceedings in which the order of that Commission is here assailed and therefore is authorized to intervene in this proceeding as of right under the provisions of Section 2323 of the Judicial Code (28 U.S.C.A., Section 2323).

3. Accompanied herewith, pursuant to provisions of Rule 24(c) of the Federal Rules of Civil Procedure (28 U.S.C.A.) is the complaint of the petitioner, which complaint sets forth [fol. 212] the claim for which intervention is sought.

Wherefore, petitioner prays for an order granting it leave to intervene as plaintiff in the above entitled proceeding, and to file the complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and further relief as the court may deem requisite in the premises.

[Title omitted]

PETITION OF KNUDSEN BUILDERS SUPPLY CO., INC., FOR LEAVE TO INTERVENE—Filed March 5, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now Knudsen Builders Supply Company, Inc., and hereby moves this Honorable Court for an order pursuant to Rule 24(b) and (c) of the Federal Rules of Civil Pro-

cedure to intervene as party plaintiff in the above entitled proceedings.

1. Your petitioner, Knudsen Builders Supply Company, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Utah, with its principal place of business in Salt Lake City, Utah; that petitioner is, among other things, engaged in the business of selling a full line of building materials, which building materials are consigned to various dealers and branches of its company located in western Colorado, Utah and Idaho; that petitioner transports building materials in interstate commerce and has an important and pecuniary interest in the issues involved in the instant proceeding.

2. That petitioner, through its President and General Manager, Mr. J. Arthur Knudsen, of Salt Lake City, Utah, entered testimony in Docket No. 30297, in which proceeding the order of the Interstate Commerce Commission is here assailed, and by such testimony showed that petitioner is vitally interested in the above proceeding; that petitioner receives from four hundred to five hundred cars of supplies and building materials per year in the conduct of its busi- [fol. 215] ness and that one hundred fifty to two hundred of these cars move from the eastern part of the United States. These cars contain roofing, insulation, wall board and a full line of building materials and originate at various points in the United States, from the Missouri River on the west to the Atlantic Seaboard on the East and from Minnesota on the north to the Gulf of Mexico on the south, and are consigned to various dealers and branches of petitioner in western Colorado, Utah and Idaho. Frequently these are pool cars, as in the case of Celotex which moves from Louisiana. Such pool cars contain about 56,000 feet of Celotex and are stopped four or five times enroute for partial unloading. Petitioner cannot always time its shipments for its western Colorado customers (Grand Junction, Colorado, for example) with cars that are consigned north of Ogden, Utah. In view of this fact petitioner is precluded from the possibility of serving its Colorado customers from such cars since there are no joint rates between The Denver and Rio Grande Western Railroad Company and the Union Pacific Railroad Company covering movements north of Og-

den. If joint through rates were established for shipments moving to points north of Ogden, between the Union Pacific and the Denver and Rio Grande Western Railroad, petitioner would be able to give better service to its customers in the western part of Colorado and effect savings for them which would build up their financial capacity, increase their efficiency, and enable petitioner to do more business with them. By the same token petitioner is precluded from aggressively soliciting business of certain customers in western Colorado because the cars which petitioner knows will terminate in Salt Lake City are so few that it does not include the Denver and Rio Grande Western Railroad in the routing of said cars. Petitioner's shipments must remain flexible so as to permit diversion or placement of its cars on original routing so they will end up at its Pocatello, Idaho, warehouse. This situation unduly discriminates against petitioner's dealers and branches located in western Colorado, Utah and Idaho, and unduly prefers petitioner's competitors located at points served by the Union Pacific Railroad [fol. 216] in the States of Colorado, Idaho, Utah, Wyoming, Nebraska, Kansas and Missouri, in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission, here assailed, failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against petitioner which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that petitioner will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common; and that petitioner's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

3. That pursuant to Rule 24(c) of the Rules of Civil Procedure (28 U.S.C.A., Rule 24) there is attached hereto the complaint of petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, Petitioner prays for an order granting leave to intervene as plaintiff in the above entitled proceeding, and to file its complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and

further relief as the Court may deem requisite in the premises.

Respectfully submitted, Barry and Hupp, by Paul M. Hupp, Attorneys for Petitioners, 738 Majestic Building, Denver 2, Colorado.

Address of Petitioner: Salt Lake City, Utah.

[fol. 217] [File endorsement omitted]

IN THE UNITED STATES DISTRICT COURT

[Title omitted]

COMPLAINT OF KNUDSEN BUILDERS SUPPLY CO., INC.—Filed April 12, 1954

Pursuant to leave granted by this Honorable Court to become intervening plaintiff herein, Knudsen Builders Supply Company, Inc., files its complaint.

I

That plaintiff, Knudsen Builders Supply Company, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Utah, with its principal place of business in Salt Lake City, Utah; that plaintiff is, among other things, engaged in the business of selling a full line of building materials, which building materials are consigned to various dealers and branches of its company located in western Colorado, Utah and Idaho; that plaintiff transports building materials in interstate commerce and has an important and pecuniary interest in the issues involved in the instant proceeding.

II

Arthur Knudsen, of Salt Lake City, Utah, entered testimony in Docket No. 30297, in which proceeding the order of the Interstate Commerce Commission is here assailed, and by such testimony showed that plaintiff is vitally interested in the above proceeding; that plaintiff re-

ceives from 400 to 500 cars of supplies and building materials per year in the conduct of its business and that 150 to 200 of these cars move from the eastern part of the United States. These cars contain roofing, insulation, wall [fol. 218] board and a full line of building materials and originate at various points in the United States, from the Missouri River on the west to the Atlantic Seaboard on the east, and from Minnesota on the north to the Gulf of Mexico on the south, and are consigned to various dealers and branches of plaintiff in western Colorado, Utah and Idaho. Frequently these are pool cars, as in the case of Celotex, which moves from Louisiana. Such pool cars contain about 56,000 feet of Celotex and are stopped four or five times enroute for partial unloading. Plaintiff cannot always time its shipments for its western Colorado customers (Grand Junction, Colorado, for example) with cars that are not consigned north of Ogden, Utah. In view of this fact plaintiff is precluded from the possibility of serving its Colorado customers from such cars since there are no joint rates between The Denver and Rio Grande Western Railroad Company and the Union Pacific Railroad Company covering movements north of Ogden. If joint through rates were established for shipments moving to points north of Ogden, between the Union Pacific and The Denver and Rio Grande Western Railroad, plaintiff would be unable to give better service to its customers in the western part of Colorado and effect savings for them which would build up their financial capacity, increase their efficiency, and enable plaintiff to do more business with them. By the same token plaintiff is precluded from aggressively soliciting business of certain customers in western Colorado because the cars which plaintiff knows will terminate in Salt Lake City are so few that it does not include the Denver and Rio Grande Western Railroad in the routing of said cars. Plaintiff's shipments must remain flexible so as to permit diversion or placement of its cars on original routing so they will end up at plaintiff's Pocatello, Idaho, warehouse. orado, Idaho, Utah, Wyoming, Nebraska, Kansas and Mis-
[fol. 219] souri, in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission, here assailed, failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against plaintiff which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that plaintiff will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common; and that plaintiff's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

PETITION OF PUBLIC SERVICE COMMISSION OF UTAH FOR LEAVE TO INTERVENE—Filed March 5, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the Public Service Commission of Utah and hereby moves the court for an order pursuant to Rule 24(a) and (c) of the Federal Rules of Civil Procedure permitting

petitioner to intervene as party plaintiff in the above entitled proceeding.

1. Petitioner is an agency of the State of Utah, with offices in Salt Lake City, Utah. The citizens of the State of Utah have an important and pecuniary interest in the issues involved in the instant proceedings.

2. Petitioner was an intervening complainant before the Interstate Commerce Commission in the proceedings in which the order of that Commission is here assailed and therefore is authorized to intervene in this proceeding as of right under the provisions of Section 2323 of the Judicial Code (28 U.S.C.A. 2323).

3. Accompanied herewith, pursuant to the provisions of Rule 24(c) of the Federal Rules of Civil Procedure (28 U.S.C.A.) is the complaint of the petitioner, which com- [fol. 221] plaint sets forth the claim for which intervention is sought.

Wherefore, petitioner prays for an order granting it leave to intervene as plaintiff in the above entitled proceeding, and to file the complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and further relief as the court may deem requisite in the premises.

Respectfully submitted, Public Service Commission of Utah, E. R. Callister, Jr., Attorney General, State of Utah, by Peter M. Lowe, Deputy Attorney General. Barry & Hupp, by John R. Barry, Attorneys for Petitioner, 738 Majestic Building, Denver 2, Colorado.

PETITION OF STRUCTURAL STEEL AND FORGING CO., INC., FOR LEAVE TO INTERVENE—Filed March 5, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the Structural Steel and Forging Company, Inc. and hereby moves this Honorable Court for an order pursuant to Rule 24(b) and (c) of the Federal Rules of

Civil Procedure to intervene as party plaintiff in the above entitled proceedings.

1. That petitioner, Structural Steel and Forging Company, Inc. is a corporation duly organized and existing under and by virtue of the laws of the State of Utah, with its principal place of business in Salt Lake City, Utah; that petitioner is engaged in the business of fabricating and selling steel, which fabricated steel is shipped to receivers located in Idaho and Montana; that petitioner transports steel and fabricated steel in interstate commerce, and has an important and pecuniary interest in the issues involved in the instant proceeding.

2. That petitioner, through its President and General Manager, M. S. Rosenblatt of Salt Lake City, Utah, entered testimony in Docket No. 30297, in which proceeding the order of the Interstate Commerce Commission is here assailed and by such testimony showed that petitioner is [fol. 224] vitally interested in the above proceedings; that petitioner received in the first ten months of 1949, 105 cars of steel from the east; in addition to the receipt of steel from points in the eatsern part of the United States, steel is shipped into its plant from the Pacific Coast and from Geneva, Utah; all steel originated in the eastern part of the United States for delivery to petitioner's plant at Salt Lake City, Utah, is routed over the Union Pacific Railroad Company and is transferred at Salt Lake City for delivery to its plant which is located on The Denver and Rio Grande Western Railroad Company. Petitioner routes all of its business to Salt Lake City via the Union Pacific railroad, primarily because it has no transit privileges for fabricating steel moving from eastern points via The Denver and Rio Grande Western Railroad Company into the areas of Idaho and Montana, which areas take approximately 50% of petitioner's business. It is impossible for petitioner to fabricate steel moving to its Salt Lake City plant over The Denver and Rio Grande Western Railroad Company and sell it in the Idaho and Montana markets as there are no transit privileges on steel moving over The Denver and Rio Grande Western Railroad Company through Ogden, Utah to Idaho and Montana points. When petitioner orders its steel it has no way of knowing where the final

destination will be; therefore, it can not take a chance on routing steel via the Denver and Rio Grande Western railroad, which steel petitioner might have to fabricate and sell in markets to which The Denver and Rio Grande Western Railroad Company would have no transit privileges. In view of this fact, petitioner is precluded from the possibility of purchasing steel at the Geneva, Utah plant of the United States Steel Company, or eastern points, shipping said steel over The Denver and Rio Grande Western Railroad Company and fabricating the steel at its Salt Lake City plant and shipping said steel through Ogden, [fol. 225] Utah to Idaho and Montana points. If joint through rates and transit privileges were established for shipments moving to points north of Ogden between the Union Pacific and the Denver and Rio Grande Western railroad, petitioner would be able to give better service to its customers in Idaho and Montana. This situation unduly discriminates against petitioner's business at Salt Lake City and unduly prefers petitioner's competitors at points served by the Union Pacific railroad in the States of Colorado, Utah and Idaho in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission here assailed failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against petitioner, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that petitioner will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common, and that petitioner's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

3. That pursuant to Rule 24(c) of the Rules of Civil Procedure (28 U.S.C.A., Rule 24) there is attached hereto the complaint of petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, petitioner prays for an order granting leave to intervene as plaintiff in the above entitled proceedings, and to file its complaint which is tendered herewith, with the right to have notice and to be treated in all other re-

spects as if it had been named as plaintiff, and for such other and further relief as the Court may deem requisite in the premises.

Respectfully submitted, Barry and Hupp, by Paul M. Hupp, Attorneys for Petitioner, 738 Majestic Building, Denver 2, Colorado.

Address of Petitioner: Salt Lake City, Utah.

IN UNITED STATES DISTRICT COURT

[Title omitted]

COMPLAINT OF STRUCTURAL STEEL AND FORGING CO., INC.—Filed April 12, 1954

Pursuant to leave granted by this Honorable Court to become intervening plaintiff herein, Structural Steel and Forging Company, Inc. files its complaint.

I

That plaintiff, Structural Steel and Forging Company, Inc. is a corporation duly organized and existing under and by virtue of the laws of the State of Utah, with its principal place of business in Salt Lake City, Utah; that plaintiff is engaged in the business of fabricating and selling steel, which fabricated steel is shipped to receivers located in Idaho and Montana; that plaintiff transports steel and fabricated steel in interstate commerce, and has an important and pecuniary interest in the issues involved in the instant proceeding.

II

That plaintiff, through its President and General Manager, M. S. Rosenblatt of Salt Lake City, Utah, entered testimony in Docket No. 30297, in which proceeding the order of the Interstate Commerce Commission is here assailed, and by such testimony showed that plaintiff is vitally interested in the above proceedings; that plaintiff received in

[fol. 227] the first ten months of 1949, 105 cars of steel from the east; in addition to the receipt of steel from points in the eastern part of the United States, steel is shipped into its plant from the Pacific Coast and from Geneva, Utah; all steel originated in the eastern part of the United States for delivery to petitioner's plant at Salt Lake City, Utah is routed over the Union Pacific Railroad Company and is transferred at Salt Lake City for delivery to its plant which is located on The Denver and Rio Grande Western Railroad Company. Plaintiff routes all of its business to Salt Lake City via the Union Pacific railroad, primarily because it has no transit privileges for fabricating any steel moving from eastern points via The Denver and Rio Grande Western Railroad Company into the areas of Idaho and Montana, which areas take approximately 50% of petitioner's business. It is impossible for plaintiff to fabricate steel moving to its Salt Lake City plant over The Denver and Rio Grande Western Railroad Company and sell it in the Idaho and Montana markets as there are no transit privileges on steel moving over said The Denver and Rio Grande Western Railroad Company through Ogden, Utah to Idaho and Montana points. When plaintiff orders its steel it has no way of knowing where the final destination will be; therefore, it can not take a chance of routing steel via the Denver and Rio Grande Western Railroad, which steel plaintiff might have to fabricate and sell in markets to which The Denver and Rio Grande Western Railroad Company would have no transit privileges. In view of this fact, plaintiff is precluded from the possibility of purchasing steel at the Geneva, Utah plant of the United States Steel Company, or eastern points, shipping said steel over The Denver and Rio Grande Western Railroad Company and fabricating the steel at its Salt Lake City plant, and shipping said steel through Ogden, Utah to Idaho and Montana [fol. 228] points. If joint through rates and transit privileges were established for shipments moving to points north of Ogden, Utah between the Union Pacific and the Denver and Rio Grande Western railroad, plaintiff would be able to give better service to its customers in Idaho and Montana. This situation unduly discriminates against plaintiff's business at Salt Lake City and unduly prefers plaintiff's com-

petitors at points served by the Union Pacific railroad in the States of Colorado, Utah and Idaho in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission here assailed failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against plaintiff, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that plaintiff will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common, and that plaintiff's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

III

To avoid reiteration and repetition, plaintiff adopts as its own, and as if pleaded herein, the complaint, as amended, filed in this Court by The Denver and Rio Grande Western Railroad Company, plaintiff herein.

Wherefore, plaintiff prays that the relief requested in the complaint be granted.

Respectfully submitted, Barry and Hupp, by Paul M. Hupp, Attorneys for Plaintiff, 738 Majestic Building, Denver 2, Colorado,

Address of Plaintiff: Salt Lake City, Utah.

[Title omitted]

PETITION OF UTAH GROWERS COOPERATIVE, INC., FOR LEAVE TO INTERVENE—Filed March 5, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the Utah Growers Cooperative, Inc., and hereby moves this Honorable Court for an order, pursuant to Rule 24 (b) and (c) of the Federal Rules of Civil Pro-

cedure, permitting petitioner to intervene as party plaintiff in the above entitled proceeding.

1. That petitioner, Utah Growers Cooperative, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Utah; that its principal place of business is in American Fork, Utah; that petitioner represents approximately 450 vegetable producers, and operates sheds and processing plants on The Denver and Rio Grande Western Railroad Company; the latter are at American Fork, Springville, and Midvale, Utah; that petitioner purchases crate material, fertilizer, seed potatoes and other items for its members and ships for its members agricultural products in interstate and foreign commerce, and has an important and pecuniary interest in the issues involved in the instant proceeding.

2. That petitioner, through its Executive Secretary and General Manager, John W. Gerber, entered testimony in [fol. 230] Docket No. 30297, the proceeding in which the order of the Interstate Commerce Commission is here assailed, and by such testimony duly showed that petitioner is vitally interested in the above proceeding; that petitioner would like to buy box crate material in Idaho and ship this material to its American Fork and Springville locations on The Denver and Rio Grande Western Railroad Company but that it is prohibited from doing so because of the higher rates that apply via the Union Pacific and The Denver and Rio Grande Western Railroad Company; that when box material is moved to its Midvale location, it must absorb a switching charge of the Union Pacific on the movement. On manufactured fertilizer purchased for its growers at Pocatello, Idaho, and Anaconda, Montana, it is required to pay a combination of the local rates over Ogden or Salt Lake City, Utah, or truck the fertilizer across town at its American Fork and Springville, Utah, locations. The same is true of seed potatoes obtained in Idaho and Montana. On seed potatoes obtained in the Red River Valley of North Dakota it cannot unload a part of carload shipments at its locations at Springville, American Fork and Midvale, Utah, on The Denver and Rio Grande Western Railroad and unload the balance of the carload shipments at

points north of Ogden, Utah, without paying a combination of the local rates which is higher than the through rate.

The available markets east of the Mississippi River have been greatly limited because of post-war rate increases and because of increases in estimated weights on celery and carrots. This necessitates petitioner's members going into nearer markets, viz., Idaho, Montana, Wyoming, and Nebraska. They are prevented from shipping into these markets by rail because of the refusal of the Union Pacific Railroad Company and other railroads to enter into joint rates with The Denver and Rio Grande Western Railroad Company for movement of their products via Ogden, Utah. [fol. 231] Petitioner has 100 members in the territory north of Ogden, Utah, that would like to be able to load their onions and potatoes ungraded, and move them to petitioner's packing sheds at American Fork and Springville, Utah, for processing and movement to points in Montana, Wyoming and Nebraska at competitive joint rates. This situation unduly discriminates against petitioner's operation at American Fork and Springville, Utah, and unduly prefers petitioner's competitors located at points served by the Union Pacific Railroad in the States of Idaho, Montana, Wyoming and Nebraska in violation of Section 3(1) of the Interstate Commerce Act; that the order of the Interstate Commerce Commission here assailed failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against petitioner, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that petitioner will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common, and that petitioner's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

3. That pursuant to Rule 24(c) of the Rules of Civil Procedure (28 U. S. C. A., Rule 24) there is attached hereto the complaint of petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, Petitioner prays for an order granting leave to intervene as plaintiff in the above entitled proceedings, and to file its complaint which is tendered herewith, with the

right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and further relief as the Court may deem requisite in the premises.

Respectfully submitted, Barry and Hupp, by Paul M. Hupp, Attorneys for Petitioner, 738 Majestic Building, Denver 2, Colorado.

Address of Petitioner: American Fork, Utah.

[Title omitted]

COMPLAINT OF UTAH GROWERS COOPERATIVE, INC.—Filed April 12, 1954

Pursuant to leave granted by this Honorable Court to become intervening plaintiff herein, Utah Growers Cooperative, Inc., files its complaint:

I

That plaintiff, Utah Growers Cooperatives, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Utah; that its principal place of business is in American Fork, Utah; that plaintiff is the representative of approximately 450 vegetable producers, and operates sheds and processing plants on The Denver and Rio Grande Western Railroad Company; the latter are at American Fork, Springville, and Midvale, Utah; that plaintiff purchases crate material, fertilizer, seed potatoes and other items for its members and ships for its members agricultural products in interstate and foreign commerce, and has an important and pecuniary interest in the issues involved in the instant proceeding.

II

That plaintiff, Utah Growers Cooperative, Inc., is a cor-

eral Manager, John W. Gerber, entered testimony in Docket

No. 30297, the proceeding in which the order of the Interstate Commerce Commission is here assailed, and by such [fol. 233] testimony duly showed that plaintiff is vitally interested in the above proceeding; that plaintiff would like to buy box crate material in Idaho and ship this material to its American Fork and Springville locations on The Denver and Rio Grande Western Railroad Company but that it is prohibited from doing so because of the higher rates that apply via the Union Pacific and The Denver and Rio Grande Western Railroad Company; that when box material is moved to its Midvale location, it must absorb a switching charge of the Union Pacific on the movement. On manufactured fertilizer purchased for its growers at Pocatello, Idaho, and Anaconda, Montana, it is required to pay a combination of the local rates over Ogden or Salt Lake City, Utah, or truck the fertilizer across town at its American Fork and Springville, Utah, vegetable locations. The same is true of seed potatoes obtained in Idaho and Montana. On seed potatoes obtained in the Red River Valley of North Dakota it cannot unload a part of carload shipments at its branches at Springville, American Fork and Midvale, Utah, located on The Denver and Rio Grande Western Railroad and unload the balance of the carload shipments at points north of Ogden, Utah, without paying a combination of the local rates which is higher than the through rate.

The available markets east of the Mississippi River have been greatly limited because of post-war rate increases and because of increases in estimated weights on celery and carrots. This necessitates petitioner's members going into nearer markets, viz., Idaho, Montana, Wyoming, and Nebraska. They are prevented from shipping into these markets by rail because of the refusal of the Union Pacific Railroad Company and other railroads to enter into joint rates with The Denver and Rio Grande Western Railroad Company for movement of their products via Ogden, Utah.

Plaintiff has 100 members in the territory north of Ogden, Utah, that would like to be able to load their onions and [fol. 234] potatoes ungraded, and move them to plaintiff's packing sheds at American Fork and Springville, Utah, for processing and movement to points in Montana, Wyoming and Nebraska at competitive joint rates. This situation

unduly discriminates against plaintiff's operation at American Fork and Springville, Utah, and unduly prefers plaintiff's competitors located at points served by the Union Pacific Railroad in the States of Idaho, Montana, Wyoming and Nebraska in violation of Section 3(1) of the Interstate Commerce Act; that the order of the Interstate Commerce Commission here assailed failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against plaintiff, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that plaintiff will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common, and that plaintiff's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

III

To avoid reiteration and repetition, plaintiff adopts as its own, and as if pleaded herein, the complaint, as amended, filed in this Court by The Denver and Rio Grande Western Railroad Company, plaintiff herein.

Wherefore, plaintiff prays that the relief requested in the complaint be granted.

Respectfully submitted, Barry and Hupp, by Paul M. Hupp, Attorneys for Plaintiff, Utah Growers Cooperative, Inc., 738 Majestic Building, Denver, Colorado.

Address of Plaintiff, Utah Growers Cooperative, Inc., American Fork, Utah.

AMENDED ORDER CONSTITUTING THREE-JUDGE COURT—March 8, 1954

Heretofore, on October 26, 1953, I made an order constituting a three-judge court to hear the above matter and designated Honorable Royce H. Savage, United States District Judge for the Northern District of Oklahoma, as one member of such court. Thereafter, on November 19, 1953, it appearing that Honorable Royce H. Savage would not be able to sit as a member of such court to hear certain matters coming on for hearing in the above case on Friday, November 20, 1953, I made an order designating Honorable Walter A. Huxman, Judge of the United States Court of Appeals, Tenth Circuit, as a member of the three-judge court in the place of Honorable Royce H. Savage, to sit and hear the matter coming on for hearing on Friday, November 20, 1953. Such matters have heretofore been heard and decided.

Now, therefore, it is ordered that said court shall be constituted as follows: Honorable Orie L. Phillips, Chief [fol. 237] Judge, United States Court of Appeals, Tenth Circuit, Honorable Royce H. Savage, United States District Judge for the Northern District of Oklahoma, and Honorable William Lee Knous, United States District Judge for the District of Colorado.

Dated at Denver, Colorado, March 8, 1954.

Orie L. Phillips, Chief Judge, United States Court of Appeals, Tenth Circuit.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF PUBLIC SERVICE COMMISSION OF UTAH—Filed March 22, 1954

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of the Public Service Commission of Utah, intervening plaintiff herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering paragraph I of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII, inclusive, of said plaintiff's complaint, as amended.

[fol. 239] Wherefore, having fully answered the allegations of the intervening complaint herein, the Commission prays that said complaint be dismissed.

Interstate Commerce Commission, by Edward M. Reidy, Chief Counsel, Samuel R. Howell, Assistant Chief Counsel.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF THE IDAHO FARM BUREAU FEDERATION—Filed March 22, 1954

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of The Idaho Farm Bureau Federation, intervening plaintiff herein, answers and says:

I.

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II.

Answering paragraph I of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII, inclusive, of said plaintiff's complaint, as amended.

[fol. 241] Wherefore, having fully answered the allegations of the intervening complaint herein, the Commission prays that said complaint be dismissed.

[Title omitted]

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF STRUCTURAL STEEL AND FORGING COMPANY, INC.—Filed March 22, 1954

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of Structural Steel and Forging Company, Inc., intervening plaintiff herein, answers and says:

I.

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II.

Answering the allegations of paragraph I of the intervening complaint, the Commission admits the same, except that it denies that the intervening plaintiff has any standing to intervene in this suit and it, therefore, relies on its aforesaid "First Defense."

[fol. 243] III.

Answering paragraph II of the intervening complaint, the Commission admits that witnesses for intervening plaintiff entered testimony in the proceedings in Docket No. 30297, out of which this suit arises. But it is denied that the evidence presented proves that the Commission's order herein attacked unjustly discriminates against intervening plaintiff's business at Salt Lake City, or at any other place, or that it unduly prefers intervening plaintiff's competitors at points served by the Union Pacific in the States of Colorado, Utah and Idaho in violation of Section 3(1) of the Act.

IV.

Answering paragraph III of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII of said plaintiff's complaint, as amended.

Except as herein expressly admitted, the Commission denies the truth of each of and all the allegations contained in the intervening complaint, insofar as they conflict with the allegations herein.

All of which matters and things the Commission is ready to aver, maintain and prove as this Honorable Court shall direct, and hereby prays that said intervening complaint be dismissed.

Interstate Commerce Commission, By: Edward M. Reidy, Chief Counsel, Samuel R. Howell, Assistant Chief Counsel.

[Title omitted]

MOTION OF WASHINGTON PUBLIC SERVICE COMMISSION, ET AL., TO INTERVENE AS DEFENDANTS UNDER RULE 24, AND NOTICE THEREOF—Filed March 19, 1954

I

Washington Public Service Commission, Public Utilities Commissioner of Oregon, Board of Railroad Commissioners of the State of Montana, State Board of Equalization and Public Service Commission of Wyoming, State of Nebraska and Nebraska State Railway Commission, file this motion pursuant to Rule 24(a) and (c), (28 U.S.C.A., Federal Rules of Civil Procedure, Rules 17-51), to intervene as defendants in the above-entitled proceeding.

II

Movants are duly constituted administrative agencies of the states named in the foregoing paragraph and are empowered and required to regulate and supervise railroads and other transportation agencies operating intrastate in their respective states and to appear on behalf of and represent the public interest of their states in proceedings in which such public interest may be involved.

III

The complaint in the above-entitled proceeding seeks to enjoin, suspend, annul and set aside "in part" an order [fol. 252] issued January 12, 1953, by the Interstate Commerce Commission (hereinafter called "Commission") in proceedings entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al.* Because the demands of The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande"), in its complaint to the Commission in said proceedings threatened seriously to jeopardize and harm the interest of shippers and the public

generally in their respective states as well as the economic and general welfare of those states, Movants intervened in said proceedings before the Commission and presented testimony and oral and written arguments in support of their contentions that the Commission should deny all of the demands of the Rio Grande and dismiss its complaint. Notwithstanding that said order grants a large part of the Rio Grande's demands and potentially jeopardizes and threatens to deteriorate railroad service to shippers and citizens of said states without affording any additional transportation service or other compensating results or substantial benefits to anyone in any manner except the enhancement of the financial position of the Rio Grande, its complaint herein alleges that "the part of the order of the Commission here assailed is unlawful * * * in that the Commission * * * failed and refused to prescribe joint competitive rates and through routes on all of the traffic eastbound and westbound and between all of the points involved," and the complaint prays that "the order" of the Commission be adjudged unlawful, null and void "in the respects" described in the complaint, and that "in these respects it be set aside and their enforcement forever enjoined." That is to say, the complaint seeks to annul and set aside, and enjoin the "enforcement" of the Commission's failure and refusal to require through routes and joint rates on all of the traffic and between all points not specified in the Commission's order, and the amendment to the complaint prays that the Court "remand" the proceedings to the Commission "for such action as the Court may direct the Commission to take in the premises." The "action" that the Court may "direct the Commission to [fol. 253] take" is not specified or described in the complaint or the amendment, but the complaint as amended seeks, in effect, to have the Court compel the Commission to serve the Rio Grande's alleged "pecuniary interest" by requiring through routes and joint rates on all traffic and between all points which the Commission failed to include in its order.

IV

Movants believe that the complaints of plaintiff, Rio Grande, and of the intervening plaintiffs to state a cause

of action, and that "in the part of the order of the Commission" assailed and attacked by the complaints is lawful and valid, and Movants desire to intervene as defendants in the above-entitled proceeding and present to the Court on behalf of the public in their respective states the grounds upon which they contend that "the part of the order of the Commission" attacked by the complaints is lawful and valid and that the complaints should be dismissed, as referred to and shown in the attached statement of "Claims for Which Intervention is Sought as Defendants."

Respectfully submitted, Don Eastvold, Attorney General of Washington; Robert L. Simpson, Asst. Attorney General of Washington, Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington; C. W. Ferguson, Counsel for Public Utilities Commissioner of Oregon, Public Service Building, Salem, Oregon; James B. Patten, Secretary-Counsel, Board of Railroad Commissioners of the State of Montana, [fol. 254] Helena, Montana; Howard B. Black, Attorney General of Wyoming, Attorney for State Board of Equalization and Public Service Commission of Wyoming, Cheyenne, Wyoming; Clarence S. Beck, Attorney General of Nebraska; Bert L. IN UNITED STATES DISTRICT COURT

[Title omitted]

CLAIMS FOR WHICH INTERVENTION IS SOUGHT AS DEFENDANTS BY WASHINGTON PUBLIC SERVICE COMMISSION; ET AL. —Filed March 19, 1954

I

Washington Public Service Commission, Public Utilities Commissioner of Oregon, Board of Railroad Commissioners of the State of Montana, State Board of Equalization and Public Service Commission of Wyoming, State of Nebraska and Nebraska State Railway Commission, seek intervention as defendants in the above-entitled proceeding upon the claims, and grounds and for the reasons set forth in the answers of the United States of America and the Interstate Commerce Commission, and in the Motion to Dismiss and Answer filed by the Intervening Railroad Defendants to the complaints herein, which Motion and Answers are hereby adopted and made the claims; grounds and reasons of these Movants, together with the matters hereinafter set forth, for dismissing said complaints of the plaintiff and the intervening plaintiffs.

II

Movants intervened in said proceedings before the Interstate Commerce Commission (hereinafter called "Commission") and presented testimony, written and oral argu- [fol. 256] ments showing that the demands of The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") in that proceeding, were inconsistent with and contrary to the National Transportation Policy and other legislation enacted by Congress, and that granting such demands in whole or in substantial part, would, through the diversion of traffic and revenue from the Union Pacific Railroad Company to the Rio Grande, impair and deteriorate the railroad transportation services of shippers and the public in said states; would jeopardize and impair the ability of the Union Pacific Railroad Company

and other railroads to continue to render satisfactory and efficient transportation service in those said states; would result in curtailment of train service and railroad employment in numerous cities, towns, and communities in said states, thus impairing and deteriorating the economic welfare of their citizens; and would result in wasteful and uneconomic transportation through diversion of traffic to the longer routes of the Rio Grande.

III

The evidence and showing in said proceeding required a finding and conclusion that there is no public need for the through routes and joint rates requested by Rio Grande; that said respective intervener States and the shippers and citizens therein represent and constitute the public interest directly involved and controlling in this case; that the Rio Grande has no remedial interest of its own, or in the claims of any shippers, cannot maintain this proceeding as a representative of any shipper or public interest and cannot obtain relief herein upon any claims of individual shippers; that intervening plaintiffs have no remedial interest and cannot maintain this suit; that no complaints have been filed with and no demands have been made by any shipper or the public upon the respective commissions of said states and that the only purpose of the Rio Grande's demands is to improve its financial position to the harm and detriment of citizens and the public in said states.

[fol. 257] IV

Movants by this intervention seek an opportunity to present to the Court their reasons and arguments as indicated above upon which they believe the complaints herein should be dismissed.

Respectfully submitted, Don Eastvold, Attorney General of Washington; Robert L. Simpson, Asst. Attorney General of Washington, Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington; C. W. Ferguson, Counsel for Public Utilities, Commissioner of Oregon, Public Service Building, Salem, Oregon;

James B. Patten, Secretary-Counsel, Board of Railroad Commissioners of the State of Montana, Helena, Montana; Howard B. Black, Attorney General of Wyoming, Attorney for State Board of Equalization and Public Service Commission of Wyoming, Cheyenne, Wyoming; Clarence S. Beck, Attorney General of Nebraska; Bert L. Overcash, Assistant Attorney General of Nebraska, Attorneys for State of Nebraska and Nebraska State Railway Commission, State Capitol, Lincoln, Nebraska; Richard H. Shaw, 301 Equitable Building, Denver 2, Colorado.

IN UNITED STATES DISTRICT COURT

[Title omitted]

MOTION OF BROTHERHOOD OF LOCOMOTIVE ENGINEERS, ET AL., TO INTERVENE AS DEFENDANTS UNDER RULE 24, AND NOTICE THEREOF—Filed March 24, 1954

I

This motion to intervene as defendants in the above-entitled proceeding is filed pursuant to Rule 24 (a) and (c) (28 U.S.C.A., Federal Rules of Civil Procedure, Rules 17-51) by M. P. Caveny of Omaha, Nebraska, and employees of the Union Pacific Railroad Company who are represented by the following standard railroad labor organizations:

Brotherhood of Locomotive Engineers.
Brotherhood of Locomotive Firemen and Enginemen.
Order of Railway Conductors.
Brotherhood of Railroad Trainmen.

American Train Dispatchers Association.
Railroad Yardmasters of America.
Order of Railroad Telegraphers.
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes.
Brotherhood of Railroad Signalmen of America.
Brotherhood of Maintenance of Way Employes.
American Railway Supervisors Association.
International Association of Machinists.
International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America.
International Brotherhood of Blacksmiths, Drop Forgers and Helpers.
Sheet Metal Workers International Association.
International Brotherhood of Electrical Workers.
Brotherhood Railway Carmen of America.
International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers.

[fol. 261] II

Movants are duly constituted and recognized collective bargaining representatives of employees of Union Pacific Railroad Company, designated as such by the National Mediation Board under the provisions of the Railway Labor Act. The Congress has permitted them to intervene, in Section 17.(11) of the Interstate Commerce Act (49 U.S. C.A. § 17 (11)) reading as follows:

> *Intervention of representatives of employees.* (11) Representatives of employees of a carrier, duly designated as such, may intervene and be heard in any proceeding arising under this chapter and chapters 8 and 12 of this title affecting such employees.

The above right of intervention was held to be absolute, in *Brotherhood of Railroad Trainmen* v. *Baltimore & Ohio R. Co.*, 331 U. S. 519 (526-7). The movants have an interest in the above-entitled civil action because they would be adversely affected by any decree this Court might enter granting any part of the plaintiffs' demands, and because this proceeding involves matters which embrace their wages and

working conditions and might have a vital effect upon the movants, their families and dependents.

M. P. Caveny, of Omaha, Nebraska, is the General Chairman of the Brotherhood of Locomotive Engineers on the Union Pacific Railroad Company, and has been designated to speak for and represent in this action not only the locomotive engineers, but all Union Pacific employees who are represented by the standard railroad labor organizations named in this motion to intervene as defendants. They were duly admitted by the Interstate Commerce Commission as interveners in the proceeding entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company* vs. *Union Pacific Railroad Company, et al.*, and were permitted to introduce testimony and evidence at the hearings, and appeared in oral argument and briefs, as parties in interest in the proceeding before the Commission; and therefore they have a statutory right under the provisions of U. S. C. Title 28, § 45a to intervene and appear as parties in the Civil Action herein.

[fol. 262] III

The complaint in this suit seeks to enjoin, suspend, annul and set aside, in part, an order issued under date of January 12, 1953, by the Commission in proceedings entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.* These railorads will be referred to below as the Rio Grande, and the Union Pacific. Because the demands of the Rio Grande in its complaint in said proceedings before the Commission threatened to seriously jeopardize and harm the interests of the Union Pacific employees, as well as the shippers and the general public, movants intervened in said proceedings before the Commission and presented testimony, written evidence, and oral and written arguments in support of the contention by the Union Pacific employees that the Commission should deny the demands of the Rio Grande and dismiss the complaint. The order of the Commission, however, granted a large part of the Rio Grande's demands, thereby jeopardizing the employment, seniority rights, earnings, pension rights, and other working conditions of the Union Pacific employees because of potential reductions in train service and con-

sequent abolishing of nonoperating employment, resulting from the diversion of traffic from the Union Pacific to the Rio Grande.

In the same proceeding the Commission failed and refused to grant the major portion of the Rio Grande's demands, and it is this failure and refusal of the Commission to grant the Rio Grande's demand for through routes and joint rates on all traffic in all commodities between all points that the Rio Grande's complaint in this suit seeks to annul and enjoin, with the ultimate purpose to divert to its line the greatest possible amount of traffic and revenues from the Union Pacific and other intervening railroads, and thus threatening to inflict the greatest possible injury upon and detriment to these intervening Union Pacific employees by jeopardizing the permanency and security of their wages and employment.

[fol. 263] IV

Movants believe that in failing and refusing to grant that part of the Rio Grande's demands which it seeks to realize as a result of this suit, the Commission acted lawfully and validly in all respects. Movants desire to intervene as defendants in this suit and present to the Court on behalf of approximately 55,000 employees of the Union Pacific the grounds upon which they believe said failure and refusal of the Commission is valid and lawful and that the Rio Grande's complaint and the complaints of intervening plaintiffs should be dismissed.

Respectfully submitted, M. P. Caveny, of Omaha, Nebraska, Chairman of The Union Pacific General Chairman's Association on behalf of the employees of Union Pacific Railroad Company who are represented by the following labor organizations: Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, American Train Dispatchers Association, Railroad Yardmasters of America, Order of Railroad Telegraphers, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, Brotherhood of

Railroad Signalmen of America, Brotherhood of Maintenance of Way Employes, American Railway Supervisors Association, International Association of Machinists, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America, International Brotherhood of Blacksmiths, Drop Forgers and Helpers, Sheet Metal Workers International Association, International Brotherhood of Electrical Workers, Brotherhood Railway Carmen of America, International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers, William E. Doyle, 630 Symes Building, Denver, Colorado, Attorneys for Movants.

[fol. 264] NOTICE OF MOTION—(Omitted in Printing)

[fol. 265] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT

[Title omitted]

CLAIMS FOR WHICH INTERVENTION IS SOUGHT AS DEFENDANTS BY BROTHERHOOD OF LOCOMOTIVE ENGINEERS, ET AL.—Filed March 24, 1954

I

M. P. Caveny of Omaha, Nebraska, chairman of the Union Pacific General Chairmen's Association, for himself and on behalf of the approximately 55,000 employees of the Union Pacific Railroad Company (hereinafter called the Union Pacific) who are represented by the following standard railroad labor organizations:

Brotherhood of Locomotive Engineers.
Brotherhood of Locomotive Firemen and Enginemen.
Order of Railway Conductors.
Brotherhood of Railroad Trainmen.
American Train Dispatchers Association.
Railroad Yardmasters of America.

Order of Railroad Telegraphers.
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes.
Brotherhood of Railroad Signalmen of America.
Brotherhood of Maintenance of Way Employes.
American Railway Supervisors Association.
International Association of Machinists.
International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America.
International Brotherhood of Blacksmiths, Drop Forgers and Helpers.
Sheet Metal Workers International Association.
International Brotherhood of Electrical Workers.
Brotherhood Railway Carmen of America.
International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers,

seek intervention in this suit upon the claims and grounds and for the reasons and purposes set forth in the Motion [fol. 266] to Dismiss and in the Answer of the intervening railroad defendants and in the Answers of defendants United States and Interstate Commerce Commission, upon which these movants will urge that the action of the Interstate Commerce Commission in failing and refusing to grant the full demands of the Rio Grande in proceedings entitled Docket No. 30297, *The Denver and Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al.*, is lawful and valid.

II

In addition, these movants desire to show to the Court that the evidence before the Commission proved and required a finding and conclusion that no public need exists for the through routes and joint rates demanded by the Rio Grande; that shippers, citizens, carrier employees and communities affected represent and constitute the public interest in this proceeding and that the Rio Grande has no legal remedial interest in the claims of any shippers and cannot maintain this suit as a representative of any shipper or the public interest and cannot have relief herein upon any claims of individual shippers.

III

These movants will further claim and show that the only purpose of the Rio Grande in this suit is to improve its financial position to the harm and detriment of citizens, the employees of the Union Pacific and other railroads who are intervening defendants herein and to the public.

IV

These movants further will claim and show that the objective of the Rio Grande in this suit is contrary to the National Transportation Policy (49 U.S.C., preceding §§ 1); that in its report of January 12, 1953, in said proceeding, the Commission outlined the disastrous adverse effect upon conditions of employment of Union Pacific employees if the Rio Grande's full demands were granted and these movants will further show and claim that if the Court should grant the demands of the Rio Grande in this suit, the Court should condition such grant by requiring that [fol. 267] any injury, detriment, loss of employment or other adverse effect upon employees of the Union Pacific resulting from such grant shall be protected and borne by the Rio Grande inasmuch as its own enrichment through diversion of traffic and revenues to its line from the Union Pacific would be the direct cause of such injury and detriment to employees of the Union Pacific.

V

These movants by this intervention request an opportunity to present to the Court their reasons and arguments orally and upon brief as indicated above, showing that the Commission's failure and refusal to grant the Rio Grande's full demands is valid and lawful and that the complaint of the Rio Grande and the complaints of intervening plaintiffs herein should be dismissed.

Respectfully submitted, M. P. Caveny of Omaha, Nebraska, Chairman of The Union Pacific General Chairmen's Association, for the employees of Union Pacific Railroad Company who are represented by the following labor organizations: Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen,

Order of Railway Conductors, Brotherhood of Railroad Trainmen, American Train Dispatchers Association, Railroad Yardmasters of America, Order of Railroad Telegraphers, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, Brotherhood of Railroad Signalmen of America, Brotherhood of Maintenance of Way Employes, American Railway Supervisors Association, International Association of Machinists, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America, International Brotherhood of Blacksmiths, Drop Forgers and Helpers, Sheet Metal Workers International Association, International Brotherhood of Electrical Workers, Brotherhood [fol. 268] Railway Carmen of America, International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers, William E. Doyle, 630 Symes Building, Denver, Colorado, Attorney for Movants.

Petition of Brotherhood Committees on the Denver & Rio Grande Western Railroad Co. for Leave to Intervene—Filed April 2, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the following Brotherhood Committees on The Denver and Rio Grande Western Railroad Company, to-wit:

General Committee of Adjustment of Brotherhood of Locomotive Engineers;

General Grievance Committee of Brotherhood of Locomotive Firemen and Enginemen;

General Committee of Adjustment of Order of Railway Conductors;

General Grievance Committee of Brotherhood of Railroad Trainmen;

General System Committee of American Train Dispatchers Association;

General Grievance Committee of Railroad Yardmasters of America;

General Committee of System Division 49 of Order of Railroad Telegraphers;

System Board of Adjustment of Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees;

General Committee of Brotherhood of Railroad Signalmen of America;

Mountain and Plains Federation of Brotherhood of Maintenance of Way Employees;

[fol. 272] General Adjustment Committee of Switchmen's Union of North America;

District No. 20 of International Association of Machinists;

District No. 22 of International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America;

System Council No. 27 of International Brotherhood of Blacksmiths, Drop Forgers and Helpers;

District Council No. 10 of Sheet Metal Workers International Association;

System Council No. 21 of International Brotherhood of Electric Workers;

Rio Grande-Western Pacific and Affiliated Lines Joint Protective Board of Brotherhood of Railway Carmen of America;

System Council No. 33 of International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers;

Protective Order of Dining Car Waiters and Attendants, Local No. 384 of Hotel and Restaurant Employees International Alliance, AF of L;

Local No. 383 of Hotel and Restaurant Employees International Alliance, AF of L;

and hereby moves the Court for an order pursuant to Rule 24 (a) and (c) of the Federal Rules of Civil Procedure permitting petitioners to intervene as parties plaintiff in the above entitled proceeding, and as grounds therefor state:

1. That petitioners are all the functioning and carrier-wide Brotherhood Committees on The Denver and Rio Grande Western Railroad Company and represent all the employees on The Denver and Rio Grande Western Railroad system under the Railway Labor Act, and have an important interest in this proceeding and in the rights of labor as these rights will be affected by a decision of the issues here involved.

2. That in the proceedings before the Interstate Commerce Commission in which was entered the order herein [fol. 273] assailed petitioners were intervening complainants, and under the provisions of Section 2323 of the Judicial Code, U. S. C. A. 2323, petitioners are authorized to intervene in this proceeding as of right.

3. That accompanied herewith as required by the provisions of Rule 24(c) of the Federal Rules of Civil Procedure, 28 U. S. C. A., is the complaint of petitioners, which complaint sets forth the claims for which intervention is sought.

Wherefore, petitioners pray for an order granting them leave to intervene as plaintiffs in the above entitled proceeding and permit them to file the complaint tendered herewith the right to have notice and be treated in all respects as if named plaintiffs, and for such other and further relief as the Court shall deem proper in the premises.

Alden T. Hill, Woolworth Building, Fort Collins, Colorado, Attorney for Petitioners.

IN THE UNITED STATES DISTRICT COURT

[Title omitted]

MOTION OF INTERVENING RAILROADS FOR POSTPONEMENT OF HEARING ON APRIL 19, 1954—Filed April 2, 1954

Come now the intervening railroads and move that the hearing in the above entitled matter set for April 19, 1954, be postponed until May 31, 1954. As grounds for such postponement said interveners state:

1. The effective date of the Order of the Interstate Commerce Commission, attacked in the complaint, has been postponed until July 1, 1954.

2. The delay of the hearing for a period of six weeks can have little effect upon the time of ultimate determination of the case by this court or the appellate courts. Plaintiff, if a decision is obtained in its behalf in courts, will still have to resort to further hearings before the Interstate Commerce Commission for the rate relief sought.

3. Civil Action No. 76-53, Union Pacific Railroad Company, et al. vs. United States of America and Interstate Commerce Commission, pending in the United States District Court for the District of Nebraska, Omaha Division, involves the validity of the same Interstate Commerce Commission Order attacked in this proceeding. Said action was tried to a three-Judge Court November 24, 1953, and decision has been pending so long, it is anticipated that there will be a ruling within the near future. Said decision, when announced, although not binding upon this court, will be important for consideration by the court and counsel in connection with the argument and determination of the issues to be raised on hearing in this case.

[fol. 281] 4. At the date of the filing of their appearance herein, the intervening railroads asked *inter alia* for a stay of the proceedings until the Omaha case was determined and it is consistent with that motion that the court postpone a hearing in this matter until the Omaha case has been decided.

5. It is understood that Edward M. Reidy, Chief Counsel for the Interstate Commerce Commission, who appeared to support the Order at the Omaha hearing, has a serious problem in connection with litigation before the Supreme Court of the United States which may prevent his participation in argument on any date between the 19th of April and the end of May.

6. Counsel for several of the interveners who have recently entered the case, find it very difficult to arrange their conflicting legal engagements so that a hearing can be had on April 19.

7. Counsel for the intervening railroads have matters pending which make it extremely difficult to be ready for a full hearing on April 19.

8. The trial calendar of the United States District Court

for the District of Colorado is very crowded for the period between April 19 and the end of May.

Dated this 1st day of April, 1954.

Elmer B. Collins, F. O. Steadry, Warren H. Ploeger, L. E. Torinus, Jr., Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, E. G. Knowles, by E. G. Knowles, 300 International Trust Bldg., Denver, Colorado, Tel. Main 0196, Attorneys for Intervening Railroads.

[fols. 282-283] CERTIFICATE OF SERVICE—(omitted in printing)

[fol. 284] [File endorsement omitted]

IN THE UNITED STATES DISTRICT COURT

[Title omitted]

PETITION OF INDEPENDENT LUMBER COMPANY, INC., FOR LEAVE TO INTERVENE—Filed April 3, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the Independent Lumber Company, Inc. and hereby moves this Honorable Court for an order pursuant to Rule 24(b) and (c) of the Federal Rules of Civil Procedure to intervene as party plaintiff in the above entitled proceedings.

1. That petitioner, the Independent Lumber Company, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Colorado, with its principal place of business at Grand Junction, Colorado; that petitioner is engaged in the business of processing and selling lumber and lumber products at points in Colorado. Petitioner's facilities at Grand Junction, Colorado are served by the tracks of the Denver and Rio Grande Western railroad; that petitioner transports lumber and lumber products to receivers located in Colorado and other western

states; that said shipments are transported in interstate commerce and petitioner has an important and pecuniary interest in the issues involved in the instant proceeding.

[fol. 285] 2. That petitioner, through its Purchasing Agent Floyde H. Hughes of Grand Junction, Colorado, entered testimony in Docket No. 30297, in which proceeding the order of the Interstate Commerce Commission is here assailed and by such testimony showed that said petitioner is vitally interested in the above proceeding; that petitioner operates fourteen (14) retail lumber yards in western Colorado, also (at Grand Junction) a wholesale distribution yard, a box factory, a lumber manufacturing plant, and a storing and drying yard covering about thirteen acres. Petitioner is also financially interested in the Crissey and Fowler Company at Colorado Springs, Colorado. Petitioner in procuring lumber for its transit plant at Grand Junction, Colorado, prefers to purchase lumber adjacent to the railroads other than the Union Pacific Railroad Company because when the inbound routing on lumber is via railroads other than the Union Pacific, petitioner enjoys competitive rates to Colorado common points and beyond. Cascade and Winchester, Idaho, and Burns, Oregon are typical points on the Union Pacific Railroad Company from which petitioner has procured lumber in the past but petitioner could not do a transit business into such points as Colorado Springs, Colorado or beyond, with lumber originating at points served by the Union Pacific Railroad Company such as Cascade and Winchester, Idaho, and Burns, Oregon, as above mentioned.

Petitioner receives about 300 carloads of lumber a year from the Northwest. Its plant at Grand Junction, Colorado can handle from one to two carloads a day. Petitioner feels that the operation, in order to expand, must seek additional markets since its present market in Colorado is limited. If petitioner's inbound materials originate on the Union Pacific Railroad Company it is limited to western Colorado in its transit operations. Petitioner feels that it should have the same rates as its competitors have to competitive areas of destination. In some cases where the present rate on [fol. 286] lumber to Grand Junction applies via the Chicago, Burlington & Quincy Railroad Company to Denver, Colo-

rado, thence The Denver and Rio Grande Western Railroad Company it would receive a reduction in its present rate if the through competitive rates to Denver were established via The Denver and Rio Grande Western Railroad Company through Ogden, Utah. A rate of 71¢ (to Denver, Colorado) applies both via the Great Northern Railway Company to Laurel, Montana, thence via the Chicago, Burlington & Quincy Railroad Company or The Colorado and Southern Railway Company and the Chicago, Burlington & Quincy Railroad Company to Denver, Colorado, as well as via the Great Northern Railway Company to Butte, Montana and the Union Pacific Railroad Company to Denver, Colorado. If this rate applied via the Great Northern Railway Company to Butte, Montana, Union Pacific Railroad Company to Ogden, Utah, and The Denver and Rio Grande Western Railroad Company to Denver, the rate to Grand Junction would then be 71¢ instead of 80¢, which is now the rate via the Great Northern, Chicago, Burlington & Quincy, or Chicago, Burlington & Quincy and The Colorado and Southern Railway Company to Denver, and The Denver and Rio Grande Western Railroad Company to Grand Junction. Petitioner needs the privilege of partially unloading at competitive rates.

As an example of the difficulties encountered by petitioner in attempting to partially unload is the following:

Petitioner was endeavoring to divide a carload of doors between its Grand Junction and Colorado Springs, Colorado operation. The car to be divided was to be shipped from Tacoma, Washington via the Union Pacific Railroad Company. Petitioner had to divert the car to the Great Northern Railway Company out of Tacoma, Washington for the through rate via that line is not applicable via the Union Pacific Railroad Company. The shipper charged petitioner a penalty of $25.19 which was the amount the shipper fig- [fol. 287] ured he had lost because of the inapplicability of the inbound Union Pacific Railroad Company's transit credit at Tacoma, Washington.

Petitioner was faced with a similar disability in trying to divide a carload of screen doors between its Colorado Springs and Grand Junction, Colorado, operations, which traffic originates at Hoquiam, Washington. Petitioner, to

make such a division, would have had to crate the doors for delivery at Colorado Springs at its Grand Junction plant and ship them by motor carrier to its yard at Colorado Springs. Petitioner is sometimes forced to go to lumber mills located on the Union Pacific Railroad Company for supplies at its Grand Junction plant because of price and quality and when this is done, petitioner can not move such lumber out of storage to its yard at Colorado Springs, Colorado except at combination rates because of the absence of joint through rates from Cascade and Winchester, Idaho by way of Grand Junction, Colorado. Petitioner's Colorado Springs yard once had to procure ten carloads of lumber from a competitor (at a disadvantage) because it would have cost an additional 46¢ per cwt. to move lumber purchased from points on the Union Pacific into its Colorado Springs yard from its storage yard in Grand Junction.

These are but some examples of the manner in which petitioner is injured by the non-existence of through competitive rates via the Denver and Rio Grande Western railroad through Ogden, Utah from the Pacific Northwest.

Joint competitive rates between the Denver and Rio Grande Western railroad and the Union Pacific railroad through Ogden would enable petitioner to stop shipments at Grand Junction, Colorado and have transit privileges at its Colorado Springs yard and beyond, and to develop new [fol. 288] markets in Colorado, which it is now precluded from servicing. The situation unduly discriminates against petitioner and unduly prefers petitioner's competitors at points served by the Union Pacific railroad in the states of Colorado, Utah, Idaho, and Oregon in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission here assailed failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against petitioner, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that petitioner will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common, and that petitioner's intervention will not, to any extent delay or prejudice the adjudication of the rights of the original parties.

3. That pursuant to Rule 24(c) of the Rules of Civil Pro-

cedure (28 U.S.C.A., Rule 24) there is attached hereto the complaint of petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, petitioner prays for an order granting leave to intervene as plaintiff in the above entitled proceedings, and to file its complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such other and further relief as the Court may deem requisite in the premises.

Respectfully submitted, Barry and Hupp, by John R. Barry, Attorneys for Petitioner, 738 Majestic Building, Denver 2, Colorado.

Address of Petitioner: Grand Junction, Colorado.

[fol. 289] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT

[Title omitted]

COMPLAINT OF INDEPENDENT LUMBER COMPANY, INC.—Filed April 12, 1954

Pursuant to leave granted by this Honorable Court to become intervening plaintiff herein, the Independent Lumber Company, Inc., files its complaint.

I

That plaintiff, the Independent Lumber Company, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Colorado, with its principal place of business at Grand Junction, Colorado; that petitioner is engaged in the business of processing and selling lumber and lumber products at points in Colorado. Petitioner's facilities at Grand Junction, Colorado are served by the tracks of the Denver and Rio Grande Western railroad; that petitioner transports lumber and lumber products to receivers located in Colorado and other western

states; that said shipments are transported in interstate commerce and petitioner has an important and pecuniary interest in the issues involved in the instant proceeding.

II

That plaintiff, through its Purchasing Agent Floyde H. Hughes of Grand Junction, Colorado, entered testimony [fol. 290] in Docket No. 30297, in which proceeding the order of the Interstate Commerce Commission is here assailed and by such testimony showed that plaintiff is vitally interested in the above proceeding; that plaintiff operates fourteen (14) retail lumber yards in western Colorado, also (at Grand Junction) a wholesale distribution yard, a box factory, a lumber manufacturing plant and a storing and drying yard covering about thirteen acres. Plaintiff is also financially interested in the Crissey and Fowler Company at Colorado Springs, Colorado. Plaintiff in procuring lumber for its transit plant at Grand Junction, Colorado prefers to purchase lumber adjacent to railroads other than the Union Pacific Railroad Company because when the inbound routing on lumber is via railroads other than the Union Pacific, plaintiff enjoys competitive rates to Colorado common points and beyond. Cascade and Winchester, Idaho, and Burns, Oregon are typical points on the Union Pacific Railroad Company from which plaintiff has procured lumber in the past but plaintiff could not do a transit business into such points as Colorado Springs, Colorado or beyond, with lumber originating at points served by the Union Pacific Railroad Company such as Cascade and Winchester, Idaho, and Burns, Oregon, as above mentioned.

Plaintiff receives about 300 carloads of lumber a year from the Northwest. Its plant at Grand Junction, Colorado can handle from one to two carloads a day. Plaintiff feels that the operation, in order to expand, must seek additional markets since its present market in Colorado is limited. If plaintiff's inbound materials originate on the Union Pacific Railroad Company it is limited to western Colorado in its transit operations. Plaintiff feels that it should have the same rates as its competitors have to competitive areas of destination. In some cases where the present rate on

lumber to Grand Junction applies via the Chicago, Burlington & Quincy Railroad Company to Denver, Colorado, [fol. 291] thence The Denver and Rio Grande Western Railroad Company it would receive a reduction in its present rate if the through competitive rates to Denver were established via The Denver and Rio Grande Western Railroad Company through Ogden, Utah. A rate of 71¢ (to Denver, Colorado) applies both via the Great Northern Railway Company to Laurel, Montana, thence via the Chicago, Burlington & Quincy Railroad Company or The Colorado and Southern Railway Company and the Chicago, Burlington & Quincy Railroad Company to Denver, Colorado, as well as via the Great Northern Railway Company to Butte, Montana and the Union Pacific Railroad Company to Denver, Colorado. If this rate applied via the Great Northern Railway Company to Butte, Montana, Union Pacific Railroad Company to Ogden, Utah, and The Denver and Rio Grande Western Railroad Company to Denver, the rate to Grand Junction would then be 71¢ instead of 80¢ which is now the rate via the Great Northern, Chicago, Burlington & Quincy, or Chicago, Burlington & Quincy and The Colorado and Southern Railway Company to Denver, and The Denver and Rio Grande Western Railroad Company to Grand Junction. Plaintiff needs the privilege of partially unloading at competitive rates.

As an example of the difficulties encountered by plaintiff in attempting to partially unload is the following:

Plaintiff was endeavoring to divide a carload of doors between its Grand Junction and Colorado Springs, Colorado operation. The car to be divided was to be shipped from Tacoma, Washington via the Union Pacific Railroad Company. Plaintiff had to divert the car to the Great Northern Railway Company out of Tacoma, Washington for the through rate via that line is not applicable via the Union Pacific Railroad Company. The shipper charged petitioner a penalty of $25.19 which was the amount the shipper figured he had lost, because of the inapplicability of the inbound Union Pacific Railroad Company's transit credit at Tacoma, Washington.

[fol. 292] Plaintiff was faced with a similar disability in trying to divide a carload of screen doors between its

Colorado Springs and Grand Junction, Colorado operations, which traffic originates at Hoquiam, Washington. Plaintiff, to make such a division, would have had to crate the doors for delivery at Colorado Springs at its Grand Junction plant and ship them by motor carrier to its yard at Colorado Springs. Plaintiff is sometimes forced to go to lumber mills located on the Union Pacific Railroad Company for supplies at its Grand Junction plant because of price and quality and when this is done, plaintiff can not move such lumber out of storage to its yard at Colorado Springs, Colorado except at combination rates because of the absence of joint through rates from Cascade and Winchester, Idaho, by way of Grand Junction, Colorado. Plaintiff's Colorado Springs yard once had to procure ten carloads of lumber from a competitor (at a disadvantage) because it would have cost an additional 46¢ per cwt. to move lumber purchased from points on the Union Pacific into its Colorado Springs yard from its storage yard in Grand Junction.

These are but some examples of the manner in which plaintiff is injured by the non-existence of through competitive rates via the Denver and Rio Grande Western railroad through Ogden, Utah from the Pacific Northwest.

Joint competitive rates between the Denver and Rio Grande Western railroad and the Union Pacific railroad through Ogden would enable plaintiff to stop shipments at Grand Junction, Colorado and have transit privileges at its Colorado Springs yard and beyond, and to develop new markets in Colorado, which it is now precluded from servicing. This situation unduly discriminates against plaintiff and unduly prefers plaintiff's competitors at points served by the Union Pacific railroad in the States of [fol. 293] Colorado, Utah, and Oregon in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission here assailed failed to grant the relief requested by The Denver and Rio Grande Western Railroad Company and continued the undue discrimination against plaintiff, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that plaintiff will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common, and that plaintiff's

intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

III

To avoid reiteration and repetition, plaintiff adopts as its own and as if pleaded herein, the complaint, as amended, filed in this Court by The Denver and Rio Grande Western Railroad Company, plaintiff herein.

Wherefore, plaintiff prays that the relief requested in the complaint be granted.

Respectfully submitted, Barry and Hupp, By John R. Barry, Attorneys for Plaintiff, 738 Majestic Building, Denver 2, Colorado.

Address of Plaintiff: Grand Junction, Colorado.

Petition of the Arnold Milling Company, et al., for Leave to Intervene—Filed April 3, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now The Arnold Milling Company; The Buhler Mill & Elevator Co.; The Consolidated Flour Mills Co.; Dixie Portland Flour Company; The William Kelly Milling Company; Light Grain & Milling Co.; The New Era Milling Company; The Wall Rogalsky Milling Company; and, Walnut Creek Milling Co.; and hereby move this Honorable Court for an order pursuant to Rule 24(a) and (c) of the

Federal Rules of Civil Procedure permitting petitioners to intervene as parties plaintiff in the above entitled proceedings.

1. That the petitioners are all corporations organized under the corporate laws of the State of Kansas, except Dixie Portland Flour Company which is a Tennessee corporation. All are authorized to buy, sell and/or store grain and/or to manufacture, mill or process flour, feed and/or other products of grain, which business is conducted in interstate commerce and therefore said companies have an important and pecuniary interest in the issues involved in the instant proceeding.

2. That petitioners were interveners in the original proceeding and since the original order of the Interstate Commerce Commission is here assailed, the petitioners are authorized to intervene in this proceeding as a matter of right under the provisions of Section 2323 of the Judicial Code (28 U. S. C. A. Section 2323).

[fol. 297] 3. Accompanied herewith, pursuant to the provisions of Rule 24(c) of the Federal Rules of Civil Procedure (28 U. S. C. A. Rule 24), is the complaint of the petitioners, which complaint sets forth the claim for which intervention is sought.

Wherefore, Petitioners pray for an order granting them leave to intervene as plaintiffs in the above entitled proceeding and to file the complaint which is tendered herewith with the right to have notice and to be treated in all other respects as if they had been named as plaintiffs, and for such other and further relief as the Court may deem requisite in the premises.

Barry and Hupp, by John R. Barry, Attorneys at Law, 738 Majestic Building, Denver, Colo. Attorneys for Petitioners: The Arnold Milling Company, The Buhler Mill & Elevator Co., The Consolidated Flour Mills Co., Dixie Portland Flour Company, The William Kelly Milling Company, Light Grain & Milling Co., The New Era Milling Company, The Wall Rogalsky Milling Company, and Walnut Creek Milling Co.

COMPLAINT OF THE ARNOLD MILLING COMPANY, THE BUHLER MILL & ELEVATOR CO., THE CONSOLIDATED FLOUR MILLS CO., DIXIE PORTLAND FLOUR COMPANY, THE WILLIAM KELLY MILLING COMPANY, LIGHT GRAIN & MILLING CO., THE NEW ERA MILLING COMPANY, THE WALL ROGALSKY MILLING COMPANY, AND WALNUT CREEK MILLING CO.—Filed April 12, 1954

Pursuant to leave granted by this Court to become intervening plaintiffs herein, The Arnold Milling Company, The Buhler Mill & Elevator Co., The Consolidated Flour Mills Co., Dixie Portland Flour Company, The William Kelly Milling Company, Light Grain & Milling Co., The New Era Milling Company, The Wall Rogalsky Milling Company and Walnut Creek Milling Co., file their complaint.

I

For their complaint and to avoid reiteration and repetition, petitioners adopt as their own and as if pleaded herein, the complaint filed in this Court by The Denver and Rio Grande Western Railroad Company, plaintiff herein.

Wherefore, petitioners pray that the relief requested in the complaint be granted.

Respectfully submitted, Barry and Hupp, by John R. Bary, 738 Majestic Building, Denver 2, Colorado. Attorneys for Petitioners: The Arnold Milling Company, The Buhler Mill & Elevator Co., The Consolidated Flour Mills Co., Dixie Portland Flour Company, The William Kelly Milling Company, The New Era Milling Company, Light Grain & Milling Co., The Wall Rogalsky Milling Company, and Walnut Creek Milling Co.

AMENDMENT OF INTERVENING RAILROADS TO MOTION FOR POSTPONEMENT OF HEARING APRIL 19, 1954—Filed April 8, 1954

Come now the Intervening Railroads and for their Amendment to the Motion for Postponement of the Hearing in the above entitled matter show the Court as additional grounds therefor:

Elmer B. Collins, Esq., of Omaha, Nebraska, has, throughout the proceedings before the Interstate Commerce Commission and before the Nebraska three-Judge District Court proceeding held at Omaha last November, been the leading counsel, and the one with chief responsibility for the Intervening Railroads.

Although the main defendants are the United States of America and the Interstate Commerce Commission, the Intervening Railroads are vitally interested, financially and otherwise, in the outcome, and Mr. Collins was expected personally to handle the defense for them.

On April 5, 1954, Mr. Collins was stricken with an attack of coronary thrombosis and taken to St. Joseph's Hospital in Omaha, and his physician, Dr. J. R. Kleyla, whose address is Medical Arts Building, Omaha, Nebraska, advised on April 6 that Mr. Collins is in a fairly serious condition, and, in his opinion it will be necessary for him to remain in the hospital from three to five weeks. On April 7, Dr. Kleyla further advised that he had examined Mr. Collins [fol. 307] again and the diagnosis is the same, that it is impossible to determine the period of confinement but that, in his opinion, it would be necessary for Mr. Collins to remain in the hospital from three to five weeks.

This information was promptly communicated to counsel for plaintiff.

It is not possible for associate counsel for the Intervening Railroads to take full responsibility on short notice and prepare the necessary briefs to proceed with this case on April 19, and to require the Intervening Railroads to proceed at that time will seriously prejudice them in their presentation of their case.

A postponement of trial from April 19, 1954 until at least May 31, 1954, may make it possible for Mr. Collins to participate in the trial and will enable other counsel to take over the case to carry on the proceeding in the event Mr. Collins cannot do so.

Dated this 8th day of April, 1954.

Elmer B. Collins, F. O. Steadry, Warren H. Ploeger, L. E. Torinus, Jr., Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, E. G. Knowles, by E. G. Knowles, 300 International Trust Bldg., Denver, Colorado, Telephone MAin 0196, Attorneys for Intervening Railroads.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF INDEPENDENT LUMBER COMPANY, INC.—Filed April 12, 1954

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of Independent Lumber Company, Inc., intervening plaintiff herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering the allegations of paragraph I of the intervening complaint, the Commission admits the same, except that it denies that the intervening plaintiff has any standing to intervene in this suit and it, therefore, relies on its aforesaid "First Defense."

III

Answering paragraph II of the intervening complaint, the Commission admits that witnesses for intervening plaintiff [fol. 317] entered testimony in the proceedings in Docket No. 30297, out of which this suit arises. But it is denied that the evidence presented proves that the Commission's order herein attacked unjustly discriminates against intervening plaintiff's business at points in the States of Colorado, Utah, Idaho, and Oregon, or at any other place, or

that it unduly prefers intervening plaintiff's competitors at points served by the Union Pacific in any of the aforesaid states in violation of Section 3(1) of the Act.

IV

Answering paragraph III of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII of said plaintiff's complaint, as amended.

Except as herein expressly admitted, the Commission denies the truth of each of and all the allegations contained in the intervening complaint, insofar as they conflict with the allegations herein.

All of which matters and things the Commission is ready to aver, maintain and prove as this Honorable Court shall direct, and hereby prays that said intervening complaint be dismissed.

Interstate Commerce Commission, by Edward M. Reidy, Chief Counsel, Samuel R. Howell, Assistant Chief Counsel.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF BROTHERHOOD COMMITTEES ON THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY—Filed April 12, 1954

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of the Brotherhood Committees on The Denver and Rio Grande Western Railroad Company, intervening plaintiffs herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver

and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering paragraph I of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts [fol. 319] as its answer thereto the answers heretofore made to paragraphs I to XII, inclusive, of said plaintiffs' complaint as amended.

Wherefore, having fully answered the allegations of the intervening complaint herein, the Commission prays that said complaint be dismissed.

Interstate Commerce Commission, By: Edward M. Reidy, Chief Counsel, Samuel R. Howell Assistant Chief Counsel.

ORDER ON PETITIONS AND MOTIONS TO INTERVENE—
April 12, 1954

The above entitled cause came before this statutory Court, convened pursuant to provisions of applicable statutes for a hearing of this suit, wherein certain petitions and motions to intervene were filed, and the Court being fully advised in the premises, it is

Ordered:

1. That the Petition of the Holly Sugar Corporation for Leave to Intervene as a party plaintiff is granted and its complaint shall be filed;

2. That the Petition of The Idaho Farm Bureau Federation for Leave to Intervene as party plaintiff is granted, and its complaint shall be filed;

3. That the Petition of the Knudsen Builders Supply Company, Inc. for Leave to Intervene as party plaintiff is granted, and its complaint shall be filed;

4. That the Petition of the Public Service Commission of Utah for Leave to Intervene as party plaintiff is granted, and its complaint shall be filed;

5. That the Petition of the Structural Steel and Forging Company, Inc. for Leave to Intervene as party plaintiff is granted, and its complaint shall be filed;

6. That the Petition of the Utah Growers Cooperative, Inc. for Leave to Intervene as party plaintiff is granted, and [fol. 322] its complaint shall be filed;

7. That the Motion of M. P. Caveny and employees of the Union Pacific Railroad Company who are represented by the following standard railroad labor organizations:

Brotherhood of Locomotive Engineers.
Brotherhood of Locomotive Firemen and Enginemen.
Order of Railway Conductors.
Brotherhood of Railroad Trainmen.
American Train Dispatcher's Association,

Railroad Yardmasters of America.
Order of Railroad Telegraphers.
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.
Brotherhood of Railroad Signalmen of America.
Brotherhood of Maintenance of Way Employees.
American Railway Supervisors Association.
International Association of Machinists.
International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America.
International Brotherhood of Blacksmiths, Drop Forgers and Helpers.
Sheet Metal Workers International Association.
International Brotherhood of Electrical Workers.
Brotherhood Railway Carmen of America.
International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Laborers.

to intervene as defendants under Rule 24, is granted;

8. That the Motion of Washington Public Service Commission, Public Utilities Commission of Oregon, Board of Railroad Commissioners of the State of Montana, State Board of Equalization and Public Service Commission of Wyoming, State of Nebraska and Nebraska State Railway Commission to Intervene as Defendants Under Rule 24, is granted;

[fol. 323] 9. That the Petition of the following Brotherhood Committees on The Denver and Rio Grande Western Railroad Company, to wit:

General Committee of Adjustment of Brotherhood of Locomotive Engineers.
General Grievance Committee of Brotherhood of Locomotive Firemen and Enginemen.
General Committee of Adjustment of Order of Railway Conductors.
General Grievance Committee of Brotherhood of Railroad Trainmen.

AFFIDAVIT OF J. R. KLEYLA, M. D., AS TO CONDITION OF ELMER B. COLLINS, ASSISTANT WESTERN GENERAL COUNSEL, UNION PACIFIC RAILROAD COMPANY, COUNSEL FOR INTERVENING RAILROADS—Filed April 12, 1954

STATE OF NEBRASKA,
County of Douglas, ss:

J. R. Kleyla, M. D., being first duly sworn on oath, deposes and says that Elmer B. Collins was stricken with a heart attack known to medical science as coronary thrombosis on the evening of April 5, 1954; that he was taken to St. Joseph's Hospital that evening; that affiant examined him on the morning of April 6, 1954, and has attended him in said hospital ever since that time; that affiant examined Elmer B. Collins last on April 10, 1954; that as of the date of said last examination the condition of Elmer B. Collins was serious, and requires absolute bed rest; that in his opinion it will be at least three to five weeks before the said Elmer B. Collins can be consulted on business matters, and then for only limited periods; that his hospitalization will be for at least three to five weeks from the date of admission.

John R. Kleyla, M. D.

[Title omitted]

PETITION OF J. I. CASE COMPANY, INC., FOR LEAVE TO INTERVENE—Filed April 13, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Comes now the J. I. Case Company, Inc. and hereby moves this Honorable Court for an order pursuant to Rule 24(b) and (c) of the Federal Rules of Civil Procedure to intervene as party plaintiff in the above entitled proceedings.

1. That petitioner, J. I. Case Company, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Wisconsin, with its principal place of business in Racine, Wisconsin; that petitioner is engaged in the business of producing agricultural implements and farm machinery at points in Wisconsin, Illinois, Iowa, and Alabama; it also maintains a branch distribution point for its products in the intermountain states' territory at Salt Lake City, Utah. This branch is served by the tracks of the Denver and Rio Grande Western railroad; that petitioner transports agricultural implements and farm machinery to receivers located in Idaho and the eastern part of Oregon; that said shipments are transported in intertsate commerce and petitioner has an important and pecuniary interest in the issues involved in the instant proceeding.

[fol. 328] 2. That petitioner, through its Branch Manager, D. G. Adams of Salt Lake City, Utah, entered testimony in Docket No. 30297, in which proceeding the order of the Interstate Commerce Commission is here assailed and by such testimony showed that petitioner is vitally interested in the above proceedings; that petitioner's Salt Lake City branch is the distribution point for its agricultural implements and farm machinery for the intermountain states' territory; about 70% of the agricultural implements and farm fachinery shipped to petitioner's Salt Lake

City branch is destined to points in Utah north of Salt Lake City and to points in Idaho and eastern Oregon, and about 30% is destined to other parts of Utah and western Colorado. Although petitioner's Salt Lake City branch is served by the tracks of the Denver and Rio Grande Western Railroad Company, to be on the safe side all shipments from the east to Salt Lake City should be routed via the Union Pacific Railroad Company, of which a majority are, because if routed to Salt Lake City via The Denver and Rio Grande Western Railroad Company and then reshipped to points on the Union Pacific Railroad Company in Idaho, northern Utah or eastern Oregon, the higher combination rates apply. Petitioner recognizes that to route all shipments of the Salt Lake City branch via the Union Pacific Railroad discriminates against the Denver and Rio Grande Western Railroad and, therefore, on occaison, petitioner routes shipments to its Salt Lake City branch via The Denver and Rio Grande Western Railroad Company.

The following is an actual example of how petitioner is adversely affected when it ships to its Salt Lake City branch via the Denver and Rio Grande Western railroad:

A carload of plows which were moving to petitioner's Salt Lake City branch via the Rio Grande railroad were badly needed at Idaho Falls, Idaho. These plows could not be diverted to Idaho Falls at the through competitive rates so petitioner was required to rebill this carload of plows after arrival at Salt Lake City, Utah, to Idaho Falls, Idaho, at an additional extra freight cost of approximately $300.00.

[fol. 329] Another instance of injuries suffered by petitioner at its Salt Lake City branch operation because of the lack of through competitive rates is as follows:

A carload of tractors was en route from the east to petitioner's Salt Lake City branch. This shipment contained two tractors of the type needed by petitioner's Ontario, Oregon, dealer. Petitioner told its Oregon dealer that it would unload all of the tractors from this car at Salt Lake City except two, and then divert the car to Ontario, Oregon. However, this car of tractors was moving to Salt Lake City via The Denver and Rio Grande Western Railroad Company and as a result the car could not be partially unloaded at Salt Lake City for further movement to On-

tario, Oregon, with the two tractors without paying the less-than-carload rate from Salt Lake City to Ontario, and therefore, the two tractors were shipped by truck from Salt Lake City to Ontario, Oregon, at a cost of approximately $50.00 apiece, causing this loss to petitioner.

These are but two examples of the manner in which petitioner is injured by the non-existence of through competitive rates via the Denver and Rio Grande Western Railroad through Ogden, Utah, to the Pacific northwest.

Joint competitive rates between the Denver and Rio Grande Western railroad and the Union Pacific railroad through Ogden would enable petition to stop shipments in Western Colorado en route to Salt Lake City as well as en route to Idaho and beyond, and would save the payment of the higher combination rates as illustrated and permit petitioner to develop new markets in Colorado and Utah, which it is now precluded from servicing. This situation unduly descriminates against petitioner and unduly prefers petitioner's competitors at points served by the Union Pacific railroad in the states of Colorado, Utah, Idaho and Oregon in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission here assailed failed to grant the relief requested by the Denver and Rio Grande Western Railroad Company and continued the undue discrimination against [fol. 330] petitioner, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that petitioner will be bound by a judgment in this action and that its interests and the main action have questions of law and fact in common, and that petitioner's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

3. That pursuant to Rule 24(c) of the Rules of Civil Procedure (28 U.S.C.A., Rule 24) there is attached hereto the complaint of petitioner, which complaint sets forth the claim for which intervention is sought.

Wherefore, petitioner prays for an order granting leave to intervene as plaintiff in the above entitled proceedings, and to file its complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if it had been named as plaintiff, and for such

other further relief as the Court may deem requisite in the premises.

Respectfully submitted, Barry and Hupp, by Paul M. Hupp, Attorneys for Petitioner, 738 Majestic Building, Denver 2, Colorado.

Address of Petitioner: Racine, Wisconsin.

[Title omitted]

COMPLAINT OF J. I. CASE COMPANY, INC.—Filed June 8, 1954

Pursuant to leave granted by this Honorable Court to become intervening plaintiff herein, the J. I. Case Company, Inc., files its complaint.

I

That plaintiff, J. I. Case Company, Inc., is a corporation duly organized and existing under and by virtue of the laws of the State of Wisconsin, with its principal place of business in Racine, Wisconsin; that plaintiff is engaged in the business of producing agricultural implements and farm machinery at points in Wisconsin, Illinois, Iowa, and Alabama; it also maintains a branch distribution point for its products in the intermountain states' territory at Salt Lake City, Utah. This branch is served by the tracts of the Denver and Rio Grande Western railroad; that plaintiff transports agricultural implements and farm machinery to receivers located in Idaho and the eastern part of Oregon; that said shipments are transported in interstate commerce and plaintiff has an important and pecuniary interest in the issues involved in the instant proceeding.

[fol. 332] II

That plaintiff, through its Branch Manager, D. G. Adams of Salt Lake City, Utah, entered testimony in Docket No. 30297, in which proceeding the order of the Interstate Com-

merce Commission is here assailed and by such testimony showed that plaintiff is vitally interested in the above proceedings; that plaintiff's Salt Lake City branch is the distribution point for its agricultural implements and farm machinery for the intermountain states' territory; about 70% of the agricultural implements and farm machinery shipped to plaintiff's Salt Lake City branch is destined to points in Utah north of Salt Lake City and to points in Idaho and eastern Oregon, and about 30% is destined to other parts of Utah and western Colorado. Although plaintiff's Salt Lake City branch is served by the tracts of the Denver and Rio Grande Western Railroad Company, to be on the safe side all shipments from the east to Salt Lake City should be routed via the Union Pacific Railroad Company, of which a majority are, because if routed to Salt Lake City via the Denver and Rio Grand Western Railroad Company and then reshipped to points on the Union Pacific Railroad Company in Idaho, northern Utah or eastern Oregon, the higher combination rates apply. Plaintiff recognizes that to route all shipments of the Salt Lake City branch via the Union Pacific railroad discriminates against the Denver and Rio Grande Western railroad and, therefore, on occasion, plaintiff routes shipments to its Salt Lake City branch via the Denver and Rio Grande Western Railroad Company.

The following is an actual example of how plaintiff is adversely affected when it ships to its Salt Lake City branch via the Denver and Rio Grande Western railroad:

A carload of plows which were moving to plaintiff's Salt Lake City branch via the Rio Grande railroad were badly needed at Idaho Falls, Idaho. These plows could not be diverted to Idaho Falls at the through competitive rates so plaintiff was required to rebill this carload of plows after arrival at Salt Lake City, Utah, to Idaho Falls, Idaho, at an additional extra freight cost of approximately $300.00. [fol. 333] Another instance of injuries suffered by plaintiff at its Salt Lake City branch operation because of the lack of through competitive rates is as follows:

A carload of tractors was en route from the east to plaintiff's Salt Lake City branch. This shipment contained two tractors of the type needed by plaintiff's Ontario, Oregon, dealer. Plaintiff told its Oregon dealer

that it would unload all of the tractors from this car at Salt Lake City except two, and then divert the car to Ontario, Oregon. However, this car of tractors was moving to Salt Lake City via The Denver and Rio Grande Western Railroad Company and as a result the car could not be partially unloaded at Salt Lake City for further movement to Ontario, Oregon, with the two tractors without paying the less-than-carload rate from Salt Lake City to Ontario, and therefore, the two tractors were shipped by truck from Salt Lake City to Ontario, Oregon, at a cost of approximately $50.00 apiece, causing this loss to plaintiff.

These are but two examples of the manner in which plaintiff is injured by the non-existence of through competitive rates via the Denver and Rio Grande Western Railroad through Ogden, Utah, to the Pacific northwest.

Joint competitive rates between the Denver and Rio Grande Western railroad and the Union Pacific railroad through Ogden would enable plaintiff to stop shipments in western Colorado en route to Salt Lake City as well as en route to Idaho and beyond, and would save the payment of the higher combination rates as illustrated and permit plaintiff to develop new markets in Colorado and Utah, which it is now precluded from servicing. This situation unduly discriminates against plaintiff and unduly prefers plaintiff's competitors at points served by the Union Pacific railroad in the states of Colorado, Utah, Idaho, and Oregon in violation of Section 3(1) of the Interstate Commerce Act. The order of the Interstate Commerce Commission here assailed failed to grant the relief requested by the Denver and Rio Grande Western Railroad Company and continued the undue discrimination [fol. 334] against plaintiff, which is declared to be unlawful under Section 3(1) of the Interstate Commerce Act; that plaintiff will be bound by a judgment in this action and its interests and the main action have questions of law and fact in common, and that plaintiff's intervention will not to any extent delay or prejudice the adjudication of the rights of the original parties.

III

To avoid reiteration and repetition, plaintiff adopts as its own, and as if pleaded herein, the complaint, as amended, filed in this Court by The Denver and Rio Grande Western Railroad Company, the plaintiff herein.

Wherefore, plaintiff prays that the relief requested in the complaint be granted.

Respectfully submitted, Barry and Hupp, By Paul M. Hupp, Attorneys for Plaintiff, 738 Majestic Building, Denver 2, Colorado.

Address of Plaintiff: Racine, Wisconsin.

PETITION OF NATIONAL LIVE STOCK PRODUCERS ASSOCIATION, ET. AL. FOR LEAVE TO INTERVENE—Filed April 13, 1954

To the Honorable Judges of the United States District Court for the District of Colorado:

Come now the National Live Stock Producers Association, American National Cattlemen's Association, Colorado Cattlemen's Association, Idaho Wool Growers Association, Utah Cattle and Horse Growers Association, and hereby move this Honorable Court for an order pursuant to Rule 24 (a) and (c) of the Federal Rules of Civil Procedure permitting petitioners to intervene as parties plaintiff in the above entitled proceeding.

I

That the National Live Stock Producers Association, is a cooperative organization composed of over 500,000 live stock growers and feeders throughout the live stock producing areas of the country, and twenty-two cooperative [fol. 338] live stock associations, with its principal offices at 139 North Clark Street, Chicago 2, Illinois.

That the American National Cattlemen's Association, is a voluntary non-profit organization of live stock producers with principal membership in the seventeen States west of the Missouri River, also in the States of Florida, Louisiana, Oklahoma and elsewhere, with executive office and postoffice address 515 Cooper Building, Denver, Colorado.

That the Colorado Cattlemen's Association, is a non-profit Association organized under the laws of the State of Colorado, with offices at 4651 Lafayette Street, Denver, Colorado; it is composed of 48 local associations throughout the State of Colorado, comprising approximately 5,000 members, many of whom have cattle ranching operations contiguous to The Denver and Rio Grande Western Railroad.

That the Idaho Wool Growers Association, is a voluntary non-profit organization in the State of Idaho, with executive office and postoffice address 17 Broadbent Building, P.O. Box 2598, Boise, Idaho.

That the Utah Cattle & Horse Growers Association, is a voluntary, non-profit organization composed of twenty local associations and numerous individuals totaling approximately 2,000 members in the State of Utah with executive office and postoffice address at Heber, Utah.

II

That the petitioners have an important and pecuniary interest in the issues involved in the above entitled proceeding and the members of the above petitioner associations are engaged in the production, buying, selling and shipping of live stock within, to, and from the area involved in this [fol. 339] proceeding and that they pay and bear the charges for the transportation of such live stock.

III

That the petitioners were intervening complainants before the Interstate Commerce Commission in the proceedings in which the order of that Commission is here assailed and therefore are authorized to intervene in this proceeding as of right under the provisions of Section 2323 of the Judicial Code (28 U.S.C.A., Section 2323).

Accompanied herewith, pursuant to provisions of Rule 24(c) of the Federal Rules of Civil Procedure (28 U.S.C.A.) is the complaint of the petitioners, which complaint sets forth the claim for which intervention is sought.

Wherefore, petitioners pray for an order granting them leave to intervene as plaintiffs in the above entitled proceeding, and to file the complaint which is tendered herewith, with the right to have notice and to be treated in all other respects as if they had been named as plaintiffs, and for such other and further relief as the court may deem proper in the premises.

Respectfully submitted, National Live Stock Producers Association, American National Cattlemen's Association, Colorado Cattlemen's Association, Idaho Wool Growers Association, Utah Cattle and Horse Growers Association, Paul M. Hupp, Barry & Hupp, 738 Majestic Building, Denver 2, Colorado, Lee J. Quasey, 139 North Clark Street, Chicago 2, Illinois, Attorneys for Petitioners.

COMPLAINT OF NATIONAL LIVESTOCK PRODUCERS ASSOCIATION, AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION, COLORADO CATTLEMEN'S ASSOCIATION, IDAHO WOOL GROWERS ASSOCIATION, UTAH CATTLE AND HORSE GROWERS ASSOCIATION—Filed June 8, 1954

Pursuant to leave granted by this court to become intervening plaintiffs herein, the National Live Stock Producers

Association, American National Cattlemen's Association; Colorado Cattlemen's Association, Idaho Wool Growers Association, and Utah Cattle and Horse Growers Association file their complaints.

I

For their complaint and to avoid reiteration and repetition, intervening plaintiffs adopt as their own and as if pleaded herein, the complaint as amended, and filed in this court by The Denver and Rio Grande Western Railroad Company, plaintiff herein.

[fol. 341] Wherefore, intervening plaintiffs pray that the relief requested in the said complaint, as amended, be granted.

Respectfully submitted, National Live Stock Producers Association, American National Cattlemen's Association, Colorado Cattlemen's Association, Idaho Wool Growers Association, Utah Cattle and Horse Growers Association, Barry & Hupp, 738 Majestic Building, Denver 2, Colorado, Lee J. Quasey, 139 North Clark Street, Chicago 2, Illinois, Attorneys for Intervening Plaintiffs.

ANSWER OF INTERVENING RAILROADS TO PETITIONS AND INTERVENING COMPLAINTS OF J. I. CASE COMPANY, INC.; NATIONAL LIVE STOCK PRODUCERS ASSOCIATION; AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION; COLORADO CATTLEMEN'S ASSOCIATION; IDAHO WOOL GROWERS ASSOCIATION; AND UTAH CATTLE AND HORSE GROWERS ASSOCIATION—Filed April 27, 1954

Now come Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The At-

chison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railroad Company; and Wabash Railroad Company, intervening defendants in the above-entitled case, and for their answers to the intervening petitions and complaints of J. I. Case Company, Inc.; National Live Stock Producers Association; American National Cattlemen's Association; Colorado Cattlemen's Association; Idaho Wool Growers Association; and Utah Cattle and Horse Growers Association; these intervening defendants:

1. Admit that the aforementioned petitioners are located and engaged in the business or activity alleged in their respective petitions and complaints.

2. Deny that said petitioners or any of them have any pecuniary or legal interest in this suit, and deny all other allegations of said petitions and complaints.

3. For further answer to the petitions and complaints of the aforementioned parties, these intervening defendants adopt and rely upon their Motion to Dismiss and their An- [fol. 343] swer to the amended complaint of plaintiff The Denver and Rio Grande Western Railroad Company.

Wherefore, having fully answered, these intervening railroad defendants pray that the original complaint, as amended, and the intervening petitions and complaints of the aforementioned parties be dismissed with costs to the plaintiffs and to said intervening petitioners and plaintiffs.

Elmer B. Collins, F. J. Melia, F. O. Steadry, Warren H. Ploeger, L. E. Torinus, Jr., Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, E. G. Knowles, 300 International Trust Building, Denver, Colorado, Telephone: Main 0196, Attorneys for Intervening Railroads.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF J. I. CASE COMPANY, INC.—Filed April 30, 1954

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of J. I. Case Company, Inc., intervening plaintiff herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering the allegations of paragraph I of the intervening complaint, the Commission admits the same, except that it denies that the intervening plaintiff has any standing to intervene in this suit and it, therefore, relies on its aforesaid "First Defense."

[fol. 347]

III

Answering paragraph II of the intervening complaint, the Commission admits that witnesses for intervening plaintiff entered testimony in the proceedings in Docket No. 30297, out of which this suit arises. But it is denied that the evidence presented proves that the Commission's order herein attacked unjustly discriminates against intervening plaintiff's business at points in the State of Colorado, Utah, Idaho, and Oregon, or at any other place, or that it unduly prefers intervening plaintiff's competitors at points served by the Union Pacific in any of the aforesaid states in violation of Section 3(1) of the Act.

IV

Answering paragraph III of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII of said plaintiff's complaint, as amended.

Except as herein expressly admitted, the Commission denies the truth of each of and all the allegations contained in the intervening complaint, insofar as they conflict with the allegations herein.

All of which matters and things the Commission is ready to aver, maintain and prove as this Honorable Court shall direct, and hereby prays that said intervening complaint be dismissed.

Interstate Commerce Commission, By Edward M. Reidy, Chief Counsel; Samuel R. Howell, Assistant Chief Counsel.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF NATIONAL LIVESTOCK PRODUCERS ASSOCIATION ET AL.—Filed April 30, 1954

The Interstate Commerce Commission, one of the defendants in the above-styled cause, hereinafter called the Commission, for answer to the intervening complaint of the National Livestock Producers Association, American National Cattlemen's Association, Colorado Cattlemen's Association, Idaho Wool Growers Association, and Utah Cattle and Horse Growers Association, intervening plaintiffs herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and

Rio Grande Western Railroad Company, plaintiff herein, as its first defense to the intervening complaint.

II

Answering paragraph 1 of the intervening complaint, which adopts the allegations contained in the complaint, [fol. 349] as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII, inclusive, of said plaintiff's complaint as amended.

Wherefore, having fully answered the allegations of the intervening complaint herein, the Commission prays that said complaint be dismissed.

MOTION OF THE AMERICAN SHORT LINE RAILROAD ASSOCIATION TO INTERVENE AS PLAINTIFF—Filed May 14, 1954

Now comes The American Short Line Railroad Association, hereinafter referred to as the Association, and pursuant to Rule 24 (a) of the Federal Rules of Civil Procedure, 28 U.S.C. Rule 24(a), and section 2323 of Title 28, United States Code, respectfully moves this Honorable Court for leave to intervene in this action in order to assert the claims set forth in its Complaint, of which a copy is hereto attached, on the following grounds:

1. The American Short Line Railroad Association is a voluntary unincorporated association, with a membership in excess of 300 common carriers by railroad, of which all members but five (5) are engaged in interstate and foreign commerce, and therefore subject to the Interstate Commerce

Act and related acts, and to the jurisdiction of the Interstate Commerce Commission, hereinafter referred to as the Commission.

[fol. 351] 2. Pursuant to petition filed September 23, 1949, and leave granted September 27, 1949, the Association intervened and participated as a complainant before the Commission in Docket No. 30297, *The Denver and Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.*, the administrative proceeding leading to the issuance of the order sought to be set aside and enjoined by this action.

3. Section 2323 of Title 28, United States Code, in part provides, ". . . associations . . interested in the controversy or question before the Commission, or in any action commenced under the aforesaid sections may intervene in said action at any time after commencement thereof."

4. The Association, its members in general, and many of its members in particular, are vitally interested in the issues presented in this action.

Wherefore, the premises considered, and pursuant to Rule 24(a) of the Federal Rules of Civil Procedure, Title 28 of the United States Code, the Association respectfully prays that it be permitted to intervene as of right in this action, and become a party thereto in support of the plaintiff.

Respectfully submitted, The American Short Line Railroad Association, By: W. J. Hickey, Vice President and General Counsel, 2000 Massachusetts Avenue N. W., Washington 6, D. C.

May 13, 1954.

[fol. 353] IN UNITED STATES DISTRICT COURT

COMPLAINT OF THE AMERICAN SHORT LINE RAILROAD ASSOCIATION—Filed June 8, 1954

Now comes The American Short Line Railroad Association, hereinafter sometimes referred to as the Association,

and having intervened in this action, and become a party in support of the plaintiff, for cause shows:

1. The Association is a voluntary, unincorporated association, with a membership in excess of 300 common carriers by railroad, of which all members but five (5) are engaged in interstate and foreign commerce and therefore subject to the Interstate Commerce Act and related acts, and to the jurisdiction of the Interstate Commerce Commission. The Association maintains its offices at Washington, D. C.

2. The Association, its members in general, and many of its members in particular, are vitally interested in the issues in this action, with respect to the maintenance of routes and rates, and with particular reference to the es- [fol. 354] tablishment of competitive joint through rates.

3. For the remainder of its complaint herein, the Association specifically adopts as its own paragraphs numbered IV to XIII, inclusive, of the Complaint filed herein on behalf of the Plaintiff, The Denver and Rio Grande Western Railroad Company.

4. Wherefore, the intervening plaintiff respectfully prays that the order of the Interstate Commerce Commission of January 12, 1953, in the respects hereinbefore described be found unlawful and void, and that in these respects set aside and permanently enjoined, and that the intervening plaintiff have such other and further relief in the premises as the Court may deem fit and proper.

Respectfully submitted, The American Short Line Railroad Association, By: W. J. Hickey, Vice President and General Counsel, 2000 Massachusetts Avenue N. W., Washington 6, D. C.

ANSWER OF THE INTERSTATE COMMERCE COMMISSION TO INTERVENING COMPLAINT OF THE AMERICAN SHORT LINE RAILROAD ASSOCIATION—Filed May 20, 1954

The Interstate Commerce Commission, one of the defendants in the above styled cause, hereinafter called the Commission, for answer to the intervening complaint of The American Short Line Railroad Association, intervening plaintiff herein, answers and says:

I

The Commission adopts its First Defense, set forth in its answer to the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, at its first defense to the intervening complaint.

II

Answering paragraph 1 of the intervening complaint, the Commission admits the same.

III

Answering paragraph 2 of the intervening complaint, the Commission denies the same.

[fol. 357]

IV

Answering paragraph 3 of the intervening complaint, which adopts the allegations contained in the complaint, as amended, of The Denver and Rio Grande Western Railroad Company, plaintiff herein, the Commission adopts as its answer thereto the answers heretofore made to paragraphs I to XII, inclusive, of said plaintiff's complaint as amended.

Wherefore, having fully answered the allegations of the intervening complaint herein, the Commission prays that said complaint be dismissed.

[Title omitted]

Motion of Intervening Railroad Defendants to Deny the American Short Line Railroad Association's Motion to Intervene as Plaintiff—Filed May 28, 1954

Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Chicago, Milwaukee, St. Paul and Pacific Railway Company; and Wabash Railroad Company, intervening defendants in the above-entitled cause, move that the Court deny the motion dated May 13, 1954, of The American Short Line Railroad Association (hereinafter referred to as the "Association") to intervene in the above-entitled case on the ground that said motion fails to completely to state or show on behalf of the Association or any of its members, any interest in this suit or facts upon which intervention by said Association as plaintiff could be justified.

In support of their motion, these intervening defendants invite the Court's attention to the statement in paragraph 4 of the motion stating that "The Association, its

members in general, and many of its members in particular, [fol. 361] are vitally interested in the issues presented in this action," but that the motion is utterly devoid of facts, and fails completely, to show how such alleged interest arises or is vital; it fails to show how the through routes and joint rates prescribed by the Interstate Commerce Commission's order or the demand by the Rio Grande in this case for through routes and joint rates via its line for all of the involved traffic, have or could possibly have the slightest effect upon any of the Association's members; it fails to show that any of such members are now denied participation in existing routes, rates or revenues; it fails to show that any of such members would or might, if the Rio Grande prevails in this case, participate in traffic and revenues not now enjoyed by them; and it fails to set forth or to give the slightest indication as to what change for better or worse in the position, financial or otherwise, could possibly result to any of the Association's members from any decision in this case.

These intervening defendants further show that in its petition for intervention to the Interstate Commerce Commission in the proceeding described in paragraph 2 of its motion herein, it was asserted that the Association has "for many years, actively supported legislation which would give to this Commission the authority to act in such a way as to promote the public interest," and that the Association "desires an opportunity to present its views, and reasons therefor, for the Commission's consideration in passing upon the merits of the issues raised in this proceeding." Although the Commission overruled our objection to the Association's intervention in that proceeding, it is plain that the Association has no interest whatever in this suit other than to pursue its perennial contention that the Congress should repeal section 15(4) of the Interstate Commerce Act which prohibits the Commission from requiring through routes that short haul existing routes except under conditions there specified. The alleged interest of the Association and its members is even more remote, irrelevant and insufficient to justify its intervention in this suit than was the interest of the Boston Tow Boat Company whose right to intervene before the Commission was

questioned but not decided by the Supreme Court in *Boston* [fol. 362] *Tow Boat Co.* v. *U. S.*, 321 U.S. 632, wherein the Court, holding that the Boston company's interest in the outcome of the litigation in which it had intervened, afforded no ground for a separate appeal, stated at page 633:

> "* * * Boston's petition did not allege, and the record fails to show, that it had any financial interest in Cornell, or was engaged in competition with Cornell, or that its interests would be adversely affected by a decision against Cornell except insofar as that decision might establish a precedent holding tugboats subject to the Commission's jurisdiction under Part III of the Interstate Commerce Act."

The Association's motion alleges that it has a membership in excess of 300 common carriers by railroad, but it fails to allege or show that the order of the Commission attacked by the Rio Grande in this suit, directs any of such members to do or refrain from doing anything or that it affects any of them in any manner whatsoever.

For its complaint, the Association states in paragraph 3 that it "adopts as its own paragraph numbered IV to XIII, inclusive, of the complaint filed herein" by the Rio Grande. All of those allegations except those numbered XII and XIII are merely recitals concerning the Rio Grande's complaint to the Commission and the proceeding as it progressed through the Commission. Neither the Association's motion nor its "complaint" alleges or indicates in any way what, if any, legal or other effect the alleged errors in paragraph XII of the Rio Grande's complaint may have upon the Association or any of its members, and in fact makes no showing that said alleged errors will have any effect upon the Association or its members. Nor does the Association's motion or its "complaint" state any fact or make any allegation indicating any necessity for or right to the relief prayed for in paragraph XIII of the Rio Grande's complaint.

Wherefore, these intervening railroad defendants respectfully move that the "Motion to Intervene as Plain-
[fol. 363] tiff" filed by said Association be denied.

Respectfully submitted, Elmer B. Collins, F. O. Steadry, Warren H. Ploeger, L. E. Torinus, Jr., Roland J. Lehman, Carson L. Taylor, Eugene S. Davis, E. G. Knowles, 300 International Trust Building, Denver, Colorado, Attorneys for Intervening Railroads.

ORDER GRANTING MOTION OF THE AMERICAN SHORT LINE RAILROAD ASSOCIATION TO INTERVENE AS PARTY PLAINTIFF —June 8, 1954

The above entitled cause came on before the statutory Court for the consideration of a motion of The American

Short Line Railroad Association to intervene as party plaintiff, and the motions of Intervening Railroad Defendants to deny The American Short Line Railroad Association's motion to Intervene as Plaintiff, and the Court being fully advised in the premises, it is

Ordered:

1. That the Motion of The American Short Line Railroad Association to intervene as party plaintiff is granted and its complaint shall be filed.

Dated this 8th day of June, 1954.

By the Court: Orie L. Phillips, Chief Judge, United States Court of Appeals for the Tenth Circuit; Royce H. Savage, United States District Judge for the Northern District of Oklahoma; William Lee Knous, United States District Judge.

[fol. 372] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA, OMAHA DIVISION

UNION PACIFIC RAILROAD COMPANY, et al., Plaintiffs,

v.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, Defendants

OPINION—October 26, 1954

Messrs. Elmer B. Collins, Asst. Western General Counsel, John J. Burchell and W. R. Rouse, Of Counsel, Omaha, Nebraska, for Union Pacific Railroad Company.

Mr. F. O. Steadry, Chicago, Illinois, for Chicago and North Western Railway Company and Chicago, St. Paul, Minneapolis & Omaha Railway Company.

Mr. Carson L. Taylor, Chicago, Illinois, for Chicago, Milwaukee, St. Paul and Pacific Railroad Company.

Mr. Eugene S. Davis, St. Louis, Missouri, for Wabash Railroad Company.

Messrs. Robert E. Quirk, Washington, D. C., Harry L. Welch, Omaha, Nebraska, and Herbert M. Boyle, Denver, Colorado, for Denver & Rio Grande Western Railroad Company.

Mr. L. E. Torinus, Jr., St. Paul, Minnesota, for Great Northern Railway Company.

Mr. Bert L. Overcash, Lincoln, Nebraska (Mr. Clarence S. Beck, Attorney General of Nebraska, was on the brief) for the State of Nebraska and Nebraska State Railway Commission.

Mr. Robert L. Simpson, Olympia, Washington (Mr. Don Eastvold, Attorney General of Washington, was on the brief) for Washington Public Service Commission.

Mr. John H. Carkin, Salem, Oregon (Mr. C. W. Ferguson was with him on the brief) for Public Utilities Commission of Oregon.

Mr. John H. Riskin, Helena, Montana, for Board of Railroad Commissioners of the State of Montana.

Mr. Howard B. Black, Attorney General of Wyoming, Cheyenne, Wyoming, for State Board of Equalization and Public Service Commission of Wyoming.

[fol. 374] Mr. Justus R. Moll, Washington, D. C.; and Messrs. J. D. Cranny and J. P. Moore, Omaha, Nebraska, for M. P. Caveny of Omaha, chairman of the Union Pacific General Chairmen's Association.

Mr. Ray McGrath for Idaho Farm Bureau, Public Service Commission of Utah, Committees of the Railroad Brotherhoods who work for the D & RG, and National Livestock Producers Association.

Messrs. Warren H. Ploeger and Roland J. Lehman, on the brief, Messrs. Nye F. Morehouse, M. L. Countryman, Jr., Edwin C. Matthias, J. C. Gibson, M. L. Bluhm, Joseph H. Miller, Of Counsel, for the plaintiffs.

Mr. Edward M. Reidy, Chief Counsel, and Mr. Samuel R. Howell, Asst. Chief Counsel, of Counsel, for Interstate Commerce Commission.

Mr. Henry B. Cockrum, Acting Assoc. Solicitor, United States Department of Agriculture, Washington, D. C.; Mr. Charles W. Bucy, Assoc. Solicitor, was with him on the brief for the Department of Agriculture.

Mr. E. Riggs McConnell, Special Asst. to the Attorney

General, Washington, D. C.; Messrs. Stanley N. Barnes, Asst. Attorney General, James E. Kilday, Special Asst. to the Attorney General, and Donald R. Ross, United States Attorney, were with him on the brief for the United States.

Before Johnsen and Collet, Circuit Judges, and Delehant, District Judge

COLLET, Circuit Judge:

The Denver and Rio Grande Western Railroad Company, hereafter referred to as the Rio Grande, filed a complaint with the Interstate Commerce Commission requesting the Commission to order the Union Pacific Railroad Company (and other lines comprising the Union Pacific System, together with connecting carriers comprising, in all, 221 railroads, which will be referred to as the Union Pacific to file joint rates over through routes with the Rio Grande for the transportation of feright from and to certain areas. The Commission granted the request as to certain types of freight with substantial territorial limitations. The Union Pacific *Union Pacific* brings this action to enjoin and set [fol. 375] aside the order. A reference to a map of the United States will be helpful in understanding the following summarization of the facts.

The northern terminus of the Rio Grande is Ogden, Utah. From Ogden it runs south through Salt Lake City and Provo, Utah, then southeasterly and east, entering Colorado at about the south central part of that state, thence east and somewhat north through the central part of Colorado to Dotsero, west of Denver, where it divides, one branch going on east to Denver, the other swinging south and east to Pueblo, Colorado. From Denver the Rio Grande line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serve territory in southern Utah, northwestern New Mexico, and southern Colorado. These latter lines are not of special importance in this action. At Denver, Colorado Springs, Pueblo, and Trinidad the Rio Grande maintains joint rates and through routes with lines other than the Union Pacific to destinations east and south of those points.

The Union Pacific (including connecting lines which were defendants in the I.C.C. proceedings) serves the greater

part of the east, south and midwestern sections of the United States. Traffic involved in this action from those sections flowing westward over the Union Pacific and connecting lines converges at Denver and Cheyenne, Wyoming, then moves westwardly across the southern part of Wyoming to Ogden and Salt Lake City. One of its lines runs from Salt Lake City south to Provo, Utah, thence southwest to Los Angeles, California.

[fol. 376] The Union Pacific also serves the northwestern part of the United States, including that part of Utah north of Ogden, Idaho, Montana, Oregon, and Washington. It is traffic from and to this latter territory, referred to herein as the northwest territory or area, which is the principal subject of the present controversy.

The Union Pacific maintains joint rates and through routes over its lines and with many connecting carriers from and to the northwest territory through Ogden and Salt Lake City, Cheyenne, Denver, and points east and south to the Atlantic Seaboard and the Gulf of Mexico. For a comparatively short distance, from Ogden through Salt Lake City to Provo, where the Los Angeles line swings southwest, the Union Pacific and the Rio Grande parallel and serve some common points. To and from these points, joint rates and through routes are maintained by the Union Pacific over its lines with the northwest territory and the area east of Cheyenne and Denver served by the Union Pacific. The Union Pacific does not maintain joint through rates with the Rio Grande, with certain exceptions not material in this proceeding. Freight moving from the northwest territory to points in southern Utah and Colorado on the Rio Grande, finally destined to points east of the eastern termini of the Rio Grande, moves on the combination rate, consisting of the total of the Union Pacific rate to Ogden via Union Pacific and the Rio Grande rate from Ogden via Rio Grande to points on the Rio Grande. The same is true of the rates on shipments from points east of Denver to those points on the Rio Grande finally destined to the northwest territory. This combination of rates, or combination rate, as it is called, is considerably higher [fol. 377] than a joint through rate. Freight moving from and to the northwest territory from and to all points east

of Denver[1] served by the Union Pacific and connecting carriers has the benefit of joint through rates via Union Pacific, with accompanying in-transit privileges en route, while freight originating on the Union Pacific in the northwest territory and moving to the area east of Denver, which is routed over the Rio Grande, pays the combination rate without in-transit privileges at points on the Rio Grande. The result is that practically all of the long-haul traffic originating in the northewest area and destined to [fol. 378] the area east of Denver goes over the Union

---

[1] "All points east of Denver" will be used as the designation of all points included in the Commission's order to or from which through routes and joint rates were ordered established by the Union Pacific with the Rio Grande. The Commission's order in this respect was: (287 I.C.C. 611, 659)

"We conclude:

"1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grand, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

Pacific all the way on the lower joint and through rates. Since the formal record before the Commission consists of 1,957 pages of testimony, 57 exhibits and 74 verified statements, the foregoing statement is obviously only a salient outline of the basis for the Rio Grande's complaint. For a complete understanding of the intricacies of the case by one unfamiliar with the record, it will be necessary to refer to the extensive report and order of the Commission reported in 287 I.C.C. 611.

The Commission ordered the establishment of through routes and joint rates via Ogden or Salt Lake City by the Union Pacific with the Rio Grande for the transportation of granite and marble monuments in carloads from points of origin in Vermont and Georgia to destinations in the northwest area, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, in carloads, from points of origin in the northwest territory to destinations "east of Denver." The order is based upon three primary basic findings. First, that the through routes and joint rates are necessary and desirable in the public interest, in order to provide *adequate and more economic transportation;* second, that the existing joint rates maintained by the Union Pacific are and will be *unjust and unreasonable and unduly prejudicial* to shippers and receivers of freight using or desiring to use the Rio Grande and *unduly preferential to shippers and receivers of freight using the Union Pacific;* third, that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad between the northwest area and points [fol. 379] on the Bamberger line between Ogden and Salt Lake City, while refusing to establish joint rates with the Rio Grande to and from the same points on the Rio Grande between Ogden and Salt Lake City, subjects the Rio Grande to discrimination in violation of Sec. 3 (4) of the Interstate Commerce Commission Act. Finding No. 1 has heretofore been quoted in footnote 1. Findings 2 and 3 are set out below.[2] To understand the import of these findings it is

---

[2] "2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and

necessary to explain the factual theory upon which they are based.

First as to the finding that the rates ordered are necessary and desirable to provide adequate and more economic transportation. Located along the route of the Rio Grande, between Ogden on the west and Denver, Pueblo and Trinidad on the eastern termini, are a number of livestock feeders. Some of these are ranchers who graze and feed cattle and sheep. Others are operators of beet sugar plants which produce livestock feed as a by-product and feed the by-product to livestock. These livestock feeders buy cattle and sheep in the northwest area, which are ultimately des- [fol. 380] tined for the market, and ship them to points on the Rio Grande for feeding. Many of the principal livestock markets of the United States are located east of Denver. Without joint through rates with in-transit privileges which would permit these livestock feeders to ship from the northwest area to the feeding points on the Rio Grande and then reship on joint through rates to points east of Denver, Pueblo, and Trinidad, they are at a substantial rate disadvantage with similar livestock feeders following the same practice who are located on the Union Pacific lines between Ogden and Provo, and between Ogden and Salt Lake City and Denver, located on the Union Pacific, who reship to points east of Denver. They are also at a substantial rate disadvantage in purchasing livestock in the northwest area in competition with buyers located on the Union Pacific lines

---

unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act." 287 I.C.C. 611, 659-660.

west of Denver and Cheyenne who have the benefit of joint through rates and in-transit privileges over the Union Pacific.

Also located on the Rio Grande are a number of industries which clean, package, process, freeze, and store fresh fruits, vegetables, poultry, food products, butter, eggs and beans, and ship them on east to points beyond Denver, Pueblo, and Trinidad. These industries are at a comparable rate disadvantage, without in-transit privileges, as livestock feeders, and for the same reasons.

Monument dealers obtaining or shipping granite and marble from Vermont and Georgia are unable to ship full carloads to the northwest territory and have the rate advantage of partially unloading cars at intermediate points on the Rio Grande under in-transit privileges of through [fol. 281] routes and joint rates which are available at points located on the Union Pacific.

This finding, which is finding No. 1 quoted in the foot-note, is held by the Commission to justify ordering the establishment of through routes and joint rates under Secs. 15 (3) and 15 (4). Title 49 U.S.C.A. Secs. 15 (3) and 15 (4). Sec. 15 (3) empowers the Commission to establish through routes and joint rates when necessary or desirable in the public interest,[3] but Sec. 15 (4) prohibits the Commission from ordering the establishment of through routes by a carrier under Sec. 15 (3) without the carrier's consent if the result would be to short-haul that carrier unless, as provided by Sec. 15 (4), the Commission finds that the through route is needed in order to provide (1) *adequate*, and (2) *more efficient* or *more economic* transportation.[4]

---

[3] "Sec. 15 (3) The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, * * * establish through routes, * * * and joint rates, * * * applicable to the transportation of * * * property by carriers subject to this part, * * *."

[4] "Sec. 15 (4) In establishing any such through route the Commission shall not * * * require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and un-

[fol. 382] The Commission accurately states the legal effect of Sec. 15 (4) in its report (Denver & R.G.W. R. Co. v. Union Pac. R. Co., 287 I.C.C. 611) at page 655 as follows:

> "Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the 'through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation.' Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In Pennsylvania R. Co. v. United States, 323 U.S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in D. A. Stickell & Sons, Inc., v. Alton R. Co., supra, the supreme Court said that the expressions 'more efficient or more economic' transportation, as used in section 15 (4), 'may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found.' These latter considerations are not determinative, how-

---

der a common management or control therewith, which lies between the termini of such proposed through route, * * * (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however*, That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. * * *."

ever, unless the existing routes can be found not to provide 'adequate' transportation.

"In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests."

Was there evidence to support the finding of inadequacy? Only in the event there was inadequacy of transportation can the question of efficiency or economy be reached. It is clear from the report and the evidence that the finding of inadequacy is based upon the lack of in-transit privileges by shippers and receivers located on the Rio Grande as to the commodities embraced in the order. There is no evidence to support a finding that the physical transportation facilities furnished by the Union Pacific between the northwest area, on the one hand, and points east of Denver are [fol. 383] inadequate. There is abundant support, however, for the finding that the service is inadequate to patrons of the Rio Grande, located on the Rio Grande between Ogden on the west and Denver, Pueblo, and Trinidad on the east (not served by the Union Pacific between Ogden and Provo), who do not have in-transit privileges with respect to freight moving from the northwest area which is to be reshipped to points east of Denver, if under the law the lack of in-transit privileges may constitute "inadequacy". That is also true as to the service to shippers of marble and granite from Vermont and Georgia to initial points on the Rio Grande who need the in-transit privileges of partial unloading or processing en route, incident to reshipment to final destination points beyond Ogden in the northwest area. The foregoing inadequacies are based upon the premise that the lack of in-transit privileges constitutes inadequacy of service within the meaning of clause (b) of Sec. 15 (4). The Union Pacific vigorously contends that it does not. This question presents the crux of this case. If, as the Union Pacific contends, in-transit rights and privileges are matters over which the Commission under the law has no control, the existence or granting of which is subject only to managerial discretion of the carrier, and relate only

to economy or efficiency of transportation to the exclusion of considerations of adequacy of transportation, then the lack of in-transit privileges will not suffice as a proper basis for ordering "adequate" transportation. The argument is made in effect that since the transportation facilities are now available over the Union Pacific and the Rio Grande on the higher combination rates, the present nonexistence of in-transit privileges relates only to the cost or economy [fol. 384] of transportation. Reference is made to excerpts from opinions which it is said support the conclusion that the Commission may not under its general regulatory power force a carrier to provide or establish in-transit privileges. The question has many ramifications. We are confronted only with determining whether a finding of inadequacy of transportation may be legally based upon the absence or lack of services which are incidents of and to in-transit privileges. If that be true, the Commission may order the establishment of through routes and joint rates, with their ordinary incidents—in-transit privileges—when such action is necessary in order to provide adequate transportation. We are convinced that the Commission does have that power. Pennsylvania R. Co., et al. v. United States, et al., 323 U.S. 588, 54 F. Supp. 381.

But the inadequacy established by the evidence does not extend to shipments from the northwest area to initial destinations east of Denver. The same is true of shipments of monuments from Vermont and Georgia to points of initial destination in the northwest territory. Transportation service is now adequate between those points. There is ample evidence to support the finding that the establishment of the through routes and joint rates between the northwest area and points on the Rio Grande (not also served by the Union Pacific between Ogden and Provo), as to shipments which require in-transit privileges at points on the Rio Grande for reshipment to points east of Denver, will result in more economical transportation. Differences in mileage and other comparative factors are for the Commission to weigh, evaluate and determine. Its ultimate [fol. 385] factual conclusion may not be overturned when supported by the evidence. But, again, there is no evidence that the service is inadequate or that more eco-

nomical transportation service will result with respect to shipments from the northwest area to points between Ogden and Provo served by both the Union Pacific and the Rio Grande and to be reshipped to final points of destination east of Denver. The transportation facilities are shown by the evidence now to be adequate, with in-transit privileges between those points over the Union Pacific. And that service is as economical via the Union Pacific as it would be over the Union Pacific and the Rio Grande if the through route and joint rates were established. The evidence therefore sustains the finding of inadequacy and the need for more economical transportation only as to (1) carload shipments of commodities embraced in the Commission's order from points in the northwest territory destined to points of final destination east of Denver which require in-transit privileges at points on the Rio Grande; (2) shipments of granite and marble monuments from Vermont and Georgia to final destinations in the northwest territory which require in-transit privileges at points on the Rio Grande not also served by the Union Pacific. If the order has been so limited to the evidence it would eliminate short-hauling the Union Pacific except as to shipments requiring service which is now inadequate and which service the Union Pacific cannot now give. It would eliminate the charge made by the Union Pacific that the order was for the purpose of assisting the Rio Grande to meet its financial needs, and, more important, it would have rested squarely within the authority of clause (b) of Sec. 15 (4). [fol. 386] The second finding, that the combination rates maintained by the Union Pacific and the Rio Grande are unduly prejudicial to shippers using or desiring to use the Rio Grande and unduly preferential to shippers and receivers using the Union Pacific to the extent they exceed the joint and through rates available to shippers located on the Union Pacific, is made for the purpose of bringing the order within the authorization of Sec. 3 (1). Title 49 U.S.C.A. Sec. 3 (1). That section is as follows:

> "Sec. 3 (1) It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm,

corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

The situation which this finding seeks to correct, simply stated, is that the shippers and receivers of the designated commodities located on the Rio Grande who do not have in-transit privileges and joint and through rates are at an economic disadvantage compared to shippers and receivers located on the route of the Union Pacific who do have joint and through rates and in-transit privileges.

If the prejudice and preference shown by the evidence falls within the prohibition of Sec. 3 (1) the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15 (3) and 15 (4) heretofore considered. But the prejudice and preference pro- [fol. 387] hibited by Sec. 3 (1) relate to prejudice and preference shown by one carrier or a combination of carriers between the entities named in 3 (1) which are served by the one carrier or the combination acting as one. The prohibition of Sec. 3 (1) is intended to prevent a carrier from giving preferences or advantages, over which the carrier has control, to one of the entities named and not to another. It does not apply to a situation such as this where the comparison of preferences and advantages or prejudices and disadvantages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion. Although the factual situation in Central R. Co. of New Jersey v. United States, 257 U. S. 247, was different, the purpose of Sec. 3 (1) was there stated as follows: (Loc. cit. 259-260)

"What Congress sought to prevent by that section, as originally enacted, was not differences between lo-

calities in transportation rates, facilities and privileges, but unjust discrimination between them by the same carrier or carriers. Neither the Transportation Act 1920, February 28, 1920, c. 91, 41 Stat. 456, nor any earlier amendatory legislation has changed, in this respect, the purpose or scope of § 3."

If the Commission could order through routes and joint rates between two or more competing railroads under Sec. 3 (1) merely because a shipper entity described in Sec. 3 (1) located on one railroad had a transportation advantage over such an entity located on the other railroad, the prohibition of Sec. 15(4) would be practically emasculated. The evidence of preference, advantage, prejudice or disadvantage, under these circumstances, furnishes no basis for the order under Sec. 3(1).

The third finding, heretofore quoted, to the effect that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad to and from points in the north-[fol. 388] west area and points on the Bamberger line from Ogden to Salt Lake City, inclusive, while refusing to maintain joint rates with the Rio Grande on shipments from the northwest area to the points served by both the Rio Grande and the Bamberger Railroad from Ogden to Salt Lake City, inclusive, discriminates against the Rio Grande, is based on Sec. 3 (4), which is as follows:

"Sec. 3 (4) All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

The Bamberger Railroad is an electric line operating only from Ogden to Salt Lake City, serving those cities and intermediate points. The Rio Grande serves all points served by the Bamberger. The criterion for determining unlawful discrimination under Sec. 3 (4) is stated by the Commission at page 658 of its order as follows:

> "A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred."

The Commission found there was no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande. Upon this record that factual conclusion may not be disturbed. Section 3 (4) clearly prohibits such discrimination. The Commission's order in this respect is valid under Sec. 3 (4).

[fol. 389] Considerable attention has been given by the Union Pacific in its brief to the action of the Commission in rejecting a portion of evidence offered by it in an attempt to show improper conduct in the preparation and presentation of the Rio Grande's case before the Commission. We do not find justification for serious consideration of that question.

Findings of Fact

I

The finding of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points.

II

The record supports the Commission's finding that present transportation service between the northwest area and points of initial destination on the Rio Grande (not also served by the Union Pacific between Ogden and Provo) is inadequate and also inefficient and uneconomical as to shipments of the commodities specified by the Commission from [fol. 390] the northwest area to initial points of destination on the Rio Grande west of Denver, which require in-transit privileges enabling their reshipment on joint through rates to points of final destination east of Denver.

III

The record supports the Commission's finding that present transportation service for granite and marble monuments, in carloads, originating in Vermont and Georgia, consigned to initial destination points on the Rio Grande, requiring unloading and in-transit privileges for continued movement to points in the northwest territory, is inadequate and uneconomical and that the establishment of joint rates and through service is necessary in order to provide adequate and more economic transportation for such shipments.

IV

The evidence supports the finding that as to designated items of traffic moving from the northwest area, shippers and receivers of freight located on the Rio Grande are at an economic disadvantage compared with shippers and receivers of freight from the northwest area who are located on the Union Pacific. But there is no community of interest between the Union Pacific and the Rio Grande and hence there is no discrimination by the Union Pacific within the prohibition of Sec. 3 (1).

V

The evidence supports the finding of the Commission, referred to and quoted herein as Finding 3, that unlawful discrimination prohibited by Sec. 3 (4) is being practiced by the Union Pacific in refusing to establish through routes [fol. 391] and joint rates with the Rio Grande comparable

to those existing between the Union Pacific and the Bamberger Line on traffic moving from the northwest area to points served by both the Bamberger Line and the Rio Grande between Ogden and Salt Lake City.

Conclusions of Law

I

The absence of in-transit and other privileges involved herein, incident to through joint rates will, under the law, support a finding that transportation service without such services and privileges is inadequate within the meaning of Sec. 15 (4). The evidence therefore supports the finding of the Commission that the establishment of through routes and joint rates between the Union Pacific and the Rio Grande is necessary in order to provide adequate and more economic transportation of the designated commodities in carloads originating in the northwest area, consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trinidad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo and Trinidad. As to such commodities the order of the Commission is valid under Secs. 1, 15 (3) and 15 (4) of the Act and does not violate the direction of Sec. 15 (4) that reasonable preference be given the carrier which originates the traffic.

II

The evidence supports the finding of the Commission that it is necessary, in order to provide adequate and more economic transportation of shipments of marble and granite monuments in carloads from points in Vermont and Georgia [fol. 392] to points of final destination in the northwest territory, which require unloading and in-transit privileges at points on the Rio Grande incident to the continuation of the shipment to the northwest area, that through routes and joint rates be established between the Union Pacific and the Rio Grande as to such shipments.

III

To the extent that the order of the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande on carload traffic moving from the northwest area to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such nature or character that it does not require stoppage-in-transit privileges, which are incident to in-transit privileges, and as to all traffic moving from the northwest area to points of original destination east of Denver, Pueblo or Trinidad, said order is not valid, because Sec. 15 (4) constitutes a limitation on the power of the Commission to order establishment of through routes which will result in short-hauling the Union Pacific, unless that be necessary in order to provide, inter alia, adequate transportation. Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destinations specified in this paragraph, that factual premise, essential to the validity of the order, is lacking.

[fol. 393]

IV.

To the extent the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande at Ogden on carload traffic moving from the northwest area to points between Ogden and Salt Lake City, inclusive, served by both the Rio Grande and the Bamberger Line, the order is valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3 (4) of the Act.

To the extent stated in the foregoing opinion, findings of fact, and conclusions of law, the order of the Commission will be enjoined. The cause is remanded to the Interstate Commerce Commission for such further proceedings as it may deem appropriate, consistent herewith.

[fol. 394] Civil Action No. 76-53

UNION PACIFIC R. CO.

vs.

UNITED STATES

JOHNSEN, Circuit Judge, dissenting:

The Commission has here used standards and criteria for the exercise of its power to compel through routes and joint rates, which I think are beyond the warrant of the statute. The majority opinion upholds in part the result which the Commission has so reached.

What the Commission purports to make the primary basis for its establishing of through routes and joint rates over the Rio Grande is "perishable food articles". Here, as taken from its Report, are the manner and perspective of its approach to the question.

"Growers [of perishable food articles in Idaho, located on the Union Pacific] * * * market such products throughout the United States. In order to get as wide a distribution as possible, those growers and other growers in the northwestern area [that part of Utah lying north of Ogden, and the States of Idaho, Montana, Oregon and Washington] need as many markets and outlets as possible."[1] 287 I.C.C. at page 642. To comprehend or evaluate that need, says the Commission, "it is necessary to consider the nature, extent and functioning of our intricate and far-flung commodity marketing system." P. 655. The importance, in our condition of growing population and national develop-

[1] It should be noted that the situation covered by the Commission's order does not involve the matter of joint rates to intermediate points on the Rio Grande as final destinations. Joint rates already apply to such traffic. The question is one of through routes and joint rates for traffic having a billing origin and destination outside of Rio Grande territory, and for which the Rio Grande therefore would merely be serving as a "bridge" line only, while the Union Pacific, on whose branch lines most of the traffic originates, would be caused to lose a line-haul thereon of 975 miles.

ment, of having "a constantly expanding flow of diverse commodities" and "particularly articles of food" is em- [fol. 395] phasized. The comment is made that "A complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible," and the truism is expressed that "Adequate transportation facilities and services are required for the proper functioning of the system." P. 656.

Then follows what seems to me to represent the crux of the Commission's concept and standard in what it did.

1. "Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and *over as many routes as possible.* This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that *as much flexibility as possible in the distribution process be permitted.*" (Emphasis mine.) P. 656.

2. "A number of services, not only at origin and destination, but enroute, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities." In-transit privileges, "such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit," are available at various points on the Union Pacific to through-shippers, on the basis of the joint rates applicable over that route, and similar privileges exercisable on the Rio Grande could be made available to such shippers, at a lower cost than under the present combination rates, by establishing competitive through routes and joint rates over that road, so that those desiring to have the benefit of these additional facilities would be able to enjoy them on the same basis as those on the Union Pacific. Because the use of such transit facilities on the Rio Grande are not available in the same manner as those on the Union Pacific, [fol. 396] "The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities." P. 656.

3. The Commission does not attempt to explain how the failure of such through-shippers as a general class to have access to the transit privileges on the Rio Grande on the same rate basis as on the Union Pacific, can thus broadly and absolutely be declared to debar them "from effective participation in the widespread system developed for the marketing of such commodities." In the absence of such an explanation, and on the implication of what the Commission has precedingly said in its Report, as set out above, the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given "as many routes as possible" and "as much flexibility as possible in the distribution process", because otherwise they will be debarred from effective participation in * * * the marketing of such commodities."

In other words, whenever it is possible physically and practicably to open up a new or an additional through route for such commodities, the Commission apparently feels entitled to exercise its power to do so, in order to make available any increase in the amount of transit privileges en route which can be provided for such through-traffic, on the basis of simply declaring, as it in effect did here, that the previous through routes are inadequate, since they lack the additional transit privileges of the new carrier's route, which some shipper may desire or can solicitedly be persuaded to use, and on the basis of further holding that the other prerequisite of section 15 (4) of the Act, 49 U.S.C.A. § 15 (4), where the element of short-hauling another carrier is involved, as it is here, [fol. 397] that such an added through-route must also provide "more efficient or more economic transportation" than that existing on the present through routes, can sufficiently be satisfied by merely resorting to the Commission's power under section 15 (3) to prescribe joint rates and pointing out that joint rates necessarily in the situation will provide "more economic transportation", since they obviously are lower than the previous combination rates.

I have grave legal doubt whether the Commission's

power to establish joint rates under section 15 (3) has any relationship to the term "more economic transportation" in section 15 (4), dealing with the Commission's right to open up through routes. Rather, it seems to me that the term "more economic transportation" in section 15 (4) is intended to have reference to the elements of distance, time, equipment, cost of operation, territorial reach, and all those other quantitative and qualitative factors which are inherent in a transportational comparison from the standpoint of the interests of both the public and the carriers—and that the Commission's power to establish joint rates under section 15 (3) is one which has application only after through routes exist or are established, without the right to use it as a factor under section 15 (4) for satisfying the requirements of opening up a long-haul-depriving, additional through route.

But however this may be, I am at least convinced that, where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term "more economic transportation" under section 15 (4), in the addition of another carrier's route as a mere "bridge" line for such traffic. If that be not so, then there is not any [fol. 398] situation in which the Commission can not make a finding of "more economic transportation" for whatever additional through route it may undertake to open up, since in all cases joint rates necessarily, from their very nature, are lower than combination rates otherwise applying.

Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to "as many routes as possible" and "as much flexibility as possible in the distribution process," so that on this basis, and without regard to any other factor, any existing through route can be called inadequate, because it is possible to create additional transit privileges or facilities for such traffic by opening up another through route over another railroad, serving as a bridge line, and

further such new route can be declared to provide "more economic transporation", because by placing joint rates in effect the cost of using such new through route for its transit facilities will be less than under the general combination rates previously existing, then the railroads of the country may as well forget section 15 (4) entirely, as affording them any protection whatsoever against deprivation of their long hauls.

Here the opening up of a through route over the Rio Grande as a bridge carrier for the transcontinental freight involved will deprive the Union Pacific of a long haul of 975 miles upon such traffic as the Rio Grande is able to solicit away from it. But this is not the sole purport or effect of the Commission's order. If the order is upheld either in whole or in part, on the basis on which the Commission's result has been reached, the Commission can hereafter exercise its power to require through routes and joint rates from every connecting point in the country against every existing carrier, since every new through route necessarily will afford additional transit privileges and every joint rate necessarily will reduce the cost of using the new through route as against the combination rate previously applicable.

[fol. 399] Nor should one allow oneself to be blinded to what the real scope and significance of the Commission's reach here is. What it has purported to paint the picture of, in relation to its standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" is, as previously indicated, "perishable food articles". But it has, by means of some artificial classification, included ordinary livestock as a perishable food article (P. 656), saying merely before doing so, that "We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden gateway." And it has further held that a little monument dealer, located on the Union Pacific in Utah, is entitled to have established for him a through route and joint rates on the Rio Grande, in order to have the transit privilege available to him of unloading locally, here and there in Colorado, on a through rate basis,

some individual monuments out of an estimated four-car-load lot of monuments per year.[2]

All of this to me is but another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position that it should have the right to put into effect as many new through routes as it deems advisable, without being required to give consideration to the question of short hauling another carrier. It has repeatedly asserted that viewpoint and sought to gain that [fol. 400] end. But Congress has never been willing to accede to that philosophy and position, and the courts have on a number of occasions had to strike down the Commission's efforts in that direction. All this is familiar history in the railroad world, and I shall not bother to go into it further here.

It is on the basis of the unqualified use of that standard here in relation to perishable commodities, and the attempt to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach, that I would strike down the Commission's order. I think that anyone who reads the Commission's Report, in the light of what I have said, and stripped of all the confusion in which the Report has been wrapped, will have no convictional difficulty as to the implications which I have pointed out.

---

[2] I shall not take the time to go into the details of this trivial monument situation, which the Commission characterized as one of "urgent need" (Page 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones constitute a commodity that is entitled to this extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of "as many routes as possible" and "as much flexibility as possible in the distribution process" for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country.

I do not mean to make any implication, nor do I here assume to pass judgment, on whether the Ogden gateway is in other manner or to other extent subject to being opened up. All I say is that the philosophy and standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" can not be made the basis for overriding the short-hauling provisions of section 15(4), through the merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the term "more economic transportation" to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing.

The philosophy and standard which the Commission has used are unquestionably sound as a marketing principle, but the railroad transportation system of the country has never yet been relegated by Congress to the full impact of marketing principles alone. There is not a distributor of any [fol. 401] commodity—including perishable foods—who, up to the time at least of the Commission's present order, has had, or has been regarded as being entitled to have, as a matter of sound transportational concept, every avenue and facility that it is possible to open up for him, with a simple brushing aside of transportational conditions, realities and consequences, such as I think the Commission here did.

I have previous referred to the fact that most of the traffic that is here involved originates on the branch lines of the Union Pacific, and that on such of this traffic as the Rio Grande is able to solicit to use its route, the Union Pacific will lose a line haul of 975 miles. The Report of the Commission admits that "the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves" is about 200 miles. Page 654. It also recognizes that the Rio Grande is a mountainous route, of higher grades, more circuity, and greater operational costs than the Union Pacific. "The total rise and fall in feet on the Rio Grande is 66.3 per cent greater than that of the Union Pacific. Other data as to physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over

the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services." Page 648.

All of these matters, however, the Commission lightly brushes aside, as not having relationship to the question of "more economic transportation" in the situation, and so leaving it free to hold, as above indicated, that the new through route provides "more economic transportation", because its joint rates necessarily are lower than the previously applicable combination rates. All that the Com- [fol. 402] mission says, in brushing aside the transportational differences which I have set out, as not requiring consideration on the question of "more economic transportation" in the situation, is that, when they are spread over hauls of such great lengths as are here involved, "they become relatively insignificant." Page 658.

The Report does not undertake to show what amount of traffic goes where. It merely says that "About 90 per cent of the traffic upon which joint rates are sought via Ogden and the Rio Grande moves to (Missouri River crossings and points east and southeast) and about 10 per cent to the Southwest." Page 626. How much terminates at the Missouri River crossing points or at other midwestern destinations, the Report does not state. As to livestock, however, it certainly is a matter of common knowledge that the primary markets are Chicago, Omaha, Kansas City and some other Missouri River points. To each of these points, as well as to the Minneapolis and St. Louis markets, the record shows that a haul of 200 miles more, and a transportation time of at least 24 hours longer, as well as at least one or two more terminal-yard services, are involved over the Rio Grande route. I do not believe that without rational demonstration the Commission can say, except arbitrarily, that in relation to hauling distances of 1036 miles (Omaha) or 1153 miles (Kansas City) or 1524 miles (Chicago), the elements of difference which I have set out are so "relatively insignificant" as to be entitled to be ignored on the question of whether "more economic transportation" is being provided. And in the absence also of some demonstration or analysis of quantities and destinations as to the various other commodities involved, I do

not believe that the Commission can be said to have any less arbitrarily brushed off the facts of the transportational and service differences existing, as related to the question of "more economic transportation" under the statute, than in the case of livestock, when it merely attempts to push all of the facts abstractly to a far-distant horizon, without [fol. 403] establishment of the reality of that horizon for lumping purposes.

Incidentally, I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established general livestock scheme, practice and policy which the Commission has previously recognized and accepted. In *Livestock, Western District Rates*, 176 I.C.C. 1, 190 I.C.C. 175, 190 I.C.C. 611, 200 I.C.C. 535, the Commisison prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15(4) of the statute. In establishing the prescribed rates, the carriers limited their application, as the commission itself has recognized, over routes which did not result in short hauling, and over other and longer routes provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. This the Union Pacific was willing to do in relation to the Rio Grande's route. It would seem to me that the upsetting of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure as against the Union Pacific in its long-hauling of livestock from the northwest territory, as related to the differential permitted to be created by other carriers generally in such situations.

This dissent is being written hastily, in order not to delay the filing of the majority opinion, and I shall accordingly not take the time to go into detail on other matters. [fol. 404] I agree with the majority that the Commission had no right here to find a violation of section 3(1) of the

Act against the Union Pacific and its connecting through-route carriers, but the basis for my view is not that adopted by the majority, that a discrimination under this section cannot at all exist, unless the complaining person or entity is located upon the lines of the carrier or combination of carriers claimed to have committed the discrimination. I do not believe that this viewpoint is tenable on the language of section 3(1), nor on the expressions contained in St. Louis Southwestern Ry. Co. v. United States, 245 U.S. 136, 144, as well as on the plain, contrary assumptions made in Texas & Pacific Ry. Co. v. United States, 289 U.S. 627. But on the factual elements that are involved in the present situation I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3(1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at the same rate, over a 200-mile longer route, with a 66.3 per cent greater variation in grade, involving a 24-hour additional hauling time, and necessitating the furnishing of several more terminal-yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3(1). If the Commission had attempted to predicate the relief which it here granted upon the existence of a violation of section 3(1), I am certain that its action resting on this basis alone could not on these facial realities be upheld. Only an escape from these facial realities, through a dissolution of them under the considerations open to the Commission in section 15(4), such as the Commission here attempted, could at all, in my opinion, on the facts of the situation, have furnished a basis for the perscribing of through routes and joint rates in relation to the existing conditions.

[fol. 405] In the pattern of the Commission's apparent attempt to strike at as much in the present situation as possible, the Commission further, as noted in the majority opinion, required the Union Pacific to establish joint rates with the Rio Grande to and from the same points where it maintained joint rates with the Bamberger Railroad. The Report says: "The Bamberger operates, for about 36 miles,

between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande." P. 659. The brief of the Union Pacific argues pointedly that "No evidence was submitted concerning or comparing transportation conditions on the Bamberger's electric line between Ogden and Salt Lake City with conditions on the Rio Grande." The brief of the Commission makes no denial of the fact that no such evidence is contained in the record. The most that the Commission could properly have said, I think, was that it had not been made to appear by the evidence that there was any important dissimilarity in the conditions on the two roads. But the lack of any such evidence of dissimilarity could hardly afford a basis for a finding of similarity on the part of the Commisison. This segment of the Commission's order is perhaps of relatively small importance in the present controversy. I refer to it simply as being characteristic or in the pattern of the loose and improper basis and manner in which it seems to me that the Commission has dealt with the entire situation.

I would strike down the Commission's order generally, on the basis and manner in which its result has been reached. In taking that position, however, I would again emphasize that I intend no implication that there may not exist some proper basis and some proper manner of reach as to some parts of the Ogden gateway situation. I have not allowed my mind to look at that avenue, in either one direction or the other. The pervading infirmities on which [fol. 406] the Commission's present order seems to me to rest make it sufficient and compel me to halt my judicial consideration right there.

IN UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

No. 4492 Civil

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Plaintiff,

v.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, Defendants

OPINION—January 13, 1955

Messrs. Dennis McCarthy and Robert E. Quirk (Herbert M. Boyle was with them on the brief) for plaintiff.

Mr. E. Riggs McConnell (Messrs. Stanley N. Barnes, James E. Kilday, and Donald E. Kelley, were with him on the brief) for the United States of America, defendant.

Mr. Samuel R. Howell (Mr. Edward M. Reidy was with him on the brief) for the Interstate Commerce Commission, defendant.

Messrs. Elmer B. Collins, F. O. Steadry, L. E. Torinus, Jr., and Eugene S. Davis (Messrs. F. J. Melia, Warren H. Ploeger, Roland J. Lehman, Carson L. Taylor, E. G. Knowles, W. R. Rouse, Nye F. Morehouse, M. L. Countryman, Jr., Edwin C. Matthias, J. C. Gibson, and Joseph H. Miller were with them on the briefs) for intervening railroad defendants.

Messrs. W. J. Hickey, John R. Barry, and Lee J. Quasey (Messrs. Duke W. Durbar, Frank W. Wachob, William T. Secor, E. R. Callister, Jr., Peter M. Lowe, Paul M. Hupp, Lowe P. Siddons, Dennis O'Rourke, and Alden T. Hill were with them on the briefs) for intervening plaintiffs.

Messrs. William E. Doyle, Robert L. Simpson, Howard B. Black, and Bert L. Overcash (Messrs. Don Eastvold, C. W. Ferguson, James B. Patten, Clarence S. Beck, and Richard H. Shaw were with them on the briefs) for intervening defendants.

Before Phillips, Chief Circuit Judge, and Knous, Chief District Judge, and Savage, District Judge

Per Curiam:

[fol. 408] This action was brought by the Denver and Rio Grande Western Railroad Company against the United States of America and the Interstate Commerce Commission under the Urgent Deficiencies Act to set aside and permanently enjoin, in part, an order of the Interstate Commerce Commission.

In August, 1949, the Rio Grande filed a complaint with the Interstate Commerce Commission against the Union Pacific and more than 200 other railroad defendants. In such complaint the Rio Grande alleged that the defendants have failed and refused to establish and maintain competitive joint rates on freight traffic with the Rio Grande: (a) via its Colorado and Utah gateways between places on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof; and (b) between Utah common points and places on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, [fol. 409] Oregon, Washington and British Columbia;

And that through routes now exist and have for many years existed for the interchange of traffic by the Rio Grande with the Union Pacific at Provo, Ogden and Salt Lake City, Utah, and with the Union Pacific and certain other defendants at Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, Colorado, as to freight traffic

(a) between points on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof; and

(b) as to freight traffic between Utah common points and points on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia;

And that the rates and charges applicable to such traffic between the points described via such through routes, with minor exceptions, are based upon the combination of the

intermediate local or other rates, which rates and charges, [fol. 410] in the aggregate, are substantially higher than the joint rates maintained by the defendants on similar competitive traffic between the same origin and destination places and territories which moves via the Union Pacific or via the Union Pacific and the other defendants, and that such combination rates are unjust, unreasonable and discriminatory, as compared with the competitive joint rates maintained by the Union Pacific or via the Union Pacific and the other defendants on like freight traffic via other competitive routes;

And that the failure and refusal of the Union Pacific and other railroad defendants to establish joint competitive through rates and charges applicable to the freight traffic between the points above described results in combination through rates which are excessive, unjust, unreasonable and constitute violations of §§ 1, 3 and 15 of the Interstate Commerce Act [1] and was and is contrary to the national transportation policy, since it deprives the public, [fol. 411] shippers and the Rio Grande of the use of reasonable and available through routes and rail facilities at just, reasonable and non-discriminatory through joint rates, which were and are necessary and desirable in the public interest.

The Rio Grande prayed that the Commission enter an order requiring the Union Pacific Railroad and the other defendant railroads to establish and maintain for the future, just, reasonable, and non-discriminatory competi- [fol. 412] tive joint rates on the freight traffic via the route of the Rio Grande through its Colorado and Utah gateways between (a) points on the Union Pacific and its connections in Utah, north of Ogden, Utah, and in Idaho, Montana, Oregon, Washington, and British Columbia, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad, Colorado, and points east thereof; and between (b) the points designated in (a); and (d) Utah common points.

[fol. 413] By the challenged order entered on January 12, 1953, the Commission granted some but not all of the

---

[1] Hereinafter called the Act.

relief sought by the Rio Grande. 287 I.C.C. 611. In this action the Rio Grande seeks to have the court enjoin, set aside, annul and remand, with appropriate directions, that part of the order which denied relief sought by the Rio Grande. Union Pacific and other railroads and other persons have intervened with permission of the Court.

Section 1, Par. (4) of the Interstate Commerce Act in part provides:

> "It shall be the duty of every common carrier * * * to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; * * *. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

[fol. 414] Section 3, Par. (4) of such Act in part provides:

> "All carriers * * * shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. * * *."

Section 13(1) of such Act in part provides:

> "That * * * any common carrier, complaining of *anything done or omitted to be done* by any common carrier subject to the provisions of this part, in contravention of the provisions thereof, may apply to

said Commission by petition, which shall briefly state the facts; whereupon a statement of the complaint thus made shall be forwarded by the Commission to such Common carrier, who shall be called upon to satisfy the complaint, or to answer the same in writing, within a reasonable time, to be specified by the Commission. If such common carrier within the time specified shall [fol. 415] make reparation for the injury alleged to have been done, the common carrier shall be relieved of liability to the complainant only for the particular violation of law thus complained of. If such carrier or carriers shall not satify the complaint within the time specified, or there shall appear to be any reasonable ground for investigating said complaint, it shall be the duty of the Commission to investigate the matters complained of in such manner and by such means as it shall deem proper.'" (Italics ours.)

Section 15(1) of such Act provides:

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, * * * the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this [fol. 416] part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum or maximum and minimum, to be charged, and what individual or joint classification, reguiation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such viola-

tion to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

At the threshhold we are confronted with a motion of the defendants to dismiss on the ground that the Rio Grande is without standing to maintain this suit. We hold that the Rio Grande has such standing. Since we so hold, by reason of our conclusion with respect to the [fol. 417] existence of the through routes, the erroneous finding of the Commission on that issue, the erroneous application to the facts by the Commission of certain provisions of the Act, and the rights of the Rio Grande under the provisions of the Act, we shall state in detail our reasons for denying such motion, after a full consideration of the merits.

I

The Merits

The Rio Grande operates approximately 2400 miles of railroad in Colorado, New Mexico and Utah. From its northern terminus at Ogden, Utah, it runs south to Salt Lake City and Provo, Utah, thence generally east to Dotsero, Colorado, where it divides, one branch going east to Denver, the other southeast to Pueblo. From Denver the line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serving territories in southern Utah, northwest New Mexico and southern Colorado are not of importance in this action.

The Rio Grande has interchange track connections and interchanges traffic with the Union Pacific at Denver, [fol. 418] Colorado, and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, and the Western Pacific at Salt Lake City. It has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, Santa Fe and the Colorado

& Southern; at Colorado Springs with the Santa Fe and the Rock Island; at Pueblo with the Santa Fe, the Colorado & Southern and the Missouri Pacific; at Walsenburg with the Colorado & Southern and at Trinidad with the Santa Fe and the Colorado & Southern.

The Union Pacific, with its leased lines, operates as a single system. From Ogden, Utah, one line of the Union Pacific extends in a southwesterly direction through Salt Lake City and Provo and thence to Los Angeles. Another line extends northwest through Utah, Idaho, Oregon, Washington and Montana, serving what is referred to as the northwest territory, or the closed door territory. From Ogden, the Union Pacific runs generally easterly through [fol. 419] Cheyenne and Denver, with eastern termini on the Missouri River at Omah and Kansas City. At various points on its line it connects and interchanges traffic with the other intervening railroads.

The Union Pacific and other intervening railroads and the Rio Grande participate in through routes and joint rates with each other and with other carriers on transcontinental and other traffic, with certain exceptions. Joint rates generally do not apply in connection with the Rio Grande on traffic originating at or destined to points in Utah, north of Ogden, and in Idaho, Montana, Oregon and part of Washington. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande to and from Ogden, the higher combination rate, consisting of the aggregate of local rates, applies.

The transcontinental traffic to and from this northwest territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather than [fol. 420] over the Rio Grande route. This is due, in part, to the refusal of Union Pacific to join with Rio Grande in establishing joint rates with respect to such traffic. The higher rates effectually close the Ogden gateway commercially and enable the Union Pacific to obtain the long haul on such traffic.

The power of the Commission to establish through routes and joint rates is limited by §15 (4) of the Act, which declares that, except as provided in § 3 of the Act,

a railroad may not be required without its consent to embrace in such route substantially less than the entire length of its railroad which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long, as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed is needed in order to provide "adequate, and more efficient or more economic, [fol. 421] transportation." It is further provided that in prescribing through routes the Commission shall, so far as is consistent with the public interest and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier which originates the traffic. The section further provides that no through routes and joint rates applicable thereto shall be established for the purpose of assisting any carrier to meet its financial needs. This section was designed to restrict the power of the Commission to establish through routes which would short haul a carrier without its consent.

Rio Grande contended at the hearing before the Commission, and contends here, that the routes over which joint rates are sought were in existence and open to traffic at combination rates, and that the Commission was not called upon to establish through routes and, therefore, limitations on its power to do so, imposed by §15 (4), are [fol. 422] not applicable and need not be considered. It urged that the principal task of the Commission was to determine whether the through rates resulting from the combination or aggregate or intermediate rates over such existing through routes are unjust, unreasonable or discriminatory, in violation of §§1 and 3 of the Act, and contrary to the national transportation policy.

The Commission recognized that the first question for its determination "is whether or not the present routes by way of the Ogden gateway constitute 'through routes' as that term is used in section 15 (3) and (4) of the Act." Only five of the ten participating members of the Commission joined in the report and order of the Commission, wherein it was first determined that through routes were not in existence over the Rio Grande in connection with

the Union Pacific through the Ogden gateway. Having reached this conclusion, the Commission proceeded upon the assumption that any order requiring the establishment [fol. 423] of such through routes and joint rates over them must be grounded on findings, as specified in § 15 (3) and (4). Thus limited in its further consideration of the case, the Commission entered its order:

> "That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegtables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kansas, to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, [fol. 424] including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

In all other material respects the relief requested by the Rio Grande was denied.

This very brief and sketchy statement of the case will suffice, since we rest our decision upon a narrow ground. We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through

routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding.

The undisputed evidence bearing upon the crucial question of existing through routes must be summarized. In [fol. 425] 1897, the Union Pacific established joint through competitive rates with the Rio Grande to and from points in the northwest area through Ogden. These rates were in effect until canceled by Union Pacific in 1906 from and to some points and in 1912 from and to remaining points. But the through routes were not closed.

Counsel for Union Pacific expressed the opinion at the hearing before the Commission, in response to interrogation by Chairman Alldredge, that the cancellation of the joint rates did not close the through routes and that shippers were free to route via the Rio Grande if they wanted to pay more.

The principal traffic witness of the Union Pacific testified at the hearing that a shipper who was willing to pay the higher combination rate had the right to specify under §15 (8) of the Act a route via the Rio Grande. It should be observed that this right exists only when through routes and through rates have been established. This witness [fol. 426] further testified that some joint through rates are now published in a Union Pacific tariff for application to shipments of sheep and goats from the northwest area via Ogden and the Rio Grande to points on the Missouri River and east thereof.

A continuous use of the Rio Grande route in the movement of traffic to and from the closed door area at through combination rates, without objection of the Union Pacific or participating railroads, is shown by the evidence, although the volume of traffic involved is comparatively small. In 1948, which was selected as a representative year, 37 carload shipments were made on through bills of lading from the northwest area to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific or its connections, but none moved to any destination east of Colorado common points. In the same year,

18 carload shipments were made west bound on through [fol. 427] bills of lading from points east and southwest over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific to destinations in the northwest area. In addition, 21 carload shipments moved on through bills of lading from various eastern points to destinations in the northwest area, which were routed over the Rio Grande and Union Pacific, were held by Rio Grande at Denver or Pueblo for change of the routing because the joint through rates were not applicable. The traffic movement to and from the northwest area over the Rio Grande through the Ogden gateway on through bills of lading and at through rates was substantially the same in years prior to 1948 and continued into 1949, until the date of the Commission hearings.

[fol. 428] From November, 1942, to August, 1945, a number of shipments were diverted under service orders issued by the Commission from the regularly used routes to the Rio Grande route. During World War II mixed trains of troops in passenger cars and of military supplies in freight cars moved from eastern and southern points on through billing over the Rio Grande via Ogden and Union Pacific to the closed door area. These trains were not routed under service orders issued by the Commission. In 1949, when the main line of the Union Pacific in Wyoming was blocked by snow, the traffic was diverted over the Rio Grande between Denver and junctions with the Union Pacific in Utah. These latter movements were made under emergency conditions and admittedly do not tend to establish an ordinary course of business between the carriers involved, but the Commission did not invoke its authority under § 15(4) of the Act to establish temporary through routes which indicates that the Commission assumed that through routes were already in existence.

[fol. 429] It is well settled that a joint rate is not essential to the existence of a through route. The rate which applies over a through route may be the aggregate of separate rates fixed independently by the several carriers participating in the through route. St. Louis-Southwestern R. Co. v. United States, 245 U.S. 136, 139; Thompson v. United

States, 343 U.S. 549, 556. In Thompson v. United States, supra, the court defines a through route as follows:

> "* * * The statutory term 'through route,' used throughout the Interstate Commerce Act, has been defined by this Court as follows:
>
> "'A "through route" is an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to destination on the line of another. Through carriage implies a "through rate." This "through rate" is not necessarily a "joint rate." It may be merely an aggregation of separate rates fixed independently by the several carriers forming the "through route"; as where the "through rate" is "the sum of the locals" on the several connecting lines or is the sum of lower rates otherwise separately established by them for through transportation. Through Routes and Through Rates, 12 I.C.C. 163, 166.'
>
> * * * * * * *
>
> [fol. 30] "In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service."

While the foregoing definition of "through route" compels us to conclude that the through routes contended for by Rio Grande were in existence, the Commission relied on the Thompson Case in reaching its decision that through routes were not in existence. But the facts in the Thompson Case are in striking contrast with the facts in this case. There, the question was whether a route from Lenora, Kansas, via Missouri Pacific to Concordia, Kansas, and thence via Burlington to Omaha was a through route. No evidence was presented that any shipment had ever been made from Lenora to Omaha via the Burlington or that the carriers had ever offered through service over that route.

In our case, through routes and joint rates were established in 1897 and the joint rates remained in effect for

some fifteen years. While the joint rates were canceled by [fol. 431] Union Pacific, nothing was ever done to close the routes and diminished traffic continued to move over the same through routes at the higher through combination rates. Moreover, joint rates were continued in effect as well as through routes in respect to the shipment of sheep and goats from the closed door area through Ogden over the Rio Grande to the Missouri River and beyond. The Union Pacific and other participating railroads have issued through bills of lading, thereby recognizing the through route status. Shipments were diverted from the Union Pacific over the Rio Grande under emergency conditions without having the Commission authorize temporary through routes, which suggest that both the Union Pacific and the Commission assumed the existence of through routes.

The Commission stated in its report and order that "The Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable." Then follows a statement that the establishment of joint competitive rates would result in such routes becoming "effective through routes, a character which they do not [fol. 432] now possess." Thus, it appears that the Commission reasoned that the closing of the routes in a commercial sense by applying the higher combination rates terminated the through routes. But, it was held to the contrary in Virginian Railway Co. v. United States, 272 U.S. 658. There, of 99 coal mines located on the line on the Virginian, 45 enjoyed through routes and joint rates to the West because of certain trackage arrangements entered into between the Virginian and the Chesapeake & Ohio. As to other complaining mines, the court said, at page 661:

> "* * * But that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive. * * *"

In discussing the attack made on the order of the Commission fixing joint non-discriminatory rates, the court stated, at page 666:

> [fol. 433] * * * The Virginian contends that the order is void because the Commission directed the establishment of through routes and joint rates without finding that they are necessary in the public interest. Such a finding is essential to the validity of an order under § 15(3). But the order here in question was not sought or made under § 15(3) and does not direct the establishment of through routes and joint rates. Through routes to the West were already in existence. And there were through rates by combination. (Citing cases.) The fact that the combination rates were excessive constituted the only obstacle to the movement."

The intervening railroads argue that Rio Grande had the burden of proving, in order to show the existence of the through routes contended for, an actual movement of traffic between every point in the northwest area and every point in the United States on every railroad east of a north and south line drawn roughly along the eastern boundary of Colorado. They point out that there are some 2900 railroad stations in the northwest area and some 30,000 stations in the area east of Colorado and that there are undoubtedly hundreds of thousands of through routes available in the published tariffs between the thousands of stations in the involved area of which Rio Grande claims to be a part. This question was not considered by the Commission, and we [fol. 434] do not reach it here. In our view, the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific in the northwest area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways and beyond. Since the case must be remanded to the Commission for a new hearing, we believe that the Commission should initially pass on the question of whether the burden is on the Rio Grande to show some actual movement of traffic on through billing over each of the possible routes between the thousands of stations in the involved areas. It might be mentioned in passing that the court in

the Virginia Railway Company Case concluded that "through routes to the west are already in existence," without apparent direct proof of transportation of freight from all points on the Virginian to all points in the west via the Chesapeake & Ohio.

The contention of the intervening railroads that we are not authorized to enter an order remanding the case to the Commission with appropriate instructions is refuted by the recent order entered by the Supreme Court in Secretary of Agriculture v. United States, 347 U. S. 645.

[fol. 435]

II

The Motion to Dismiss

We have concluded that under the evidence before the Commission the existence of through routes via the Rio Grande was clearly established, as a matter of law, and that the Commission erred, as a matter of law, in not finding the existence of such through routes.

We have further concluded that the Commission, in determining whether the Union Pacific Railroad and the other defendant railroads should be required to establish and maintain for the future just, reasonable, and non-discriminatory competitive joint rates, as prayed for by the Rio Grande, erred as a matter of law in failing to apply the provisions of § 1(4) and § 3(4), rather than the provisions of § 15(3).

The duties and powers of the Commission, with respect to the relief sought by the Rio Grande, are clearly provided in § 1(4) and § 3(4) of the Act. The right of the Rio Grande to file its complant with the Commission and seek the relief therein prayed for is clearly given by § 13 of the Act. [fol. 436] Under the Act, a carrier is as fully entitled to non-discriminatory treatment as a shipper. See Chicago Junction Case, 264 U. S. 258, 267, which cites with approval Pennsylvania Co. v. United States, 236 U. S. 351, where the complainant sought relief under § 3 of the Act.

The fact that the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief. See Rochester Telephone Corp. v. United States, 307 U. S. 125, 135-143; Mitchell v. United States, 313 U. S. 80, 92, 93.

The negative portion of the order required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had, and, if considered solely from those points of view, the order caused no pecuniary loss to the Rio Grande.

If the Rio Grande, in the proceding before the Commission, established its right to the relief prayed for, it was entitled to an order establishing just and reasonable and non-discriminatory through rates and equitable divisions [fol. 437] thereof, and a removal of the discrimination resulting from the existing through rates, which were a combination of intermediate or local rates, and the denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established.

The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defendants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to have the Commission apply the provisions of § 1(4) and § 3(4) of the Act.

If the Rio Grande, on its showing before the Commission and an application of the provisions of § 1(4) and § 3(4), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the Rio Grande of [fol. 438] a pecuniary gain to which it was entitled. This, because the granting of the relief undoubtedly would have resulted in a large increase of traffic via the Rio Grande and in its operating income, and, no doubt, in its net earnings.[2] More succinctly stated, if the Rio Grande, under the facts established by the evidence before the Commission, and the application of the provisions of § 1(4) and § 3(4) of the Act, was entitled to an order requiring the defendant railroads to establish such joint rates, the denial of that right resulted in pecuniary injury to the Rio Grande.

---

[2] The Union Pacific asserts that the granting of the relief prayed for would result in a large loss of traffic and a large reduction of earnings by the Union Pacific.

Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order.[3]

[fol. 439] While it is our view that the denial of the relief here challenged will result in pecuniary injury to the Rio Grande, we do not think such injury is essential to the right to judicial review. In Mitchell v. United States, 313 U. S. 80, Mitchell brought a proceeding before the Commission in which he alleged that the Chicago, Rock Island and Pacific Railway Company, in its purported compliance with an Arkansas statute requiring segregation of the races during transportation did not provide as desirable accommodations for colored as for white passengers traveling in Arkansas over its line, which resulted in unreasonable charges and unjust discrimination against and undue prejudice to colored passengers in violation of §§ 1, 2, 3, and 13 of the Act and the Fourteenth Amendment. The only relief sought was the removal and avoidance in the future of the alleged discrimination and prejudice in the furnishing of accommodations. The Commission, while holding that the matters complained of were prohibited by § 3(1) of the Act, denied the relief prayed for. Mitchell then brought an ac- [fol. 440] tion in the District Court of the United States for the Northern District of Illinois to set aside the Commission's order. In passing on whether Mitchell had standing to maintain the action, the Supreme Court said, at pages 92 and 93:

> "*First.* The Commission challenges the standing of appellant to bring this suit. We find the objection untenable. This question does not touch the merits of the suit, but merely the authority of the District Court to entertain it. The fact that the Commission's order was one of dismissal of appellant's complaint did not foreclose the right of review. Appellant was an aggrieved party and the negative form of the order

[3] The Chicago Junction Case, 264 U. S. 258, 266, 267.

is not controlling. Rochester Telephone Corp. v. United States, 307 U. S. 125, 143.

"Nor is it determinative that it does not appear that appellant intends to make a similar railroad journey. He is an American citizen free to travel, and he is entitled to go by this particular route whenever he choose to take it and in that event to have facilities for his journey without any discrimination against him which the Interstate Commerce Act forbids. He presents the question whether the Act does forbid the conduct of which he complains.

[fol. 441] "The question of appellant's right to seek review of the Commission's order thus involves the primary question of administrative authority, that is, whether appellant took an appropriate course in seeking a ruling of the Commission. The established function of the Commission gives the answer. The determination whether a discrimination by an interstate carrier is unjust and unlawful necessitates an inquiry into particular facts and the practice of the carrier in a particular relation, and this underlying inquiry is precisely that which the Commission is authorized to make. As to the duty to seek a determination by the Commission in such a case, we do not see that a passenger would be in any better situation than a shipper. Texas & Pacific Ry. Co. v. Abilene Cotton Oil Co., 204 U.S. 426; Robinson v. Baltimore & Ohio R. Co., 222 U.S. 506; Mitchell Coal Co. v. Pennsylvania R. Co., 230 U.S. 247; Morrisdale Coal Co. v. Pennsylvania R. Co., 230 U.S. 304; General American Tank Car Corp. v. El Dorado Terminal Co., 308 U.S. 422.

"The District Court had jurisdiction to review the action of the Commission and the question on that review was whether that action was in accordance with the applicable law."

[fol. 442] There, Mitchell suffered no pecuniary injury, but the court had no difficulty in concluding that he had a right to maintain the proceeding before the Commission, that he was an aggrieved party, and that he was entitled to judicial review. See, also, Henderson v. United States, 339 U.S. 816, 823.

Here, the Rio Grande sought an order compelling the defendant railroads to perform the duty of establishing just and reasonable joint rates, fares, and charges over through routes, and it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate.

We think the cases relied on by the defendants are distinguishable.

Edward Hines Trustees v. United States, 263 U.S. 143, did hold that in order for the plaintiffs to maintain that action it was necessary for them to show that the order subjected them "to legal injury, actual or threatened," but the complainants there sought the continuation of a so-[fol. 443] called penalty charge of $10 per car per day on lumber held at reconsignment points. The court said that the plaintiffs had no absolute right to require carriers to impose penalty charges and that plaintiffs' right was "limited to protection against unjust discrimination." Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines. In the Chicago Junction Case, supra, the court distinguished between an incident of more effective competition and injury inflicted by denying equality of treatment. Just, reasonable, and non-discriminatory joint rates is the equality of treatment which the Rio Grande here seeks.

In Alexander Sprunt & Son, Inc. v. United States, 281 U.S. 249, the Interstate Commerce Commission entered an order directed to the railroads operating in Oklahoma, Arkansas, Texas, and Louisiana, which required them to remove in a prescribed manner, undue prejudice and pref-[fol. 444] erence caused by their rates on cotton shipped from interior points to Houston and other ports on the Gulf of Mexico. Two actions were brought, one by Sprunt & Son and one by the Texas & New Orleans Railroad Company and other carriers, to enjoin the enforcement of the order. Upon final hearing, the District Court sustained the validity of the order and entered a decree dismissing the bills. None of the carriers appealed from the decree. Sprunt & Son appealed. The court held that the issue of

undue prejudice and unjust preference which had been passed upon by the Commission had become moot, because most of the carriers never sought to annul the order and that the carriers who joined in the suit to set it aside had voluntarily severed themselves from the shipper, who objected to it. With respect to the right of Sprunt & Son to maintain the action, the court at pages 254, 255, said:

> "* * * We are of opinion that appellants have no standing, in their own right, to make this attack. In so far as the order directs elimination of the rate differential previously existing, it worsened the economic position of the appellants. It deprived them of an advantage over other competitors of almost 3.5 cents [fol. 445] per hundred pounds. The enjoyment of this advantage gave them a distinct interest in the proceeding before the Commission under § 3 of the Interstate Commerce Act. For, their competitive advantage was threatened. Having this interest, they were entitled to intervene in that administrative proceeding. * * * But that interest alone did not give them the right to maintain an independent suit, to vacate and set aside the order. Such a suit can be brought by a shipper only where *a right of his own is alleged to have been violated by the order.* * * * In the case at bar, the appellants have no independent right which is violated by the order to cease and desist. *They are entitled as shippers only to reasonable service at reasonable price and without unjust discrimination. If such service and rates are accorded them, they cannot complain of the rate or practice enjoyed by their competitors or of the retraction of a competitive advantage to which they are not otherwise entitled.* The advantage which the appellants enjoyed under the former tariff was merely an incident of, and hence was dependent upon, the right, if any, of the carriers to maintain that tariff in force and their continuing desire to do so." (Italics ours.)

[fol. 446] Here, again, the court recognized that mere deprivation of a competitive advantage was not enough and that they were only entitled to reasonable service at

reasonable rates and without unjust discrimination. Here, the very thing the Rio Grande seeks is not a mere competitive advantage, but the establishment of just and reasonable through rates and the removal of unjust discrimination, which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings.

In Pittsburgh & West Virginia Railway Co. v. United States, 281 U.S. 479, the Commission entered an order authorizing the New York Central Railroad and other rail carriers to join in establishing a union passenger station at Cleveland, through a subsidiary, Cleveland Union Terminals Company. The Wheeling & Lake Erie Railway Company had for some years owned and maintained an independent passenger station at Ontario Street, in Cleveland, in the line of the easterly approach to the proposed [fol. 447] union terminal. It was apparent that either ownership of or an easement in the Wheeling site would be indispensable in order to provide the necessary eastern approach to the terminal. Wheeling consented to sell its site and become a tenant in the new terminal. Contracts were made embodying this plan, subject to approval of the Interstate Commerce Commission. Thereupon, Wheeling filed before the Commission two applications for certificates of public convenience and necessity, one permitting it to abandon its Ontario Street station, and the other authorizing it to use the facilities of the union terminal, and pending its completion to use the facilities of the station of the Erie Railroad and the tracks of the Big Four.[4] Pittsburgh & West Virginia Railway, a minority stockholder and connecting carrier of the Wheeling, intervened in opposition to the applications. It opposed them on the ground that the Ontario Street station was ample for both the present and future needs of the Wheeling and that the contracts were disadvantageous to the Wheeling in certain particulars. The Commission found the [fol. 448] public convenience and necessity would be served by the granting of both applications and accordingly issued its certificates as prayed for. Pittsburgh & West Virginia

---

[4] Cleveland, Cincinnati, Chicago & St. Louis Ry. Co.

Railway then brought an action in the District Court of the United States for the Northern District of Ohio to set aside and annul the order of the Commission. The Supreme Court held that the order did not affect Pittsburgh & West Virginia as a carrier and that the claim that the order threatened Wheeling's financial stability and Pittsburgh & West Virginia's financial interest as a minority stockholder was not sufficient to show a threat of the legal injury necessary to entitle it to bring a suit to set aside the order. The court, at page 487, said: "* * * The injury feared is the indirect harm which may result to every stockholder from harm to the corporation," and that the interest of Pittsburgh & West Virginia was insufficient to give it standing to bring the action.

[fol. 449] In Moffat Tunnel League v. United States, 289 U.S. 113, the Commission had entered an order authorizing the Denver and Rio Grande Western Railroad Company by stock purchase to acquire control of the Denver and Salt Lake Railway Company, called the Moffat Road. In the proceeding before the Commission the Moffat Tunnel Improvement District and the Public Utilities Commission of Colorado had intervened and they brought an action in the District Court of the United States for the District of Delaware to set aside the Commission's order. In holding that the plaintiffs did not have standing to maintain the suit, the Supreme Court said, at page 119:

> "* * * the complaint must show that plaintiff has, or represents others having, a legal right or interest that will be injuriously affected by the order. Edward Hines Trustees v. United States, 263 U.S. 143, 148. Sprunt & Son v. United States, 281 U.S. 249, 254. Pittsburgh & W. Va. Ry. v. United States, 281 U.S. 479, 486. Plaintiffs have failed to show that they are so qualified. Their interest is not a legal one. It is no more than a sentiment, such as may be entertained by members of the public in the territory west of [fol. 450] Craig, that the improvement of transportation facilities authorized by the Commission will lessen the possibility of construction by a rival of the Rio Grande of an extension of the Moffat to Utah common points."

The Pittsburgh & West Virginia Railway case and the Moffat Tunnel League case are obviously distinguishable from the instant case.

With respect to cases relied on by the defendants, the statement by the court in Youngstown Sheet & Tube Co. v. United States, 295 U.S. 476, is apposite. "* * * The authorities cited by the appellees are to be distinguished on the ground that the plaintiffs either had no legal interest or capacity to sue or failed to allege that the rates under attack were *unreasonable or discriminated against them.*" (Italics ours.) Here, the existing rates are attacked by the Rio Grande on the ground that they are unjust, unreasonable, and discriminatory as against the Rio Grande and shippers on its line, deny them equality of treatment, and cause injury to them.

[fol. 451] It is urged that to maintain the action, equitable grounds for relief must be alleged. But, it should be remembered that in the Rochester Telephone Case, the court, at page 142, said:

> "* * * An action before the Interstate Commerce Commission is akin to an inclusive equity suit in which all relevant claims are adjusted. An order of the Commission dismissing a complaint on the merits and maintaining the *status quo* is an exercise of administrative function, no more and no less, than an order directing some change in status. The nature of the issues foreclosed by the Commission's action and the nature of the issues left open, so far as the reviewing power of courts is concerned, are the same. Refusal to change an existing situation may, of course, itself be a factor in the Commission's allowable exercise of discretion. In the application of relevant canons of judicial review an order of the Commission directing the adoption of a practice might raise considerations absent from a situation where the Commission merely allowed such a practice to continue. But this bears on the disposition of a case and should not control jurisdiction. * * *"

Moreover, in overruling Procter & Gamble v. United States, 225 U.S. 282, the court, at page 136, in the Rochester

[fol. 452] Telephone Case, supra, observed that the shipper in that case "was within the express language of Congress authorizing suits 'to enjoin, set aside, annul, * * * any order of the Interstate Commerce Commission.'"

In the instant case, the Rio Grande, in its complaint, alleges that it was without adequate remedy at law. Clearly, the Rio Grande can maintain no other action which will give it adequate relief or prevent injury to it.

Accordingly, we conclude that the Rio Grande had standing to maintain the action.

The order in so far as it denied relief to the Rio Grande will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with this opinion.

[fol. 453] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT

[Titled omitted]

MOTION OF INTERVENING DEFENDANTS FOR A NEW TRIAL OR REARGUMENT AND RECONSIDERATION—Filed February 10, 1955

Intervening defendants, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company; and intervening defendants, Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, move the Court, pursuant to Federal Rules of Civil Procedure, 28 U.S.C.A., Rule 59, to grant a new trial in the above-entitled cause, or in the alternative to permit reargument, and to reconsider this cause, for the reason that the opinion filed herein by the Court January

13, 1955 contains certain erroneous statements of fact which are vital to the conclusions reached, contains numerous errors of law, and also errs in failing to dismiss the complaints.

[fol. 454] More specifically, these Movants respectfully urge in support of this motion that the opinion is erroneous in the following particulars:

I

The Court Erred in Holding that the Rio Grande has Standing to Maintain this Suit and in Failing and Refusing to Grant the Motion to Dismiss on the Ground that the Rio Grande Lacks such Standing

Counsel for these Movants have diligently searched the Court's opinion, but in vain, for the precise reason why it concludes that the Rio Grande has standing to maintain this suit. Under the consistent rulings of the numerous decisions of the Supreme Court cited in Volume I of the intervening railroads' brief, the question whether the Commission's order is valid or invalid can be of no concern to the Rio Grande and its complaint must be dismissed unless it clearly shows or discloses a legal or other right that entitles the Rio Grande to this Court's injunctive protection against the Commission's order.

We now discuss holdings, conclusions or statements in the opinion that the Court seems to rely upon in reaching its conclusion, but they do not, either individually or collectively, specify or disclose precisely or understandably any legal or other right of the Rio Grande held by the Supreme Court to be essential to enable a complainant to maintain a suit to enjoin and annul an order of the Commission:

(1) Beginning at page 29, under the heading "The Motion to Dismiss", the opinion states that the evidence before the Commission clearly established the existence of through routes via the Rio Grande "as a matter of law" and that the Commission "erred, as a matter of law, in not finding the existence of such through routes." The opinion next states that the Commission, in determining whether it should [fol. 455] require "just, reasonable, and non-discriminatory competitive joint rates, as prayed for by the Rio Grande,

erred as a matter of law in failing to apply the provisions of § 1(4) and §3(4), rather than the provisions of § 15(3)." The opinion then says that the Commission's duties and powers, "with respect to the relief sought by the Rio Grande, are clearly provided in § 1(4) and § 3(4) of the Act"; that the Rio Grande's right to file its complaint with the Commission and "seek the relief therein prayed for is clearly given by § 13 of the Act"; that "a carrier is as fully entitled to non-discriminatory treatment as a shipper", and that the fact that the portion of the order assailed by the Rio Grande's suit in this Court was negative "no longer affords a ground for the denial of judicial relief".

None of the statutory provisions or other matters so far mentioned in the opinion has the slightest bearing upon the question whether the Rio Grande has standing to maintain this suit. While Section 3(4) of the Act entitles the Rio Grande to nondiscriminatory treatment by other railroads and it may complain to the Commission against alleged discriminatory treatment, the opinion thus far:

(a) errs in stating that the Rio Grande has a right to complain to the Commission under Section 1(4) that its own combination rates are unreasonable and discriminatory and to demand "competitive joint rates", for those rights belong to the public and to shippers who pay the freight rates, and not to carriers. Being a carrier, the Rio Grande is under the statutory duty to establish reasonable and non-discriminatory rates, and if its rates are unreasonable or discriminatory, it is free to correct them upon its own initiative, but it may not be heard to complain against itself or to ask the Commission to order it to do what the law requires it to do;

[fol. 456] (b) errs in holding that the Commission erred in failing to apply the provisions of Section 1(4) and Section 3(4), rather than the provisions of Section 15(3), because, first, its report clearly shows that the Commission *did* apply the provisions of Section 1(4) and Section 3(4), for at pages 659-660 the Commission expressly found in its conclusion number "2" that the combination rates via the Rio Grande are unjust and unreasonable, thus applying its authority

under Section 1(4), and then it ordered establishment of rates it found reasonable, and in the last full paragraph on page 658 the report, applying the standards and provisions of Section 3(4) of the Act, the Commission finds that the evidence of record will not support a finding that carriers participating in Union Pacific routes discriminate against the Rio Grande by refusing to make joint rates with it;

(c) errs in ignoring the fact that the Commission has no power under Section 1(4) or Section 3(4) to order the equal joint rates demanded by the Rio Grande, its only power under those sections being to require establishment of reasonable rates and to require that other carriers "cease and desist" practicing discrimination against the Rio Grande;

(d) errs in ignoring the fact that the only power the Commission has to require the joint rates prayed for by the Rio Grande is conferred by Section 15(3) upon finding such rates in the "public interest", and that without applying Section 15(3) the Commission would have been powerless to require the joint rates it did order, even if it had, as the Court says it should have, found and held that through routes via the Rio Grande were already in existence; and

[fol. 457] (e) errs in holding or implying that the Rio Grande has standing to maintain this suit because it has a right to complain to the Commission of discriminatory treatment by other railroads, or because "the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief".

Contrary to the apparent view of this Court, neither the right of the Rio Grande to complain to the Commission nor the negative character of the Commission's failure to grant the Rio Grande's full demands has any bearing on the question whether the Rio Grande has necessary legal interest or standing to maintain this suit, *Edward Hines Trustees* v. *U. S.*, 263 U.S. 143. Since the Commission is the exclusive tribunal to determine whether the Rio Grande's rights under the Act have been violated, its determination

upon substantial evidence in this case that its rights have *not* been violated clearly is not, as the Court seems to think, a denial of the Rio Grande's statutory rights, but instead is an adjudication or determination that the Rio Grande has failed to establish by the evidence that its rights under the Act are being violated. No provision of the Act entitles the Rio Grande to any of the joint rates it demanded, for that is a right of shippers, if they can prove that joint rates are required in "the public interest". The Rio Grande's right under the Act to non-discriminatory treatment is most certainly not a peremptory right to an order requiring that the alleged discrimination be stopped, but is merely a right to prove, if it could, to the Commission that the treatment of which it complained was in fact discriminatory within the meaning of the Act, and, if the Commission believed its evidence proved the alleged discrimination, to an order requiring that the guilty parties "cease and desist" practicing such discrimination as the Commission might find from the evidence. The Commission having found at page 658 of its report that the evidence [fol. 458] failed to prove such discrimination (except at points on the Bamberger Railroad which the complaint did not allege), the Rio Grande's rights under the Act were exhausted and the Commission accordingly failing or refusing to grant the "relief" demanded by the Rio Grande is not a denial of any right of the Rio Grande but merely a refusal to grant something to which the evidence failed to prove the Rio Grande's claim that it had a right to receive.

The Commission did grant the joint rates on some of the traffic because it believed the evidence of shippers proved that joint rates on that part of the traffic were necessary "in the public interest", but not because the Rio Grande had any right to demand joint rates.

If the bare right accorded by the Act to file the complaint with the Commission gives the Rio Grande standing to maintain this suit, then the Supreme Court has been wrong in all of its decisions holding that the fact that one who seeks in court to enjoin and annul an order was a party to the proceeding before the Commission does not give such party the standing or right to maintain its suit in court (see cases

cited and quoted at pages 28-29, Volume I of brief for the intervening railroads).

At page 32, the opinion states:

> "Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order."

The Chicago Junction Case, 264 U.S. 258, is cited, presumably as authority for the statement just quoted. But, insofar as the case at bar is concerned, there are several errors and oversights which render the statement and the citation erroneous and inapplicable.

First, the quoted statement erroneously ignores the fact that the Act gives no right to the Rio Grande to complain that its own rates are unreasonable or discriminatory, or [fol. 459] to an order requiring joint rates; that its only right is to treatment by other carriers which does not discriminate, in violation of Section 3(4), and whether that right is being violated is for exclusive determination by the Commission upon evidence duly submitted.

Second, the Commission's exclusive administrative power to make such determination upon the evidence necessarily includes the power to decide against a complainant if, in the Commission's judgment, the evidence does not support and sustain the complaint, regardless of whether the decision results in "pecuniary injury" or "pecuniary gain" to the complainant.

Third, the Commission having determined upon the evidence that the Rio Grande is not suffering discrimination in violation of Section 3(4), and having found upon the evidence that joint rates are necessary in the public interest only to the extent required by the order, the rights of the Rio Grande and "the public" have not been denied, but have been adjudicated and fully satisfied in accordance with the evidence of record as evaluated by the Commission in exercise of its administrative judgment and discretion.

Fourth, an order, supported by evidence, refusing to require joint rates for the "pecuniary gain" of the Rio

Grande when it has no statutory or other legal right to joint rates, or for shippers' "pecuniary gain" where the evidence fails to show the joint rates are "in the public interest", is not an order denying a right given by the Act, or causing "pecuniary injury" of the kind which entitles the Rio Grande or shippers to judicial review. The Court's theory seems to be that the Rio Grande has standing to maintain its suit on the ground that the order inflicts "pecuniary injury" upon the Rio Grande because it grants only a part of its demand for "pecuniary gain", or, in other words, the failure to grant complete "pecuniary gain" is unlawful infliction of a "pecuniary injury", which the Court holds to be legal injury because the Act gives the Rio Grande a right to complain against discriminatory treatment. It is certain that the fact that the Commission [fol. 460] failed to grant the Rio Grande complete "pecuniary gain" affords no possible standing to maintain its suit, especially since, as the Rio Grande itself admits in its argument based on cases cited at page 111 of its brief in this case, neither the Rio Grande nor any other carrier has an absolute right even to "traffic which terminates or originates" on its line, to say nothing of the Rio Grande's assertion here of a right to have traffic it neither originates nor terminates diverted for a "bridge" haul over its longer line so that it can enjoy "pecuniary gain" at the pecuniary *loss* of the Union Pacific. All of the numerous cases cited at pages 29-40 of intervening railroads' brief, Volume I, hold that a party has no standing to maintain a suit to enjoin an order of the Commission without a clear showing that the order threatens legal injury or to deprive such party of something to which it is legally entitled. As the Rio Grande correctly admits it has no legal right of its own to divert traffic for a "bridge" haul over its line for "pecuniary gain" or any other purpose, its suit should be dismissed.

Fifth, the decision in the *Chicago Junction Case* lends no support whatever for the statement in the last paragraph of page 32 of the opinion. The legal right and standing of the complaining railroads to maintain the suit in that case was sustained by the Supreme Court—*not* because the order *denied* them "pecuniary gain", but, as stated at page

266, though apparently ignored in this Court's opinion, plaintiffs there showed that because of the order:

> "A large volume of traffic has been diverted from their lines to those of the New York Central. The diversion of traffic has already subjected the plaintiffs to irreparable injury. The loss sustained exceeds $10,000,000. Continued control by the New York Central will subject them to an annual loss in net earnings of approximately that amount."

While the Court said at page 267, *if*, as *suggested* in a prior decision, "a legal interest exists where carriers' revenues may be affected, there is clearly such an interest [fol. 461] here", and that, under the Act, carriers are as fully entitled as any shipper to "equality of treatment", it is indisputable that standing to maintain the suit was sustained by the Court because the order inflicted a *loss* of $10,000,000 a year upon the plaintiffs, which the Court held to be "irreparable injury", saying:

> "This loss is not the incident of more effective competition. * * * It is injury inflicted by denying to the plaintiffs equality of treatment."

Here, the Commission has found that the evidence fails to prove that the Rio Grande is denied "equality of treatment" and the order inflicts no *loss* upon the Rio Grande. Indeed, as stated in the intervening railroads' brief, Volume I, page 14, the order grants the Rio Grande's demands to "pecuniary gain" to the extent of requiring joint rates on the articles named therein, which gives the Rio Grande the opportunity to divert to its line some 50,000 carloads annually of traffic it never had, producing revenue of some $15,000,000 annually to the Union Pacific.

Although the Court said in the *Chicago Junction Case* at page 267 that "The plaintiffs may challenge the order because they are parties to it", it may not be assumed that their standing to sue would have been sustained if the order had merely denied plaintiffs a "pecuniary gain" and had not inflicted irreparable *loss* and legal injury upon them. Three Justices (Sutherland, McReynolds and Sanford) dissented from the majority opinion written by

Justice Brandeis, March 3, 1924, in that case, and it was Justice Brandeis who, less than four months earlier, November 12, 1923, wrote the unanimous decision in the *Edward Hines Case*, and who also wrote the unanimous decisions, April 14, 1930, in the *Sprunt Case*, and May 19, 1930, in the *Pittsburgh & W. Virginia Case*, all holding expressly that the fact that one is a party to a proceeding before the Commission gives him no right or standing to maintain a suit to enjoin the order made in such proceeding, and that such suit cannot be maintained in the absence of threatened or actual legal injury. In fact, the *Chicago* [fol. 462] *Junction* decision is the only one we find which says a party may challenge an order in Court because he is a party to the order, and the statement in that case was clearly *dictum* for the opinion shows that the order caused great and irreparable loss and inflicted legal injury more than sufficient to maintain the suit. In all other decisions on the point the Supreme Court holds that whether one who sues to enjoin an order was a party to the proceeding before the Commission has no bearing on his standing to maintain suit to enjoin the order. Therefore, the *Chicago Junction Case*, being contrary to all other decisions of the Supreme Court, is not the law on that point, and this Court erred in relying upon it to sustain the Rio Grande's right to maintain this suit.

(2) Beginning at page 30, the opinion continues the confusing and inconclusive speculation with respect to the Rio Grande's rights under the Act. The opinion says that *if*, before the Commission, the Rio Grande established its rights to the relief prayed, it was entitled to an order establishing just and reasonable and non-discriminatory through rates and that "denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established"; that the Rio Grande was entitled, as a matter of law, to have the Commission apply the provisions of Section 1(4) and Section 3(4) of the Act in determining whether the defendant railroads should be required to establish the competitive joint rates demanded by the Rio Grande; and again, *if* on the Rio Grande's showing before the Commission and application of Section 1(4) and Section 3(4), the Rio Grande was entitled to an order establishing such joint rates, then the denial of such order

"deprived the Rio Grande of a pecuniary gain to which it was entitled" because the granting of the joint rates would have resulted in a large increase in the Rio Grande's traffic and income; and again, *if*, under the facts established by the evidence and the application of Sections 1(4) and [fol. 463] 3(4) of the Act, the Rio Grande was entitled to an order requiring such joint rates, then the denial of that right resulted in pecuniary injury to the Rio Grande; and yet again,

> "Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order."

All of the foregoing from the opinion completely ignores and gives no effect whatever to the fact that the Commission has found that the evidence failed to prove that discrimination was being practiced against the Rio Grande, and failed to prove that joint rates were necessary in the public interest except upon the commodities for which the order requires them, and the Court also erroneously assumes that Section 1(4) and Section 3(4) confer power on the Commission to require establishment of joint rates. This part of the opinion goes extremely far toward holding that, upon the exercise of its right to complain to the Commission of discrimination and to submit such evidence as it had in support of its complaint, the Rio Grande had a right under the Act to demand equal joint rates, and that the Commission had no alternative but to find that the alleged discrimination was being practiced and to issue an order granting the joint rates demanded by the Rio Grande. The Court has misled itself because of its obvious disagreement with the Commission's refusal, in the exercise of its exclusive administrative judgment and discretion, to grant the Rio Grande's full demands for joint rates on all commodities so that it could reap "pecuniary gain" and increased revenues in the fullest possible measure. At page 37 of the opinion, in an apparent effort to establish a right

entitling the Rio Grande to maintain its suit, the Court makes its own finding that:

> "Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines."

This is a plain usurpation by the Court of the Commission's exclusive administrative authority to weigh the evi- [fol. 464] dence and make findings of fact from it, and the Court would make its usurpation binding and effective upon the Commission by "remanding" the case to the Commission for further proceedings "in conformity with this opinion", if the "remand" were within the Court's authority. In other words, the Court would compel adoption of its own finding of discrimination against the Rio Grande despite the Commission's finding to the contrary. Of course, the Commission may not so easily be reduced to the function of "rubber-stamping" claims and demands of litigants before it, nor may the exclusiveness of its function to weigh the evidence and decide upon it, or finality of its findings and orders based upon substantial evidence be so easily thwarted or its administrative functions invaded, usurped or directed by a court, for the Supreme Court holds that the courts are forbidden to "usurp merely administrative functions", even if they do disagree with the Commission's findings of fact or the wisdom of the order, *Interstate Comm. Comm.* v. *Ill. Cent. R. R.*, 215 U.S. 452, 470. The Court clearly exceeded its authority in attempting to make the administrative finding of discrimination against the Rio Grande, and then relying upon that finding in sustaining the Rio Grande's right to maintain its suit.

If, as the Rio Grande argues at page 111 of its original brief in this Court, *neither the Union Pacific nor any other railroad has* a legal right even "to the traffic which terminates or originates in the territory" it serves (citing several cases), *afortiori*, the Rio Grande can claim no semblance of a legal right to an order granting its demands for joint rates for the purpose of enhancing its financial position by

diverting traffic from Union Pacific routes for a "bridge" haul over its line, nor may the Court sustain the Rio Grande's standing to maintain this suit upon the ground that it has a right to "pecuniary gain" by diversion of traffic from Union Pacific routes.

[fol. 465] It is fundamental that a showing of threatened or actual "legal injury" resulting from the order is essential to the right to judicial review, whether the injury is financial loss or invasion of a legal right without financial loss. The Rio Grande's complaint and those of intervening plaintiffs relied upon their allegations that the Commission's order affects their "pecuniary interest", and we have argued that denial of part of the Rio Grande's demand to enrich itself by obtaining a "pecuniary gain" at the expense of the Union Pacific is not an "injury" at all, and most certainly is not a legal injury or denial of any other element of legal or equitable right for protection of which the Rio Grande may sue to enjoin and annul the Commission's refusal to grant its full demands for "pecuniary gain".

One decision of the Supreme Court should furnish sufficient enlightenment on the point. In *Alabama Power Co. v. Ickes, et al.*, 302 U. S. 464, the Power Company sued to enjoin the Federal Administrator of Public Works from making loans and grants under a federal statute to certain municipalities for construction of electricity distribution systems, the competition of which the Power Company alleged would result in great and destructive loss and injury to its business of producing, distributing and selling electricity. The Court held that the Power Company had no standing to maintain its suit, saying at page 478:

> "Unless a different conclusion is required from the mere fact that petitioner will sustain financial loss by reason of the lawful competition which will result from the use by the municipalities of the proposed loans and grants, it is clear that petitioner has no such interest and will sustain no such legal injury as enables it to maintain the present suits."

After making it clear that to maintain a suit for an injunction, a party must show that the thing complained of

threatens or causes him "direct injury" in a legal sense, meaning "a wrong which directly results in the violation of a legal right", the Court undertook to define or describe, [fol. 466] at page 479, the injury essential to the maintenance of a suit for injunctional protection, as follows:

> " 'An injury, legally speaking, consists of a wrong done to a person, or, in other words, a violation of his right. It is an ancient maxim, that a damage to one, without an injury in this sense, (*damnum absque injuria,*) does not lay the foundation of an action; because, if the act complained of does not violate any of his legal rights, it is obvious, that he has no cause to complain . . . Want of right and want of remedy are justly said to be reciprocal. Where therefore there has been a violation of a right, the person injured is entitled to an action.' *Parker* v. *Griswold*, 17 Conn. 288, 302-303. The converse is equally true, that where, although there is damage, there is no violation of a right no action can be maintained."

Holding that, since the Power Company had no legal or equitable right to be free of competition of other electric power plants, it had no standing to maintain its suit to prevent such competition even "if its business be curtailed or destroyed" by such competition. Later on, the Court held that a "legal interest" which qualifies a complainant to sue—

> " . . . is a pecuniary interest in preventing the defendant from doing an act where the injury alleged flows from its quality and character as a breach of some legal or equitable duty."

and that—

> "The only injury of which he can be heard in a judicial tribunal to complain is the invasion of some legal or equitable right."

Since the Rio Grande admits, as it must, upon decisions cited at page 111 of its brief that it has no legal right to the traffic it seeks to divert to its line for a "pecuniary gain", and, indeed, that no carrier has an absolute right even "to

the traffic which terminates or originates" on its line, it clearly has no standing to maintain suit to enjoin the Commission's refusal to grant its full demands even if denial of its desire for a "pecuniary gain" be treated as a "pecuniary injury", for as held in the case just discussed and in numerous other decisions cited in the railroads' brief, Volume I, and supplemental brief, it would not be the result of an "invasion of some legal or equitable right" of the Rio Grande.

[fol. 467] (3) After all of its discussion of the Rio Grande's alleged rights under the Act and its exhaustive effort to prove that the Commission's failure to grant the Rio Grande's full demands for "pecuniary gain", is a "pecuniary injury" giving the Rio Grande standing to maintain its suit, the Court seems to recognize the "circular" character and futility of its reasoning and then abruptly abandons that effort, saying at page 33:

> "* * * we do not think such injury is essential to the right to judicial review."

The opinion then cites *Mitchell v. United States*, 313 U. S. 80, and after lengthy quotation of the decision in that case, the opinion states that Mitchell "suffered no pecuniary injury," but that the Supreme Court:

> "* * * had no difficulty in concluding that he had a right to maintain the proceeding before the Commission, that he was an aggrieved party, and that he was entitled to judicial review."

The opinion then apparently attempts to fit the case at bar into the facts of the *Mitchell Case*. At page 36 it states:

> "Here, the Rio Grande sought an order compelling the defendant railroads to perform the duty of establishing just and reasonable joint rates, fares, and charges over through routes, and it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate."

The statement is patently erroneous because of the erroneous assumptions and implications which it involves:

First, the Act gives the Rio Grande no right to an order compelling other railroads to establish "just and reasonable joint rates, fares, and charges over through routes", for, as we have repeatedly said, that is a right belonging to shippers upon proof that joint rates are necessary "in the public interest";

Second, there is no "statutory mandate" in the Act requiring the Commission to order other railroads to establish any joint rates with the Rio Grande or any other railroad, unless and until the Commission finds, upon substan- [fol. 468] tial evidence, that such joint rates are "in the public interest";

Third, the statement assumes that, upon the Rio Grande's demand for joint rates, the Commission had no alternative but to issue an order requiring the joint rates, regardless of whether the evidence established the prerequisite "public interest", which is but to disregard and completely eliminate the statutory necessity of the exercise of the Commission's administrative judgment and discretion upon evidence;

Fourth, the Commission's finding at page 658 of its report that the evidence of record failed to support or justify a finding that the Rio Grande is being discriminated against compelled its refusal of an order to remove alleged discrimination;

Fifth, in asserting that the Rio Grande "suffered discrimination" by the Commission's refusal to issue an order compelling the "joint rates" demanded by the Rio Grande, the Court completely contradicts its holding at page 29 that the Commission "erred as a matter of law in failing to apply the provisions of § 1(4) and § 3(4), rather than the provisions of § 15(3)", for the only power the Commission has to compel joint rates is that conferred by Section 15(3), and it has no power whatever to order joint rates as the remedy for violations of Sections 1(4) and 3(4).

But, the Court fails in its effort to fit this case into the facts and rulings in the *Mitchell Case* and fails also to recognize the real ground upon which the Supreme Court

held that Mitchell was entitled to judicial review of the order in his case. In that case, as pointed out at pages 91-92 of the Court's opinion, the Commission:

> "* * * thought that in deciding the case on the facts presented it must recognize that the state law required the defendants to segregate colored passengers"

and that, since passenger car accommodations offered Mitchell were fairly comparable in comfort to those offered other than colored passengers, the "segregation" requirement [fol. 469] that colored passengers be excluded from various parts of a train and restricted to the cars or coaches designated exclusively for them, was not discrimination prohibited by Section 3 of the Act. At page 93, the Court said Mitchell "presents the question whether the Act does forbid the conduct of which he complains." At page 94, the opinion points out that Mitchell had bought a first-class fare for the entire journey from Chicago to Hot Springs, Arkansas and had offered to pay the proper charge for a seat which was available in the Pullman car from Memphis to Hot Springs, but he was—

> "* * * compelled, in accordance with custom, to leave that car and to ride in a second class car and was thus denied the standard conveniences and privileges afforded to first class passengers. This was manifestly a discrimination against him in the course of his interstate journey and admittedly that discrimination was based solely upon the fact that he was a Negro."

After saying that whether this was a discrimination forbidden by the Act was not a question of segregation but one of "equality of treatment", the Court held at page 94 that the denial of equal accommodations to Mitchell because of his race was "an invasion of a fundamental individual right which is guaranteed against state action by the Fourteenth Amendment" to the Constitution of the United States and that such discrimination was "essentially unjust" and could not be deemed "to lie outside the purview of the sweeping prohibitions" of the Act. At page 97, the Court held:

> "On the facts here presented, there is no room * * * for administrative or expert judgment with respect to

practical difficulties. It is enough that the discrimination shown was palpably unjust and forbidden by the Act."

Thus, Mitchell was entitled to judicial review of the order in that case, because the discriminatory conduct of which he complained violated his Constitutional rights, and he was therefore entitled to the Court's determination of the question whether the Commission committed error of law in holding that Section 3 of the Act did not forbid conduct which the Court found to be so clearly discriminatory as to [fol. 470] violate Mitchell's Constitutional rights. (See the race segregation cases decided by the Supreme Court in May 1954 (*Hernandez* v. *Texas*, 347 U. S. 475; *Brown* v. *Board of Education*, 347 U. S. 483, and *Bowling* v. *Sharpe*, 347 U. S. 497), in which the Court held that racial segregation, *per se*, results in discrimination, denial of equal protection of laws, or denial of due process of law in violation of the Fifth or Fourteenth Amendments.)

We agree with this Court that "pecuniary injury", as such, to say nothing of the denial of "pecuniary gain", was not involved in that case and was not there held essential to Mitchell's right to judicial review; but, as the crux of the Supreme Court's decision is that Mitchell was entitled to judicial review and to relief under Section 3 of the Act because the conduct of which he complained clearly violated his Constitutional rights, the case is wholly inapposite for there is no question here whether the Rio Grande's Constitutional rights have been violated by the Commission's refusal of its full demands for joint rates, nor is there even a question whether the order denies any legal right of the Rio Grande under either the Act or the common law, for as we have previously pointed out, the Rio Grande itself argues, at page 111 of its brief in this case, that no railroad has an absolute right to any traffic, including even that which originates or terminates on its line. The Supreme Court held that Mitchell was an "aggrieved party" because the conduct of which he complained violated his Constitutional rights and the Commission had peremptorily denied him relief because it believed that the Act did not forbid such conduct.

Another of the three decisions in which this Court ap-

parently takes comfort and erroneously relies upon for its holding that the Rio Grande has standing to maintain this suit is *Youngstown Sheet & Tube Co.* v. *United States*, 295 U.S. 476, cited and quoted at page 44 of the opinion, apparently because the Court there, in distinguishing cases cited against judicial review of the order in that case, said that in the cited cases judicial review was refused either [fol. 471] because the parties had no legal interest or capacity to sue, "or failed to allege that the rates under attack were unreasonable or discriminated against them." The Rio Grande in its amended complaint has followed that pattern here and apparently the Court adopts it and sustains the Rio Grande's standing to maintain its suit, at least in part because its complaint alleges that the rates on commodities not included in the Commission's order are unreasonable and discriminatory. If the Rio Grande is entitled to judicial review of the order merely because it makes that allegation in its complaint, then everyone, including strangers to such orders not remotely affected by them, may sue to enjoin such orders, for there is nothing to prevent anyone from making that allegation in a complaint.

It is not understandable why the Supreme Court in that case left the possible implication that standing to maintain a suit to enjoin an order of the Commission derives from a mere allegation in the complaint to the Court that rates prescribed by the Commission were "unreasonable or discriminated" against the complainant. The order was not sustained by any finding by the Court that the rates prescribed by the Commission's order were in fact just and reasonable, but upon the ground that the prescription of the rates was within the Commission's authority and that its order was adequately supported by its findings and the evidence of record.

And, more important such allegation attempts to present to the Court an administrative question of fact which the Court is powerless to determine, for every decision of the Supreme Court on the point since its decision in *Texas and Pac. Ry.* v. *Abilene Cotton Oil Co.*, 204 U.S. 426, has held without exception that the courts have no power or jurisdiction to determine whether an interstate rate is unreasonable, discriminatory or otherwise unlawful under the Act,

and that the Commission is the only tribunal to make such determinations in the exercise of its exclusive administrative judgment and discretion. Stated otherwise, the Rio [fol. 472] Grande seized upon the only case in which it could find this inadvertent, enigmatical and erroneous suggestion of power in the courts to determine the lawfulness of rates under the Act and this Court unfortunately relies upon it to the exclusion of the law that has been established in all other decisions for nearly 50 years.

If the allegations in the Rio Grande's complaint to this Court gives it standing to maintain this suit, then the Court has not performed its duty but should have proceeded to determine whether the rates are in fact unreasonable or discriminatory. In other words, the Rio Grande's standing to maintain this suit must be based upon some legal or other right which this Court has power to determine and protect, and unless this Court is willing to make the egregious error of holding that it has jurisdiction to determine whether the involved rates are unreasonable and discriminatory, and, upon its own determination of that administrative question, to protect the Rio Grande from such rates by issuing its own injunctive relief, then the Court fatally errs in relying upon the allegation that the rates are unreasonable and discriminatory as affording any semblance of ground for the Rio Grande to maintain its suit in this Court.

Furthermore, the Court has seen fit to ignore the fact pointed out in the brief of intervening railroad defendants, Volume I, pages 29 and 31, that the order reviewed in the *Youngstown Case* increased the rates of the shipper as much as 18¢ per net ton, or $9.00 per 50-ton car, and apparently the Supreme Court felt that the shipper was entitled to judicial review of the order imposing such a tremendous additional financial burden to have the Court determine whether the Commission committed any error of law in issuing the order.

Even the decision in *Rochester Tel. Corp. v. U.S.*, 307 U.S. 125, quoted at pages 45-46 in this Court's opinion, reiterates the settled law that the question whether interstate rates are reasonable, discriminatory or otherwise unlawful under the Act is for exclusive determination by

the Commmission and that the courts have no power to make such determinations.

[fol. 473] At pages 138-140 the opinion in that case says:

> "This Court 'ascribed' to the findings of the Commission 'the strength due to the judgments of a tribunal appointed by law and informed by experience.' *Illinois Central R. R.* v. *Interstate Commerce Commission*, 206 U.S. 441, 454. Recognition of the Commission's expertise also led this Court not to bind the Commission to common law evidentiary and procedural fetters in enforcing basic procedural safeguards.
>
> "From these general considerations the Court evolved two specific doctrines limiting judicial review of orders of the Interstate Commerce Commission. One is the primary jurisdiction doctrine, firmly established in *Texas & Pacific Ry.* v. *Abilene Cotton Oil Co.*, 204 U.S. 226. Thereby matters which call for technical knowledge pertaining to transportation must first be passed upon by the Interstate Commerce Commission before a court can be invoked. The other is the doctrine of administrafive finality. Even when resort to courts can be had to review a Commission's order, the range of issues open to review is narrow. Only questions affecting constitutional power, statutory authority and the basic prerequisites of proof can be raised. If these legal tests are satisfied, the Commissions order becomes incontestable."

At page 146 the opinion holds that:

> "Having found that the record permitted the Commission to draw the conclusion that it did, a court travels beyond its province to express concurrence therewith as an original question. 'The judicial function is exhausted when there is found to be a rational basis for the conclusions approved by the administrative body.' *Mississippi Valley Barge Line Co.* v. *United States*, 292 U.S. 282, 286-287; *Swayne & Hoyt, Ltd.* v. *United States*, 300 U.S. 297, 303, *et seq.*"

The standing of the Rochester Company to maintain its suit in that case was based upon the fact that the order

"necessarily and immediately carried direction of obedience to previously formulated mandatory orders addressed generally to all carriers amenable to the Commission's authority."

Moreover, Mr. Justice Frankfurter, who wrote the decision in that case, later pointed out (in his dissent in *Columbia System* v. *U. S.*, 316 U.S. 407, at page 436) that failure or refusal by Rochester to comply with the order would subject it to statutory penalties of $500.00 for each offense and $25.00 for each day of its continuance. The Rochester [fol. 474] Company had a right to judicial review because it had a right not to be regulated if it was not within the class of telephone companies embraced within the Commission's authority and it clearly had a right not to be subjected to the statutory penalties for refusal to obey the order if in making it the Commission had committed error of law in holding it subject to the regulatory provisions of the Act. In striking contrast, the Commission here has merely held that the Rio Grande's evidence fails to prove that its rights under the Act are being violated or that all of the joint rates demanded by it are necessary "in the public interest".

Accordingly, and without subjecting the Rio Grande to any burden, regulatory process or statutory penalty, the order fails to require joint rates enabling it to reap a "pecuniary gain" by diverting to its line traffic to which the Rio Grande admits it has no legal right whatever.

In Volume I of their original brief and in their supplemental brief, the intervening railroad defendants cited some 40 decisions of the Supreme Court involving judicial review of the Commission's orders and those of other administrative agencies. In more than half of those decisions, standing of the complaining party to maintain the suit was challenged and directly decided. In 11 of the decisions, the Court held that the complainants had standing to maintain the suits for reasons stated in the opinions and mentioned in the briefs of intervening railroad defendants herein. In 11 others of the cases cited, the Court dismissed the appeals, holding that the appellants were without standing to maintain the suits to enjoin the orders.

In all of the decisions sustaining the right to maintain suits to enjoin the orders, the facts show that the com-

plainants were threatened with pecuniary *loss* resulting from the fact that the orders, in some of the cases, would deprive railroads of money they previously had enjoyed [fol. 475] from their operations and to which they had either a legal or equitable right or a legal interest recognized in statutory provisions, and in others of those cases the orders resulted in pecuniary loss, in effect, by imposing burdensome increases of freight charges upon shippers who brought the suits. Not one of the cases in which standing to maintain suit was upheld involved an order or a part of an order which merely refused to grant a part or all of the complainant's demands for "pecuniary gain".

In 11 of the cases cited the Court held that standing to maintain the suits was lacking because the complainants failed to show that "the order alleged to be void subjects them to legal injury, actual or threatened", *Edward Hines Trustees* v. *U.S.*, 263 U.S. 143, 148. In several of the cases judicial review was denied for lack of the requisite legal standing to maintain the suits, even though the orders resulted directly in substantial pecuniary *loss* to the complaining parties. For example, in *Sprunt & Son* v. *United States*, 281 U.S. 249, the order caused Sprunt, a shipper, to lose $7.00 per ton advantage he had long enjoyed over his competitors, but the Court said, in the language quoted in this Court's opinion at pages 38-39, that Sprunt was only entitled to reasonable service at reasonable rates and without injurious discrimination and that since the Commission had prescribed such rates, the loss by Sprunt of his long-standing competitive advantage gave him no independent legal right of his own to maintain suit to enjoin the order.

If, as held in that case, the fact that the order inflicted pecuniary *loss* by depriving Sprunt of a substantial competitive advantage long enjoyed gave him no legal right to maintain his suit, it is incredible that this Court would hold, as it does, that the Commission's denial in part of the Rio Grande's effort to reap a "pecuniary gain" from the joint rates it demanded, gives the Rio Grande standing to [fol. 476] maintain its suit, particularly in the face of the Commission's finding that the evidence fails to prove that the Rio Grande is being denied equality of treatment, and the Rio Grande's admission that it has no right to the

traffic on which it seeks rates that would enable it to realize additional "pecuniary gain".

The Court's opinion at page 36 states that "the cases relied on by the defendants are distinguishable" and then proceeds to discuss 4 of the 11 cases cited by the railroad defendants in which judicial review was denied. But in its efforts to distinguish even those 4 decisions the Court overlooks or ignores the fact that in each of them, as in all the others which the Court does not undertake to distinguish, judicial review was denied on the fundamental ground that the parties suing to enjoin the orders lacked standing to maintain the suits because they failed to show that the orders subjected them to actual or threatened legal injury or invaded some independent legal or equitable right of their own or threatened economic damage or loss of something the parties had long and lawfully enjoyed. The opinion fails in its efforts to distinguish even the 4 cases it attempts to distinguish, for it does not and can not point to any statutory or judicial authority for the assertion that the Rio Grande has any right of any kind to divert traffic from other railroads for a "bridge" haul over its line, and the Rio Grande admits that it has no such right.

The opinion ignores the fact pointed out in connection with numerous cases cited in Volume I and the supplemental briefs of intervening railroad defendants, that every case in which the right to maintain suit was sustained involved an order which the Supreme Court held would result in irreparable injury and loss, or that the order violated or invaded some legal or other right of the complaining party or that some special statutory provision gave such parties the right to judicial review. For example, the opinion [fol. 477] at page 32 cites the *Chicago Junction Case*, 264 U.S. 258, but refrains from mentioning the fact shown in the Supreme Court's opinion in that case that the order deprived the complaining parties of $10,000,000 annually and that their right to challenge the order in court rested in part upon certain provisions in the Transportation Act, 1920. Similarly, the Court ignores the fact that in *Youngstown Co. v. United States*, 295 U.S. 476, the order inflicted an additional burden of $9.00 per 50-ton car upon the shipper, which most certainly was a pecuniary injury if,

as alleged in its complaint, the Commission committed errors of law in prescribing the increased rates. Even *Mitchell* v. *United States*, 313 U.S. 80, which the Court seems to have selected for its principal authority in sustaining the Rio Grande's right to maintain its suit, although involving no pecuniary loss, was as clear a case as one could imagine of a right to judicial review because of Mitchell's clear-cut and specific legal right under the Constitution of the United States to non-discriminatory treatment and to equality in passenger service and accommodations, and the Commission's order, in effect, deprived Mitchell of that Constitutional right.

The Court should reverse its holding that the Rio Grande has standing to maintain its suit and dismiss the complaint and intervening complaints for lack of standing of the plaintiffs to maintain the suits.

II

The Court Erred in Failing to Dismiss the Complaint on the Ground that the Commission's Failure to Compel Through Routes and Joint Rates on all Commodities is not an "order" or a part of the Order Issued by the Commission

This Court has power and jurisdiction only to enjoin, set aside, annul, or suspend in whole or in part any "order" of the Commission (Title 28, U.S.C., §§ 1336, 1398, 2284 and 2321-2325). There is nothing to which the Court's jurisdiction can attach unless and until the Commission issues [fol. 478] an "order". The only order issued by the Commission in this case is the order quoted at pages 7 and 8 of the intervening railroad defendants' brief, Vol. I. That order requires through routes and joint rates with the Rio Grande on the articles therein named and prohibits them from charging rates in excess of those prescribed, and the order further requires the defendant railroads to cease and desist from practicing undue prejudice and preference and unlawful discrimination referred to in the first paragraph of the order. There is no "part" of that order, nor is there any order or part of any order at all, refusing to require through routes and joint rates on articles other

than those named in the order issued, nor is there any order or any part of an order dismissing the Rio Grande's complaint or any part of its complaint. Therefore, unless the Rio Grande's complaint seeks to enjoin and annul the order which the Commission did issue, its complaint attacks, and the Court's conclusion is to annul and set aside, something that does not exist, namely an "order" dismissing the Rio Grande's complaint in part or as to articles not named in the order the Commission did issue. The complaint attacks, and the Court has erroneously dealt with something that is not embraced or touched upon in the order the Commission issued. The Court concludes to annul and set aside the Commission's mere failure to issue an order with respect to articles other than those named in the order it did issue. While the Commission's conclusion "4" is—

> "That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

that conclusion is not embraced in the order issued or embodied in any order or part of any order. The Supreme Court has expressly held that "matter", conclusions or findings contained in a Commission report, but not followed by and embraced in a formal "order", are not subject to judicial review. In *United States* v. *Atlanta B. & C. R. Co.*, [fol. 479] 282 U.S. 522, the Commission had issued a report at the end of which it stated its final conclusion and said that the carrier "will be expected to adjust its accounts in accordance with this finding within 60 days from service of this report" (p. 524). But the Commission issued no "order". In holding that the Commission's report and the conclusions, findings or statements embodied therein were not subject to judicial review, the Court held, pages 527-528:

> "The action here complained of is not in form an order. It is a part of a report—an opinion as distinguished from a mandate. The distinction between a report and an order has been observed in the practice of the Commission ever since its organization—and for compelling reasons.
>
> * * * * * * *

"No case has been found in which matter embodied in a report and not followed by a formal order has been held to be subject to judicial review."

The Rio Grande's complaint alleged that certain statements or conclusions in the Commission's report were erroneous or unsupported by evidence, but as held in the case just cited and other cases cited in the intervening railroad defendants' brief (Vol. I, p. 60, and Vol. II, pp. 1-6), the Commission's process of reasoning, its mere conclusions, or its mere failure to reach different conclusions from those stated in its report are not subject to judicial review, and no Court has any jurisdiction under the Act here invoked to review any matter complained of unless such matter has been embodied in "a formal order" issued by the Commission. There being no such "order embodying or carrying into effect the Commission's failure to include all commodities in the order it did issue, the Court has erred in failing to dismiss the Rio Grande's complaint on the ground that there is no "order or part of an order" giving the Court jurisdiction to review the matters of which the Rio Grande complains.

Our contention here is not based on the "negative" character of the Commission's failure to require through routes and joint rates on commodities not included in its order but upon the fundamental fact, pointed out earlier, that there is no order at all, or any part of an order embodying [fol. 480] the failure of the Commission to do more than it did in requiring through routes and joint rates on the few articles named in its order. In other words, we are not here arguing that judicial review should be denied because of the "negative" character of any order or part of any order, but because of the fact that there is no order and no part of any order embracing what the Rio Grande complains of or what the Court proposes to annul and set aside, and that consequently the very thing necessary to give the Court jurisdiction, namely an "order", is completely lacking. To make our position clearer if possible, we point to the fact that in all of the cases in which judicial review was denied because the Commission's orders were "negative", there were in fact actual "orders", in form, dismissing

complaints that had been filed with the Commission. (See cases reviewed and discussed in *Rochester Tel. Corp.* v. *U.S.*, 307 U.S. 125.) Such "order" dismissing the complaint had actually been issued in *Mitchell* v. *United States*, 313 U.S. 80, and, adhering to its decision in the *Rochester Case*, the Court, upon holding that Mitchell had standing to maintain the suit because the order deprived him of his Constitutional rights, proceeded to review the order, regardless of its negative character. But *there was an order in form and in reality* and not a complete absence of an order embodying the action or non-action of the Commission of which complaint was made. As stated by the Court in *United States* v. *Atlanta, B. & C. R. Co., supra*, holding that the Court had no power or jurisdiction to review the Commission's action because of the absence of an order:

> "No case has been found in which matter embodied in a report and not followed by a formal order has been held to be subject to judicial review."

Clearly, this Court erred in proceeding on the theory indicated at page 30 of its opinion that, because, under the *Rochester Case* it had jurisdiction to review a "negative" order, it also had jurisdiction to review the Commission's failure to take the action of which the Rio Grande com- [fol. 481] plained because such failure was negative in character and regardless of the fact that there is no order or part of any order embodying the failure or negative action of the Commission against which the Rio Grande complains. The Court, upon reconsideration of this case, should dismiss the complaint because of the absence of any order embracing the matters complained of, in accordance with the decision in *United States* v. *Atlanta, B. & C. R. Co., supra*.

III

The Court Erred in Holding that the Commission's Finding that "There are at present no through routes, as that term is used in the Act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned" is not Supported by Substantial Evidence and is Erroneous as a Matter of law, and the Court Further Erred in its own Holding that the Evidence Establishes the Existence of such Through Routes

Although it can not be gleaned from its opinion just what fact or circumstance or what combination of facts or circumstances constitute the basis for the Court's conclusion that through routes already exist via the Rio Grande for the traffic involved, certain errors and implications are so necessarily embraced in that conclusion as, we think, to compel this Court to reconsider the conclusion along with other errors on which this motion for new trial and reconsideration is based. In such reconsideration of its conclusion that through routes via the Rio Grande already exist, we earnestly urge the Court to ponder carefully the discussions of this question in the Commission's report pages 615-619, and its brief, beginning at page 26, and in the brief filed by the five intervening states, beginning at page 19, and in Vol. 2, pp. 129-136 of the original brief filed by intervening railroad defendants, and at pp. 14-29 of their supplemental brief. The protection of railroads, and especially those like the Union Pacific that have built vast spreads of branch lines for the purpose of developing large areas in the hope [fol. 482] of obtaining a profitable haul of the traffic over their main lines, which protection Congress has steadfastly refused throughout the years to take from them, is so vitally important that it should not be nullified by administrative or judicial findings or interpretations of vague and doubtful meaning.

We cannot believe that the Court comprehended the enormity, scope or significance of the Rio Grande's contention that through routes exist via its line for the traffic involved or the impossible burden of proof inescapably shouldered by the Rio Grande in alleging at page 7 of its complaint to the Commission that through routes now exist and for

many years have existed via its line for the traffic it seeks in this case. The Rio Grande's complaint and evidence before the Commission seem to proceed upon the theory that it could prove its contention that through routes already exist via its line for the traffic involved, merely by showing that physical interchange of cars between its line and the Union Pacific and certain other railroads is possible and that considerable traffic, except that involved here, is actually being interchanged with it by certain other railroads. The Court's opinion apparently falls into the same error of treating the Rio Grande's demands here and its contention that through routes for the traffic involved exist via its line, as if the fact that interchange of traffic with the Union Pacific is physically possible makes the Rio Grande's line a part of the hundreds of thousands of through routes published and maintained by other railroads for the transcontinental traffic involved in this case.

We begin by pointing to allegation VII in the Rio Grande's complaint to the Commission that the Union Pacific and the other 200 railroads therein named publish tariffs maintaining through routes and joint rates for the involved traffic, and next to its allegation IX (pp. 6-7) that the railroads that publish and maintain through routes and joint rates for this transcontinental traffic "have failed [fol. 483] and refused" to include the Rio Grande's line as part of any of the through routes so published by them and by notes and exceptions in their tariffs have excluded the Rio Grande from the through routes via which the joint rates are applicable. It is this exclusion of the Rio Grande to which it objects, and in reality its complaint sought an order from the Commission requiring the carriers publishing the through routes and joint rates via their lines to remove from their tariffs the notes and exceptions which make the joint rates inapplicable via the Rio Grande, and to include the Rio Grande as a carrier participating in the hundreds of thousands of through routes and joint rates published in the tariffs of the defendant railroads for this transcontinental traffic. In the hope of avoiding the short haul prohibition in Section 15(4) of the Act, the Rio Grande's complaint alleged (p. 7) that through routes already exist via its line for the traffic involved, and in mak-

ing that allegation it most assuredly undertook the burden of proving that its line is a part of the myriad of through routes published in tariffs of the defendant railroads for this traffic.

The scope and extent of the Rio Grande's burden is indicated in the following statement at page 614 of the Commission's report describing the nationwide coverage of the multitude of through routes published and maintained by the defendant railroads, each and all of which the Rio Grande claims its line is a part:

> "Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, but there are many exceptions."

Although the record does not show and, indeed, it is hardly possible to show the total number of the hundreds of thousands of through routes of which the Rio Grande claims its line is a part, the appendices to its complaint [fol. 484] (pp. 24-37) afford some indication. The supplemental brief of the intervening railroads endeavored to give this Court an understanding of the scope and extent of the Rio Grande's contention by pointing (p. 24) to the fact that there are some 39,000 railroad stations in the involved part of the United States east and south of a north and south line roughly along the eastern boundary of Colorado, and approximately 2,900 railroad stations in the northwest area, between all of which stations through routes and joint rates for the transcontinental traffic involved are published and are applicable. There are, of course, from one route to hundreds or even thousands of routes between the stations in the northwest and those in the eastern and southern part of the country, but if there were only one through route between each of the stations, this would make

a minimum total of 113,000,000 through routes, of which the Rio Grande claims its line is a part.

In a further effort to give the Court a more definite and comprehensive grasp of the colossal and fantastic extent and scope of the Rio Grande's claim that it is already a part of all through routes published for the involved traffic, we now cite testimony from an official Federal document entitled "Through Routes", being a transcript of hearings before the Interstate and Foreign Commerce Committee of the House of Representatives on Senate Bill 1261, December 1937 and April 1938, concerning a proposal of short line railroads and the Interstate Commerce Commission to repeal the provision in Section 15(4) of the Act which protects carriers from being short hauled. It is shown in that document (p. 164) that there were then 12,291 different through routes for movement of traffic under specific tariff publication from Chicago, Ill. to Jacksonville, Fla., and (p. 142) that there were more than 10,000 through routes for so-called merchandise traffic alone between New York, N.Y. and Dallas, Texas, and (p. 141) that there were 2,300 through routes from New York to St. Louis and 2,628 through routes from Boston to St. Louis, and from such [fol. 485] smaller places as Butler, Pa. to Burlington, Ia., there were as many as 130 through routes, and from New York to Chicago 445 through routes. While that testimony concerned through routes east of the Missouri River, it illustrates the point we make, particularly since much of the transcontinental traffic here involved moves through such points as St. Louis, Kansas City, Omaha, Chicago, Pittsburgh, and other cities that are served by numerous railroads, nearly all of which doubtless are parties to the existing through routes of which the Rio Grande claims its line is a part, and it is indisputable that the number of such routes would run into many millions.

The Rio Grande undertook to prove its allegation that its line is a part of all these through routes by pointing to the fact that (1) it was a party to through routes and joint rates for tarffic to and from the northwest between 1897 and 1912, but it did not show that those were the same through routes between the same points that it now claims some 40 years later to be a part of, and the Commission's

report indicates that (p. 621) the then through routes were not as extensive or numerous as present through routes on the transcontinental traffic involved; (2) that 17 shipments of through traffic from 15 of the 39,000 stations in the east moved westbound via its line in 1948 at combination rates to 9 of the 2900 stations in the northwest area (Ex. 1, p. 5); that 37 carloads moved in 1948 from points on the Union Pacific in the northwest to destinations on the Rio Grande's line, which, of course, moved on joint rates and were not transcontinental through traffic which is involved in this case; (3) that through traffic was diverted to and moved over its line under emergency conditions of the war and the blizzards which blocked the Union Pacific Railroad a few days in 1949.

The Court's opinion simply summarizes the basis on which the Rio Grande claims through routes exist via its line and then abruptly agrees with the Rio Grande, without stating why it reaches that conclusion. Thus, the Court [fol. 486] reaches the opposite conclusion upon the same evidence on which the Commission, after careful analysis and reasoning at pages 615-619 of the report, rejected the Rio Grande's claim that its line is a part of the millions of through routes for this transcontinental traffic.

Since the opinion refrains from disclosing any rationale by which it reached the conclusion that through routes claimed by the Rio Grande already exist, we are left to the subjunctive method of pointing to the errors and inconsistencies in the opinion on which it must be assumed that the Court relied, and which we insist the Court should reconsider and reverse itself on the through routes question.

If, as indicated at page 19, the Court believes through routes via the Rio Grande still exist because some of the routes did exist from 1897 to 1912, and because, when the joint rates were cancelled "the through routes were not closed", then the discussion concerning movement of traffic over the Rio Grande at combination rates is clearly irrelevant. But, unless the Court intends to hold that, in order to close through routes, railroads must erect some physical roadblock or take other measure to prevent physical interchange of traffic, we insist that, upon the Rio Grande's own allegations and arguments, those old through

routes were effectively closed with the cancellation of the joint rates, leaving the higher combination of local rates in effect.

Thus, as alleged at page 8 of its complaint to the Commission, cancellation of the joint rates so effectively closed the through route via the Rio Grande "as to prevent the movement of freight traffic" over its line; and at page 10, operates "to deprive shippers of the advantages" of transit privileges at points on the Rio Grande, and to deprive the Rio Grande of "through freight traffic which it might obtain if equal rates applied in connection with it."

[fol. 487] So effective was the cancellation of the joint rates in closing of the through routes via the Rio Grande that its brief (p. 4) to the Commission argues that the higher combination rates "deprive the public, shippers and the complainant (Rio Grande) of the use" of its line for the through traffic involved; and at page 5, that refusal of carriers participating in the Union Pacific routes to short haul themselves by including the Rio Grande in the through routes at equal joint rates "actually prevents the movement of traffic from eastern points" via the Rio Grande to Salt Lake City and Ogden, and (p. 98) that the combination of local rates, after cancellation of the joint rates, via its line "prevent any regular or substantial movement of the traffic via" the Rio Grande; and again at page 101 of its brief that, "unless the same level of rates is prescribed on the traffic involved via the Ogden Gateway and the Rio Grande no practical or useful purpose will be served"; and (p. 116) that livestock shippers testified that any rates via the Rio Grande higher than livestock rates via Union Pacific routes "would be of no use to them and would not move the livestock" via the Rio Grande; and at page 26 that the combination rates via the Rio Grande "are excessive and prohibitive", which must mean that cancellation of the joint rates so effectively closed the through route via the Rio Grande as to prohibit shippers from using that line when their shipments could be moved via Union Pacific routes.

Certainly, cancellation of the joint rates was effective to close the through route via the Rio Grande sufficiently to preserve the right guaranteed by Section 15(4) of carriers

participating in Union Pacific routes not to be short hauled by the Rio Grande to any substantial extent, and indeed, if cancellation of the joint rates had not effectively closed the route, then the Rio Grande would have no reason to complain. The Rio Grande clearly stultifies its position in contending that cancellation of the joint rates had no ef- [fol. 488] fect on the existence of through routes via its line and, in the same breath, contending that cancellation of the joint rates so effectively closed its route "as to prevent the movement of freight traffic" over its line, and the Court's opinion is likewise inconsistent and erroneous.

If the Court relies on the statements of the counsel and witness for the Union Pacific that shippers may route such of the involved traffic over the Rio Grande as they desire if they are willing to pay the higher combination rates, the Court is clearly erroneous in holding that this fact tends to prove the existence of a through route via the Rio Grande, unless the Court intends to rest its decision on a theory the Supreme Court flatly rejected in *Thompson* v. *United States*, 343 U. S. 549, because such a theory would mean that "through routes exist between all points throughout the country wherever physical rail connections are available". The Court further errs in holding that a shipper's right under Section 15(8) of the Act to route his traffic "exists only when through routes and through rates have been established", for there is no provision in the Act preventing a shipper from routing his traffic over any series of connecting railroads wherever physical interchange is possible and the carriers have performed their duty of publishing local rates on their respective connecting lines. The right of a shipper under Section 15(8) is to choose between two or more "competing lines of railroad" and he may exercise that right by paying the rates published over the route or routes he chooses, regardless of whether the rates are combinations of local rates or joint rates.

If the Court relies on the statement at page 20 that joint rates are published for shipments of sheep and goats via the Rio Grande, the Court clearly errs because there is no statutory, judicial or administrative precedent or authority for the proposition that where carriers publish a through route with joint rates for one commodity, then such route

[fol. 489] becomes a through route within the meaning of Section 15(3) and (4) for every commodity. Such proposition is contrary to the Commission's settled administrative practice and treatment of through routes and carriers' rights under Section 15(4) not to be short hauled.

If the Court intends to hold that the existence of through routes can be established by proof of "a continuous use of the Rio Grande in the movement of traffic to and from the closed door area at through combination rates", then its ultimate conclusion is wholly erroneous and unsupported because the evidence here is limited to 17 westbound through shipments that moved in 1948, to 37 eastbound shipments that moved to local destinations on the Rio Grande in 1948, none of which moved beyond its eastern termini, and to traffic that was diverted to the Rio Grande under war and blizzard emergency conditions, which is clearly within the right of carriers to do by voluntary agreement or, in the absence of such agreement, the Commission may require under Section 15(4) of the Act. The Court further errs in saying at page 21 that movements of the traffic via the Rio Grande "was substantially the same in years prior to 1948 and continued into 1949" for that statement is squarely contrary to the Rio Grande's own assertion at page 98 of its brief to the Commission that the combination rates are so high as to "prevent any regular or substantial movement of the traffic" via its line; and there is no evidence whatever in the record concerning the movement of such traffic via the Rio Grande during any other years. The Rio Grande's witness who submitted the movement for 1948 did not say that 1948 was a representative year, but that he selected that year because "it was the last full calendar year prior to this proceeding" and, after testifying concerning problems of re-routing arising because shippers had sometimes mis-routed their traffic via the Rio Grande, in ignorance of the fact that the joint rates did not apply via that line, the witness said "the same problems prevailed to about the same extent in prior years, and have continued [fol. 490] thus far in 1949" (R. 74).

The statement at pages 22 and 25 that shipments diverted from the Union Pacific via the Rio Grande under emergency conditions without the Union Pacific having asked the Com-

mission to authorize temporary through routes via the Rio Grande and without the Commission invoking its authority under Section 15(4) to establish temporary through routes indicates and suggests "that both the Union Pacific and the Commission assumed the existence of through routes" via the Rio Grande, is untenable and illogical, and rests upon a misconception or a distortion of the statutory pattern. Section 1(15) of the Act authorizes the Commission to issue "service orders" whenever it is "of opinion that shortage of equipment, congestion of traffic, or other emergency requiring immediate action exists in any section of the country" and Section 15(4) authorizes the Commission, under the same type of emergency conditions, to "establish temporarily such through routes as in its opinion are necessary or desirable in the public interest". But no provision of the Act prohibits carriers from acting voluntarily among themselves in such emergencies without invoking the authority of the Commission under either of these statutory provisions and it is wholly illogical and erroneous to hold that, because the Union Pacific and the Rio Grande acted voluntarily in these emergencies, instead of invoking or waiting for an exercise of the Commission's emergency powers on its own initiative, indicates or suggests that the Union Pacific and the Commission assumed that through routes via the Rio Grande were already in existence, within the meaning of Section 15(3) and (4), for the traffic involved in this suit. It was shown by an experienced operating witness at page 833 of the record in this case that:

> "There is nothing unusual about such diversion of traffic among railroads under emergency conditions. It is the rule and not the exception.
>
> "Detour movement of trains and traffic via other lines in the event of interruptions is an accepted principle in American railroading, and hundreds of agreements are on file today stipulating the terms and conditions governing such movements. It is the device under which traffic of the Nation is kept fluid regardless of the temporary stoppage or incapacity of one line to function."

[fol. 491] At pages 23 and 24, the opinion states that "a joint rate is not essential to the existence of a through route" and that "the rate which applies over a through route may be the aggregate of separate rates fixed independently by the several carriers participating in the through route." The opinion then cites *St. Louis-Southwestern R. Co.* v. *United States*, 245 U. S. 136, 139, which defines the term "through route"; and *Thompson* v. *United States*, 343 U. S. 549, 556, and quotes from the latter decision the definition of a "through route" as there given. This Court's opinion then (p. 24) says:

> "* * * the foregoing definition of 'through route' compels us to conclude that the through routes contended for by the Rio Grande were in existence * * *"

but then at least implies that the Commission erred in relying on the *Thompson Case* in holding that through routes via the Rio Grande were not in existence, saying:

> "But the facts in the Thompson case are in striking contrast with the facts in this case."

and that:

> "No evidence was presented that any shipment had ever been made from Lenora to Omaha via the Burlington or that the carriers had ever offered through service over that route".

The opinion then again refers to the testimony concerning movement of traffic via the Rio Grande.

The opinion refrains from indicating what there is in the definitions of a through route in the *St. Louis Case* and the *Thompson Case* that "compels us to conclude that the through routes contended for by Rio Grande were in existence", so we are again left to guess what the Court means in this part of its opinion. The decision in the *St. Louis Case* clearly is against the Rio Grande's position here, as shown at page 143:

> "The order entered does not require any complaining carriers to substitute the route via Memphis for that via Cairo; nor does it require any to establish an

additional route via Memphis. Carriers are left free to furnish the through transportation either via Cairo or via Memphis. The order merely compels a through [fol. 492] route and a joint rate of 16 cents to Paducah. If they elect to continue the existing through route via Cairo, the order operates merely to introduce reduced joint rates. If they elect to discontinue the through routes via Cairo, the order operates to establish through routes and joint rates via Memphis, which the findings of the Commission fully justify."

In the instant case the Rio Grande's sole purpose is to "substitute" its line for lines of the Union Pacific and other roads so it can haul the traffic part way as "bridge" line.

If the Court means that the part of the definition in the *Thompson Case* that "compels" the conclusion that through routes exist via the Rio Grande is that part of the definition which says that a through route may exist where a "through rate" has been published and that such rate "may be merely an aggregate of separate rates fixed independently by the several carriers forming the 'through route' ", then this Court's conclusion that the definition compels it to hold that through routes exist via the Rio Grande is clearly erroneous because it flies in the face of the fact that this very theory was urged by the Commission but flatly rejected by the court in the *Thompson Case* in the following language (p. 558):

"The fact that appellant's line connects with the Burlington at Concordia does not aid the Commission in proving the existence of a through route since the power to establish through routes under Sections 15 (3) and (4) also presupposes such physical connection. And the showing that appellant publishes a local rate from Lenora to Concordia and that the Burlington publishes a local rate from Concordia to Omaha proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines."

And, at pages 559-560, the Court further explained that:

"The Commission continues to support its order, but the logical conclusion of the theory advanced by

the Commission is that through routes exist between all points throughout the country wherever physical rail connections are available. If there is no through carriage over any combination of connecting carriers, the Commission under its present theory would never have to establish through routes under Section 15(3) and (4) but could divert traffic to any route between two points by ordering reduction of the sum of the local rates over that route. Acceptance of this argument would mean that Congress' insistence on protecting carriers from being required to short haul themselves could be evaded whenever the Commission chose to alter [fol. 493] the form of its order. The Commission, by using the form of order employed in this case, could also divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of Section 15(4), before the Court in *United States* v. *Great Northern R. Co.*, 343 U. S. 562 (decided this day). In short, acceptance of the Commission's argument would mean that the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage."

If this Court's opinion is that through routes claimed by the Rio Grande exist on the theory that by publishing their own independent local rates the connecting carriers "hold themselves out as offering through transportation service", then again, its conclusion is clearly erroneous and foreclosed by the language just quoted from the *Thompson Case*.

If this Court rests its decision that through routes are in existence as claimed by the Rio Grande upon that part of the definition in the *Thompson Case* which says that "through carriage implies the existence of a through route whatever the form of the rates charged for the through service", then there is no basis whatever for this Court's conclusion, because there is no evidence whatever in this case, and indeed the Rio Grande made no effort to prove, and does not even contend that there has been "through carriage" via its line over the myriad of transcontinental

routes, of which it claims to be a part. And the complete absence of any such evidence becomes more fatal to this Court's conclusion in view of its apparent reliance upon the fact that in the *Thompson Case* there was no evidence showing that any shipment had ever moved from Lenora to Omaha via the Burlington, and that the evidence upon which the Commission relied of shipments moving from Lenora to points on the Burlington short of Omaha:

> "* * * cannot be used as evidence of the existence of a through route to Omaha unless we are to hold that compliance with Section 1(4) causes the Missouri Pacific to lose its right to serve Omaha via its own lines, a right guaranteed by Section 15(4). We reject the Commission's argument that the existence of through routes from Lenora to points on the Burling- [fol. 494] ton line short of Omaha proves the existence of a through route to Omaha via the Burlington as requiring an unwarranted distortion of the statutory pattern." (p. 559)

If, as this Court erroneously seems to hold, under the *Thompson* decision the existence of a through route can be proved only by evidence showing actual movement of traffic over the entire lines of the connecting carriers "between the termini" (Section 15(4) of the claimed through route, then this Court is clearly wrong in holding that the meager token of evidence offered by the Rio Grande and summarized at pages 20-22 of the opinion, establishes the Rio Grande's claim that its line is a part of the millions of through routes published in the tariffs for the transcontinental traffic involved in this case.

The opinion is further inconsistent and erroneous in attempting to throw back to the Commission for decision the question whether the "burden is on the Rio Grande to show some actual movement of traffic on through billing over each of the possible routes between the thousands of stations in the involved areas", for the Court has readily assumed authority to make its own decision that through routes were already in existence via the Rio Grande and to reverse the Commission upon the very facts and circumstances on which the Commission held that through

routes via the Rio Grande did not exist. If this Court correctly construes the *Thompson* decision as holding that proof of actual movement "between the termini" of a claimed through route is essential to establish the existence of the route, then this Court is bound by that decision to hold that the burden is on the Rio Grande to make such proof with respect to actual movement over each of the millions of routes of which it claims to be a part. This Court's citation at page 28 of *Virginian Ry. Co.* v. *United States,* 272 U.S. 658, lends no support to this Court's views for no question of actual movement of traffic was raised in that case, and the dictum of that decision concerning the existence of through [fol. 495] routes at combination rates has clearly been overruled by the very pointed decision in the *Thompson Case.*

At page 26, the opinion says it appears that the Commission "reasoned" that cancellation of the joint rates in 1906 and 1912 closed the through routes in a "commercial sense" by applying the higher combination rates and that this "terminated the through routes", but that "it was held to the contrary" in the *Virginian Case.* In passing, we observe that hardly, if ever, has there been a Supreme Court decision as frequently mis-cited and misunderstood as its decision in the *Virginian Case.* This Court's opinion says that 45 out of 99 coal mines located on the Virginian "enjoyed through routes and joint rates to the West because of certain trackage arrangements", but, as clearly shown at page 664 of the Supreme Court's decision, the 45 mines on the Virginian, while enjoying lower rates to the west than 54 other mines located on the Virginian, this was not because through routes existed or joint rates had been established from the 45 mines to the West, but because of a trackage agreement between the Virginian and the Chesapeake and Ohio for the use of each others tracks to certain mines in the area which agreement operated as a "reciprocal switching arrangement" whereby the Chesapeake and Ohio absorbed the switching charges of the Virginian from the 45 mines to its junction with the Chesapeake and Ohio, thus enabling "these mines to enjoy the same rate to the west as do those located on the Chesapeake and Ohio." But from the 54 other mines that complained to the Commission the trackage and reciprocal switching arrangement did not apply, because those mines were directly connected with the

Virginian's main line to the east by its own branch line tracks and it was unnecessary for the Virginian to have operating rights over Chesapeake and Ohio tracks to reach those mines (see the Commission's report, 98 I.C.C. 488, 490-491). Consequently, shippers from those 54 mines to the west had to pay the combination of the Virginian's local rate from the mines to its junction with the Chesapeake [fol. 496] and Ohio and whatever rate applied from that junction to the western destinations. This combination of rates was from $1.14 to $2.52 in excess of the rates enjoyed by the 45 mines as result of the absorption by the Chesapeake and Ohio of the Virginian's switching charge from the 45 mines to the junction of the two railroads. At page 661, the Court did say that:

> "For most of these 54 mines access to these (western) markets was and is *physically possible* through a junction of the Virginian and the Chesapeake and Ohio. But that route is closed commercially, because these two carriers have not established any joint rates to the west from any of these 54 mines".

At page 666, the Court further said "through routes to the west were already in existence. And there were through rates by combination." The Court's statements concerning through routes in that case are pure dictum and have no bearing upon the decision, and moreover the dictum of that case is necessarily overruled by the express holding of the Court in the *Thompson Case*, at the top of page 558, in addition to which in footnote 18 at page 560 of the *Thompson Case*, the Court says that the *Virginian Case* "is inapposite" and we insist and will now demonstrate that it is inapposite here. The opinion in the *Virginian Case* states at page 666 that "the order here in question was not sought or made under § 15(3) and does not direct the establishment of through routes and joint rates" and (p. 667) that:

> "The Commission found that the combination rate was both unreasonable and discriminatory. It prescribed through rates which it found were reasonable and nondiscriminatory. *It did not order joint rates.*"

Instead, as stated at page 662, the Commission ordered the carriers to "cease and desist" from collecting rates from the 54 complaining mines to western destinations in excess of the rates enjoyed by the 45 mines and others in the district having the lower rates. Thus, neither the Commission nor the Court in that case faced any problem of establishing joint rates under Section 15(3) or any new through route with joint rates. In that case, there was no railroad [fol. 497] claiming that its line was a part of millions of existing through routes nor any demand, such as the Rio Grande makes here, that the Commission require that the joint rates via existing Union Pacific routes be made applicable via the Rio Grande for the purpose of its "pecuniary gain" from a "bridge" haul over its line of traffic diverted from existing routes.

Furthermore, there was no question of short hauling the *Virginian* in that case for the traffic involved was originated at the 54 mines located on its line and it necessarily hauled the coal from the mines to its junction with the Chesapeake and Ohio. This haul averaged 64.7 miles, as shown in Commissioner Cox's dissenting opinion, 98 I.C.C. 498, and included all of the Virginian's line "which lies between the termini" of the route over which the coal moved from the 54 mines to the western destinations and, since it obtained its longest possible haul on such coal to the west, there was no short hauling within the meaning of Section 15(4). As shown in the decisions of the Commission and the Supreme Court, the western terminus of the Virginian was at Deepwater, W. Va., and from there it "extends only eastward to tidewater", meaning Norfolk, Va., and other ports along the Atlantic Coast. The Virginian's purpose in refusing to reduce its local rates from the 54 mines to junctions with the Chesapeake and Ohio was to discourage shipments from those mines to the west and thereby retain or increase the volume of coal traffic over its line to the east which gave it the benefit of a maximum haul of 450 miles (98 I.C.C. 498). In view of the foregoing analysis of the *Virginian Case*, this Court clearly errs in relying upon the decision in that case, and further errs in saying at page 28 of the opinion that the statement in the *Virginian Case* that "through routes to the West are already in existence" was "without apparent direct proof of transportation of freight from all

points on the Virginian to all points in the west via the [fol. 498] Chesapeake & Ohio", for, as we have just shown, the case did not involve the question whether through routes to the West already existed or what evidence was necessary to prove that such routes existed. These questions were involved, however, in the *Thompson Case*, and, as we have said, in deciding them the Court flatly rejected the dictum of the *Virginian Case* that the existence of through routes between connecting carriers automatically results from the fact that each of the carriers publishes its own local rates as required by the Act.

We urge the Court to give the most thorough reconsideration to its holding that through routes claimed by the Rio Grande already exist. We earnestly believe that upon careful analysis of all the facts and circumstances the Court will reverse its holding and agree with the Commission that through routes via the Rio Grande do not exist for the involved traffic and that no such route can be required without invoking Section 15(3) as limited by the short haul prohibition in Section 15(4).

IV

Upon its Holding that the Commission "erred as a matter of law" in Finding that There are at Present no Through Routes via the Rio Grande as Claimed by it, and that this Finding "obviously prejudiced the entire proceeding", the Court Erred in Concluding that the Commission's Order will be Annulled and set Aside only "in so far as it denied relief to the Rio Grande", and in Failing to hold that the Order Requiring Through Routes and Joint Rates for the Articles Therein Named, as well as the Commission's Failure to Require Joint Rates for all Commodities *Should be Annulled and set Aside.*

The Court's decision on "The Merits" is (p. 28) that the evidence clearly established the existence of through routes as claimed by the Rio Grande and that in finding to the contrary the Commission "erred as a matter of law" (pp. 18 and 29), and that this error of law "obviously prejudiced the entire proceeding". The Court further holds (p. 29) that the Commission adopted an erroneous "approach" and "erred as a matter of law in failing to apply the provi-

[fol. 499] sions of § 1(4) and § 3(4), rather than the provisions of § 15(3)."

Thus, the Court adopts as its own the contention of the Rio Grande at pages 86-101 of its brief that, because the Commission found that through routes do not presently exist as claimed by the Rio Grande, the decision and order are erroneous, arbitrary and capricious, and the Court also adopts the contention of the Short Line Association at page 24 of its brief that "the failure of the Commission to correctly determine the issue of through routes completely prejudiced the whole proceeding" and "completely destroyed the opportunity for the Commission to perform its statutory duty, and all additional rulings have thus been legally prejudiced, and should not therefore be regarded as determinative of the issues properly before the Commission."

While we contend that the Commission correctly found that no through routes presently exist, as claimed by the Rio Grande, and that, as argued at pages 16-19 of the supplemental brief of the intervening railroad defendants, even if the Commission committed error of law in so finding, the error is irrelevant to the validity of the order and is of no consequence unless it is a "distinct and dominant proposition of law * * * the exact influence of which, in its (the Commission's) decisions, could be estimated," *Ill. Cent., etc., R.R. Co. v. Inter. Com. Comm.*, 206 U.S. 441, 457. We challenge anyone to demonstrate that the Commission's finding that through routes via the Rio Grande do not presently exist "prejudiced" or had any effect or influence upon its ultimate conclusions or its failure to grant the Rio Grande's full demands. That the finding was also made by the Chief Examiner in his proposed report without objection, exception or claim by the Rio Grande that it influenced or prejudiced the conclusions of the Chief Examiner, for he recommended that the Commission require through routes and joint rates on all commodities. If the Com- [fol. 500] mission had found that the evidence justified requiring joint rates on all commodities, it needed only to adopt the order recommended by the Chief Examiner, from which it is plain that the finding of both the Commission and the Chief Examiner that through routes do not exist as

claimed by the Rio Grande, even if erroneous, was not the reason the Commission failed to require joint rates on all commodities, and the finding was therefore of no consequence.

However, if we are wrong in these views and if the Court, the Rio Grande and the Short Line Association are correct in the view that the Commission's finding was an error of law and that it "prejudiced the entire proceeding" and "completely destroyed the opportunity for the Commission to perform its statutory duty, and all additional rulings have thus been legally prejudiced", it is inescapable, we submit, that the *whole proceeding* before the Commission, including its order requiring through routes and joint rates for the articles therein named as well as its failure to require joint rates on all commodities, was by that finding vitiated and completely nullified, and that the Court patently errs in decreeing that the order will be annulled and set aside only "in so far as it denied relief to the Rio Grande".

An error of law so fundamental and having such pervading, influential and consequential effect that it "obviously prejudiced the entire proceeding" and completely prevented the Commission from performing its statutory duty, and to legally prejudice all additional rulings made in the proceeding, necessarily nullifies all action flowing from such error of law and the Court certainly exceeds its power in attempting to save the order insofar as it confers benefits upon the Rio Grande. In that attempt the Court necessarily usurps administrative authority of the Commission and, in effect, makes an administrative finding that the joint rates required by the order are justified by the evidence upon application of Sections 1(4) and 3(4), rather than [fol. 501] Section 15(3). In other words, while "remanding" the case to the Commission, the Court has pre-empted and usurped that much of the very purpose of the "remand" and the function the Commission would be called upon by the remand to perform, namely a determination whether the evidence requires any joint rates, and whether the Rio Grande is entitled to any "relief", in the light of the provisions of Sections 1(4) and 3(4).

The inevitable and unavoidable effect of the Court's hold-

ing that the Commission's finding that through routes do not presently exist as claimed by the Rio Grande is an error of law which "obviously prejudiced the entire proceeding", like a blight which kills a tree and all its roots and branches, is completely destructive and nullifying of all and not merely a part of the action flowing from the error. There can be no "unblighted" or lawful part of the action flowing from an error which "obviously prejudiced the entire proceeding". No case can be found in which such incongruous action has been undertaken by a court under such circumstances. Instead, the courts have invariably completely, and not partly, annulled and set aside orders held to have resulted from fundamental errors of law, or from the Commission's misinterpretation of its authority or from its arbitrary action. For example, in *Ann Arbor R. Co. v. United States*, 281 U.S. 658, the Supreme Court held that the Commission had committed error of law by misconstruing a Joint Resolution of Congress in issuing the order there considered, but the Court did not undertake to save any part of the order. Instead, at page 669, it held:

> "Our conclusion is that the order of the Commission was based upon an erroneous construction of the Joint Resolution, and therefore should have been set aside by the Court below."

In *Atchison, etc. Ry. Co. v. U.S.*, 284 U.S. 248, the Commission had, after long hearings and consideration, issued an order prescribing rates on grain and grain products throughout the western part of the United States. After [fol. 502] the order was issued, several western railroads petitioned the Commission to reopen the proceedings and receive further evidence which would disclose drastically changed conditions resulting from the early effect of the great "Depression", and the consequent inability of the railroads to withstand the rate reductions required by the order. The Commission denied the petition. The Supreme Court held that the Commission's refusal of further hearings and consideration in the light of the facts which the petition offered to prove was an arbitrary denial of right. The Court did not attempt to save any part of the order

or to remand the case to the Commission. Instead, at page 263, the opinion concludes:

> "The order of the District Court refusing an interlocutory injunction is reversed, and the cause is remanded with direction to grant the injunction as prayed".

Even in cases where the courts have found that the Commission acted lawfully in granting *a part* of motor carrier operating rights but acted upon an error of law or misinterpretation of the Act in denying other parts of the operating rights sought by the application, the Courts, upon holding that the Commission's denial of a part of the operating rights sought, have not tried to save the rights lawfully granted but have annulled and set aside the entire order. Such a case is *Carolina Freight Carriers Corp. v. U. S.*, 38 F. Supp. 549, in which the Court, though "remanding" the case to the Commission, said at page 556:

> "For the reasons stated the order of the Commission will be set aside."

The decree of the three-judge District Court was "affirmed" by the Supreme Court on appeal without suggesting that the order should be annulled and set aside only insofar as it refused operating rights as a result of its error of law. *U. S. v. Carolina Carriers Corp.*, 315 U.S. 475, 490.

In *E. Brooke Matlack, Inc. v. United States*, 119 F. Supp. [fol. 503] 617, the Commission issued an order granting a part of operating rights but denying the motor carrier's application for still more extensive rights. The Court held that the denial of the more extensive rights was the result of erroneous and unlawful action by the Commission, but it decreed that the Commission's whole order be set aside, without suggesting that the operating rights lawfully granted by the order be saved, pending reconsideration by the Commission.

For the foregoing reasons, the Court, upon its holding that the "entire proceeding" was prejudiced by the Commission's finding that no through routes presently exist as claimed by the Rio Grande, can only decree that the

entire order be annulled and set aside for it has no power to save that part of the Commission's "prejudiced" action as the Court might think is beneficial to the Rio Grande while annulling and setting aside the part of the same "prejudiced" action which is unfavorable to the Rio Grande.

V

The Court Erred in Holding that the Commission "erred as a matter of law in failing to apply the provisions of § 1(4) and § 3(4), rather than the provisions of § 15(3)", in Determining Whether "joint rates, as prayed for by the Rio Grande", should be Required

There are at least four separate errors in that holding; first, it overlooks or ignores the fact that the Commission *did* make findings under Sections 1(4) and 3(1) and 3(4) and its order makes requirements that the defendant railroads correct violations found under those sections; second, the Rio Grande's complaint (page 10), though couched in evasive language, demanded *joint rates* "equal" to the joint rates via Union Pacific routes, and the Court clearly errs in holding (page 31) that the Rio Grande was entitled to such equal joint rates if its evidence proved violations of Sections 1(4) and 3(4), for the Commission has no power under those sections to require joint rates; third, the only power the Commission has to require joint rates is that [fol. 504] conferred by Section 15(3), as limited by Section 15(4), where, as in this case, short hauling other carriers is involved, and fourth, the only right the Rio Grande has under the allegations of its complaint is the right under Section 3(4) to be not discriminated against by other railroads, and it has no rights under Sections 1(4) or 3(1), for the right to reasonable rates and to be not unduly prejudiced or preferred, and the right to joint rates under Section 15(3) are all shipper's rights and not rights of the Rio Grande. These separate errors will now be discussed briefly in the order just stated:

1. The Court's erroneous thought that the Commission failed to apply the provisions of Sections 1(4) and 3(4) clearly is the result, as shown in the opinion, of strange and

incredible inadvertence or failure to observe what seems impossible of overlooking in the Commission's report and order. At pages 15 and 16, the opinion undertakes to state the Rio Grande's contentions before the Commission and then states that the Commission recognized the first question for determination was whether through routes via the Rio Grande exist within the meaning of Section 15(3) and (4). The Commission did make this statement at page 615 of its report but the Court's opinion completely overlooks the following statement of the issues on page 619 of the report:

> "The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15(3) and (4). In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower than the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together."

[fol. 505] By thus ignoring the Commission's statement that the issues include reasonableness of the combination rates, discrimination between connecting lines and undue prejudice against shippers using the Rio Grande route, the Court's opinion leaves the erroneous impression that the Commission's failure to grant all the Rio Grande's demands is the result of a self-imposed, limited and restricted consideration and treatment of the case, and a refusal and failure to consider the very things which the paragraph just quoted clearly shows the Commission recognized as issues presented and to be determined. At page 17 the opinion says, "Thus limited in its further consideration of the case, the Commission entered its order:", following which the opinion quotes, not from the order but the first

paragraph of the Commission's conclusions at page 659 of its report, following which the opinion states that:

> "In all other material respects the relief requested by the Rio Grande was denied." (p. 18)

The Commission's report (pp. 659-660) sets forth four separately stated conclusions. By quoting only the first conclusion as constituting the order of the Commission and by refraining from making any reference to the other three conclusions, the opinion would mislead one who reads it to believe that the Commission dealt with nothing more than appears in its conclusion "1", which the opinion quotes. Since the Court quite apparently was misled by its own oversight, we now quote conclusions "2", "3" and "4" from pages 659-660 of the Commission's report, which clearly show that the Commission considered and made findings with respect to all of the issues raised by the Rio Grande under all of the sections of the Act invoked by its complaint:

> "2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the [fol. 506] Union Pacific routes.
>
> "3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3(4) of the act.
>
> "4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

"An appropriate order will be entered."

Thus, the Commission not only states that the issues for determination include the reasonableness of the combination rates via the Rio Grande, discrimination against the Rio Grande resulting from the refusal of carriers forming Union Pacific routes to join with the Rio Grande in establishing joint rates lower than its combination rates, and undue prejudice against shippers using or desiring to use the Rio Grande, but also makes specific findings on all of the issues.

At page 658 its report states that the evidence adequately supports—

> "* * * a finding of undue prejudice and preference under section 3(1) of the act."

and, with respect to discrimination against the Rio Grande, the report, at page 658, makes the following finding:

> "There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3(4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than the over routes said to be preferred. No such a showing has here been made."

Further, with respect to discrimination against the Rio Grande, the Commission finds at pages 658-659,

> "The situation is different with respect to traffic between Utah common points, on the one hand, and the northwest area, on the other. On such traffic the Union Pacific interchanges with the Bamberger Railroad Company at Ogden at joint through rates to and from [fol. 507] points on that line, including Salt Lake City. There is no apparent reason why similar arrangements should not apply on like traffic interchanged with the Rio Grande. The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the

Bamberger and those in connection with the Rio Grande."

The first paragraph of the Commission's order briefly summarizes its findings, and other paragraphs of the order require establishment of joint rates with the Rio Grande found reasonable (Section 1) and that the defendant railroad cease and desist from practicing undue prejudice and preference as between shippers (Section 3(1)), and unlawful discrimination against the Rio Grande (Section 3(4)), at points on the Bamberger Railroad.

2. The opinion reiterates the view that the Rio Grande was entitled to an order requiring the joint rates it demanded if its evidence provided violations of Sections 1(4) and 3(4), thus, assuming that those sections confer power on the Commission to compel joint rates and that the requirement of joint rates was the only remedy the Commission had power to order if it found violations of those sections, and is thoroughly confused with respect to the several separate sections and provisions of the Act. A mere reading of Sections 1(4) and 3(4) plainly shows that those provisions confer no power upon the Commission to order joint rates.

Sections 1(4) and 3(4), conferring the broad power upon the Commission to pass upon the reasonableness of rates and alleged discrimination against one carrier by others, were enacted in 1887. The special power to require joint rates was not conferred upon the Commission until 1906, in connection with the power to require through routes, Section 15(3) and (4), which expressly requires a finding that joint rates are necessary ad desirable "in the public interest" before the Commission may require them. See, for example, *U. S. v. Great Northern R. Co.*, 343 U. S. 562, where the court sustained the Commission's order requiring [fol. 508] joint rates found necessary in the public interest. The power to require joint rates is separate and distinct from the power to pass on the reasonableness of rates and discrimination under Sections 1(4) and 3(4). The Commission's power to order reasonable and non-discriminatory rates is not conditioned upon a finding of public interest; but the power to require joint rates may not be

exercised except upon a finding of public interest, *Atchison T. & S. F. Ry. Co. v. U. S.*, 279 U. S. 768, 776, *Virginian Railway Co. v. United States*, 272 U. S. 658, 667. To hold that the Commission has power to require joint rates upon finding violations of Sections 1(4) and 3(4) is to render useless and meaningless the later enactment of Section 15(3) in 1906, conferring the special power to require joint rates when found necessary in the public interest, and the Supreme Court has, as late as June 2, 1952, in *Thompson v. United States*, 343 U. S. 549, rejected any interpretation or application which so confuses, commingles or fails to give full effect to the separate and independent provisions of Section 15(3) and (4) with the power earlier conferred upon the Commission to correct unreasonable and discriminatory rates.

Although its complaint alleged violations of Section 1(4) and Section 3, under which the Commission had power to require reasonable and non-discriminatory rates, this was not what the Rio Grande wanted, for its complaint demanded joint rates "equal" to those via Union Pacific routes, and it argues at page 101 of its brief to the Commission, that—

> "Unless the same level of rates is prescribed on the traffic involved via the Ogden gateway and the Rio Grande no practical or useful purpose will be served."

Realizing that difference in transportation conditions via its longer and more onerous line might require a finding that reasonable rates via its line would be somewhat higher than rates via the Union Pacific routes, the Rio Grande [fol. 509] also alleged a violation of Section 15(3), but as that power is limited by the short haul prohibition in Section 15(4) and, realizing also that its only purpose was to short haul Union Pacific routes, the Rio Grande seized upon the contention rejected by the Commission but adopted by this Court that through routes via its line already existed for the traffic involved and that the limitations of Section 15(4) on the power to require joint rates and through routes did not apply. Thus, it sought to separate the power to require joint rates from the power to require through routes that would divert traffic to its line from Union Pacific routes and in that way to obtain the benefit of the Commission's

power to prescribe through routes and joint rates without having to hurdle the short haul prohibition in Section 15(4). The Court has adopted the Rio Grande's theory throughout and has even gone beyond it in holding that the Rio Grande is entitled to an order requiring joint rates if it establishes violations of Sections 1(4) and 3(4).

While the power to require joint rates in lieu of combination rates may, upon a valid finding that joint rates are necessary "in the public interest", be exercised separately from the power to require through routes where through routes actually exist, and requiring joint rates over the same through route via which combination rates previously existed would not divert traffic from either of the connecting railroads, but the joint rate power clearly may not be exercised separately from the limitations upon it where, as here, the very purpose is to divert traffic to the Rio Grande from Union Pacific routes, or for the purpose of curing violations of Section 1(4) and Section 3(4). *U. S. v. Great Northern R. Co.*, 343 U. S. 562.

3. The next error embraced in the Court's holding that the Commission erred in failing to apply Sections 1(4) and 3(4), rather than Section 15(3), is, as indicated above, that [fol. 510] the Court believes that the Rio Grande was entitled to the joint rates it demanded on all commodities and tha. he Commission might and probably would have granted the demand for joint rates on all commodities if it had applied only Sections 1(4) and 3(4) and had not resorted to its power under Section 15(3) and (4). Sufficient has already been said to demonstrate that if the Commission had limited its consideration and application to Sections 1(4) and 3(4) it would have been powerless to require the joint rates on all commodities, which the opinion strongly suggests the Commission should have required, or to require even the joint rates on the articles named in the order, for the Commission as shown above has no power under any section or provision of the Act to require joint rates other than the power granted by Section 15(3).

4. The Court erroneously assumes that the Rio Grande, as a carrier, may complain to the Commission that its own combination rates are unreasonable and discriminatory and

to demand an order requiring joint rates equal to those via the Union Pacific routes. But the numerous cases cited at pages 204-214 of the brief, Vol. II, of the intervening railroad defendants in this Court hold beyond question that the rights to reasonable and non-discriminatory rates and to joint rates when required "in the public interest" are all rights of shippers and that the only right the Rio Grande may assert is that granted in Section 3(4) declaring that carriers "shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper". Even that right not to be discriminated against is conditioned by the proviso in Section 3(1) that—

> "* * * this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

[fol. 511] The Commission itself held correctly at page 619 of its report that the Rio Grande, being a railroad, "could not raise, in its own behalf, an issue under section 3(1) against another railroad." Not only is the Rio Grande without any right to demand joint rates "in the public interest", since that is a right belonging only to the shipping public, but an order requiring joint rates, even if the Commission had found that the Rio Grande's rights under Section 3(4) had been violated, is beyond the Commission's power for the further reason that a violation of Section 3(4) calls for an order directing the guilty carriers to "cease and desist" from such violations and not for an order requiring joint rates equal to those maintained by competing carriers, *Central R. R.* v. *United States*, 257 U. S. 247, 257-259, and *Texas & Pacific Ry. Co.* v. *U. S.*, 289 U. S. 627, holding at page 650, that:

> "Where an order is made under § 3 an alternative must be afforded. The offender or offenders may abate the discrimination by raising one rate, lowering the other, or altering both. * * * (citing cases) The situation must be such that the carrier or carriers if given an option have an actual alternative."

It results that the Court holds the Commission guilty of committing an error of law which does not invalidate the joint rates the Commission did require, but nullifies its failure to grant the joint rates it did not require, because the Commission resorted to the only power it has to require joint rates (Section 15(3)) in granting the Rio Grande joint rates on such articles as the record justified. Surely, the Court will not permit this incongruous and erroneous holding to go down in the books.

VI

The Court Exceeded its Power by Usurping Administrative Authority to make Findings of fact Favorable to the Rio Grande and Thereupon "remanding" the case to the Commission "for further proceedings in conformity with this opinion"

The opinion reflects a strong tendency by the Court to suggest what it seems to think the Commission should have [fol. 512] done in the exercise of its exclusive administrative power and even goes so far as to make findings of fact which only the Commission has power to make. For example, at page 36, the opinion finds:

> "Here, the Rio Grande sought an order compelling the defendant railroads to perform the duty of establishing just and reasonable joint rates, fares, and charges over through routes, and it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate."

Again on page 37, the Court finds:

> "Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines."

These are plain findings of fact and in making them the Court ignores the settled rule laid down in Supreme Court decisions that in reviewing orders of the Commission the

courts may not "usurp merely administrative functions", *Interstate Comm. Comm.* v. *Ill. Cent. R. R.*, 215 U. S. 452, 470. Having usurped administrative authority to make these findings, the Court then would further exceed its powers and make its own findings binding upon the Commission, thus directing and controlling its administrative discretion by "remanding" the case to the Commission "for further proceedings in conformity with this opinion". If the "remand" were within the Court's power, which it is not, the Commission in such "further proceedings" would be bound to adopt the administrative findings of fact which the Court has made although they are contrary to the Commission's own findings in its report.

Fortunately, the Commission's exclusive administrative discretion may not be so easily pre-empted or controlled, for, as pointed out elsewhere in this motion, the Court has no authority to make administrative findings of fact and it has no power to "remand" a case to the Commission with direction to proceed further in conformity with the Court's unauthorized administrative findings of fact.

[fol. 513] The statute (28 U. S. Code, Sec. 1336) authorizing review of the Commission's orders gives the courts no power to "remand" a case to the Commission; under the specific language of the statute, the courts are given power only to "enjoin, set aside, annul or suspend in whole or in part, any order" of the Commission. The Commission is a legislative and administrative arm or agency of Congress—the legislative department of the Federal Government—and not a part of the judicial department, and in view of the exact statutory specification and limitation of what the courts may do upon reviewing an order of the Commission, and the refusal of Congress to empower the courts to "remand" cases to that legislative and administrative agency, there is no power in the courts to "remand" cases to the Commission, and the Supreme Court was without power to "remand" to the Commission the order reviewed in *Secretary of Agriculture* v. *United States*, 347 U. S. 645, cited in this Court's opinion as authority for its "remand" of the order in this case. An appropriate federal court has power to compel the Commission *to act*

only in a mandamus suit, but this is not such a suit, and no court in any type of proceeding has power to compel the Commission to decide a case as a court might think it should be decided, nor even to adopt the court's view of the law, for the Commission's exclusive administrative power to decide includes the power to decide erroneously as well as correctly, and the courts can do nothing more than declare their views of the law and to "enjoin, set aside, annual or suspend in whole or in part" orders they adjudge to be erroneous in law.

Wherefore, these Movants pray that the Court grant this motion for new trial, that the Court grant oral argument and reconsideration of the matters presented and, there-
[fol. 514] upon, correct the errors specified and discussed in this motion.

Respectfully submitted, Don Eastvold, Robert L. Simpson, C. W. Ferguson, James B. Patten, Howard B. Black, Clarence S. Beck, Bert L. Overcash, Elmer B. Collins, F. O. Steadry, L. E. Torinus, Warren H. Ploeger, Roland J. Lehman, Eugene S. Davis, E. G. Knowles, 560 Denver Club Building, Denver, Colorado, Attorneys for Movants

[fol. 515-516] CERTIFICATE OF SERVICE (Omitted in Printing)

[fol. 517] IN UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

Civil Action No. 4492

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Plaintiff,

v.

UNITED STATES OF AMERICA, AND INTERSTATE COMMERCE COMMISSION, Defendants,

UNION PACIFIC RAILROAD COMPANY, ET AL, Intervening Defendants

FINAL JUDGMENT AND DECREE—February 1, 1955

The hearing in the above-entitled cause having been held on June 8 and 9, 1953, before Circuit Judge Orie L. Phillips and District Judges Royce H. Savage and William Lee Knous, constituting a District Court of three judges, convened pursuant to Title 28 U.S.C., Sections 2284 and 2325, and all parties being represented by counsel, and the Court having received the evidence offered and heard the arguments of counsel, and the Court being fully advised in the premises and having filed its opinion herein on January 13, 1955, and the Court being of the opinion that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297 is invalid and unlawful insofar as it denied relief to the plaintiff above named;

Now, therefore, upon the basis of of said opinion of this Court dated January 13, 1955, and for the reasons therein set forth, It is ordered, adjudged and decreed that the injunction and other relief prayed for by plaintiff and in-
[fol. 518] tervening plaintiffs in the complaint be and the same is hereby granted, and the order of the Interstate Commerce Commission dated January 12, 1953, be and the same is hereby annulled and set aside insofar as it denied and withheld relief to the plaintiff and intervening plaintiffs,

It is further ordered, adjudged and decreed that this cause, insofar as the aforesaid order of the Interstate Com-

merce Commission denied and withheld relief to plaintiff and intervening plaintiffs, be and the same is hereby remanded to the Interstate Commerce Commission for further proceedings in conformity with the opinion and judgment of this Court.

Dated this 1st day of February, 1955.

Orie L. Phillips, Chief Judge, United States Court of Appeals; Royce H. Savage, Judge, United States District Court; William Lee Knous, Judge, United States District Court

ORDER DENYING MOTION FOR NEW TRIAL OF REARGUMENT AND RECONSIDERATION—April 22, 1955

Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company; and Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, intervening defendants herein,

having seasonably filed their motion for new trial or re-argument and reconsideration and this Court having entertained and duly considered said motion and brief of plaintiff in opposition thereto,

It is ordered:

1. That said motion be and it is hereby overruled and [fol. 523] denied;

2. That the Clerk of this Court transmit forthwith copies of this Order to counsel in this case.

Dated at Denver, Colorado, this 22 day of April, 1955.

By the Court: Orie L. Phillips, Chief Judge, United States Court of Appeals for the Tenth Circuit; Royce H. Savage, United States District Judge for the Northern District of Oklahoma; William Lee Knous, United States District Judge.

NOTICE OF APPEAL BY UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION TO THE SUPREME COURT OF THE UNITED STATES—Filed June 20, 1955

I. Notice is hereby given that the United States of America and the Interstate Commerce Commission, defendants in the above-entitled action, hereby appeal to the Supreme Court of the United States from the final judgment and decree (dated February 1, 1955) setting aside the order of the Interstate Commerce Commission, entered in this action on February 14, 1955.

This appeal is taken pursuant to 28 U.S.C. § 1253.

II. The clerk will please prepare a transcript of the record in this cause, for transmission to the Clerk of the Supreme Court of the United States, and include in said transcript the entire record before the district court.

[fol. 532] III. The following question is presented by this appeal:

Whether the district court, in setting aside the Commission's order establishing new through routes (and joint rates) on the ground that the "uncontradicted evidence" showed that through routes were already in existence, applied an erroneous standard for determining the existence of a through route.

Daniel M. Friedman, Special Assistant to the Attorney General, Attorney for the United States, Address: Department of Justice, Washington 25, D. C., Samuel R. Howell, Acting General Counsel, Attorney for the Interstate Commerce Commission, Address: Interstate Commerce Commission, Washington 25, D. C.

NOTICE OF APPEAL BY UNION PACIFIC RAILROAD CO., ET AL. TO THE SUPREME COURT OF THE UNITED STATES—Filed June 20, 1955

I.

Notice is hereby given that Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, intervening defendants in the above-entitled cause, hereby appeal to the Supreme Court of the United States from the final judgment and decree entered in this cause February 14, 1955, the effect of which was suspended pending consideration of motion for new trial filed by these intervening defendants, said motion having been denied by order of the Court dated and entered April 22, 1955, which final judgment and decree orders, adjudges and decrees [fol. 536] that the order of the Interstate Commerce Commission dated January 12, 1953, in its docket No. 30297, *Denver & R. G. W. R. Co.* v. *Union Pac. R. Co. et al*, 287 I.C.C. 611, "is invalid and unlawful insofar as it denied relief to the plaintiff" and intervening plaintiffs, grants "the injunction and other relief prayed for by plaintiff and intervening plaintiffs", annuls and sets aside said order insofar as it denied and withheld relief to the plaintiff and intervening plaintiffs' and orders and decrees—

> "* * * that this cause, insofar as the aforesaid order of the Interstate Commerce Commission denied and withheld relief to plaintiff and intervening plaintiffs, be and the same is hereby remanded to the Interstate Commerce Commission for further proceedings in conformity with the opinion and judgment of this Court."

This appeal is taken pursuant to 28 U. S. Code, Section 1253.

II

The Clerk will please prepare a transcript of the record in this cause, for transmission to the Clerk of the Supreme Court of the United States, and include in said transcript the entire record of the proceedings before the specially constituted three-judge Court, and all of Rio Grande Exhibit No. 1, which consists of a transcript of the pleadings, evidence and exhibits and other documents in the proceeding before the Interstate Commerce Commission.

III

The following questions are presented by this appeal:

(1) Whether the court erred in refusing to dismiss the Rio Grande's complaint and intervening complaints on the ground that, as the Commission's failure to order through routes and joint rates on *all* instead of only a part of the traffic is not an "order" or a part of any order issued by the Commission, there is no jurisdictional basis for judicial review.

[fol. 537] (2) Whether the district court erred in holding that plaintiff, The Denver a d Rio Grande Western Railroad Company (hereinafter called "Rio Grande"), admittedly lacking any legal or other right to traffic it seeks to divert to its line from other carriers, has standing to maintain this suit for the purpose of obtaining a "pecuniary profit" from that part of the traffic for which the Commission failed to order through routes and joint rates via the Rio Grande.

(3) Whether the court erred in making its own administrative finding that, "under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines", contrary to the Commission's finding that the evidence did not prove discrimination, and erred further in relying upon its own administrative finding to sustain

the standing of the Rio Grande and intervening shippers to maintain this suit.

(4) Whether the court erred in holding, in effect, that the Commission's finding that the evidence failed to prove discrimination against the Rio Grande and its failure to order through routes and joint rates on *all* instead of a part of the traffic amounts to the denial of a right given the Rio Grande by the [Interstate Commerce] Act adversely affecting its traffic and revenues, causing it to suffer pecuniary injury, and giving it "a right to judicial review of the order".

(5) Whether, in resting its decision that the Rio Grande has standing to maintain this suit upon several hypothetical or "if" propositions, the court erred in ignoring or giving no effect to the fact that, after full hearings and thorough consideration of the evidence, the Commission [fol. 538] found that, except to the extent indicated in its findings, the evidence failed to prove discrimination against the Rio Grande or undue preference and prejudice between shippers or that through routes and joint rates by the Rio Grande are necessary in the public interest to provide adequate and more economic transportation, and concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained".

(6) Whether the court erred in failing to hold that neither the Rio Grande nor intervening plaintiffs had standing to maintain this suit.

(7) Whether the court erred in holding that the Commission's finding that "there are at present no through routes, as that term is used in the Act", over the Rio Grande via Ogden or Salt Lake City "on the traffic here concerned" is not supported by substantial evidence and is erroneous as a matter of law, and whether the court further erred in its own holding that the existence of such through routes is established by the evidence and the law.

(8) Whether, in holding that through routes for the "bridge" traffic here concerned were in existence via the Rio Grande, the court erred in refusing to consider the fact that the evidence showed through movement of only

one shipment of non-emergency traffic via the Rio Grande over each of only 17 of the many hundreds of thousands of through routes of which the Rio Grande claims to be a part between the 2,900 railroad stations in the northwest area and the 39,000 stations in the eastern and southern parts of the country.

(9) Whether, in holding that through routes were in existence via the Rio Grande for the traffic here concerned, the court erred in failing and refusing to indicate or specify the through routes held to be in existence via the Rio Grande or the termini of, or the railroads comprising such [fol. 539] through routes, or the commodities for which the court holds that through routes exist via the Rio Grande.

(10) Whether, in view of the fact that the Commission overcame the short haul prohibition in Section 15(4) by ordering through routes and joint rates on all the commodities it considered upon the evidence to be necessary in the public interest, the court erred in holding that the Rio Grande and the "entire proceeding" were "prejudiced" by the Commission's finding that through routes did not already exist via the Rio Grande for the traffic it seeks.

(11) Whether, if the last preceding question is answered negatively, the court erred in annulling and setting aside "the order" *only* "insofar as it denied and withheld relief" to the Rio Grande.

(12) Whether the court erred in holding that the Rio Grande was entitled to have the Commission, in determining whether joint rates via the Rio Grande should be required, "apply the provisions of §1(4), §3(4), §15(1) and §15(3) of the Act, free of any of the limitations imposed by §15(4) with respect to establishing through routes".

(13) Whether the court exceeded its powers in making its own finding that the evidence proved discrimination against the Rio Grande, and thereupon in "remanding" the case to the Commission "for further proceedings in conformity with the opinion and judgment of this Court".

(14) Whether the court erred in failing to conside and

review the entire record and all the issues tendered in [fol. 540] briefs and arguments of the parties.

F. O. Steadry, L. E. Torinus, Warren H. Ploeger, Roland J. Lehman, Eugene S. Davis, James C. Wilson, E. G. Knowles, Elmer B. Collins, Attorneys for Intervening Railroad Defendants.

IN UNITED STATES DISTRICT COURT

[Title omitted]

NOTICE OF APPEAL BY WASHINGTON PUBLIC SERVICE COMMISSION ET AL TO THE SUPREME COURT OF THE UNITED STATES—Filed June 20, 1955

I

Notice is hereby given that Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission; intervening defendants in the above-entitled cause, hereby appeal to the Supreme Court of the United States from the final judgment and decree entered in this cause February 14, 1955, the effect of which was suspended pending consideration of motion for new trial filed by these intervening defendants, which motion was denied by order of the Court dated April 22, 1955, which final judgment and decree orders, adjudges and decrees that the order of the Interstate Commerce Commission dated January 12, 1953, in its docket No. 30297, *Denver & R.G.W.R. Co.* v. *Union Pac. R. Co., et al.*, 287 I.C.C. 611, "is invalid and unlawful insofar as it denied relief to the plaintiff above named" and intervening plaintiffs, grants "the injunction

and other relief prayed for by plaintiff and intervening plaintiffs", annuls and sets aside said order insofar as it denied and withheld relief to the plaintiff and intervening plaintiffs and orders and decrees—

> [fol. 546] "* * * that this cause, insofar as the aforesaid order of the Interstate Commerce Commission denied and withheld relief to plaintiff and intervening plaintiffs, be and the same is hereby remanded to the Interstate Commerce Commission for further proceedings in conformity with the opinion and judgment of this Court."

This appeal is taken pursuant to 28 U. S. Code, Section 1253.

II

The Clerk will please prepare a transcript of the record in this cause, for transmission to the Clerk of the Supreme Court of the United States, and include in said transcript the same record as designated by the Union Pacific Railroad Company, et. al., intervening defendants in the above entitled action.

III

The following questions are presented by this appeal:

I. Does the plaintiff (hereafter called Rio Grande) which obtained certain joint through rates under the Commission's order, have legal standing to seek by a suit to enjoin the order, similar rates on all commodities via all possible routes when the granting of such additional relief is subject to administrative determination of public interest requirements under the Interstate Commerce Act.

II. Did the district court err in holding that Rio Grande sustained "pecuniary injury" and had standing to maintain this action on the ground that the Commission deprived Rio Grande of additional "pecuniary gain" which would be realized if all the joint rates demanded by Rio Grande had been granted.

III. Did the district court err in holding that Rio Grande need not sustain "pecuniary injury" in order to have a "right to judicial review".

IV. Did the district court err in holding that the Com-

mission's finding that "there are at present no through routes, as that term is used in the act", over the Rio Grande via Ogden or Salt Lake City "on the traffic here concerned" is not supported by substantial evidence and is erroneous as a matter of law.

V. Did the district court, in connection with its holding that through routes were in existence on the "bridge" traffic sought by Rio Grande, err in failing to consider and give effect to the fact that the primary objective of Rio [fol. 547] Grande was to participate in the transportation of the products of the northwest states to the eastern and southern markets and that not a single movement of such "bridge" traffic is shown to have occurred over the Rio Grande route.

VI. Did the district court, in connection with its holding that through routes were in existence, err in failing to find that the cancellation of joint rates in 1906 and 1912 effectively closed these through routes in accordance with the understanding and "course of business" of the parties concerned and that the conclusion of the Commission in this regard is supported by legislative amendments in 1940 to Section 15 (3) of the act.

VII. Did the district court, in connection with its holding that through routes were in existence, err in failing to find as the Commission found, that shippers have a right to route traffic via the Rio Grande and Union Pacific and that the Union Pacific had no right or duty to refuse shipments.

VIII. Did the district court err in holding that the decision of the Commission as to the existence of through routes "obviously prejudiced the entire proceeding" in view of the fact that the Commission's order established through routes and joint rates upon all commodities that it considered upon the evidence to be necessary in the public interest.

IX. Did the district court err in annulling and setting aside only that portion of the Commission's order which "denied relief to the Rio Grande" upon its holding that the Commission's finding as to through routes "obviously prejudiced the entire proceeding".

X. Did the district court err and exceed its powers in making findings of fact favorable to Rio Grande and in

[fol. 548] ordering the Commission to proceed "in conformity with the opinion and judgment of the court", and the "instructions" therein.

Don Eastvold, Robert L. Simpson, C. W. Ferguson, James B. Patten, George F. Guy, Clarence S. Beck, Beyt L. Overcash, Attorneys for Intervening Defendants, State Capitol Building, Lincoln, Nebraska

[Title omitted]

Motion for Transmittal of Original Pleadings and Exhibits—Filed July 11, 1955

Comes now the United States of America, a party to the above-entitled matter, by Donald E. Kelley, United States Attorney for the District of Colorado, and shows unto the Court as follows:

1. That a Notice of Appeal herein was filed on June 20, 1955, to the United States Supreme Court in this matter.

2. That in the interests of justice, and to effect monetary savings, it is desirable that the Clerk of this Court transmit to the United States Supreme Court for its use, the original pleadings and exhibits on file in this cause, all of which should be returned to the Clerk of this Court when their purpose has been served in the Supreme Court of the United States.

Wherefore, it is prayed that an Order be entered permitting the Clerk of this Court to transmit to the United States Supreme Court the originals of the pleadings and exhibits on file in this cause, all to be returned to the

Clerk of this Court whenever they have served their purpose:

Donald E. Kelley, United States Attorney for the District of Colorado; Robert Swanson, Assistant United States Attorney for the District of Colorado.

[Title omitted]

ORDER RE TRANSMITTAL OF ORIGINAL PLEADINGS AND EXHIBITS —July 11, 1955

This matter coming on to be heard upon the application of the United States for an Order permitting the Clerk of this Court to transmit the original pleadings and exhibits on file in this case to the United States Supreme Court for use in the appeal proceedings, and the Court having examined the files and heard the statements of counsel,

It is ordered that the Clerk of this Court transmit to the Supreme Court of the United States, for use in connection with the appeal proceedings herein, the original pleadings and exhibits now on file in this cause, all to be returned when such pleadings and exhibits have served their purpose in the Supreme Court.

Dated at Denver, Colorado, this 11 day of July, A.D. 1955.

By the Court: William Lee Kraus, United States District Judge.

BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, ET AL., Defendants

COMPLAINT—Filed August 1, 1949

To The Interstate Commerce Commission:

The complainant, The Denver and Rio Grande Western Railroad Company, by its complaint herein respectfully shows:

I.

That complainant, a corporation duly organized and existing under the laws of the State of Delaware, is a common carrier by railroad engaged in the transportation of persons and property in interstate and foreign commerce, and, as such, is subject to the provisions of the Interstate Commerce Act. Complainant owns and operates approximately 2400 miles of railroad in the States of Colorado, New Mexico and Utah. Its principal eastern terminals are at Denver, Colorado Springs and Pueblo, Colorado, and its [fol. b] principal western terminals are Ogden, Salt Lake City and Provo, Utah. Complainant is an important and necessary part of the railroad transportation system of the United States.

II

That defendant, Union Pacific Railroad Company, hereinafter called the Union Pacific, and the other defendants named in Appendix A attached hereto and made a part hereof, are common carriers engaged in the transportation

of property and persons in interstate and foreign commerce wholly by railroad or partly by railroad and partly by water between places in the States of Montana, Idaho, Washington, Oregon, California, Nevada, Utah and places in other states of the United States, the District of Columbia, the Dominion of Canada, and the Republic of Mexico, and, as such common carriers, are subject to the provisions of the Interstate Commerce Act.

III

That defendant, the Union Pacific, is engaged in the transportation of persons and property as a common carrier by railroad between Omaha, Nebraska, and Ogden, Utah, via Cheyenne, Wyoming, and other intermediate places, and between Kansas City, Missouri, Denver, Colorado, Cheyenne, Wyoming and Ogden, Utah. The Union Pacific is likewise engaged under lease in the operation of the railroad properties of the Oregon Short Line Railroad Company, the Oregon-Washington Railroad and Navigation Company and the Los Angeles and Salt Lake Railroad Company and by virtue of said lease and operation of the railroad properties described, the Union Pacific serves [fol. c] points and places in the States of Montana, Idaho, Washington, Oregon, California, Nevada and Utah.

IV

That complainant has interchange connections, inter alia, and interchanges traffic with the Union Pacific at Denver, Colorado, and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific Company at Ogden, Utah, and with the Western Pacific Railroad Company at Salt Lake City, Utah. Complainant also has interchange comections and interchanges traffic at Denver, Colorado, with the Chicago, Rock Island and Pacific Railroad Company, Chicago, Burlington & Quincy Railroad Company, The Atchison, Topeka and Santa Fe Railway Company, and The Colorado and Southern Railway Company; at Colorado Springs, Colorado, with The Atchison, Topeka and Santa Fe Railway Company and the Chicago, Rock Island and Pacific Railroad Company; at Pueblo, Colorado, with The Atchison, Topeka and Santa Fe Railway Company, The Colorado and South-

ern Railway Company and the Missouri Pacific Railroad Company (Guy A. Thompson, Trustee); at Walsenburg, Colorado, with The Colorado and Southern Railway Company, and at Trinidad, Colorado, with The Atchison, Topeka and Santa Fe Railway Company and The Colorado and Southern Railway Company.

V

That in June, 1934, the complainant established a new through route between Denver, Colorado, and Salt Lake City and Ogden, Utah, via Dotsero, Colorado, frequently called the Moffat Tunnel route. The distance via this route is 175 miles shorter than the distance via the line of the complainant through Pueblo, Colorado, and the Royal [fol. d] Gorge, and is 43 miles shorter than the route of any other railroad between Denver, Colorado, and Salt Lake City, Utah. The route through the Moffat Tunnnel enabled complainant to establish, and it has established, greatly improved local and through freight and passenger service, not only as to freight and passengers between Denver, Colorado, and Salt Lake City and Ogden, Utah, but also as to freight and passengers which move via defendants or some of them, between points west of Salt Lake City, Provo and Ogden, Utah, and points east of Colorado common points in which the complainant is an intermediate carrier. In addition to the improvements of the service already described, approximately $73,000,000 were expended during the trusteeship of the predecessor of the complainant for additions and betterments, modernization of equipment, establishment of centralized traffic control, automatic block signaling, new rail, ballast and other physical improvements. The complainant acquired the property from the Trustees under appropriate court order on April 11, 1947, at which time The Denver and Salt Lake Railway Company was merged with the complainant, and complainant has since continued to make substantial expenditures which have resulted in the betterment of the service of complainant.

VI

That the phrase "freight traffic," as used in this complaint, shall include domestic, interstate and foreign traffic

in carload or trainload quantities, in any quantity lots, or in less-than-carload lots.

VII

That the Union Pacific and the other defendants maintain through routes, interchange facilities for the operation [fol. e] of such routes, and joint rates with each other and with complainant, which are applicable to freight traffic between points served by them in the several states and countries hereinbefore described and local points served by complainant in the States of Utah, New Mexico and Colorado. Complainant participates with the Union Pacific and the other defendants at the going or competitive joint rates on freight traffic between the places described in paragraph II herein except

(a) as to traffic that moves between points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia on the one hand, and Colorado common points and points east thereof, on the other hand, via Salt Lake City or Ogden, Utah,

and

(b) as to freight traffic between Utah common points on the one hand, and points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia on the other hand.

As is shown in paragraph X hereof, joint competitive rates do not apply between the places and to the freight traffic described in clauses (a) and (b). The rates and charges applicable to the freight traffic here in issue are too numerous to be set forth in full. For that reason, reference to representative tariffs is shown in Appendix B and Appendix C attached hereto and made a part hereof. The tariffs thus shown are representative and not necessarily all inclusive.

VIII

That in the year, 1897, at which time the Union Pacific, [fol. f] the Oregon Short Line and the Oregon Railroad

and Navigation Company were in receivership, competitive joint freight rates were established via the Ogden and Salt Lake City gateways with a predecessor of complainant, herein called the Rio Grande, on freight traffic which moved between places served by or via the Oregon Short Line and the Oregon Railroad and Navigation Company and points at or east of Colorado common points. Effective August 25, 1906, Supplement 1 to Union Pacific Tariff, I.C.C. 1970, the competitive joint rates on freight traffic between Colorado common points and certain points in Montana on or via the Oregon Short Line were cancelled via Ogden and Salt Lake City, Utah, in connection with the Rio Grande. On November 24, 1906, Union Pacific Tariff, I.C.C. 1583, the competitive joint freight rates in which the Rio Grande and the Oregon Short Line participated were cancelled on freight traffic to and from other points on or via the Oregon Short Line in Idaho, Montana and Oregon. On November 4, 1912, Agent Countiss, by Tariff I.C.C. 942, Sup. No. 12, cancelled the competitive joint rates on westbound transcontinental freight traffic to points on or via the Oregon-Washington Railroad and Navigation Company with the Rio Grande, and on December 16, 1912, Agent Countiss, by Tariff I.C.C. 958, cancelled the eastbound rates on transcontinental freight traffic via the Rio Grande from points on or via the Oregon-Washington Railroad and Navigation Company.

IX

That although the Union Pacific and the other defendants participate with complainant in competitive joint rates on freight traffic between places on the Los Angeles line of the Union Pacific in California, Utah and Nevada and Colo- [fol. g] rado common points and places east thereof, via Provo or Salt Lake City, Utah, they have failed and refused to establish and maintain competitive joint rates on freight traffic with complainant.

(a) via its Colorado and Utah gateways, between places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof,

and

(b) between Utah common points on the one hand, and places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia on the other hand.

X

That through routes now exist and have for many years existed for the interchange of traffic by complainant with the Union Pacific at Provo, Ogden, and Salt Lake City, Utah, and with the Union Pacific and certain other defendants at Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, Colorado, as to freight traffic.

(a) between points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof,

and

(b) as to freight traffic between Utah common points on the one hand and points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington, and British Columbia, on the other hand.

[fol. h] However, except as shown in Appendix D, the rates and charges applicable to such traffic between the points described via such through routes are based upon the combination of the intermediate local or other rates, which rates and charges in the aggregate are substantially higher than the joint rates maintained by defendants on similar competitive traffic between the same origin and destination places and territories which moves via the Union Pacific or via the Union Pacific and the other defendants. The combination rates applicable on the traffic and between the territories described, via said through routes of the complainant and defendants, are unjust, unreasonable and discriminatory as compared with the competitive joint rates maintained by the Union Pacific or via the Union Pacific and the other defendants on like freight traffic via other competitive routes, and as compared with the joint through rates and through routes maintained by the Union Pacific

and the other defendants with complainant on freight traffic on or via the Los Angeles line of the Union Pacific in California, Nevada and Utah.

XI

That the aggregate of the combination rates and charges applicable to the freight traffic involved via the routes described in paragraph X hereof is so much greater than the competitive joint rates and charges on the same freight traffic, via other routes which have also been described, as to prevent the movement of freight traffic via the routes in which the complainant participates. The through routes of the complainant via which the aggregate of intermediate rates make up the through charge are available, are efficiently and economically operated, and are comparable in service with the through routes of the Union Pacific and the [fol. i] other defendants via which the joint through rates apply. The failure and refusal of defendants to establish competitive joint rates via the routes of the complainant in respect to freight traffic which terminates and originates in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia, deprives the public and the complainant of the use of reasonable, necessary and desirable through routes at reasonable and non-discriminatory rates and charges. The routes of the complainant via which the combination rates apply on the freight traffic to and from the restricted territory, already described, were used during the war to a substantial extent and during the blockades and congestions on the line of the Union Pacific and other defendants which resulted from the snow storms and blizzards in the western part of the United States in January and February, 1949. In the special circumstances recited, the published through rates applicable via Union Pacific and not applicable via the complainant via Salt Lake City or Ogden thence Union Pacific were generally applied to the freight traffic involved via the routes actually used. It is clearly contrary to the National Transportation Policy and to the provisions of the Interstate Commerce Act for the defendants to restrict the use of such vital through routes to emergency situations, and they should be restrained from doing so.

XII

That the complainant and the defendants provide in their tariffs reconsignment, stoppage in transit to complete loading or to partially unload, and other transit arrangements which are generally applicable to carload freight traffic. These transit arrangements are of great importance to shippers, and are used by them to a substantial extent. In [fol. j] fact, in recent years there has been a continuing increase in the use of such arrangements. The restricted application of competitive joint rates via routes of the complainant operate to deprive shippers of the advantages of these transit arrangements at points on the line of complainant between the territories herein described, when point of origin is, or ultimate destination may become, a point on or via the line of the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia. Additionally, such restricted application not only operates to deprive complainant of through freight traffic which it might obtain if equal rates applied in connection with it, but by virtue of the transit arrangements, complainant is likewise deprived of a haul on an unknown volume of competitive traffic destined, for example, to Salt Lake City, Utah. Complainant finds that in numerous instances shippers will not route freight traffic from Chicago, for example, to Salt Lake City, Utah, via its line because, should it become necessary to reconsign their shipments via Union Pacific to places in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia, the competitive joint through rates would not be applicable. The situation with respect to reconsignment also applies to other transit arrangements, such as stopping a car for partial unloading at Salt Lake City, Utah, or at exclusively local points on lines of complainant. While the examples recited deal with westbound traffic, similar obstacles exist on eastbound traffic. For tariff references see Appendix E.

XIII

That in the transportation of the freight traffic involved between the territories and points hereinbefore described, [fol. k] the Union Pacific participates with defendants, or

some of them, in joint rates and through routes in which the haul of the Union Pacific is less than the entire length of its railroad, lying between the termini of such through routes, and conversely the defendants, or some of them, participate in joint rates and through routes with the Union Pacific in which the haul of the defendants, or some of them, is less than the entire length of their respective railroads, lying between the termini of such through routes. On the other hand, as hereinbefore shown, the Union Pacific and the defendants, or some of them, have failed and refused to accord like treatment under like circumstances and conditions to complainant by virtue of their failure and refusal to join with complainant in establishing competitive joint rates for the transportation of the freight traffic involved between

(a) points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof,

and

(b) on freight traffic between Utah common points on the one hand, and places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia, on the other hand.

which failure and refusal by the defendants constitute violations of Section 1(4), Section 3, Section 15(1) and Section 15(3) of the Interstate Commerce Act, and is contrary to the National Transportation Policy.

XIV

That the Commission should prescribe just, reasonable and non-discriminatory competitive joint through rates ap- [fol. 1] plicable to the transportation of the freight traffic in which the complainant may participate on a competitive or equal basis with defendants

(a) between points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof,

and

(b) between Utah common points on the one hand, and places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia on the other hand.

When and if such rates are prescribed by the Commission, the proceeding should be held open so that the complainant and defendants will be given an opportunity voluntarily to establish just, reasonable, equitable, non-preferential and non-prejudicial divisions, failing in which the proceeding should be assigned for further hearing so that the Commission may determine and prescribe just, reasonable, non-preferential and non-prejudicial divisions as between complainant and the defendants.

XV

That by reason of the facts stated in the foregoing paragraphs, the failure and refusal of the Union Pacific and the other defendants to establish competitive joint through rates and charges applicable to the freight traffic and between the points hereinbefore described constitutes violations by defendants of Section 1(4), Section 3, Section 15(1) and Section 15(3) of the Interstate Commerce Act, is contrary to the National Transportation Policy, and de-[fol. m]prives the public and the complainant of the use of available and reasonable through routes at reasonable and non-discriminatory through joint rates which are necessary and desirable in the public interest.

Wherefore, complainant prays that defendants may be severally required to answer the charges herein; that after due hearing and investigation an order be made commanding said defendants and each of them to cease and desist from the aforesaid violations of the Interstate Commerce Act and the National Transportation Policy, and to require said defendants to establish, put in force, maintain and apply in the future to the transportation of the freight traffic hereinbefore described, in lieu of the existing unjust, unreasonable and discriminatory through combination rates and charges via the through routes in which

complainant participates, just, reasonable and non-discriminatory and competitive joint through rates and charges with respect to the traffic and between the places and territories hereinbefore described; that the Commission, by order, determine and prescribe the just, reasonable, equitable, non-preferential and non-prejudicial divisions of the said joint rates and charges herein sought, in the event the defendants fail and refuse voluntarily to establish such divisions; and that such other and further order or orders be made as the Commission may consider proper and necessary in the premises.

Dated at Denver, Colorado, the 1st day of August, 1949.

Respectfully submitted, (S.) Otis J. Gibson, 604 Rio Grande Building, Denver 2, Colorado; (S.) R. E. Quirk, 1116 Investment Building, Washington 5, D. C., Attorneys for Complainant

Edwin S. Booth, Board of Railroad Commission, Helena, Montana, appearing for Board of Railroad Commission, Intervener in opposition.

J. L. Pease, Washington, D. C., appearing for Transportation Rates and Services Division, Transportation

and Warehousing Branch, Production and Marketing Administration, U. S. Department of Agriculture, Intervener as interests may appear.

Phil H. Gallagher, Joseph Starni and Bartleet Burns, Attorney General's Office, Olympia, Washington, appearing for Washington Public Service Commission, Intervener in opposition.

Maurice H. Greene, 422 Idaho Building, Boise, Idaho, appearing for Brotherhood of Locomotive Engineers, et al. of the Union Pacific Railroad Company, and the Cheyenne Chamber of Commerce, et al., Interveners.

T. S. Wood, J. R. Barry, R. C. Horton and J. W. Hawley, 318 State Office Building, Denver 2, Colorado, appearing for Public Utilities Commission of the State of Colorado, Intervener as interests may appear.

John H. Carkin, 460 North Commerce Street, Salem, Oregon, appearing for Public Utility Commission of Oregon, Intervener in opposition.

Byron M. Gray, c/o State Corporation Commission, New England Building, Topeka, Kansas, appearing for Kansas Corporation Commission, Intervener in opposition.

[fols. 1c-2] Lee J. Quasey, 139 North Clark Street, Chicago, Illinois, appearing for National Live Stock Producers Association, Intervener in support of Complainant.

E. F. McGuire, 728 Great Northern Building, St. Paul, Minnesota, appearing for Great Northern Railway Company, Defendant.

Chas. A. Root, 314 State Capitol, Salt Lake City, Utah, appearing for Public Service Commission of Utah, Intervener as its interests may appear.

Thomas W. Dench, 460 North Commercial Street, Salem, Oregon, appearing for Public Utilities Commission of Oregon, Intervener in opposition.

[fol. 3] PROCEEDINGS RE APPEARANCES AND INTERVENTIONS

Exam. Mullen: The Interstate Commerce Commission has set for hearing at this time and place its Docket No. 30297. It is entitled "The Denver and Rio Grande Western Railroad Company versus Union Pacific Railroad Company, et al."

Who appears for the complainant?

Mr. Quirk: Robert E. Quirk, 1116 Investment Building, Washington, D. C., for the complainant.

Mr. Gibson: Otis J. Gibson, 1531 South Street, Denver 2, Colorado, for the complainant.

Exam. Mullen: Any other appearances for the complainant?

Who appears for the defendants?

Mr. Collins: Elmer B. Collins; F. J. Melia; W. R. Rouse; John J. Burchell, for the Union Pacific Railroad Company.

Exam. Mullen: Will you please state whether you are authorized to practice before the Commission?

Mr. Collins: We are. I believe Mr. Rouse is not, are you, Mr. Rouse?

Mr. Rouse: That is right.

Mr. Collins: He is not. The rest of us are.

Exam. Mullen: Any other appearances for defendants?

Mr. Bierma: Robert H. Bierma, appearing for the Pennsylvania Railroad Company, 652 Union Station, Chicago, Illinois. I am admitted to practice before the Commission.

Mr. Torinus: L. E. Torinus, Jr., 1120 Great Northern [fol. 4] Railway Building, St. Paul, Minnesota, appearing for the defendant, Great Northern Railway Company.

I am an attorney and a registered practitioner.

Mr. Draver: P. H. Draver and Carson L. Taylor for the Chicago, Milwaukee, St. Paul and Pacific Railroad, 888 Union Station, Chicago.

I am authorized to practice before the Commission.

Mr. Taylor is an officer of the railroad and appearing here as an officer of one of the defendants.

Mr. Gault: Frank G. Fitzpatrick and P. F. Gault, 400 West Madison Street, Chicago 6, Illinois, appearing for the Chicago & North Western Railway Company and the Chicago, St. Paul, Minneapolis & Omaha Railroad Company, defendants.

I am admitted to practice.

Mr. Fitzpatrick is vice president and an officer of both companies.

Mr. Davis: Lee S. Davis, Smith Tower Building, Seattle, Washington, appearing as an officer of the Northern Pacific Railway Company; and Conrad Olson, Northern Pacific Railway Building, St. Paul, Minnesota, both appearing for the Northern Pacific Railway Company.

I am authorized to practice before the Commission.

Exam. Mullen: We will assume that all those appearing as attorneys are authorized to practice unless they state otherwise.

Mr. Cole: F. H. Cole, Jr., 1315 Union Central Life In-[fol. 5] surance Building, Cincinnati, Ohio, appearing for defendant, the Baltimore & Ohio Railroad Company.

Mr. Lehman: Roland J. Lehman, 80 East Jackson Boulevard, Chicago, Illinois, appearing for the Atchison, Topeka & Santa Fe Railway Company; the Gulf, Colorado & Santa Fe Railway Company; and Panhandle & Santa Fe Railway Company, defendants.

Mr. Lyons: James E. Lyons, 65 Market Street, San Francisco 5, California, appearing for Southern Pacific Lines.

Mr. Examiner, if this is an appropriate place I would like to address, through the Bench, an inquiry to counsel for the complainant. I have had correspondence with them, and I understand that they do not ask any affirmative relief from the Southern Pacific Lines and that we were only included because of our participation in certain of the tariffs.

Is that correct, Mr. Quirk?

Mr. Quirk: Yes, that is correct. Except that of course all defendants that are participants with the Union Pacific in what we are complaining about are, in that sense, jointly and severally responsible; but the answer is "Yes."

Mr. Lyons: Thank you.

Mr. (E. S.) Davis: Eugene S. Davis, for the Wabash Railroad Company. I wish to enter an appearance for Mr. L. E. Clarahan, vice president of traffic of that company and myself, an attorney and duly admitted practitioner, [fol. 6] 1667 Railway Exchange Building, St. Louis, Missouri.

Exam. Mullen: Are there any other appearances for defendants?

(No response.)

Exam. Mullen: Apparently not.

Who appears for the interveners?

Mr. Purvis: L. F. Purvis, for the Public Utilities Commission of Idaho, Boise, Idaho. I am admitted to practice.

Mr. Examiner, I would like to also enter the appearances of W. B. Joy, H. N. Beamer and B. Auger, constituting the Idaho Commission, neither of whom are practitioners.

At this time——

Exam. Mullen: Is either one of those gentlemen here?

Mr. Purvis: They are either present in the room, or will be in just a few moments.

Exam. Mullen: All right.

Mr. Purvis: At this time I would like to submit, Mr. Examiner, the Commission's petition of intervention.

Exam. Mullen: Before I examine this I will call for appearances of interveners whose petitions have already been received and filed with the Commission.

Mr. Michelsen: A. H. Michelsen, chairman, Wyoming State Board of Equalization, Wyoming Public Service Commission; Albert P. Bruch, member, and E. A. McKay, director, of the Wyoming Ad Valorem Tax Department. All are present.

[fol. 7] Mr. Miller: C. A. Miller, 2000 Massachusetts Avenue, N. W., Washington, D. C., for the American Short Line Railroad Association, intervener in support of the complainant.

Exam. Mullen: Mr. Michelsen, did you announce what position you take in the proceeding?

Mr. Michelsen: Yes. Opposition to the complaint.

Exam. Mullen: American Short Line Railroad Association in support?

Mr. Miller: That is right.

Exam. Mullen: Mr. Collins, did you want to say something?

Mr. Collins: I want to ask something in respect to Mr. Miller's intervention and appearance at the appropriate time. I really prefer to wait until these other interventions have been stated and appearances filed, if that is all right.

Exam. Mullen: That may be done.

The Colorado Wool Growers Association?

(No response.)

Exam. Mullen: Arkansas Valley Stock Feeders Association?

(No response.)

Exam. Mullen: Grand Junction Chamber of Commerce?

(No response.)

Exam. Mullen: Holly Sugar Corporation?

(No response.)

Exam. Mullen: Pueblo Chamber of Commerce?

(No response.)

[fol. 8] Exam. Mullen: Nebraska State Railway Commission?

Mr. Overcash: I am Bert L. Overcash, assistant attorney general of Nebraska, appearing in opposition to the complaint; also Harry C. King, a registered practitioner.

A Petition was filed by the Commission for leave to intervene as its interests may appear, and I would like to submit an amended petition in opposition to the complaint.

Exam. Mullen: That may be filed now, if you wish.

Mr. Quirk: Mr. Examiner, before you call for any additional interventions I would like to make this statement by way of explanation:

The Grand Junction Chamber of Commerce, the Holly Sugar Corporation, the Pueblo Chamber of Commerce, the Arkansas Valley Stock Feeders Association and the Colorado Wool Growers Association and the Colorado Cattlemen's Association are interveners in support of the complainant.

We are largely responsible for their not being here this morning. We told them the complainant would probably take two days and a half, at least, and if they would arrive Wednesday it would be ample time. They didn't care to sit longer than that unless it was necessary, so they will be here.

Mr. Collins: Mr. Examiner, will it be in ample time? Can they file their appearance at any time during the hearings?

Mr. Quirk: That is what the rules say.

[fol. 9] Exam. Mullen: They may file it when they actually appear.

Mr. Collins: I see.

Exam. Mullen: Mr. Overcash, how does this amended petition differ from the original one?

Mr. Overcash: The original petition does not state the position, but this one does.

Exam. Mullen: That is the only change?

Mr. Overcash: This states in detail the reasons for the position that we take.

Exam. Mullen: Is there any objection to the receipt of this amended petition?

Mr. Quirk: Mr. Examiner, I think, to the extent that that petition states conclusions of fact, it is objectionable unless they are proven; so I make that objection.

Exam. Mullen: That objection will be noted.

Are there any other objections?

(No response.)

Exam. Mullen: The petition will be received and filed.

The state Board of Railroad Commissioners of the State of Montana.

Mr. Booth: Edwin S. Booth, secretary-counsel of the Board of Railroad Commissioners, Helena, Montana, appearing for the Board. The intervention of the Board has heretofore been authorized and the copies of the intervention circulated. The intervention is against the complaint. [fol. 10] Mr. Quirk: Did your body, the Board of Railroad Commissioners, file an earlier petition?

Mr. Booth: They did not file one. They prepared one and it was forwarded and withdrawn prior to filing.

Mr. Quirk: It was? What position did you take in that one?

Mr. Booth: That petition was filed in support of the complaint.

Mr. Quirk: You have been on both sides then, haven't you?

Mr. Booth: We have sent one in. However, only one was filed, and the second one we can present evidence on if necessary.

Exam. Mullen: The Secretary of Agriculture of the United States.

Mr. Pease: J. L. Pease, Transportation Rates and Services Division, United States Department of Agriculture, appearing for the Secretary of Agriculture as intervener as the Secretary's interests may appear.

Exam. Mullen: Are there any other petitions of intervention to be filed at this time?

Mr. Gallagher: My name is Phil H. Gallagher, assistant attorney general representing the Washington Public Service Commission of the State of Washington. Also Joseph Starin and Bartlett Burns. The latter two are practitioners; I am assistant attorney general, but not a practitioner.

The Washington Department of Public Service filed its [fol. 11] original petition to intervene and were notified by Mr. Bartell, the Secretary, that they would not have time to distribute the petitions and asked us to serve the Examiner at this hearing. I would like to file a copy of the petition and leave it with you at this time.

For the State of Washington I might state that we are appearing in opposition to the complainant.

Exam. Mullen: In opposition to the complainant?

Mr. Gallagher: That is right, sir.

Exam. Mullen: Any opposition to this petition for leave to intervene?

Mr. Quirk: I make the same comment, and I suppose it probably is not necessary to state that it contains conclusions of fact about operating conditions, efficiency, and things of that kind. They are objectionable.

Mr. Collins: Mr. Examiner, then the complaint itself is objectionable on that ground.

Mr. Quirk: Those are allegations.

Exam. Mullen: We are not discussing that at this moment.

The petition for leave to intervene by the Washington Public Service Commission is allowed.

Any other petitions to intervene?

Mr. Greene: Maurice H. Greene, 422 Idaho Building, Boise, Idaho, appearing for 19 brotherhoods of railroad employees of the Union Pacific System; also the brother- [fol. 12] hoods of the railroad employees of the Union Pacific in the State of Wyoming; and on behalf of the Cheyenne Chamber of Commerce and eight other chambers of commerce in the State of Wyoming.

I am an attorney and admitted to practice before the Commission.

The original of one of the petitions was forwarded to Washington, Mr. Examiner, and we had a wire from the Secretary advising that it would be filed if accepted by the Examiner here.

Exam. Mullen: Do you have copies for counsel?

Mr. Greene: Yes, I have copies for counsel.

Exam. Mullen: Let's take up first this petition for the railway labor organization named in the petition. Is there any objection to that intervention?

Mr. Quirk: We have not seen it yet.

Mr. Greene: Our position is in opposition to the application.

Exam. Mullen: Distribute the copies, please.

Any objection to the receipt of this petition?

Mr. Quirk: No objection.

Exam. Mullen: It will be received, and the intervention is allowed.

The next one is the petition for labor organizations or groups representing over 20,000 persons employed in the State of Wyoming. Any objection to that intervention?

[fol. 13] Mr. Quirk: No.

Exam. Mullen: There being no objection, it will be received.

The third is for certain chambers of commerce and others. Any objection to that?

Mr. Quirk: No.

Exam. Mullen: It will be received.

Any other petitions?

Mr. Wood: Thomas S. Wood appearing for the Public Utilities Commission of Colorado and J. R. Barty for the State of Colorado. Both Mr. Wood and Mr. Barry are present.

I also want to enter an appearance for Commissioners Horton and Hawley, who are not present.

I have not filed my petition of intervention up until this time. Our position is as the shippers' interests may appear. We will clear our position before the close of the proceeding.

Exam. Mullen: Do you have copies of your petition?

Mr. Wood: I have.

Exam. Mullen: Any objection to this?

Mr. Quirk: No.

Exam. Mullen: It will be received.

Mr. Carkin: John H. Carkin, counsel for the Public Utilities Commission of Oregon, appearing on behalf of the defendant in opposition to the complainant.

Our situation is the same as Washington's. Our petition with some 200 copies was received and acknowledged by [fol. 14] Mr. Bartell, the Secretary, with a telegram asking that it be presented to the Examiner at this time. Copies have been distributed.

Exam. Mullen: What is your name, sir?

Mr. Carkin: John H. Carkin, counsel for the Public Utilities Commission of Oregon.

Exam. Mullen: No objection? It will be received.

Mr. Gray: Byron M. Gray, 2403 New England Building, Topeka, Kansas, appearing for the State Corporation Commission of the State of Kansas.

I wish to file a petition for leave to intervene in opposition to the complaint.

Exam. Mullen: If there is no objection, it will be received.

Mr. Quasey: Lee J. Quasey, counsel, National Live Stock Producers Association, 139 Clark Street, Chicago 2, Illinois.

I have a petition for intervention I would like to present for your consideration.

Mr. Examiner, the position we take is not adverse to the complaint.

Exam. Mullen: Any objection to this?

If there is no objection, this will be received and granted.

Are there any other petitions for leave to intervene?

(No response.)

Exam. Mullen: There are none.

Are there any other preliminary matters to be disposed [fol. 15] of before I read the statement of the issues?

Mr. Collins: Mr. Examiner, I wanted to make some inquiry of Mr. Miller, counsel for the Short Line Association, with respect to the status of his intervention. Do I understand Mr. Miller is intervening for his entire membership of 323 railroads?

Exam. Mullen: Mr. Miller.

Mr. Miller: I am intervening for the American Short Line Railroad Association as an organization.

Mr. Collins: His petition for leave to intervene says he is intervening on behalf of the membership, which constitutes 323 members.

Are you withdrawing the intervention insofar as your membership is concerned?

Mr. Miller: The petition recites the facts on the face of it, and I stand by what is said in the petition.

Exam. Mullen: And what you have stated here?

Mr. Miller: Yes.

Mr. Collins: Now then, Mr. Examiner, I call attention to the fact that 44 of the defendants to the complaint in this case are members of Mr. Miller's Short Line Railroad Association, and he has now, as I understand him, in the language of his petition for leave to intervene, brought those 44 members of his in on the side of the complainant, although they are still named as defendants.

Mr. Quirk: Mr. Examiner, I will have to answer that.

[fol. 16] Mr. Collins: I beg your pardon. I am addressing counsel for the Association.

Mr. Quirk: I am addressing you.

Exam. Mullen: I think the question was addressed to Mr. Miller.

Mr. Collins: Quite right.

Exam. Mullen: Does Mr. Miller desire to answer?

Mr. Miller: What is the question.

Mr. Collins: Will you read it, Mr. Reporter?

(Record read.)

Exam. Mullen: Would you like to clarify that, Mr. Miller?

Mr. Miller: That is correct. They are brought in in support of the complaint, even though they are named as defendants. It is one of those cases where all the people—that is, all the roads that participate with the Union Pacific—must necessarily be named as defendants. That doesn't mean that everybody who is named as a defendant is opposed to the complaint. It doesn't mean that so far as our membership is concerned. We are supporting the complaint.

Mr. Collins: You mean those 44 defendants are supporting the complaint?

Mr. Miller: Yes,

Mr. Collins: Now I call attention to the fact that 8 of the defendants are also members of the Short Line Association and are subsidiaries, under common management, of [fol. 17] certain long line defendants. I would like to inquire if those defendants, and the members of the Short Line Association, and subsidiaries, one of which is a subsidiary of the Union Pacific Railroad, are supposed to be supporting the complaint in this case, according to Mr. Miller's theory.

Mr. Miller: Yes.

Mr. Collins: Well, then I serve notice on you that the Yakima Valley Transportation Company is not supporting the complainant in this case. It is a subsidiary of the Union Pacific Railroad Company.

I call attention also, Mr. Examiner——

Exam. Mullen: Are you appearing for that road?

Mr. Collins: Yes, as a part of the Union Pacific Railroad and under common management with it.

I call attention to the fact, also, that the Chicago, Indianapolis and Louisville Railroad Company is a member of the Short Line Association and is a defendant in this complaint, and has filed an answer to the complaint denying the allegation of the complaint; yet under Mr. Miller's intervention for the Short Line Association that railroad, the Chicago, Indianapolis and Louisville, is, although denying the allegation of the complaint, at the same time supporting those allegations, according to Mr. Miller's intervention for the Short Line Association.

I call attention, further, to the very peculiar status or [fol. 18] predicament in which the Short Line petition for intervention and its intervention leaves us in this case. The Butte, Anaconda & Pacific, for instance, one of the defendants and a member of the Short Line Association, has filed an answer saying it is not a competing carrier, or not a competing short line, and yet the Short Line Association's petition for intervention says that its members have a vital interest in this case.

Others of the Short Line Association membership have filed answers saying they are not affected by the com-

plaint in this case. One of those is the Chicago Short Line Railway Company; also the Illinois Northern Railway Company, the Lake Terminal Railroad Company.

I call attention to those things, Mr. Examiner, for the purpose of trying to portray on this record in the beginning the rather incongruous situation that faces the defendants, or the Union Pacific Railroad in particular, insofar as my speech is concerned, and facing, also, the Commission.

It does seem to me that there should be some more orderly way to proceed without defendants being brought into the case as complainants or in support of complainants and leaving us without knowledge as to just by what authorization Mr. Miller proceeds for the Short Line Association.

I feel that I must go this far at this time, I must demand of the Short Line Association that it show actual authoriza-
[fol. 19] tion to intervene on behalf of its membership, as it has filed its intervention here.

Exam. Mullen: Do you desire to reply to that, Mr. Miller?

Mr. Miller: I don't think I need to other thar to express my sympathy for Mr. Collins.

Mr. Collins: I then move that his intervention—and it is under reconsideration now by the Commission, incidentally, on a motion I filed—I now move that, in view of this answer, and for that additional reason that he declines to show that he is authorized to intervene for those defendants who are named as defendants and are members of his Association, his petition for intervention be rejected on that additional ground.

Exam. Mullen: Do you desire to reply to that, Mr. Miller?

Mr. Miller: Mr. Examiner, our petition for leave to intervene in this case was filed with the Commission. The facts were stated in the petition for leave to intervene, and the Commission has entered an order granting us leave to intervene in support of the complaint. Our intervention in this case is a fait accompli, and I don't thing I am called upon to go any further at this time. I simply stand on the Commission's order granting leave to intervene. We are a party to this proceeding by order of the Commission.

Mr. Collins: Mr. Examiner, I call attention to the fact that I have received no notice of any action by the Commis-
[fol. 20] sion upon my motion to the Commission to recon-

sider an reject the Short Line Association's petition for leave to intervene. As far as I know, that matter has not been settled, and I think Mr. Miller is quite premature in assuming that the Commission is going to deny any reconsideration and possible rejection of his intervention.

Exam. Mullen: I think Mr. Miller should clarify the petition of intervention in connection with the matters that Mr. Collins has raised here as to those particular railroads. The particular motion of Mr. Collins now is denied, and if the Commission has left it to the Examiner here to act upon the prior motion, that motion is denied.

Mr. Collins: You say "if it has"?

Exam. Mullen: If it has been left to me. If the Commission has left it to me to rule upon your original petition, I will say that my ruling is that that petition be denied.

Mr. Collins: Mr. Examiner, has the Commission or has it not left it to you to rule on the original motion that I filed?

Exam. Mullen: That I don't know.

Mr. Collins: I see.

Exam. Mullen: I just wanted to make the record clear at this point.

Mr. Collins: Yes. So that your ruling actually is final, insofar as you are concerned, only on the motion I made pursuant to Mr. Miller's refusal to make any clarification? [fol. 21] Exam. Mullen: Yes. And my ruling with respect to your first petition is subject to any other ruling by the Commission.

Mr. Collins: Yes.

Exam. Mullen: Are there any further matters to be considered before we proceed with the taking of testimony?

(No response.)

Exam. Mullen: Apparently not.

Examiner's Statement of Issues Involved

I will read a brief statement of the issues in this case:

Complainant alleges that the Union Pacific Railroad Company and defendants, or some of them, have failed and refused to join with complainant in establishing joint rates for transportation of freight (a) between points on or via

the Union Pacific Railroad in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia, on the one hand, and Colorado common points and points east thereof, on the other hand; and (b) between Utah common points, on the one hand, and places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia, on the other hand. It further alleges that such refusal is unlawful and results in violations of sections 1(4), 3, 15(1) and 15(3) of the Interstate Commerce Act.

Complainant requests the Commission to prescribe just, reasonable and non-discriminatory competitive joint through rates applicable to the transportation of freight, in which complainant may participate on a competitive or equal basis with defendants between the said points and [fol. 22] territories described, in lieu of the present through combination rates which are alleged to be unjust, unreasonable and discriminatory.

In addition, the Commission is requested to prescribe just and reasonable divisions of any joint rates that may be prescribed as a result of this proceeding, and to hold the record open to permit the parties voluntarily to establish division of such rates, and for further hearing if such divisions are not so established.

Does that state the issues substantially?

Mr. Quirk: I think it summarizes the issues.

Exam. Mullen: You may proceed, Mr. Quirk.

Mr. Quirk: I call Mr. McCarthy.

Wilson McCarthy was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Mr. McCarthy, your name is Wilson McCarthy, and your business address is 1531 Stout Street, Denver, Colorado?

A. Yes, sir.

Q. And you have prepared a statement, copies of which have been served on counsel in this case. I suggest that you proceed to read your statement.

A. My name is Wilson McCarthy and I am president of the Denver and Rio Grande Western Railroad Company.

With regard to my transportation experience, I cam- to [fol. 23] Denver in 1934 as president of the Denver and Salt Lake Railway Company. I served in that capacity until April 11, 1947, when the Denver and Salt Lake was merged with the Denver and Rio Grande Western. In 1935 I was appointed co-trustee of the Denver and Rio Grande Western Railroad Company and served in that capacity until April 11, 1947, when I was elected president of the consolidated Denver and Rio Grande Western Railroad.

The Dotsero Cutoff had just been completed when I began my tenure as co-trustee of the Rio Grande. While this "cut-off" provided a potential means for the Rio Grande to participate in transcontinental traffic, the physical condition of our company at that time was such that we were in no position to effectively compete for this extremely competitive business from either a service or cost standpoint. Because of long depressed earnings, the Rio Grande's trackage and rolling stock were in very poor condition. At that time faster schedules were neither feasible nor possible.

Therefore, a planned program was immediately progressed with a view towards contributing to a sounder national transportation system by making the Rio Grande a vital link in transcontinental traffic. This embraced strengthening of the personnel, a revamping of the financial structure, and complete modernization of the physical plant.

To strengthen the personnel, training programs were [fol. 24] conceived, which are still in effect, planned to strengthen supervision in all departments. And where necessary the best talent available outside the railroad was brought in to bolster certain of the weaker departments.

To better fulfill its service responsibility to the public, the Rio Grande's on and off-line traffic forces have been augmented, comprehensive programs adopted for stimulating agricultural and industrial development, and the company's freight rates and services critically reviewed in the light of economic needs and shipper requirements.

The capital structure has been revamped so that annual

fixed charges on our mortgage obligations, which in 1935 amounted to $5,073,390, are now only $1,314,077.

The physical plant has been improved to the point where greater economy and expeditious operation is now possible. Since my coming to the property approximately 109 million dollars have been expended in improving the company's property and facilities.

When I came to the property, 70 per cent of our standard gauge freight equipment was over twenty years old. Today only 44 per cent of this equipment is over that age. Proportionately even greater gains have been made in our freight and passenger schedules.

Mr. Collins: Judge McCarthy, may I interrupt you a moment?, I'm sorry.

[fol. 25] Mr. Examiner, this is very interesting, and I am sure is quite correct, but for fear of not speaking timely I feel compelled to object to these recitals unless some relevancy to the Ogden gateway, to the issues in this case, are established. I can see no relevancy of these recitals to the issues which the Examiner stated.

Exam. Mullen: Well, the Examiner thinks it is relevant as background testimony.

Mr. Collins: All right.

Exam. Mullen: Go ahead, Mr. McCarthy.

The Witness: In 1935 our locomotives had an average tractive effort of only 49,574 pounds. Today the average tractive effort is 70,638 pounds—a gain of over 42 per cent.

The Rio Grande has moved rapidly toward dieselization and I believe today owns proportionately more of this type of equipment than any other western Class I railroad. Today over 70 per cent of our freight traffic is handled by diesel power. This compares with an average of 32 per cent for all Class I railroads.

During the same period since 1935, the Company's main line was virtually rebuilt. Four hundred and seventy-four bridges have been built or rebuilt, 531 repaired and some 215 eliminated. A total of 1,457 miles of rail have been laid—843 miles with new rail. Almost four million cross ties have been replaced with treated ties and heavy slag [fol. 26] ballast has been applied to 634 miles of track.

The capacity of our company's main line has been further increased through the construction of a second tunnel through the Continental Divide at Tennessee Pass, the installation of some 507 miles of Centralized Traffic Control and 186 additional miles of Automatic Block Signals, the building of more and longer passing tracks, and the reduction of grades and curvatures.

Safety and economy have been promoted through the construction of slide detector fences, widening of cuts, installation of track and flange oilers, purchase of off-track work equipment and the providing of a greatly improved communications system. The Rio Grande was the first U. S. railroad to receive a regular license to install and operate radio communication equipment on its trains.

Similar improvements have been made in the company's yard and terminal facilities with the view to expediting service and reducing costs. These have included extensive track changes, the construction of modern yard offices, the flood-lighting of yards, and the installation of pneumatic tube, radio and loudspeaker communication systems. Service and schedules have likewise benefited from an extensive motive power modernization program.

Our research laboratory is known throughout the world and many of its discoveries have added to the safety and [fol. 27] economy of rail transportation.

The effect of all this on the company's operating efficiency is evidenced in the fact that the Rio Grande has shown proportionately greater gains in recent years than either Class I or Western District carriers as a group in the number of gross ton miles it has produced per train hour operated. The record shows, moreover, that, notwithstanding the mountainous terrain, the company's freight trains in 1948 actually operated at higher average speeds than most lines.

Because of the improved physical conditions, and for other reasons that will be covered in the testimony for the complainant, the management of the complainant reached the conclusion that there is no justification for the failure and refusal of the defendants, including the Union Pacific, to maintain joint competitive rates via the route of the Rio Grande through the Ogden gateway; and, as a result of these considerations and conclusions, the complaint was

filed with the Interstate Commerce Commission on August 1, 1949.

However, prior to filing this complaint with the Commission, I conferred with Mr. Stoddard, president of the Union Pacific, regarding our necessity for the competitive joint rates here requested. On June 26th of this year, I went to Omaha and advised him that we had under consideration the filing of a complaint with the Commission, and asked him that he consider the issues involved and determine whether the Union Pacific was willing to satisfy the complaint and to publish competitive joint through rates [fol. 28] with the Rio Grande via Ogden, as described in the complaint.

After some discussion, it was decided that the traffic officials of the Union Pacific and the Rio Grande would confer. This conference took place on June 27th. On that date Mr. Hogue, our vice president, submitted copies of the proposed complaint to the officers of the Union Pacific.

After the Union Pacific officials had an opportunity to consider the complaint, they decided that there could be no agreement to publish joint rates via Ogden with the Denver and Rio Grande, and on July 16th of this year Mr. Stoddard came to Denver and so informed me.

In his refusal to consider publication of competitive joint rates, there was no offer or suggestion that any basis could be found on which this complaint might be adjusted and, as I have said before, it was therefore filed with this Commission on August 1st.

Mr. Quirk: I have no questions. You may examine the witness.

Cross-examination.

By Mr. Collins:

Q. Then, Judge McCarthy, I take it that you are personally familiar with the language of the complaint?

A. I have read the complaint, Mr. Collins.

Q. And did you authorize or direct that it be filed?

A. Yes, sir.

[fol. 29] Q. In your experience with the Denver & Salt Lake, I forgot what year you said you came with the Salt Lake line.

A. I came there in '34, in December of 1934.

Q. And did you not go through the reorganizations proceedings of the Denver and Rio Grande and personally participate actively in those proceedings?

A. I did, sir.

Q. You are familiar with it because of actual personal knowledge of the things that transpired affecting those two lines since 1934, I take it?

A. Yes, sir.

Q. And, in that capacity and your performance of your duties and your work in connection with the reorganization proceedings, are you not familiar with what we might, for some brevity, call the entire history of the Denver and Rio Grande, of the properties which now constitute the Denver and Rio Grande Western Railroad Company?

A. I am familiar with them since I have been there and know something about its other history, Mr. Collins.

Q. I suggest probably more so than any other individual at this time, if I may.

Now, I want to ask you some questions, Judge McCarthy, that go back a little way, and they have to do with your decision to file the complaint here; and I take it that the final decision to file the complaint was a result of considerable deliberation on the part of you and your board of directors and other officials of your line; is that correct? [fol. 30]

A. Yes, sir.

Q. May I ask, at this point, and before going on with these questions, whether you conferred with any other railroad presidents than Mr. Stoddard before finally deciding to file this complaint? I particularly have in mind, Judge, the lines connecting with the Union Pacific at Missouri City, Kansas City and Omaha, and so on.

A. Yes, I did confer with some presidents.

Q. And with what results?

A. I might state that I conferred with Mr. Budd, of the Burlington Railroad, in connection with the matter, and he was exceedingly sympathetic to what we are attempting to do and he later told me he could not come in with us because the Northern Pacific and Great Northern controlled his railroad and they did not concur with him.

Q. Was he the only one with whom you conferred?

A. I also conferred with Mr. Gurley and told him of our position, what we intended to do, and Mr. Gurley told me that his railroad—that is, it was their intention to stay neutral.

Q. Well, did you meet with any who made an offer of any kind, to use the term that you used in your concluding paragraph here, to join with you?

[fol. 31] A. I did not.

Q. Now, in your last paragraph of your statement——

A. Except, of course, the Short Line Association, which came in. They came in of their own volition and not by reason of any request from us.

Q. They join faster, Judge.

In your last paragraph you say that Mr. Stoddard made "no offer or suggestion that any ba-is could be found on which this complaint might be adjusted." I would like to inquire if you made any offer or suggestion to Mr. Stoddard yourself other than that you wanted the Ogden gateway, shall we say, "wide open"?

A. I don't recall making any other proposal. I might have stated that there were some grounds upon which we could get together. I don't recall that my statement was qualified. He and I had a very pleasant conversation which ended as I have indicated. I have no recollection of anything outside of what I have mentioned here.

Q. Well, I am sure that he feels the same way about your personal meeting, but what I am getting is that your position here is, is it not, simply that the Ogden gateway must be wide open or, at least, the Rio Grande wants it wide open for the same rates on all commodities as are in existence via the present routes?

A. That is right.

[fol. 32] Q. Now, in your meeting with Mr. Stoddard, did he not suggest to you the deferring of the filing of your complaint until these pending bills—the so-called through-route bills pending before Congress—had been acted upon?

A. No, sir, not that I have any recollection of.

Q. I see.

Now, Judge McCarthy, since you went to the Rio Grande as a trustee there have, of course, as is publicly known,

been many improvements, as you recited. The railroad certainly has taken on a better financial situation as well as physical improvements, as I understand the situation; but has it not been the policy since you became connected with the property, the Rio Grande, and a long time before, to try to develop so-called "bridge" traffic in order to enhance the revenues of the Rio Grande?

A. Yes, sir.

Q. And the filing of this complaint is, for lack of better language, another step in that direction, is it not?

A. Yes, that is one purpose of it.

Q. That is, from the standpoint of what I will say the treasury of the Rio Grande and the stockholders, that would be the purpose?

A. Yes, we hope to improve our condition if we can get these through rates.

Q. Insofar as the corporate management and the stock- [fol. 33] holders of the Rio Grande are concerned, that would really be the only immediate purpose to them, would it not?

A. Yes—that they would want to improve the financial condition of our railroad.

Q. Yes. That, of course, is apart from what you anticipate or what you have said would be some additional transportation conveniences that you would expect the public to derive?

A. That is right.

Q. Now, some years ago, Judge McCarthy, the Rio Grande had some 15 per cent of its revenues from so-called "bridge" traffic, did it not? Or do you recall? I refer back as far as 1923.

A. I think Mr. Hogue is going to cover that. Back many years ago it might have been that low.

Q. May I ask, then, in a little more general way: In your annual reports, copies of which the Union Pacific is pleased to receive as a courtesy, I notice, from year to year, that you speak of the increase in revenues from bridge traffic, and I would like to call your attention to a particular one of those reports. Here, for instance, on page 33 of your annual report for 1947 it is stated—and I take it that you are familiar with, or were familiar with, the state-

ments made in your annual reports, and I am quoting now on page 33—"The volume of Rio Grande's bridge traffic increased about 6 per cent, continuing the steady advance [fol. 34] in evidence for several successive years."

Now, that is, is it not, as planned by your management—that increase of bridge traffic?

A. We have been trying to build up our bridge traffic ever since I have been there, and have materially succeeded in doing so.

Q. You have materially succeeded?

A. Yes.

Q. To the point that, if I am correct in saying that your bridge traffic as far back as 1923 was about 15 per cent, it did go as high as more than 50 per cent during the war, did it not?

A. I think it went higher than that. As I recall, I think it was 60-some-odd per cent.

Mr. Quirk: This subject will be covered by Mr. Hogue, Mr. Examiner.

Mr. Collins: If Judge McCarthy doesn't mind me asking some more of these questions, I would like to go ahead with him.

Exam. Mullen. You may proceed, Mr. Collins.

By Mr. Collins:

Q. In the very interesting article concerning The Denver and Rio Grande in Fortune magazine of November, 1949, it is stated that 45 per cent of your traffic is bridge traffic?

A. I don't recall what it says.

Q. And 45 per cent—You are familiar with that article, aren't you?

[fol. 35] A. Yes, I read the article, but I don't recall what it stated in that regard. That might be an error regarding the 60 per cent.

Q. That is a little higher than I had heard of.

A. Maybe so. Mr. Hogue can give you those exact figures because I do not have them in my mind.

Q. Now, what has been the reason for pressing for the increase in bridge traffic over the Rio Grande?

A. The reason has been that, generally speaking, there is more money in it.

Q. More money than there is in traffic that you originate?

A. Originate, yes.

Q. Originate or——

A. We have been able to haul our own local traffic during these years, and, of course, have been aspiring to get bridge traffic.

Q. Has it not been the realization of the management of the Rio Grande, or at least their feeling, that they should devote their efforts to the solicitation of so-called bridge traffic rather than the development of local traffic along their line, along the D&RG line?

A. I think our desire is to keep our local traffic and develop our bridge traffic to the extent that we can.

Q. I notice that you refer to the fact—whether in your testimony or in some recent statement I saw from you, I don't recall how long ago—that you have now a director [fol. 36] of agricultural development, or something like that?

A. Yes.

Q. That is something new, is it not?

A. No. We had an agricultural man many years before I came to the property, and Mr. Fealy Young has been agricultural director for, I would say, 7 or 8 years—11 years. We had another man prior to him some years before, but he was not on the railroad when I came there. There had been a space when we had no agricultural man there.

Q. The increase, to which we have referred, in your bridge traffic, do you know what has been the source of that traffic?

A. I don't know that I understand you.

Q. The origin of it. Where did it come from? That is, just in a very general way.

A. All over; east and west. Our bridge traffic has increased, of course, on the Pacific coast and all the way from New York clear through to Chicago and all over our property—that is, wherever we have been soliciting.

Q. Your connection to the West to reach Oakland, California, is the Western Pacific, is it not?

A. Yes; we connect with the Southern Pacific at Ogden and the Western Pacific here.

Q. You do interchange traffic with the Southern Pacific, and, I suppose, to some extent with any other western roads over which the traffic may be routed?

[fol. 37] A. Yes, we connect here with your railroad going to Los Angeles and with the Western Pacific and Southern Pacific.

Q. In 1929, Judge McCarthy, the Interstate Commerce Commission had before it a proceeding entitled "Construction of Denver and Salt Lake Railroad Company." That had to do with the construction of the Dotsero cutoff. The then Denver and Ria Grande was making an appearance in that case, of course, in a rather large way, and I want to call your attention to a particular statement——

A. Just a moment. What petition was that? Who filed it?

Q. That was an application to the Commission by the Denver and Salt Lake for authority to construct the Dotsero cutoff.

Mr. Quirk: What was the date of that?

Mr. Collins: 1929, and the citation is 154 ICC page 51.

Mr. Quirk: That was before the witness was connected with either that property or the complainant here.

Mr. Collins: I realize what he said, Mr. Quirk.

By Mr. Collins:

Q. The Commission, in referring—of course all this is subject to check by your counsel or anyone else you direct by looking at the report—the Commission discussed the possible uses of the Dotsero cutoff and made the observation that freight, some more than half of the freight of Western Pacific eastbound, perishables in particular, were delivered to the Union Pacific at Salt Lake City, and if the cutoff was authorized and the Denver and Rio Grande [fol. 38] Western had trackage rights over it, then "this freight could be delivered to the new route" by way of the Dotsero cutoff.

Now, hasn't that, to your knowledge, developed to a very considerable extent—that is, the diversion of through traffic to the Rio Grande since you acquired, or the management acquired, rights over the Dotsero cutoff?

A. Well, I don't recall what happened to that particular petition there, Mr. Collins,——

Q. I should have added—excuse me for interrupting you—I should have added that the Commission authorized the construction subject to the condition that the Denver and Rio Grande have trackage rights over the cutoff.

A. Well, you see, the petition that was actually granted for the building of the Dotsero cutoff was later filed by the D&RG in 1932—'32 or '33.

Q. Yes, it came up again; I remember that.

A. It was on that petition that the Rio Grande was given the right to build the Dotsero cutoff, which was not completed until June, I think, of 1934.

Q. Yes, that's right. But I was speaking not so much as to who constructed the cutoff or the time of it, or the date of its construction, as to the effect. It is a fact, is it not, that the position that the position of the Denver and Rio Grande with respect to bridge traffic and transcontinental traffic has very greatly improved as a result, [fol. 39] partially at least, of the construction of the Dotsero cutoff?

A. I think so. Undoubtedly so, because it cuts off 175 miles.

Q. Yes.

A. Instead of going way around by Pueblo and up to Denver, you go through the Moffat Tunnel and cut off 175 miles between Denver and Salt Lake City.

Q. If I don't cause Mr. Quirk to faint, I would like to go even further back than I have with you. I would like to inquire of you if it isn't a fact that from the beginning—I am testing your lengthy knowledge of the history of the Rio Grande as against my rather hurried search of that history—isn't it a fact that from the beginning of moves to make the Rio Grande a part of a transcontinental route which took place in the early 1900's, according to the books I have consulted, efforts that have been made were to make the Rio Grande a so-called "California line?" I refer to

the time when it was decided to construct the Western Pacific and to work in the Missouri Pacific, the Rio Grande and the newly-constructed Western Pacific.

A. I think probably that was true, that in the early beginnings it was contemplated to— Of course the Rio Grande built the Western Pacific.

Q. Unhappily, supposition.

A. Yes— Well, I don't say that.

Q. Not any more, no.

[fol. 40] A. No. So that your general statement that they were attempting to get a western connection favorable to it undoubtedly occurred at that time. Of course you know that even in, I guess, 1900, somewhere in there, the Ogden gateway was opened.

Q. Yes.

A. 1906, I think.

Q. As late, on some commodities, as 1912, as your complaint says.

A. Yes.

Q. But the efforts were to make what you are now advertising—excuse me for saying "you"; I mean the management, or maybe your advertising department—what you are calling the direct central continental route.

A. I think they call it that.

Q. Yes. It is noticeably displayed on the bottom of each page in red ink.

A. Yes.

Q. I hope that doesn't portend anything.

A. Of course you probably know that we have a tremendous business with the Southern Pacific at Ogden.

Q. Yes, I so understand.

I would like to inquire of you whether or not you feel you are being deprived of what you consider to be a fair share of this traffic to and from the Oakland Bay country [fol. 41] —transcontinental traffic over this direct central transcontinental route that you are now operating.

A. I don't know that I understand you, Mr. Collins.

Exam. Mullen: Perhaps the reporter will read it again. I didn't understand it either.

Mr. Collins: Let me see if I can do better.

By Mr. Collins:

Q. Do you feel that you are failing to get a fair share of this transcontinental traffic to and from the California origins and destinations and the East?

A. Well, I think that we do fairly well. I hope that we might do better.

Q. I was encouraged somewhat to ask that because of your mentioning the *the* Southern Pacific, your interchanges with the Southern Pacific, which I understood are quite voluminous. It is then a matter which probably is within the breast of all railroad management, and that is to strive to increase the volume of the least expensive and best-paying traffic they can lay their hands on. Isn't that the very honorable position that you take?

A. I think we are all trying to improve our traffic situation.

Q. And revenues?

A. And revenues.

Q. Do you understand, from your knowledge of the history of the early days of the Rio Grande—and even down to, I will say, 3 or 4 years ago—do you understand that it [fol. 42] was ever contemplated that the Rio Grande should figure in routes to the Northwest—to Idaho and to eastern Oregon?

A. Would you read that to me?

(The question was read.)

The Witness: All I know is that they did figure in it for a good many years, and certainly it has been our hope and our thought that they ought to figure in it. We see no reason why we should be excluded from it at all.

By Mr. Collins:

Q. They figured in it, to continue using my awkward term, from the time that those rates described, mentioned in the complaint, were established in 1897 to the time they were cancelled in—the last of them in 1912.

The reason I ask the question is that I find nothing in the history of the formative or construction days——

Mr. Quirk: Mr. Examiner, it seems to me——

Mr. Collins:

Q. —that indicates there was any such thing in contemplation——

Exam. Mullen: Just a minute. Mr. Quirk has an objection.

Mr. Quirk: I object to that statement. Whether Mr. Collins could find it or not is not important. I found it.

Exam. Mullen: I took it Mr. Collins was explaining his question.

Mr. Collins, No, I was going to ask Judge McCarthy if he knew of any different situation or purpose of the early days. I mean the days of construction, and even the days [fol. 43] when the Goulds were making the plans to develop the Western Pacific.

The Witness: Well, I don't know what their intentions were during that time. I know that ever since I have been with the property I have been looking forward to the opening of the Ogden gateway and the publishing of through rates through there. At one time—I don't recall when—Mr. Harriman was a director of the DR&G.

By Mr. Collins:

Q. And Mr. Gould of the Union Pacific?

A. And Mr. Gould during the Union Pacific. I don't know what they had in mind during those days.

Q. Your hope, since you have been responsible for the management of the Rio Grande, to open the Ogden gateway, has been one of simply enhancing the position of the Rio Grande Railroad, hasn't it?

A. That is true—and the convenience to our shippers.

Q. Yes. Of course the convenience to the shippers would be of no value to the Rio Grande unless it collected revenue, would it?

A. That is right.

Q. Judge McCarthy, may I inquire—I don't want to annoy you with a lot of detailed questions unless you indicate to me some extent of the study that you yourself, or the attention that you yourself personally gave to the period of time leading up to the filing of this complaint; and I take it, from what you have just said a while ago, since

[fol. 44] you have wanted the Ogden gateway opened, that perhaps you have given a good bit of study to it—to the problem of opening it and your desire to have it opened.

A. Yes, sir.

Q. Will you tell me whether, in deciding to file the complaint in this case, you took into consideration the fact that the Union Pacific is the originating and terminating line for particularly the Idaho and eastern Oregon and southwestern Wyoming traffic and bears the expense of that service.

A. If we are originating traffic from Omaha west.

Q. Sir?

A. You are the originating traffic Omaha west, but not beyond there.

Q. No. Originating in Idaho, in the country I mentioned, in the Norothwest, and traffic terminating on the points on the line of the Union Pacific. In other words, eastbound traffic originating in the Northwest country local to the Union Pacific.

A. Oh.

Q. And westbound traffic—I don't know whether I said originating or terminating; I meant originating—westbound traffic terminating at points on the Union Pacific and that Northwest country.

A. I don't know whether you originate all of the traffic.

Q. No, I am not saying that we do. I am saying, as to [fol. 45] all of traffic that terminates in southern Idaho, no matter where it originates, that the Union Pacific necessarily is the terminating carrier.

A. Oh, yes; that is right.

Q. And as to traffic originating there, the Union Pacific is necessarily the originating carrier or gathering carriers.

A. That is right.

Q. Now, all I was inquiring was whether or not, in deciding to file the complaint, you took that feature into consideration.

A. Oh, yes.

Q. And did you take into consideration also the fact that the Union Pacific has some approximately 1400 miles of branch lines which it operates in Idaho?

A. I don't know how much we have there, but whatever

statement you would make on that I would accept. I don't know what your mileage is there.

Q. Well, actually, what I am trying to discover is the extent or depth of study you made of the problems involved. It is a matter of fact, the 1392 miles of branch lines in Idaho that the Union Pacific operates. You knew that the branch line mileage was large.

A. We certainly know that you cover Idaho, Mr. Collins. There is no doubt about that.

Q. Quite true. But did you know that more than half of our coverage is in branch lines?

[fol. 46] A. Well, I am sure you have quite a lot of branch lines there.

Q. Now, did you give consideration also to the fact that the mileage over routes by the Rio Grande between McCammon, Idaho—the point where the Omaha line of the Union Pacific and the Ogden line of the Union Pacific converge—to any destination point that you might pick out is longer by way of the Rio Grande by 33 miles to 219 miles than mileage by the existing routes?

Mr. Quirk: Mr. Examiner, I object to that. We are going farther than I think should be allowed. This witness did not cover that sort of statement. We have two witnesses, one witness in particular, who is going into distances, comparative distances and other matters of that kind, in a comprehensive manner. We are certainly taking up a lot of time to the satisfaction of Mr. Collins. He will have all that by other witnesses himself.

Mr. Collins: Mr. Examiner, Mr. Quirk must certainly have a crystal ball. I don't know what I am going to have. It has not been prepared.

Exam. Mullen: It seems it probably could be covered more directly by the other witnesses that Mr. Quirk mentioned.

Mr. Collins: Well, I want to find out——

Mr. Examiner, I have had a good bit of experience with the kind of so-called objections that Mr. Quirk makes: "Wait until we get to the next witness." And then the [fol. 47] next, the next and the next, and they don't come through. Judge McCarthy is trying to give me cooperative and fair answers.

Exam. Mullen: That is not quite so. We have a direct statement by Mr. Quirk that he will have witnesses here that will cover those points, Mr. Collins.

Mr. Collins: My question of Judge McCarthy is relevant, and I would like to pursue it, just in a general way.

Exam. Mullen: I know; it was a general question, and Mr. McCarthy may answer it to the extent of his knowledge.

The Witness: I think your 33 miles is shorter to Ogden, and of course less distance from Denver to Salt Lake. As to the distance over the cutoff, I do not know that mileage.

By Mr. Collins:

Q. I was not going to take you into details of distances with respect to particular routes. All I wanted to ask was whether you realized that if you succeeded in this complaint, then whatever traffic might be routed by way of the Rio Grande will be transported from origin points up in Idaho from 33 to more than 200 miles farther, or over that much more mileage, than if transported over the direct and existing routes.

A. Well, if your figures are correct, that is true; and it would not have made any difference, as far as I am concerned.

Q. I see.

Exam. Mullen: We will recess for 10 minutes.

(Short recess taken.)

[fol. 48] Exam. Mullen: We are ready to proceed, gentlemen. Mr. Collins.

By Mr. Collins:

Q. Judge McCarthy, are you familiar with the fact, as it appears in the Interstate Commerce Commission's reports—which I will recite at the appropriate time—that for many years the railroad that is now the Denver and Rio Grande Western have asked the Interstate Commerce Commission for authority to charge rates that were appreciably higher—as much as 30 per cent higher—than the rates of other lines in the general territory of the Rio Grande's location?

A. I don't know.

Q. You gave no consideration to that, then, in the filing of this complaint?

A. I don't know what you are talking about, Mr. Collins.

Q. Well, I would like to——

Mr. Quirk: Mr. Examiner, it does seem to me that Mr. Collins ought to be held somewhat closer than he is traveling to what this witness testified to on direct. He just can't take all the things that this railroad is interested in and cross examine this witness on it. There may be some others that he can.

Mr. Collins: I don't know what——

Exam. Mullen: I think there is some merit in that, Mr. Collins, as to this particular question that you have asked now. This witness stated he has no knowledge.

[fol. 49] Mr. Collins: Yes, I am willing to accept Judge McCarthy's statement that he had no knowledge.

By Mr. Collins:

Q. Do you have knowledge of the fact, also appearing in the Interstate Commerce Commission's reports, that the joint through rates over existing routes on principal commodities from Idaho—I have in mind particularly potatoes, onions, vegetables and those things—have been found by the Commission a number of times to be far below what they call maximum reasonable rates?

Mr. Quirk: That is another question——

Mr. Collins: Just a minute.

Mr. Quirk: I object.

Exam. Mullen: The sole question is whether he has given consideration.

Mr. Collins: I asked whether he was familiar with the fact.

The Witness: I am not.

By Mr. Collins:

Q. You are not?

A. No.

Q. So, consequently, you gave no consideration to that in the filing of this complaint?

A. No.

Q. Now, Judge McCarthy, I would like to go into a further and different matter, and we may save a lot of detailed questions if you will answer this question: Is it not a fact that on August 1, 1949, on which date the complaint in [fol. 50] this case was filed, that the Denver and Rio Grande Western Railroad immediately began what you might call an educational campaign among the shippers and the press in Utah, Colorado, Idaho, and finally extending up into Oregon in an endeavor to stimulate public interest and shipper interest in this complaint and its purposes?

A. Well, we had men representing us up in those districts, and I think that a pamphlet was put out evidencing some of the things that we thought the shippers might be interested in.

Q. I take it you were consulted, or at least approved that undertaking to give publicity to the filing of the complaint and its purposes?

A. Well, I imagine I had something to do with it. I don't know just what you are talking about.

Mr. Quirk: I submit it is irrelevant and immaterial to this issue, anyway.

Exam. Mullen: It strikes me so, Mr. Collins. I don't understand the pertinency of it.

Mr. Collins: I am not quite sure it is not.

I will tell you the purpose: Let Judge McCarthy say whether or not this—Have you seen this document? Will you pass it to him?

The Witness: I don't know what is inside of it.

Mr. Quirk: The question is: Have you seen them?

The Witness: I don't know whether I have or not, Mr. [fol. 51] Collins. This first news item here, I might have seen it, but I don't recall.

By Mr. Collins:

Q. Were you aware of the fact that this packet was being distributed to the press and the public?

A. No, sir. I don't recall that it was.

Q. All right. May I have that back, please?

You know, of course, as you just said——

Mr. Quirk: Just a minute, Mr. Examiner. I am going to object to this line of inquiry because it is irrelevant and

immaterial. Moreover, if you allow this line of inquiry we will have to go into it. The Union Pacific has not been a bit modest in educating the public, if that is what they call it, and they have been very, very active in it.

Exam. Mullen: Just a moment. What is your objection?

Mr. Quirk: I am giving the reason for my objection.

Mr. Collins: You are making a little speech there.

Exam. Mullen: Just a moment, Mr. Collins. What is the purpose of this inquiry?

Mr. Collins: The purpose, Mr. Examiner, is this: As this material shows—and, as Judge McCarthy indicated, this contact was made, whether you call it an educational program or a propaganda program—this shows that this was done immediately upon the filing of the complaint, and I say that any inquiry with respect thereto is relevant because, since it is the obligation of the complainant here to [fol. 52] prove actual public demand or need for the so-called relief sought in this complaint, if there had been such public demand or need for the opening of the Ogden gateway, as it is termed, then there would have been no necessity whatever for a campaign by the Rio Grande among the shippers local to the Union Pacific Railroad to try to stir up interest on their part in the Rio Grande's proposal to take part of the Union Pacific's traffic.

Exam. Mullen: What is your specific objection to that, Mr. Quirk?

Mr. Quirk: The objection is this: It isn't unusual for both sides of an inquiry of this importance to attempt to persuade the public to support them. That is a very common practice, and one well known to the Commission.

My objection is, Mr. Examiner, that if you allow Mr. Collins to go into this we will have to go into it, and we will show, if we must, how they have continued to neutralize our efforts, and not always with the most gentle methods.

Mr. Collins: I am frank to admit that we have done just What Mr. Quirk has said. We have attempted to neutralize the campaign that has been made among the local shippers, shippers local to the Union Pacific Railroad, in an effort to incite them against the Union Pacific Railroad.

He has not reached my point yet in his objection. Can I make it any clearer, Mr. Examiner? Or do I need to?

[fol. 53] Exam. Mullen: I am not convinced yet, Mr. Collins, that this particular line of inquiry is relevant. After all, we want to get the actual facts concerning the operations and the need and desirability for these joint through rates.

Mr. Collins: Mr. Examiner, they must prove a bona fide actual public need or demand for routes by the Rio Grande Railroad as sought in the complaint or else they have failed.

Mr. Quirk: If this is the time for argument, I want to ask——

Exam. Mullen: Just a moment. Let me take care of this, Mr. Quirk. I assume that is an obligation which the defendants recognize.

Mr. Quirk: They don't recognize it in the form Mr. Collins takes.

Exam. Mullen: Just a moment, please. This particular line of inquiry concerning what you call propaganda among shippers, in my opinion, is not relevant. I will sustain the objection.

Mr. Collins: You didn't let me finish, and neither did Mr. Quirk. I don't want to argue with your ruling, but I do insist that you reconsider it after I have finished stating again and tried to make clear to you my position. I think your ruling would be different if I had been permitted to finish.

Exam. Mullen: I assumed, Mr. Collins, you had finished. If you desire, you may restate your position.

[fol. 54] Mr. Collins: I stated to you that, in my judgment, it is their obligation to prove, it is the complainant's obligation or burden to prove an actual public need and those things which section 15(3) of the Act specify as justifying the Commission's compelling of joint through rates.

Now, to restate it, if there had been such a public need prior to the filing of this complaint on August 1, which I deny—that is, I deny there was a public need at that time—and if there had been there would have been no need to go into this publicity campaign that the Rio Grande entered into concurrently with the filing of the complaint. So my ultimate point is, in directing these questions to Judge McCarthy, that, instead of there being an actual bona fide public need or demand for the through routes and joint

rates that the complainant seeks to establish, there is an attempt to make it appear on this record by these efforts of the DRG&W that there is such a public demand through a simulated and artificial method of theirs which they hope to put in the record in lieu of an actually developed public demand and need which might, if it had existed, have justified the filing of the complaint.

It is a difference between an actual public need and one that they hoped to demonstrate to the Commission might be present through their agitation among the shippers local to the Union Pacific Railroad, and I think if Judge McCarthy felt like admitting to me that they had no particu-
[fol. 55] lar reason, except their own, to file this complaint, and that this information or educational program was engaged in for the purpose of trying to stimulate an interest that did not exist among the public and the shippers, that would end it.

Exam. Mullen: I so understood that was your position, and, as I stated the first time, I will adhere to the ruling. However, if there are witnesses later produced of the kind you have mentioned, and to which you want to direct that type of question, you are free to do so.

Mr. Quirk: Could I make one statement, Mr. Examiner?

Exam. Mullen: Yes, Mr. Quirk.

Mr. Quirk: I don't want to be bound by Mr. Collins' conception of what has to be proven in this kind of a case. I don't expect to convince him, but I do have some hope of convincing the Commission.

Exam. Mullen: Obviously, Mr. Quirk, you are not bound by what Mr. Collins says.

Mr. Quirk: I am glad to hear that.

Exam. Mullen: Go ahead. Proceed, Mr. Collins.

Mr. Collins: May I have just a moment, Mr. Examiner?

Exam. Mullen: Yes.

Mr. Collins: That is all from you, Judge. Thank you very much.

Examiner Mullen: Anything on redirect?

[fol. 56] Redirect examination.

By Mr. Quirk:

Q. Judge, Mr. Collins made some reference to the interest of the Rio Grande as it existed 25 or 30 years ago or

more in California traffic, and of the Western Pacific. Do you recall, Judge, at the time the old Rio Grande was inspired to build the Western Pacific, that the Union Pacific controlled the Southern Pacific?

A. I so understood.

Q. And that the Supreme Court of the United States, in December 1912, required the Union Pacific to divest itself of the control of the Southern Pacific?

A. I understood so.

Q. That is in 226 U. S. 61, United States versus the Union Pacific.

Now, there was also reference to the fact that in from 1897 to about 1912, or 1906—and I think some of the tariffs were cancelled in 1915—there were a line of joint rates competitive with other routes via the Rio Grande between the territory here involved and the territory served by the Oregon Short Line and the Oregon-Washington Railway and Navigation Company. You recall that, don't you?

A. Yes.

Q. Now, at the time those joint rates were in effect, during most of the time, isn't it a fact that the Oregon Short Line and the Oregon-Washington Railway and Navigation [fol. 57] Company were operated independently of the Union Pacific?

A. I understand so.

Mr. Collins: Excuse me. I object, unless Judge McCarthy can say positively he has positive knowledge of this.

The Witness: I haven't positive knowledge of it. I don't know whether or not the Union Pacific had some contingent interest somewheres or not, but during that time I had understood it was an independent line.

By Mr. Quirk:

Q. Under separate receivership

A. Both of those railroads went into receivership.

Mr. Collins: Mr. Examiner, so as to avoid any confusion in the facts of the situation we are going to show you, in our part of this case, that the Union Pacific Railroad controlled all of these lines as far back as 1878.

The Witness: That might be so. I thought they were independent during that period, Mr. Collins.

Mr. Quirk: I think it will not be too difficult to show they had separate receiverships during the period we are talking about; and then the receivers acted independently, established these rates. And when the end of that receivership came and the Union Pacific got in the seat again, it cancelled the rates.

Exam. Mullen: In view of Mr. Collins' statement as to putting in some direct evidence on that, I think this particular line of inquiry might cease.

Any further questions?

[fol. 58] By Mr. Quirk:

Q. Judge McCarthy, is it unusual for railroads to have branch lines?

Exam. Mullen: That needn't be answered.

Mr. Quirk: How is that?

Exam. Mullen: That needn't be answered. I think we are wasting a little time here, Mr. Quirk.

Mr. Quirk: I thought we were when he was talking about it, but he said the Union Pacific had 1400 branches up there.

Mr. Collins: I did not.

Mr. Quirk: 1400 miles, I mean.

Mr. Collins: Correct.

Exam. Mullen: Mr. Collins will establish whether that is true or not.

By Mr. Quirk:

Q. In all events, the Denver & Rio Grande doesn't have any branches, does it?

A. Not many—Not too many.

Mr. Quirk: I believe that is all, Judge.

Exam. Mullen: That is all, sir.

Thank you.

Mr. Collins: That is all.

(Witness excused.)

Mr. Quirk: I will call Mr. F. C. Hogue.

[fol. 59] F. C. Hogue was sworn and testified as follows:

Direct examination.

Exam. Mullen: Are you ready to proceed?
Mr. Quirk: Has the witness been sworn?
Exam. Mullen: Yes.

By Mr. Quirk:

Q. Mr. Hogue, you have a prepared statement. You have put your testimony in statement form?
A. I have.
Q. Is your business address 1531 Stout Street, Denver, Colorado?
A. That is correct.
Q. Proceed.
A. My name is F. C. Hogue. I am vice president in charge of traffic of The Denver and Rio Grande Western Railroad Company, with headquarters at 1531 Stout Street, Denver, Colorado.

I have been in its employ more than forty years, of which the first twelve years were in the operating department, and the past 28 years in the traffic department. I have occupied the position of vice president since April 11, 1947, and for nearly seven years prior to that date I was general traffic manager.

Q. Have you prepared an exhibit consisting of 7 pages?
A. I have.

Mr. Quirk: I would like to offer that for identification at this time, Mr. Examiner, as Complainant's Exhibit 1.
[fol. 60] Exam. Mullen: It will be so marked Exhibit No. 1.
(Complainant's Exhibit No. 1, Witness Hogue, marked for identification.)

The Witness: The original Denver and Rio Grande Railway Company, which is today's the Denver and Rio Grande Western Railroad Company, and hereinafter referred to as the Rio Grande, was incorporated October 27, 1870. Its standard gauge main line between Denver and Ogden via Pueblo, the Royal Gorge, and Tennessee Pass was opened to traffic November 14, 1890, and its shorter main line between Denver and Ogden via the Moffat Tunnel and the Dotsero Cutoff was opened to traffic June 15, 1934.

Page 1 of my exhibit shows a map of the Rio Grande as it exists today, with the distances between its eastern and western terminals indicated thereon. The original line over Tennessee Pass provides adequate and efficient service on traffic originating at, destined to, or interchanged with connecting lines at Pueblo, Colorado, and the Moffat Tunnel route provides adequate and efficient service on traffic originating at, destined to, or interchanged with connecting lines at Denver, Colorado.

Prior to the opening of the Moffat Tunnel route on June 15, 1934, the Rio Grande's line between Denver and Ogden via Pueblo, the Royal Gorge, and Tennessee Pass, was 782 miles in length, and its circuity was such that comparatively [fol. 61] little through traffic originating at, destined to, or interchanged with connecting lines at Denver, other than non-perishable freight, could be attracted to it. Thus until June 15, 1934, the Pueblo gateway afforded the only interchange point via which through traffic service comparable to that of other carriers could be maintained. Since that date, and because of the opening of the Moffat Tunnel route, both the Pueblo and Denver gateways enjoy a service parity.

Page 2 of my exhibit shows in detail the Rio Grande's tonnage and gross freight revenue from originated traffic, and on that received from connecting lines, for the 25-year period 1924-1948, inclusive. As to tonnage, it will be noted that in 1924, which is the first line, the Rio Grande originated 76.83 per cent of its tonnage, with 41.38 per cent thereof terminating on its line and 35.45 per cent being delivered connecting lines. In 1948, the bottom line, the Rio Grande originated but 47.66 per cent of its tonnage, with 17.90 per cent thereof terminating on its line and 29.76 per cent being delivered connecting lines.

As to gross freight revenue, it will be noted that in 1924 the Rio Grande received 66.29 per cent of its gross freight revenue from originated traffic, with 36.11 per cent thereof terminating on its line and 30.18 per cent being delivered connecting lines. In 1948 the Rio Grande received but 34.66 per cent of its gross freight revenue from originated [fol. 62] traffic, with 12.01 per cent thereof terminating on its line and 17.90 per cent being delivered connecting lines. Or, stated another way, the Rio Grande received but 33.71

per cent of its gross freight revenue or traffic from connecting lines in 1924, with 17.43 percent thereof terminating on its line and 16.28 per cent being delivered other connecting lines. In 1948 the Rio Grande received 65.34 per cent of its gross freight revenue on traffic from connecting lines, with 21.80 per cent thereof terminating on its line and 43.54 per cent being delivered other connecting lines.

Page 3 of my exhibit shows in detail the tonnage interchanged beteween the Rio Grande and its principal eastern and western connections for the 25-year period 1924 to 1948, inclusive. It indicates the extent of the Rio Grande's increased interchanged traffic with the Chicago, Burlington & Quincy Railroad, and the Chicago, Rock Island and Pacific Railroad Company at Denver as a result of the opening of the Moffat Tunnel route on June 15, 1934. It also indicates the Pueblo interchange with the Missouri Pacific Railroad has continued to show substantial increases since June 15, 1934. The 1948 interchange with the Union Pacific, as shown on the bottom line, reveals the Rio Grande delivered the Union Pacific 633,524 tons at Denver for which it received but 272,268 tons in return. At Utah junctions the Rio Grande delivered the Union Pacific 1,693,355 tons for [fol. 63] which it received but 1,086,182 tons in return, but this return traffic included 874,875 tons of ore on which the rate was not otherwise applicable. At both Denver and Utah junctions the Rio Grande delivered the Union Pacific a total of 968,429 more tons than it received in return.

Both pages 2 and 3 of my exhibit illustrate the changes in the character of the Rio Grande's freight traffic during the past 25 years. From a local railroad deriving its principal tonnage and revenue from freight traffic originating on its own line in 1924, it has become a transcontinental carrier deriving its principal tonnage and revenue from traffic delivered it by connecting lines. Few, if any, other Class I railroads have experienced such a change in the kind and character of their freight traffic during a similar period. Contributing to the decline in local traffic was the growing scarcity of Colorado non-ferrous ores, which closed Colorado smelters one by one. Today only one smelter, that of the American Smelting and Refining Company at Leadville, is in operation in the entire state.

The introduction of natural gas into our territory also caused a gradual decline in the Rio Grande's originated coal tonnage. For example, 4,379,249 tons were originated in 1924, and only 3,262,976 tons in 1946. Originated coke tonnage as a by-product of coal also declined from 278,043 tons in 1924 to 87,272 tons in 1946. Lumber and its products [fol. 64] have likewise declined as the timber has been cut and shipped to market. Many sawmills have been abandoned and only a comparatively few remain. For example, 86,608 tons of forest products were originated in 1924, and only 56,707 tons in 1946. As to originated coal, coke, and forest products tonnage, I have compared 1924 with 1946 rather than with 1948 for the reason that our having absorbed the Denver and Salt Lake Railway Company on April 11, 1947, distorted the 1948 figures for comparative purposes on these particular commodities.

With the decline experienced in the originated commodities named, plus a heavy tonnage loss of untold volume to other forms of transportation in the states served by the Rio Grande, we are forced to turn our thoughts and efforts to main line through freight traffic. In no other way could we have survived and continued to render rail transportation service to those people of Colorado, Utah and New Mexico who are reached only by the Rio Grande. Another witness will testify as to the expeditures made to change the Rio Grande's physical status from a local to a transcontinental carrier.

In connection with through freight traffic, it should be stated that the Rio Grande first became a party to the guaranteed eastbound freight train schedules on California perishable traffic via Western Pacific-Rio Grande-Missouri Pacific through the Pueblo gateway in 1924, and later this guar- [fol. 65] antee was extended via Southern Pacific-Rio Grande-Missouri Pacific. With the opening of the Dotsero cutoff on June 15, 1934, the same guaranteed schedule was made effective via the Denver gateway. During 1924 the Rio Grande handled 2,305 carloads of this important California perishable traffic, and in 1948 handled 15,649 carloads.

Another illustration might well be our participation in westbound freight forwarder traffic. In 1935, the first full

year of operation after opening the Dotsero cutoff route, we handled but 593 carloads, while in 1948 we handled 6,758 carloads. This forwarder traffic largely moves through the Denver gateway, and without the Moffat Tunnel route and the shortest line of railroad between Denver and Salt Lake City it could not have been attracted to our line.

This record of eastbound California perishable and westbound forwarder traffic is related only for the purpose of indicating capacity and ability to handle on competitive schedules.

With the transition of the Rio Grande to a transcontinental carrier, its twelve off-line traffic agencies were augmented by the establishment of eleven additional agencies at Atlanta, Georgia; Boston, Massachusetts; Cleveland, Ohio; Dallas, Texas; Eugene, Oregon; Fresno, California; Minneapolis, Minnesota; Reno, Nevada; Sacramento, California; Seattle, Washington; and Washington, D. C., and our traffic organization further strengthened by [fol. 66] the appointment of additional supervisory personnel.

The Rio Grande's ability to handle freight traffic was also demonstrated during the recent war years. Numerous diversion orders involving the Ogden gateway were issued by the Interstate Commerce Commission, and by W. F. Kirk, its agent. Our records indicate that:

Under ICC Service Order No. 94, effective November 2, 1942, and canceled August 17, 1945, the Rio Grande diverted 7,943 carloads destined points in Oregon and Washington via Western Pacific-Great Northern to the Union Pacific at Ogden and Salt Lake City.

Under ICC Service Order No. 98, effective November 28, 1942, and canceled August 17, 1945, the Rio Grande diverted 8,491 carloads destined points in Oregon and Washington via Southern Pacific to the Union Pacific at Ogden and Salt Lake City.

Under Kirk's Order No. 117, effective January 10, 1944, and canceled April 15, 1945, the Rio Grande diverted 1,804 carloads destined points in Oregon and Washington to the Union Pacific at Ogden and Salt Lake City.

Under Kirk's Order No. 242, effective May 12, 1945, and canceled September 5, 1945, the Rio Grande diverted 262

carloads destined points in Oregon and Washington to the Union Pacific at Ogden and Salt Lake City.

Under Kirk's Order No. 246, effective May 16, 1945, and [fol. 67] canceled August 18, 1945, the Rio Grande diverted 586 carloads destined points in Oregon and Washington to the Union Pacific at Ogden and Salt Lake City.

In addition to traffic diverted to the Union Pacific at Ogden and Salt Lake City during the war years and under appropriate orders referred to, many combination special trains of from 30 to 50 cars, consisting of troops on passenger transportation, and military supplies in freight cars on freight billing, from eastern and southern origins were initially routed and moved via Rio Grande-Ogden-Union Pacific. Examples:

Special train moving as Main 7370, consisting of 24 cars military supplies and six passenger cars, from Fort Sill, Oklahoma, December 18, 1941, to Fort Lewis, Washington, via SLSF-AT&SF-Rio Grande-Ogden-Union Pacific.

Special train moving as Main 3529, consisting of 50 cars military supplies and an unknown number of troops, from Camp Claiborne, Louisiana, February 22, 1942, to Fort Lewis, Washington, via MP-L&A-KCS-CRI&P-Rio Grande-Ogden-Union Pacific.

Special train moving as Main 3534, consisting of 50 cars military supplies and an unknown number of troops, from Camp Claiborne, Louisiana, February 22, 1942, to Fort Lewis, Washington, via MP-L&A-KCS-CRI&P-Rio Grande-Ogden-Union Pacific.

[fol. 68] Special train moving as Main 3537, consisting of 50 cars military supplies and an unknown number of troops, from Camp Claiborne, Louisiana, February 22, 1942, to Fort Lewis, Washington, via MP-L&A-KCS-CRI&P-Rio Grande-Ogden-Union Pacific.

Interline settlement sheets indicate the Government received the advantage of rates applicable only via Union Pacific long haul. Satisfactory divisions were negotiated with the Union Pacific, and no dispute exists.

We also have record of 524 carloads of war material handled into Utah via the Rio Grande during the period March 12, 1942, to May 31, 1945, and intended for storage at Ogden or Clearfield, Utah, but which were diverted to the Pacific

Northwest via Union Pacific from Salt Lake City or Ogden without being unloaded into these storage depots. Interline settlement sheets indicate the Government received the advantage of rates applicable only via Union Pacific long haul. Satisfactory divisions were also negotiated with the Union Pacific for application on this traffic and no dispute exists.

Attention is also directed to agent King's ICC Service Orders Nos. 50, 51 and 52, issued during February, 1949, when storms and blizzards blocked the Union Pacific's main line. Under these orders we have a record of 4,208 carloads of freight being diverted to the Rio Grande between Denver, Colorado, on the one hand, and Utah junctions with the [fol. 69] Union Pacific, on the other. 2,814 of these carloads moved on rates which were applicable via the Rio Grande, but the balance of 1,394 carloads originated at or were destined to Union Pacific points north of Ogden on which competitive through rates were not applicable in connection with the Rio Grande. Under the orders referred to the shipper properly paid only the going rates applicable via Union Pacific, but in some instances the division thereof between the two lines remains in dispute.

Arrangements were also perfected during the February storm period by which 210 carloads of express and 276 carloads of United States mail were diverted from the Union Pacific to the Rio Grande and handled by it between Denver and Salt Lake City. In addition, 44 Union Pacific passenger trains consisting of from ten to sixteen cars each were detoured via the Rio Grande between Denver and Salt Lake City. Another witness will testify in greater detail concerning our handling of the diverted and detoured traffic described.

During the past 28 years in my various traffic department assignments, including seven years as assistant traffic manager at Chicago, it has been my responsibility to contact hundreds of shippers and hundreds of shippers have contacted me in regard to their inability to use the Rio Grande at equal rates on freight traffic to or from Union Pacific territory north of Ogden. Some instances involved a sell- [fol. 70] ing problem for shippers who desired to use certain transit arrangements along the Rio Grande. For example, competitive through rates on traffic originating at

Missouri River or east thereof and destined to the Union Pacific's closed door territory north of Ogden do not apply via Pueblo, Colorado, with a population of seventy-five thousand, over any route or combination of routes. This fact is overlooked from time to time by certain shippers who bill cars to partly unload at Pueblo, which results in higher charges at combination rates.

One firm of national prominence, operating ten retail stores in Southern Colorado and Northern New Mexico, could effect a material saving in their freight costs on cars shipped to the closed door territory if they could be routed through Pueblo at equal rates and partly unloaded at that point.

Mr. Collins: Mr. Examiner, I object to this statement in line 3 of the last paragraph beginning on page 7, "the hundreds of shippers" and sweeping statements of that sort, unless Mr. Hogue is prepared to identify the shippers.

Mr. Quirk: I think it is relevant and competent for the witness to tell of his actual experience as vice president and in other positions in dealing with shippers.

Exam. Mullen: I think this witness is qualified to testify that way, Mr. Collins. This is his own personal experience with the shippers. You may proceed, Mr. Hogue.

[fol. 71] The Witness: On carload shipments delivered to the Union Pacific at Kansas City or Omaha, on which they receive the long haul to points in the closed door territory north of Ogden, they permit an out-of-line haul via Denver for partial unloading at that point at the through rate. The nationwide concern we referred to, or any other consignee taking advantage of partial unloading at Denver of merchandise intended for southern Colorado, or northern New Mexico, is then put to the additional freight charge for reshipping 119 miles farther. If cars could be partially unloaded at Pueblo at competitive rates, the reshipping expense and the transit time of the firm referred to, as well as that of any other consignee, would be materially lessened.

Other instances coming to my attention involved the possibility of a diversion to the closed door territory being required after arrival at a destination on the Rio Grande, and still others involved shipments which had already moved via the Rio Grande on which combination rates over

Ogden had been assessed. For example, page 4 of my exhibit covers 39 eastbound carloads from the closed door territory north of Ogden which actually moved via Union Pacific-Ogden or Salt Lake City thence Rio Grande to their destination during the calendar year of 1948. 36 of the 39 carloads originated on the Union Pacific for which that carrier issued bills of lading for through carriage to desti- [fol. 72] nation via the Rio Grande. The other 3 carloads were covered by bills of lading issued by connections of the Union Pacific, and routed via Union Pacific-Rio Grande. Competitive through rates not being applicable, shippers were penalized to the extent indicated on this statement, although 9 carloads required partial unloading at points on the Rio Grande.

By Mr. Quirk:

Q. Will you give the range of the amount of penalties, Mr. Hogue?

A. The last column, Mr. Counsel.

Q. But I would like to have you give the range right here.

A. The lowest penalty that I observe is $34, on line 21—Pardon me. The lowest penalty I observe is $29.75 on line 16. The highest penalty is $866.69 on line 31.

Mr. Collins: Mr. Examiner, for clarification, may I ask Mr. Hogue if what he refers to as a "penalty" is not just the difference between the combination rates and the through rates?

The Witness: The penalty charges are the difference between through rates applicable for only via Union Pacific and the combination charges that must of necessity be assessed when the business is interchanged between your line and ours at Ogden, destined to these points.

Mr. Collins: Thank you.

By Mr. Quirk:

Q. By that you mean, I suppose——

Mr. Collins: He has answered sufficiently for my purposes.

Mr. Quirk: He has not answered sufficiently for me.

[fol. 73] Exam. Mullen: What is your question?

By Mr. Quirk:

Q. My question is: By that statement you mean, Mr. Hogue, that this car that had the $866 charge, that you called a penalty charge, cost that shipper $866 more than he would have paid if it had moved on the joint rate via the Union Pacific?

A. That particular car, as stated, moved UP-Salt Lake-DRG&W in a combination which is $866.69 higher than the charge would have been had the car moved via the Union Pacific's long haul to Denver, thence the Rio Grande to destination.

Q. All right. Proceed.

A. Page 5 of my exhibit covers 17 westbound carloads which actually moved via Rio Grande-Salt Lake City or Ogden, thence Union Pacific to the closed door territory during the calendar year of 1949. Competitive through rates not being applicable, shippers were penalized to the extent of the Salt Lake City-Ogden combination, although 3 carloads required partial unloading at points on the Rio Grande.

Since page 5 was prepared, two additional carloads have come to my attention which were CRI&P 64136 shipped from Quincy, Illinois, April 29, 1948, destined Portland, Oregon, and routed Wabash-Missouri Pacific-Rio Grande-Salt Lake City-Union Pacific, resulting in additional charges of $637.20, and Reading 24221 shipped from Toledo, Ohio, October 24, 1948, destined Boise, Idaho, and routed NYC-[fol. 74] CB&Q-Rio Grande-Salt Lake City-Union Pacific, resulting in additional charges of $1,278.32. These two carloads came to my attention through our divisions department only last week, and it is probable there were other carloads of which we are presently uninformed.

Page 6 of my exhibit shows 22 westbound carloads routed Rio Grande-Union Pacific to the closed door territory which came to my attention and were held temporarily at Denver or Pueblo during 1948 because competitive through rates were not applicable via the Ogden gateway, and until disposition or reroute instructions could be obtained from

shipper or originating carrier. This statement indicates disposition which was made of each of these 22 carloads.

Pages 4, 5 and 6 of my exhibit all reveal that many shippers, large and small, and many railroads, assume a through route exists at competitive freight rates via Rio Grande-Ogden-Union Pacific on westbound traffic, and via Union Pacific-Ogden-Rio Grande on eastbound traffic. I selected the year 1948 for pages 4, 5 and 6 of my exhibit as it was the last full calendar year prior to this proceeding. I desire to state, however, that the same problems prevailed to about the same extent in prior years, and have continued thus far in 1949.

Page 7 of my exhibit shows the existence of a freight car interchange between the Rio Grande and Union Pacific railroads at Ogden, Utah, by detailing the number of loads and [fol. 75] empties delivered each line by the other at that point during the 5-year period 1944 to 1948, inclusive.

By Mr. Quirk:

Q. Have you prepared an additional map, Mr. Hogue?
A. I have.
Q. You have caused that to be prepared?
A. Yes.

Mr. Quirk: We offer that for identification as Complainant's Exhibit No. 2.

Exam. Mullen: It will be so marked.

(Complainant's Exhibit No. 2, Witness Hogue, marked for identification.)

By Mr. Quirk:

Q. Does that exhibit require any explanation or comment from you? If so, make it.

A. This is a reproduction of a map that we prepared to show the situation covered by the complaint in a graphic manner. The hatched lines in the territory north of Ogden, and in Utah common point territory, as far south as Provo and Payson, indicate that that is all within what we term the "closed door" territory.

As to the hatched lines from Denver south to Trinidad and west as far as Kansas City, those points are all located

in what we commonly refer to as Colorado common point territory. Traffic originating in that Colorado common point territory, or destined to it, can generally move only via the Union Pacific through Denver in order to enjoy the lowest competitive rate.

[fol. 76] Mr. Collins: Pardon me. You mean to or from this other hatched-line location in the Northwest, do you not?

The Witness: Between the Colorado common point territory, Mr. Collins, on the one hand, and the closed door territory, on the other; yes, sir.

I think otherwise the map is self-explanatory.

Mr. Quirk: You may examine the witness.

Mr. Collins: Mr. Examiner, I wish to indulge your sympathy, if I may. I would request that we adjourn or recess for lunch and have some relief from this Florida atmosphere we are in here, and let me decide whether I want to ask Mr. Hogue any questions.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

We will recess until 2 o'clock.

(Whereupon, at 12:20 p. m. the hearing was recessed until 2 o'clock p. m. the same day.)

[fol. 77] Afternoon Session, 2:00 p. m.

Exam. Mullen: We are ready to proceed, gentlemen.

In order to remove any misunderstanding, I desire to say that all the petitions for leave to intervene that were offered this morning have been received and granted.

I would like to inquire if there is any representative here of the Brotherhood of Railway and Steamship Clerks?

Mr. Greene: I believe they are included in my list. Yes, they are.

Exam. Mullen: That is included in the petition you filed this morning?

Mr. Greene: Yes.

Exam. Mullen: All right. You may proceed, Mr. Collins.

Mr. Collins: We have no cross examination of Mr. Hogue —I mean, I do not have, for the Union Pacific.

Exam. Mullen: Does anyone desire to cross examine Mr. Hogue on his testimony this morning?

Mr. Torinus: Mr. Examiner, I have one or two questions at this time. Possibly these questions might be directed at counsel rather than the witness. I am speaking on behalf of the defendants other than the Union Pacific. I would like to know first with respect to the traffic which originates or terminates in this so-called closed door territory shown on Exhibit 2, whether the complainant is seeking any relief with respect to traffic that is neither originated nor terminated [fol. 78] by the Union Pacific.

F. C. Hogue resumed the stand and testified further as follows:

Cross examination.

By Mr. Torinus:

Q. Can you answer that, Mr. Witness?

A. I think our complaint answers that question.

Q. What is the answer?

A. It defines the territory to which we seek joint competitive rates to the territory and from the territory.

Q. I understand what the territory is. What I would like to know is whether or not you are seeking joint rates with respect to traffic which is not originated or terminated by the Union Pacific Railroad.

Mr. Quirk: I can answer that. We are seeking precisely what the complaint seeks, to the extent that any of the defendants participating with the Union Pacific, whether they originate the traffic or they don't, and we are eliminated from the participation of joint rates on a competitive basis with the Union Pacific, and so forth. That is what we are seeking.

Now, the answer to your question, as you put it to Mr. Hogue, yes, we are seeking more than you suggest. In other words, this case cannot be determined on the proposition of traffic originating and terminating on the Union

Pacific, because the Union Pacific participates in other traffic which they have a right to participate in.

[fol. 79] Mr. Torinus: Then is your complaint confined to traffic with respect to which the defendants, other than the Union Pacific, participate in joint rates with the Union Pacific via Ogden?

Mr. Quirk: Yes, if the other railroads participate with the Union Pacific on competitive rates, they are defendants, and we expect to participate with them wherever they participate with the Union Pacific.

Mr. Torinus: Then, as I understand it, this is simply so that the defendants other than the Union Pacific, particularly the Great Northern, whom I represent, may understand precisely what the issues are, you are seeking competitive joint rates with respect to traffic handled by defendants other than the Union Pacific to the extent, and to the extent only, that those defendants, other than the Union Pacific, participate in joint rates with the Union Pacific on the traffic described in the complaint via Ogden, is that correct?

Mr. Quirk: That is my understanding of it.

Mr. Torinus: I have no further questions.

Exam. Mullen: Any further questions of this witness? That appears to be all.

The Witness: Thank you.

(Witness excused.)

Mr. Quirk: I call Mr. Earley.

[fol. 80] T. K. Earley was sworn and testified as follows:

Exam. Mullen: We will take a short recess for five minutes.

(Recess taken.)

Exam. Mullen: All right, Mr. Quirk.

Direct examination.

By Mr. Quirk:

Q. Have you been sworn, Mr. Earley?

A. Yes.

Q. Have you prepared your testimony in statement form?
A. Yes.
Q. And you have also prepared an exhibit?
A. I have.
Q. It has been distributed?
A. It has.

Mr. Quirk: I suggest, Mr. Examiner, before the witness starts, we number this exhibit for identification.
Exam. Mullen: Exhibit No. 3.

(Complainant's Exhibit No. 3, Witness Earley, marked for identification.)

By Mr. Quirk:

Q. Will you proceed with your statement, Mr. Earley?
A. My name is T. K. Earley. I am Assistant Freight Traffic Manager of The Denver and Rio Grande Western Railroad Company, 151 Stout Street, Denver, Colorado. I have been continuously employed in the Freight Traffic Department of the Denver and Rio Grande Western for more [fol. 81] than thirty years, and I will testify for that Company.

Since 1927, I have been actively engaged in handling matters pertaining to freight rates. In the performance of my duties I have prepared and introduced data in a number of formal proceedings before the Interstate Commerce Commission and various state commissions.

References in this statement to page numbers and lettered sections refer to pages and sections of my Exhibit No. 3, unless otherwise specifically stated.

Description of territory covered by Complaint:

On page 2 of Section A appears a definition of the various territories referred to in my testimony.

Introductory:

The Denver and Rio Grande Western Railroad Company, which I shall hereafter call the Rio Grande, now operating approximately 2,400 miles of line, was originally designed to serve a large local territory in Colorado and New Mexico, and secondly, to become a useful part of trans-continental routes and thus to handle traffic to and from the Pacific Coast. See Map, page 1 of Section A.

Today its main lines extend from Denver to Ogden via two routes, one through Pueblo and the Royal Gorge via Salida, Tennessee Pass and Dotsero; the other through the Moffat Tunnel and Dotsero, the routes being identical west of that point.

[fol. 82] These two main lines comprise 951 miles, or 51 per cent of the standard gauge tracks. The total of branch lines is 1,452 miles, of which 527 miles are of narrow gauge construction. Approximately 60 per cent of the Rio Grande consists of branch lines. The narrow gauge lines are located in the most rugged and remote parts of western Colorado and northwestern New Mexico, and were so constructed because of the physical characteristics of the country, its scant population and light density of traffic.

The poor prospects of future traffic development did not justify the much greater cost of standard-gauge construction, even in those instances where it would have been possible to build standard gauge lines. Some of the narrow gauge rails are laid on four per cent grades and encounter curvatures as great as twenty-four degrees.

These lines were built primarily to serve small communities, the metal mining industry and towns dependent thereon, which at the time were active and prosperous but now have largely been abandoned or practically so. These narrow gauge lines, now serve small communities which have built around the transportation facilities.

What sparse freight traffic has existed for the past twenty years, or more, is now shared with motor trucks, as is passenger traffic with the bus and air lines. The severe physical obstacles to be met, as well as the light traffic den-
[fol. 83] sity, result in high operating costs and cause large operating deficits, which are constantly increasing as the local traffic in narrow gauge territory continues to decline.

Likewise, the volume of traffic originated in the local territory served by standard gauge lines has not kept pace with the volume of freight received from connections. To show this changing picture in the composition and character of Rio Grande traffic over the years, the statements shown on pages 1 and 2, Section B, have been prepared.

Page 1 shows the amount of Rio Grande originated busi-

ness for certain calendar years. As will be seen from the statement on this page, originated freight traffic of the Rio Grande accounted for 74.43 per cent of all freight tonnage in 1925, as compared with 47.66 per cent in 1948; revenue on this traffic has decreased from 63.17 per cent to 34.66 per cent during the same period.

Page 2 of Section B shows that the revenue from coal traffic originated on the Rio Grande as compared with the total revenue from all freight traffic has declined from 27.62 per cent in 1928 to 14.82 per cent in 1948. On the other hand, as will be presently shown, the proportion of bridge or overhead traffic of the Rio Grande during the same period has substantially increased. In other words, the Rio Grande has become with the passage of time an important link in the chain of trans-continental railroads and depends to a [fol. 84] very large extent at the present time on such traffic.

There has been a diminishing activity in metal mining throughout the years, caused principally by lack of ore of value sufficient to be mined and treated at a profit; also, there has been a constant lessening of lumbering operations in southwestern Colorado, due to exhaustion of timber. These are some additional causes for the decline in originated business.

Bridge traffic is traffic received from connections and delivered to connections, the Rio Grande being an intermediate line. Largely, in our case, this means trans-continental traffic, either destined to or originating in the Pacific Coast states on the one hand, and Colorado Common Points and east, on the other. In 1922, bridge traffic accounted for 9.4 per cent of freight revenue; in 1928 it was 17.2 per cent of the total. By 1939, this figure had reached 35.82 per cent, and during the war years it reached a high of 56.58 per cent in 1945. The 1948 figure was 43.54 per cent.

The increase in bridge traffic has, in part, been made possible by extensive improvements upon the main lines and equipment used thereon. These improvements will be fully described in the testimony of other witnesses who will follow.

The importance of overhead or bridge traffic to the Rio Grande is thus emphasized. The Rio Grande can and does [fol. 85] participate at competitive rates in through traffic

with all of its connections at Utah junctions, except with the Union Pacific on traffic to or from northern Utah, Idaho, Montana, and the Northwest, upon which traffic combination rates apply.

The Rio Grande is an essential connecting link between the Prairie Lines on the east and Pacific Coast Lines on the west. Prairie Lines are the Burlington, Rock Island, Santa Fe, Missouri Pacific, and Union Pacific. While not a Prairie Line, the Colorado and Southern is an important connection at Colorado junctions for traffic to and from the Southwest. It is contrary to the general scheme of transcontinental rate-making to prohibit the interchange of traffic at competitive rates at such a natural dividing point as Ogden.

In a limited way, the Rio Grande can and does participate in freight traffic to and from places in western Oregon, Washington and British Columbia, via its connections at Salt Lake City with the Western Pacific and at Ogden with the Southern Pacific. In respect of distance, service and area covered, these routes do not afford the shipping public the adequate access to and from the Northwest that competitive rates via the Rio Grande and Union Pacific through Ogden would give it.

Exam. Mullen: Just a moment. Do the parties desire to have the historical statement read into the record by the witness?

[fol. 86] Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

The witness may proceed to read it.

The Witness: In order that a full explanation of what we are seeking to bring about may be made, it seems proper at this point to give the history of the Rio Grande as it relates to the Ogden Route. The route has existed without interruption since 1883. The map shown on page 3 of Section B will help to visualize the historical narrative that immediately follows.

The Rio Grande embodies within itself the rails of several pioneer companies, construction of some parts of which was started as early as 1870. The original company (The Den-

ver and Rio Grande Railway Company) was incorporated October 27, 1870, and the first construction was narrow gauge via Salida, Gunnison and Montrose to Grand Junction, Colorado. Here it joined another company, the Rio Grande Western Railroad, which was built as a narrow gauge line between Grand Junction and Ogden, Utah, via Provo and Salt Lake City. The through narrow gauge line from Denver to Ogden was completed May 21, 1883.

During the 1870's and until July of 1886, the operations of the first Denver and Rio Grande were in various hands, successively the original company, the A. T. & S. F. Railway, and three receivers. On July 12, 1886, the Denver and Rio Grande Railroad Company was organized and took over the property. Not long afterwards the main line was con- [fol. 87] verted to standard gauge, and between Salida and Grand Junction, Colorado, was relocated with Tennessee Pass and Glenwood Springs.

The through standard gauge line from Denver to Ogden was completed November 14, 1890. In 1901, the Denver and Rio Grande acquired the Rio Grande Western. Connections existed on the east at Denver, Colorado Springs and Pueblo, with lines operating into those points from the east, north and south, and at Ogden with the Central Pacific lines of the Southern Pacific Company and at Ogden and Salt Lake City with the Oregon Short Line Railroad.

Prior to 1890, it was possible for the Rio Grande to participate in transcontinental freight traffic, but only by transfer from standard gauge equipment to narrow gauge and back to standard gauge. After the main line was changed to standard gauge, the traffic could move through without transfer of lading, but at that time no competitive traffic (i.e., traffic originating or finding destination at Denver, Colorado Springs, Pueblo or east thereof) could be interchanged with the Oregon Short Line Railroad (see page 4, Section B) at Ogden or Salt Lake City at equal rates.

Additionally, Oregon traffic handled west of Ogden via the Southern Pacific could not, if originating or destined Colorado Common Points east thereof, move via the Rio Grande System at equal rates.

[fol. 88] As to the Oregon Short Line Railroad and Oregon Railroad and Navigation Company, this was changed in 1897. In that year, the Union Pacific Railroad and its controlled lines (i.e. St. Joseph and Grand Island, Kansas

Pacific, Oregon Short Line and Oregon Railroad and Navigation Company) were in separate receiverships. The policy of the Oregon Short Line Railroad and Oregon Railroad Navigation Company was changed in 1897 and competitive rates with the Rio Grande via the Ogden gateway were then established for the first time at the rates then in effect through Granger, Wyoming, via the Union Pacific Railroad.

Mr. Collins: May I interrupt for a moment for something I think is probably for clarification purposes only?

Would you take the trouble now to indicate, Mr. Earley, the source of your statement that "the policy of the Oregon Short line changed"?

The Witness: Yes.

Mr. Collins: Is that obtained from some official document some place, which you could give reference to?

The Witness: I have reference to the official transcript in I&S Docket No. 519, which was known as the "Ogden Gateway Case."

Mr. Quirk: What is the date of the hearing?

The Witness: The date of the hearing was November 17-18, 1914.

Mr. Collins: November?

[fol. 89] The Witness: November 17, 1914.

Mr. Collins: 1914?

The Witness: Yes sir.

Mr. Collins: That eventually resulted in a decision of the Commission?

The Witness: I think so.

Mr. Collins: Do you have the citation handy?

Mr. Quirk: It is in Volume 35. What the witness is attempting to do, Mr. Collins, is cite some testimony by your officers, if you want to hear it now.

Mr. Collins: All right.

Mr. Quirk: Former officers; Mr. Fort, for one.

Mr. Collins: Go ahead.

The Witness: I am reading from page 18.

Mr. Collins: I am not asking you to read that. Just give the citation, the source of your statement as to policy. That is the passenger fare case, isn't it?

The Witness: Yes sir.

Mr. Collins: You don't need to read or say any more to satisfy me in answer to my question.

Exam. Mullen: Go ahead, sir.

The Witness: Page 6 of Section B is a reproduction of the first page of the May 30, 1897 edition of the Salt Lake Tribune. The contemplated establishment of through competitive rates via the Rio Grande to and from points on [fol. 90] the Oregon Short Line Railroad and to and from the Northwest via Ogden as of June 1, 1897, is recorded here. I also find that Trans-Continental Freight Bureau West-Bound Tariff No. 1-A, Agent R. H. Countiss' I.C.C. No. 1, effective June 24, 1897, carried rates to Pacific Coast terminals, including Portland, Tacoma and Seattle and intermediate points via the Denver and Rio Grande, the Colorado Midland and the Rio Grande Western, in connection with the Oregon Short Line and the Oregon Railroad and Navigation Company.

This tariff applied on classes and commodities from New York, Pittsburgh, Buffalo, Cincinnati, Detroit, Chicago, Mississippi River points, Missouri River points and points grouped therewith. By Amendment No. 1 to the same tariff, issued on June 7, 1897, and effective June 24, 1897 (the same effective date as the tariff itself), the Rio Grande made the Missouri River rates maximum rates from stations on its standard gauge line.

This tariff does not carry any reference to cancellation of prior issues, and I have been unable to turn up any older tariff or tariffs which might have been effective between June 1, 1897 (the date predicted in the newspaper article) and June 24, 1897, but it seems logical to assume that trans-continental rates were in effect via the Rio Grande System in connection with the Union Pacific Lines via Ogden some time in June of 1897 and that similar tariffs [fol. 91] covering Idaho and Montana were made effective at approximately the same time.

Exam. Mullen: Mr. Earley, speaking of those rates, do you mean they were joint through rates?

The Witness: Yes sir.

Exam. Mullen: All right, sir.

The Witness: The Colorado Midland Railway, which had been built from Colorado Springs to Grand Junction Colorado, and which, as a competitor of the Denver and Rio

Grande, could interchange traffic with the Rio Grande Western at Grand Junction, was also included in through competitive rates from and to Idaho and the Northwest.

The Colorado Midland continued to operate until World War I, when it was abandoned. The tracks between Newcastle, Colorado, and Grand Junction, Colorado, were jointly used by the Colorado Mid*lena* and the Rio Grande. Since the abandonment of the Colorado Midland, the line between these points has been operated exclusively by the Rio Grande.

Shortly after, in the same year (1897), the O.R.& N. and the O.S.L. cancelled joint rates and divisions with the Union Pacific through Granger, Wyoming, by Supplement No. 8 to Agent R. H. Countiss' I.C.C. No. 1, effective September 23, 1897, and all O.S.L. and O.R. & N. traffic to and from the East was for a time interchanged with the Rio Grande at Ogden.

On October 14, 1897, the O.S.L. and O.R. & N. re-established the joint rates with the Union Pacific via Granger in [fol. 92] Supplement No. 9 to the same tariff, but the joint rates via the Ogden route with the Rio Grande remained in effect. Also, at about this time, through competitive joint rates between Oregon and Washington points served by the O.R. & N. on the one hand, and points on or via the Great Northern and Northern Pacific through Spokane or Wallula, Washington, on the other hand, were made effective.

Rates from and to Union Pacific points via these junctions are still in effect (see pages 2 through 5, Section F, for tariff authority). This action by the O.R. & N. caused some of its traffic that would otherwise move via the Oregon Short Line to move via the Great Northern Railway or the Northern Pacific Railway through Spokane or Wallula, and it may be assumed that this was objectionable to the Oregon Short Line and led to the early settlement of differences between the various units of the Union Pacific System.

Ogden was continued as an open gateway until August 25, 1906 when through competitive rates between Colorado Common Points and certain Montana points on or via the O.S.L. and the Rio Grande through Utah junctions were cancelled by Supplement No. 1 to Union Pacific Tariff No. 10340, I.C.C. No. 1970.

Between O.S.L. points in Idaho and Oregon, on the one hand, and Colorado Common Points and east thereof, on the other hand, the joint competitive rates via the Utah gateways with the Rio Grande, were cancelled effective [fol. 93] November 24, 1906, in U. P. Tariff No. 8606, I.C.C. No. 1583. On November 4, 1912, transcontinental rates to O.W.R.& N. points were cancelled in Supplement No. 12 to T.C.F.B. Tariff No. 4-1, Agent R. H. Countiss' I.C.C. No. 942. Eastbound transcontinental rates via D. & R. G. through Utah gateways from O.W.R. & N. points were cancelled in T.C.F.B. Tariff No. 2-1, Agent R. H. Countiss' I.C.C. No. 958, on December 16, 1912.

During this period, the Union Pacific Railroad controlled the Southern Pacific Company as well as the various units now operated by the Union Pacific. By the decision of the Supreme Court of December 2, 1912, in United States vs. Union Pacific Railroad Company, 226 U. S. 61, the Union Pacific was required to divest itself of the control of the Southern Pacific Company which it had exercised for some time prior to that date.

During the period of control, however, the Southern Pacific exerted every effort to influence the routing of freight and passenger traffic via the Union Pacific not only from or to Oregon, but from or to California. As the result of that situation, the officers of the Rio Grande, mindful af the need of California traffic in particular, conceived and constructed the Western Pacific Railroad as an outlet for the Rio Grande to the Pacific Coast.

As early as 1905, the annual reports of the Rio Grande portray the financing and the construction of the Western [fol. 94] Pacific, which railroad was finally placed on an operating basis July 1, 1911 (see pages 7 through 29 of Section B). (These are photostatic copies of those pages of the annual reports to the stockholders of the Rio Grande which deal with the early financing and construction of the Western Pacific.) The subsequent fortunes of the Rio Grande were thereafter linked with those of the Western Pacific.

On December 11, 1909, in Supplement No. 2 to Trans-Continental Freight Bureau West-Bound Tariff No. 1-J, Agent R. H. Countiss' I.C.C. No. 904, and effect the same date in Supplement No. 1 to T.C.F.B. East-Bound Tariff

No. 3-H, Agent R. H. Countiss' I.C.C. No. 906, the Western Pacific Railway was added to the list of participating carriers and routing provided via Salt Lake City, Utah in connection with lines operating from or to that point.

The only lines connecting with the Western Pacific at Salt Lake City for the interchange of transcontinental traffic, then and now, are the Rio Grande and the Union Pacific. Thus, the Union Pacific enjoyed joint competitive through rates with the Western Pacific at the very beginning of the latter's existence as a transcontinuental line, and it has continued to enjoy such through rates without interruption since that time. About 25,000 carloads are now interchanged annually between the Union Pacific and the Western Pacific at Salt Lake City.

[fol. 95] At the time these joint rates were made effective the Union Pacific, through its contral of the Southern Pacific enjoyed the status of a preferred connection in the handling of Pacific Coast traffic to, from or via points on the latter line. This relationship between the Southern Pacific and the Union Pacific brought about the necessity of building the Western Pacific by the Rio Grande.

Having conceived and sponsored the Western Pacific, joint through rates to, from or via points on that line through the Salt Lake City gateway were not restricted to the Rio Grande alone, but were applicable from the outset in connection with the Union Pacific as well, and the U. P. thus profited from the new railroad in Western Utah, Nevada and California.

While retaining its preferred position with the Southern Pacific, the Union Pacific acquired another connection to the west and has enjoyed, since through rates were first established immediately following construction, an equal competitive status as regards Western Pacific traffic, with the Rio Grande—the line which caused the Western Pacific to be built and which subsequently encountered serious financial difficulties by reason of its construction.

In 1915, the Western Pacific went into receivership and the Rio Grande, which had guaranteed the payment of interest on the bonds of that carrier, followed it into receivership on January 26, 1918. Since that time its corporate [fol. 96] history has been——

Mr. Quirk: Off the record.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

The Witness: January 26, 1918 to July 31, 1921, Receiver or Director General of Railroads; August 1, 1921 to July 21, 1922, the Denver and Rio Grande Western Railroad Company; July 22, 1922 to December 19, 1924, Receivers; December 20, 1924 to November 17, 1935, The Denver and Rio Grande Western Railroad Company; November 18, 1935 to April 10, 1947, Trustees; April 11, 1947 to date, Reorganized as The Denver and Rio Grande Western Railroad Company (The Denver and Salt Lake Railway merged with Rio Grande April 11, 1947).

In 1928, the Directors of the company, in compliance with its by-laws, commenced negotiations looking to the creation of a short line of railroad between Denver and Salt Lake City by the utilization of the existing line between Salt Lake City and Dotsero, and a line between Dotsero and Denver through the Moffat Tunnel.

In 1931, negotiations were completed and contracts executed granting trackage rights to the Rio Grande over the Denver and Salt Lake Railway's line between Utah Junction (Denver) and Orestod, and covering the construction by the Rio Grande, through The Denver and Salt Lake Western Railroad Company, of a new railroad between [fol. 97] Orestod and Dotsero, generally referred to as the "Dotsero Cut-Off." (154 ICC 51, 585 and 175 ICC 535). This route is shown on map on page 1 of Section A. The Denver and Salt Lake Railway is now a part of the Rio Grande (267 I.C.C. 862).

The Cut-off, 38.1 miles in length, was ready for operation and service was inaugurated on June 15, 1934, providing a new route between Denver and Salt Lake City and Ogden, 175 miles shorter than the old line via Pueblo and the Royal George, and 43 miles shorter than any other railroad between Denver and Salt Lake City.

Since January 1, 1936, as the result of Union Pacific Railroad Company Unification (189 I.C.C. 357 and 207 I.C.C. 543), the various units of the Union Pacific, theretofore operated as separate corporations, but as a part of the Union Pacific System, have been operated by the Union

Pacific under leases. (These properties are described on page 4, Section B.)

Mr. Collins: Section B?

The Witness: Section B.

Trans-Continental Traffic:

Trans-continental freight traffic is interchanged with other railroads by the Union Pacific at numerous junction points. This traffic generally moves under rates published in Trans-Continental freight tariffs covering the entire United States from the Atlantic to the Pacific, applying on [fol. 98] domestic and foreign commerce, eastbound and westbound, and naming practically every railroad, Class I or smaller, as participating carriers therein. On the one hand, the territory covered is that portion of the United States lying generally east of the Rocky Mountains or on and east of a line extending from the U.S.-Canadian border along the eastern boundaries of Montana and Wyoming, thence through Cheyenne, Wyoming, Denver, Pueblo and Trinidad, Colorado; to El Paso, Texas; on the other, the Pacific Coast states, also Nevada, Arizona, the northern portion of Idaho, western part of New Mexico and the extreme western points in British Columbia adjacent to Vancouver.

Obviously, it would be impractical to specify all of the junction points and routes available thereunder; hence, in the absence of restrictions, the Trans-Continental tariffs may be said to be open route tariffs. However, there are many exceptions to that general plan.

An outstanding example is freight traffic which moves via Union Pacific leased lines from and to points in the Northwest. On much of that traffic, the Union Pacific demands it long haul and the interchange of such traffic at Missouri River junction points. On the other hand, the general plan of open routes in respect to trans-continental traffic is followed by the Union Pacific as to traffic to and from California, Nevada and Utah points which moves via the Union Pacific.

Such traffic may be interchanged with the Rio Grande [fol. 99] at Provo or Salt Lake City at competitive rates. In 1934, the Union Pacific made a futile effort partially to close the interchange of traffic with the Rio Grande at the Utah gateways on livestock traffic. (I&S Docket No.

4062, decided July 23, 1935, and reported in 210 I.C.C. 153.)

I have said that the Rio Grande can participate in transcontinental traffic at competitive rates with all of its connections at Utah junctions, except on traffic to or from the Northwest via Union Pacific. This means that there exist through routes at competitive rates via the Los Angeles line of the Union Pacific; via the Western Pacific or Southern Pacific to and from central California (and southern California via the W.P. in connection with the A. T. & S. F. or S. P.); via the Western Pacific and Great Northern to and from Western Oregon and Washington; and via the Southern Pacific, or S.P. and connections, to and from Portland and Seattle and S.P. territory south of Portland.

In Great Northern Railway Construction, 166 I.C.C. 1, decided June 9, 1930, the Commission authorized the Great Northern and Western Pacific Railroads to construct a new line joining those two roads at Bieber, California. This gave the Western Pacific a route to the Northwest which it previously did not have, and provided a line competitive with the Southern Pacific between California and the states of Oregon and Washington.

The construction of this route created a new and competi- [fol. 100] tive route open to the Rio Grande, to and from a portion of the Northwest. The territory reached by this route is generally that served by the Great Northern from Bieber, California to Vancouver British Columbia through Klamath Falls, Bend, Wishram and Portland, Oregon, and Seattle and Everett, Washington.

Prior to February 1, 1949, the through rates available to the Rio Grande from the Northwest to competitive territory in Colorado and the East via the Bieber route included rates and routes on lumber from certain origins in Oregon and Washington on the Oregon Trunk Railway and the Spokane, Portland and Seattle Railway, both subsidiaries of the Northern Pacific and the Great Northern Railways.

Generally, the origin territory in question extended from Bend, Oregon through Wishram to Vancouver, Washington. On February 1 1949, rates on lumber from these points of origin to competitive destinations were cancelled via the Bieber route in Trans-Continental Freight Bureau Tariffs Nos. 16, 17, 18 and 28 series, thus further restrict-

ing the Rio Grande in the traffic which it can handle from and to the Northwest.

The statement on page 5 of Section B shows the movement of Rio Grande competitive traffic via the Great Northern-Western Pacific and Southern Pacific routes from and to the Northwest just discussed, for the five years prior to 1949. The preponderance of this traffic is lumber from [fol. 101] Southern Pacific points south of Portland, Oregon.

The trans-continental routes now open to the Rio Grande from and to the Northwest leave it without competitive through rates via the Union Pacific or any other route from and to the eastern parts of the states of Oregon and Washington, northern Idaho and part of Montana. The absence of competitive rates via Ogden and the Rio Grande sets up an obstacle to effective solicitation, in that diversion and transit privileges which are available to traffic moving via the Union Pacific are denied traffic which may be moving via the Rio Grande. This feature will be developed fully in a separate part of this testimony.

Idaho:

The testimony I have just offered has dealt with trans-continental traffic, principally, insofar as this complaint is concerned, traffic destined to or originating in the states of Oregon and Washington. My next testimony will be concerned with traffic to or from points in Idaho, which is divided into two parts by the Salmon River.

This river traverses the state from east to west just north of the forty-fifth parallel. South of the Salmon the Union Pacific is the only railroad. In the Panhandle of Idaho, north of the Salmon, the C. M. St. P. & P., Great Northern and Northern Pacific cross with their trans-continental lines, and connections with a branch of the Union Pacific [fol. 102] extending from Tekoa, Washington to Burke, Idaho exist between the Union Pacific and C. M. St. P. & P. at Plummer and the Union Pacific and the Northern Pacific at Burke and Wallace.

The Great Northern and Northern Pacific also connect with the Union Pacific at Moscow, the U. P. reaching this point with a branch line from Colfax, Washington.

In addition to the above, the Union Pacific likewise serves the Panhandle section of Idaho by virtue of its

ownership (joint with Northern Pacific) in the Camas Prairie Railroad, which extends from Riparia, Washington through Lewiston, Idaho, and thence to Headquarters, Sjites and Grangeville, Idaho. All of the Union Pacific lines in northern Idaho are reached via the Union Pacific from the east and south by means of its lines through Huntington and Pendleton, Oregon, and Walla Walla or Attalia, Washington.

The statement shown on page 1 of Section C has been prepared to reveal the composition of traffic to and from points in the state of Idaho and other states covered by this complaint. Idaho's predominantly agricultural status is clearly shown, although its production (originated tonnage) of forest products, while not as large as Washington's or Oregon's, is still very substantial.

The statement shown on pages 2, 3 and 4 of Section C is intended to portray the relative importance of the Union Pacific in Idaho's transportation picture. From the [fol. 103] sources quoted on page 5 of Section C, a five-year analysis of car-loadings of principal commodities has been developed, and for a selected list of these commodities a study of the Union Pacific's share in the state's forwarded traffic is graphically and briefly presented.

With regard to the routing restrictions in presently effective tariffs, the Union Pacific does not generally permit itself to be short-hauled on its southern Idaho traffic; in other words, that part of the state is practically closed to other railroads in the hauling of any traffic to or from the east or south until the Union Pacific has hauled the traffic as far as it can. There are important exceptions to this rule, where, for example, the Union Pacific interchanges Idaho traffic with its connections at Denver, Colorado, or Cheyenne, Wyoming, and I shall discuss these exceptions later in this testimony. However, no routing via Ogden and the Rio Grande is authorized at equal competitive rates.

The largest single crop in Idaho is potatoes. Ninety-nine and six-tenths per cent of rail-shipped Idaho potatoes are loaded on and move via Union Pacific. The average annual carload shipments of potatoes via Union Pacific from Idaho stations to all destinations for the period 1944 to 1948, inclusive, were 37,966 cars. We estimate the

average annual number of cars of potatoes which could move via the Rio Grande, contingent upon competitive rates via Ogden, to be 23,539 cars.

[fol. 104] Also of importance in the Agricultural Products list are Wheat and Wheat Flour. In Grain and Grain Products from Oregon, Idaho and Utah to Pacific Coast (268 I.C.C. 707), decided July 25, 1947, it is shown that, based on shipments during January, March, May, July, September and November, 1940, the movement of Wheat from eastern Oregon, southern Idaho and northern Utah was 13.9 per cent to the East; of the Flour shipped from the same territory during the same months 25.1 per cent went to the East. This eastbound movement of Wheat was destined in the greatest volume to points in Colorado, Kansas and Missouri; the Flour to Arkansas, Colorado, Georgia, Louisiana, and Mississippi. Traffic to these states could move via Ogden and the Rio Grande, if competitive rates were available.

This is mentioned here to point up the substantial reservoir of traffic which would be available to transient operators in Kansas, for example, who would like to secure Idaho Wheat for their operations, but who now cannot make use of this tonnage because of the absence of competitive rates via their mills. The Union Pacific generally requires its long haul on its Idaho grain traffic, there being no routes via Denver or Cheyenne to Missouri River rate-break points, viz., Sioux City, Omaha, Leavenworth, St. Joseph and Kansas City, via which the Union Pacific short-hauls itself. No competitive rates apply via Ogden and the Rio Grande.

[fol. 105] By Mr. Quirk:

Q. Just a minute, Mr. Earley. Will you explain whether there are any transit arrangements at the Kansas towns you have in mind under an existing tariff by any combination of routes to a certain territory?

A. Well, I think that the full explanation will come later when I am dealing with Section H of my testimony.

Q. If the inference you leave by this paragraph, as I read it, is that there would be transit to some of these Kan-

sas points if only the traffic moved via the long-haul route of the Union Pacific——

A. Well, if I understand your question correctly, the answer is that at the present time there is no transit via any route through certain Kansas towns, such as Wichita, on wheat from Idaho to the Missouri River.

Q. And east of the Missouri River?

A. Well, east of the Missouri River, the rates are made on the Missouri River combination.

Q. I see. Proceed.

A. The Utah Idaho Central Railroad, which formerly operated from Ogden, Utah, to Preston, Idaho, and which ceased operation July 25, 1947, paralleled the Union Pacific in northern Utah and into Preston. Joint through rates with the Rio Grande via Ogden were maintained by the U.I.C., which line also joined the Union Pacific in rates via [fol. 106] Ogden. These joint rates from and to competitive points (viz., Logan and Brigham, Utah, Preston, Idaho, etc.) were the same as in effect via the Union Pacific for its long haul. With the abandonment of the U.I.C. the participation by the Rio Grande in competitive traffic to or from Idaho ended. This is also true of Northern Utah.

Freight tonnage interchanged with Union Pacific:

Another witness has testified as to the volume of traffic which the Rio Grande receives from, as contrasted with traffic it delivers to, the Union Pacific at Denver and at Utah interchange points over a long period of years. It is sufficient for my immediate purpose to say here that in the year 1948 the Rio Grande delivered to the Union Pacific at Denver 361,256 tons more of freight than the Union Pacific delivered to the Rio Grande at that point, and that the excess of deliveries over receipts to and from the Union Pacific at Utah junctions during the same year was 607,178 tons.

The received tonnage at Utah junctions includes an extremely heavy movement of iron ore from Union Pacific origins in southern Utah to the steel works at Minnequa, Colorado. This ore commenced to move in great volume in 1942 and 1943. Prior to June 30, 1949, the joint through rate on this traffic applied only via the Union Pacific to Provo, thence Rio Grande.

This extraordinary action by the Union Pacific, of insist-

ing on short-hauling itself on this traffic, was taken for [fol. 107] reasons best known to itself. However, effective on June 30, 1949, the Union Pacific saw fit to make the rate apply also via its line to Denver, thence via connecting lines to Minnequa, without cancelling the rate via the Provo route.

Page 1 of Section D is a statement showing the tons of coal delivered by the Rio Grande to the Union Pacific at Utah junctions for destinations in the states shown on the statement for the twenty-five year period 1924 to 1948, inclusive. This coal originated at Utah mines located in the area shaded in green on the map on page 1 of Section E.

Over the years, the coal movement from Utah to the Northwest has been very substantial. During the war, and for a period thereafter, a huge increase took place in the movement to Oregon and Washington which included coal moving to North Pacific Coast ports for off-shore movement. This latter traffic is decreasing yearly.

The heavy coal movement to Idaho is worth of some comment. Idaho must, and does, draw on neighboring states for some of its raw materials such as coal. Practically all of its coal requirements come from Utah and Wyoming. Page 2 of Section D has been prepared to show the importance of Utah mines as a source of fuel for Idaho and other northwestern states.

This shows that Idaho looks to Utah for approximately 80 per cent of its coal requirements, Oregon for 75 per cent, and Washington for 50 per cent. The rates on coal [fol. 108] from Utah mines are higher than from Wyoming mines to this territory, the relationship being one of long standing, having been fixed by the Commission in Consolidated Fuel Co. vs. A.T.&S.F. (24 I.C.C. 213 and 27 I.C.C. 554) and later in Western Coal Rates (89 I.C.C. 666) and Utah Coal Operators Association vs. A.T.&S.F. (218 I.C.C. 663).

As a result of the last-named proceeding, the differential was fixed at 30 cents per ton Utah over Wyoming, which differential exists today. In spite of this rate situation, which would seem to accord Wyoming coal a favorable market position in these states, Utah shipments neverthe-

less far exceed Wyoming shipments of coal into the Northwest.

Page 3 of Section D has been prepared to show the relative position of the respective Utah lines as to handling of this important coal traffic. The Rio Grande and the Carbon County Railway, which connects only with the Rio Grande, originate 70 per cent of Utah coal and are, therefore, the major contributors to the handling of this fuel for the Northwest, since Utah is the source of most of the coal shipped into these states, as has been shown.

Coal traffic, like all raw material traffic, is relatively low-revenue traffic. Generally the railroads furnishing the transportation for raw materials moving into a territory or region, or to industries and communities located therein, are likewise the beneficiaries of the outbound traffic pro- [fol. 109] duced by such industries and communities. Generally, too, this outbound traffic pays relatively higher rates than is charged for the inbound raw materials.

In the case of the Rio Grande, however, it not only is deprived of outbound hauls on the products of the territory served exclusively by the Union Pacific, but also it cannot haul inbound traffic unless, as in the case of coal, it originates in the local territory of the Rio Grande. The preponderance of traffic delivered to the Union Pacific both at Colorado and Utah junctions (as contrasted with the traffic received from that line) supports the proposition that the Rio Grande is entitled to better treatment from the Union Pacific in the interchange of traffic.

Application of existing rates and routes between points on Rio Grande in Colorado, Utah and New Mexico, and points on and via the Union Pacific in Northern Utah, Idaho, Oregon, Montana, Washington and British Columbia:

The map shown on page 1 of Section E is a "Gateway" map of the Rio Grande. It has been prepared to show the application of rates between points on the Rio Grande, on the one hand, and points on or via the Union Pacific north and west of Ogden, Utah, on the other. The area shaded in red (on the East) is that part of the Rio Grande Denver and south to and inclusive of Trinidad and Bon Carbo and west to Canon City, Colorado.

[fol. 110] These points are in the Colorado Common Point group (see page 2 of Section A) and are likewise located in Trans-Continental Group J. This territory is competitive with either the Santa Fe or the Colorado and Southern Railway, or both. Routing between this territory and points north and west of Ogden, Utah, via Union Pacific at competitive joint rates is restricted to the Denver gateway. Thus, even though the Rio Grande originates the traffic, it cannot obtain its maximum haul to Ogden but must yield the traffic to the Union Pacific at Denver if the shipper is to enjoy the going through rate.

The area shaded in yellow on this map is likewise located in Trans-Continental Group J. Prior to April 11, 1947, this line was known as the Denver and Salt Lake Railway or the "Moffat Road". Under separate ownership and operation, it was naturally the policy of the D. & S. L. to maintain routes via Denver on traffic to or from trans-continental territory in connection with lines operating into Denver.

When the Dotsero Cut-off was put into operation, in June, 1934, the Rio Grande acquired another junction point with the D. & S. L. Railway for the interchange of trans-continental freight, viz., Orestod, Colorado. This route considerably shortened the distance between Moffat Road territory and the Pacific Coast.

When the D. & S. L. Railway was merged with the Rio Grande on April 11, 1947, no attempt was made (nor has [fol. 111] one been made since) by the Rio Grande to cancel competitive through rates via Denver with its connections on trans-continental traffic to or from former D. & S. L. points. The Denver routes applicable prior to that date are still available and the Rio Grande must compete with its Denver connections for the long haul to or from these local points.

Analysis of the interline carload shipments between points on the former D. & S. L. Railway (yellow shading on the map) and points in British Columbia, California, Idaho, Montana, Nevada, Oregon and Washington during the period April 11, 1947 to December 31, 1948, shows 499 cars forwarded and 409 cars received, a total of 908 cars. Of this number, 486 were interchanged with connecting

lines at Denver and 422 were interchanged at Utah junctions.

In the distribution of this traffic, the Union Pacific handled 229 cars via Denver and 162 cars via Utah junctions, a total of 391 cars, and our other connections handled 257 cars via Denver and 260 cars via Utah junctions, a total of 517 cars. Other connections are the A.T. & S.F., C.B. & Q., and C. & S. at Denver, W.P. at Salt Lake City, and S.P. at Ogden. The Union Pacific enjoyed 43 per cent of this traffic.

The area shaded in blue and green on the map (page 1, Section E) is the interior territory of the Rio Grande in Colorado, New Mexico and Utah, lying generally between Colorado Common Points on the east and Utah Common [fol. 112] Points on the west. The rate application to or from the green areas is the same as to or from the blue area, the distinction being made to show separately the location of the Utah coal fields served by the Rio Grande (green).

This area is served exclusively by the Rio Grande, and from earliest times has been the origin and destination of varied and substantial amounts of freight traffic moving to and from points on or via the Union Pacific north and west of Ogden. This interior territory is a large consumer of lumber from the Northwest, and, more particularly in recent years, it has been looking to the Pacific Coast for manufactured goods, such as furniture, automobiles, iron and steel products, in fact, almost every kind of manufactured article that formerly was procured almost exclusively in the East.

The map also shows in red (on the west) the so-called Utah Common Point territory from Ogden to Santaquin (see page 2 of Section A). This territory is served by both the Rio Grande and the Union Pacific, with additional service of the Bamberger Railroad between Salt Lake City and Ogden. Prior to July 15, 1946, the Salt Lake and Utah Railway operated between Salt Lake City and Magna, Utah on the north, and Payson, Utah on the south.

Paragraph (a), page 2 of Section E, names tariffs carrying rates where the Union Pacific formerly participated jointly to or from this territory in connection with the Salt

[fol. 113] Lake and Utah Railway via Salt Lake City, and now participates in joint rates with the Bamberger Railroad, which rates do not generally apply via Rio Grande-Union Pacific or vice-versa. There are exceptions to this general arrangement whereby the Rio Grande is permitted to join the Union Pacific in a few through rates to or from Utah Common Points, some of which are named in the tariffs listed in paragraph (b), page 2 of Section E.

Routing to and from points on Union Pacific in Idaho (Northern), Oregon and Washington to and from which the Union Pacific joints its various connections in competitive joint through rates via routes which short-haul the Union Pacific. (Map is shown in page 1 of Section E):

I have already shown that the Rio Grande cannot participate via Ogden at competitive rates in through traffic to and from the Northwest via the Union Pacific. I have also dealt in a general way with the fact that the Union Pacific makes important exceptions in respect to maintenance of competitive rates with other railroads.

I shall now show in considerable detail the scope and character of these exceptions. Briefly states as to trans-continental freight traffic to and from the Northwest, they show that the Union Pacific participates in numerous joint rates with railroad connections other than the Rio Grande in which the Union Pacific voluntarily takes less than its long haul.

Trans-continental traffic moving under rates named in [fol. 114] tariffs made subject to Trans-continental North Coast Territorial Directory No. 40-J (Agent L. E. Kipp's I.C.C. No. 1516) as a general rule can move under open or unrestricted routing east of certain gateways. The tariffs referred to are enumerated in Note 1 on page 4 of Section F.

These gateways are points located on or near the Trans-Continental frontier, such as Snowden, Montana; Portal, Oakes and Beach, North Dakota, Morbridge, South Dakota; Cheyenne and Speer, Wyoming; Denver, Pueblo and Canan City, Colorado; Santa Rosa, Albuquerque and Belen, New Mexico; and El Paso, Texas. West of these gateways specific routing is provided which, in some instances, permits interchange at interior Trans-Continental gate-

ways such as Plummer, Idaho; Spokane, Marengo, Wallula, Washington; and Portland, Oregon.

Due to the absence of provisions to the contrary, Trans-Continental tariffs contain literally thousands of partially open routes; however, the scheme of gateway-routing does restrict the movement of traffic to specific routes for that part of the movement west of the frontier and interior gateways referred to above.

The detail of the existing routes over which competitive rates apply to and from Union Pacific points in Trans-Continental territory is shown by the map on page 1 of Section F and the notes and explanations on pages 2 to 5, inclusive, of the same section. A simplified and brief sum-[fol. 115] mary of the situation which this testimony is designed to show is as follows——

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

The Witness: Among the points selected on this page to portray what I am attempting to show, is Pendleton, Oregon, which point is located in Group No. 4, which is shaded in green on the map on page 1.

Between Chicago, for example, and Pendleton, Oregon, if the traffic is routed via Union Pacific through Council Bluffs, Iowa, that line haul is 1560 miles. Now, there also exists other routes to or from Pendleton in which the Union Pacific joins with other of its connections. One of those routes is in connection with the C. M. St. P. & P., through Marengo, Washington.

By joining in that route, the Union Pacific accepts the haul of 165 miles. By joining the Great Northern in routes through Spokane, the Union Pacific accepts a haul of 227 miles. By joining the Northern Pacific in its Wallula route, it accepts a haul of 70 miles.

If there were competitive through rates available in connection with the Rio Grande through Ogden, the haul of the Union Pacific would be 633 miles.

I think that is descriptive of the other examples which I have attempted to portray on this page.

[fol. 116]

Between Chicago (for example) and points in Groups:	If routed via:	Resulting in Following Hauls for Union Pacific: Via Long-Haul	Via Short-Haul
Seattle, Wash. (Group 1) (Violet)	Council Bluffs, Ia.	1,954	—
	Portland, Ore.	—	184
	*Ogden, Utah	—	1,027
Centralia, Wash. (Group 2) (Red)	Council Bluffs, Ia.	1,862	—
	Marengo, Wash.	—	393
	*Ogden, Utah	—	935
Burns, Ore. (Group 3) (Yellow)	Council Bluffs, Ia.	1,777	—
	Marengo, Wash.	—	309
	Spokane, Wash.	—	370
	Wallula, Wash.	—	213
	Portland, Ore.	—	7
	*Ogden, Utah	—	850
Pendleton, Ore. (Group 4) (Green)	Council Bluffs, Ia.	1,560	—
	Marengo, Wash.	—	165
	Spokane, Wash.	—	227
	Wallula, Wash.	—	70
	*Ogden, Utah	—	633

	Spokane, Wash.	—	193
	*Ogden, Utah	—	845

*In the event of the establishment of competitive through rates in connection with the Rio Grande via Ogden, Utah.

[fol. 117] A further observation on this practice of the Union Pacific in joining in routes over which competitive rates apply, which practice results in short-hauling of the Union Pacific, is that it freely joins in routes from United States points to United States points through Canada, accepting its haul of 227 miles from Spokane to Pendleton,

for example, while declining to join the Rio Grande via Ogden where it would get a haul of 633 miles.

Traffic moving from St. Louis to Pendleton, Oregon via Soo Line-Canadian Pacific-Spokane International R. R.-U. P., moves 789 miles through Canada, yet there is no restriction against such routing, but a shorter route via Ogden in connection with the Rio Grande, entirely within the United States, permitting the Union Pacific to haul the traffic 406 miles further than when the traffic moves via the Canadian route through Spokane, is not authorized under present tariffs.

Examples of representative routes showing instances where the Union Pacific and other defendants take less than their maximum haul of traffic which they interchange with each other at various junctions:

Pages 6 to 27, Section F, outline a series of examples designed to show in a simplified manner the widespread practice of defendants in joining each other in so-called short-haul routes. Pages 6 to 20 list eastbound routes and page 21 to 27 list westbound routes.

[fol. 118] The Eastbound examples are divi-ed as follows:

Routes showing where Trans-Continental Lines take less than maximum haul on traffic interchanged at Idaho, Oregon, Washington or Montana junctions, pages 6 to 10 of Section F;

Routes showing where Trans-Continental Lines take less than maximam haul on traffic interchanged at California junctions, pages 11 to 13 of Section F;

Routes showing where Union Pacific takes less than maximum haul on traffic interchanged at Colorado, Utah, Wyoming or Nebraska junctions, pages 14 to 18 of Section F;

Routes showing where Missouri River Connections of Union Pacific take less than maximum haul on traffic interchanged at Missouri River junctions, pages 19 to 20, Section F.

The Westbound examples are divided as follows:

Routes showing where Trans-Continental Lines take less than maximum haul on traffic interchanged at Oregon, Washington, or Montana junctions, pages 21 to 22 of Section F;

Routes showing where Trans-Continental Lines take less than maximum haul on traffic interchanged at California junctions, page 23 of Section F;

Routes showing where Union Pacific takes less than maximum haul on traffic interchanged at Colorado, Utah or Wyoming junctions, pages 24 to 25, Section F;

Routes showing where Missouri River Connections of Union Pacific take less than maximum haul on traffic inter- [fol. 119] changed at Missouri River junctions, pages 26 to 27, Section F.

On pages 6 to 10, Section F, are listed 25 representative trans-continental movements of nine different commodities picked at random. These 25 routes include 14 instances where the Union Pacific gives up traffic that it originates at various junctions in the Northwest. The other 11 routes show instances where other trans-continental lines serving the Northwest relinquish their long haul to the Union Pacific at various junctions, which action deprives the originating lines of their long haul.

Here we see a pattern of agreement which reveals the existence of many open gateways at through competitive rates to and from the Northwest that amounts to almost wide-open routing, but there is no interchange of this traffic between the Rio Grande and the Union Pacific at Ogden. A few words about one or two of the examples will serve to point up what the whole set portrays.

Line 1, page 6, refers to eastbound carload movement of apples, rates on which are found in Agent Kipp's I. C. C. No. 1522. Using the first movement included under the heading of apples, viz., Yakima, Washington, to New York City, we find that the Union Pacific participates in a route via Spokane with the Great Northern and connections, under which route the Union Pacific accepts a haul of 253 miles to Spokane, whereas, if it insisted on its long haul and treated the Great Northern route as it treats the Rio Grande, it could haul the traffic 1,730 miles to Council Bluffs. [fol. 120] If competitive through rates are made effective via Ogden and the Rio Grande, the haul of the Union Pacific would be 803 miles, over three times its haul to Spokane.

In similar fashion another trans-continental line foregoes its maximum haul, as is shown in the example of a

movement of canned goods from Seattle to Philadelphia, opposite Line 2 on page 8 of Section F. The Northern Pacific, in joining the Canadian Pacific and other defendants in through competitive rates on this traffic via Sumas, Washington, contents itself with a haul of 127 miles while it could adopt a policy like that of the Union Pacific toward the Rio Grande through Ogden and insist on a haul of 1,886 miles to St. Paul.

Other examples could be dwelt upon, but it appears unnecessary to do so. The situation which the routes depicted on pages 6 to 10 of Section F show is clearly a picture of how the Rio Grande is excluded from participatin- (in connection with the Union Pacific) in traffic that otherwise moves freely via other routes and other junctions.

On pages 11 to 13, Section F, are listed 22 representative eastbound trans-continental movements of nine different commodities, likewise picked at random. Eleven of these examples show instances where the Union Pacific joints its California connections in through competitive rates via routes which leave the U. P. with hauls ranging from 7 miles to 147 miles in lieu of routes which would give it hauls [fol. 121] ranging from 1,395 miles to 1,933 miles, that it might secure if it followed in California the same hard-boiled policy that it maintains toward the Rio Grande through Ogden on traffic from and to the Northwest.

Exam. Mullen: We will pause at this time and take a recess for ten minutes.

(Recess taken.)

Exam. Mullen: Come to order, please, gentlemen.

I have received a copy of a petition for intervention by the Public Service Commission of the State of Utah.

Mr. Root: Charles A. Root, Commerce Attorney of the Public Service Commission, Utah. The Public Service Commission of Utah desires to intervene in this proceeding as its interests may appear. I have had copies of our petition of intervention circulated to the defendants, and personally to the complainants.

Exam. Mullen. Do you wish to state at the present time or at a future time what your direct interests will be?

Mr. Root: I think so, but I am not sure.

Exam. Mullen: Is there any objection to the granting of this petition for intervention?

Mr. Collins: As he stated, of course not.

Exam. Mullen: It will be received, and intervention is granted.

Is the witness ready to proceed?

The Witness: Yes.

[fol. 122] Other California defendants join the Union Pacific in interchanging trans-continental traffic at California junctions, thus extending into the South Coast territory the same smooth and flexible pattern which we found in the Northwest—with this difference, however.

The Rio Grande can and does participate in trans-continental business to and from Southern California at equal rates in connection with the Union Pacific via Provo or Salt Lake City. Pages 11 to 13, Section F, show eleven examples of routes where California defendants, other than the Union Pacific, join in short-haul routes with each other and with the Union Pacific, which routes limit their hauls to distances ranging from 24 to 427 miles, whereas a policy of "long-haul or nothing" would results in hauls ranging from 898 miles to 2,131 miles for the originating line.

The examples thus far shown, and those with which I shall presently deal, indicate that while the Union Pacific, in dealing with the Rio Grande on traffic from and to points on or via the Union Pacific north and west of Ogden, insists on taking its long haul, it does not insist on that policy in dealing with numerous other of its connections.

On pages 14 to 18 of Section F are listed routes showing how the Union Pacific is short hauled at junction points in the states of Utah, Colorado, Wyoming and Nebraska. For example, the Union Pacific has a line from Pendleton, Ore-[fol. 123] gon to Council Bluffs, Iowa, but it joins with other defendants in handling lumber from Pendleton to Milwaukee, Wisconsin via Denver, Colorado, then C. R. Y. & P. C. & N. W. As is shown on line 2, page 14 of Section F, this action results in the Union Pacific accepting a haul of 1,144 miles to Denver as against a maximum haul of 1,560 miles to Council Bluffs which it would receive if it insisted on treating the Rock Island as it does the Rio Grande.

Another example which illustrates this practice is shown

on line 3, page 15 of Section F. In the movement of canned goods from Ogden, Utah to Atlanta, Georgia, for example, the Union Pacific does not insist on its long haul to the Missouri River, as it does when the traffic originates on its lines north and west of Ogden, but relinquishes it to its connections at Denver, in this case the Rio Grande and Missouri Pacific through Pueblo, Colorado and St. Louis, Missouri, thereby limiting its haul to 577 miles, whereas, if it chose to insist on its long haul to Kansas City, it would handle this traffic 1,107 miles.

The Union Pacific frequently permits itself to be short-hauled on traffic moving between points on its own line. On line 2, page 16 of Section F, a route is shown in connection with the movement of canned goods from Evona, Utah to Boulder, Colorado—both Union Pacific points. As distinguished from its policy of not joining in the establish-
[fol. 124] ment of through competitive rates from and to points on its lines in northern Utah, Idaho and other northwestern states via the Rio Grande through Ogden, the Union Pacific here permits this traffic to move via Cheyenne, Wyoming and the Colorado and Southern Railway, thereby short-hauling itself 95 miles.

On Page 17 of Section F, line 1, a situation is revealed whereby the Union Pacific turns over potatoes originating at Idaho Falls, Idaho to the Colorado and Southern at Denver for movement to New Orleans, Louisiana. Had it elected to give the C. & S. and its connections the same treatment it accords the Rio Grande and insisted on routes via the Missouri River only, it would have assured itself of a haul of 1,226 miles to Kansas City. By joining in competitive rates via the Denver route, it limits itself to a haul of 696 miles on traffic interchanged at Denver. If joint competitive rates were established via Ogden, its haul would be 185 miles.

Other routes outlined on page 14 to 18 of this section serve to elaborate upon the widespread practice of the Union Pacific to apply, via the lines of other defendants, competitive through rates via junctions which deprive the Union Pacific of its maximum hauls. This practice is not restricted to traffic which it originates or delivers in competitive territory, such as California or at Utah Common Points, but

applies likewise on traffic which it handles from or to its exclusive points. The noteworthy exception to this scheme [fol. 125] is the absence of any routing via the Rio Grande through Ogden at competitive rates.

On pages 19 and 20 of Section F are listed representative examples of routes where defendants having connections with the Union Pacific at both Missouri River crossings and Colorado junctions, interchange, in some instances, traffic at the Missouri River, thereby short-hauling themselves without having an optional route via Colorado junctions which would give them the opportunity to handle the traffic for their own long haul. Line 6, page 19 of Section F, is a typical example.

In the movement of sugar from Blackfoot, Idaho to St. Louis, Missouri, the Union Pacific hauls the traffic to Kansas City, and when the movement beyond Kansas City is via the Rock Island that line hauls the traffic 298 miles. If rates were effective via Union Pacific to Denver thence Rock Island, that latter's haul would be 935 miles.

So much for the eastbound examples portrayed on pages 6 to 20 of Section F. On pages 21 and 22 are listed some examples of westbound movements showing where trans-continental lines, defendants in this proceeding, including the Union Pacific, accept less than their maximum haul on traffic interchanged at junctions in the Northwest. The friendly spirit of cooperation between these trans-continental lines is strikingly shown in two examples on page 21 of Section F.

On line 3 of this page I have shown that class-rate traffic [fol. 126] can move from Port Arthur, Texas to Umatilla, Oregon via Great Northern Railway from the Twin Cities to Spokane, thence U. P., thereby limiting the Union Pacific to a haul of 185 miles. The Union Pacific could insist on a haul from Kansas City, which would give it a haul of 1,717 miles. Establishment of joint through competitive rates via Ogden would result in a 675-mile haul for the Union Pacific.

On line 5 of this same page (page 21, Section F) the Great Northern assumes the role of the short-line connection of the Union Pacific. Here it appears that in handling roofing or building material from Chicago to Everett,

Washington, the Great Northern will accept the traffic from the Union Pacific at Spokane, thereby limiting its haul to 297 miles. If it kept the Spokane gateway closed to the Union Pacific, as the Union Pacific keeps the Ogden gateway closed to the Rio Grande, its haul from Minneapolis would be 1,721 miles. These two examples show how the Union Pacific and Great Northern join each other in routes which short-haul each other.

On page 22 of Section F is shown an example of short-hauling for the benefit of lines forming a through route from Milwaukee, Wisconsin through Canada to Seattle. The Northern Pacific, one of the defendants in this proceeding, accepts a haul of 127 miles in joining in the through rates via Sumas, Washington. Yet, the Northern Pacific and the Union Pacific do not join in through competitive rates via routes wholly within the United States in connection with [fol. 127] the Rio Grande through Ogden.

Other examples listed in Section F show that on westbound traffic the same general pattern as applies eastbound is in effect, with this exception, however: No optional routes are in effect via Denver in lieu of Missouri River junctions on traffic originating east of the Missouri River and destined points north and west of Ogden. Here the Union Pacific demands and gets its long haul from the Missouri River, although it does not originate the traffic.

For example, on line 4 of page 27, the Burlington has to deliver nursery stock which it originates at Shenandoah, Iowa, to the Union Pacific at Council Bluffs to haul to Nampa, Idaho. Here the originating line has no option, but must accept a short haul of 69 miles, whereas, if it insisted on hauling the traffic as far as it could (i. e., to Denver, 573 miles) it would only be acting as the Union Pacific does on most of the traffic it originates in Idaho and the Northwest.

In the same way, the Rock Island submits to a short haul of 176 miles, as is shown on line 5, page 27, when it delivers washing machines originating on its line at Newton, Iowa, to the Union Pacific at Council Bluffs when destined Twin Falls, Idaho. A stiff policy of retaining its own long haul would insure the Rock Island of a 761-mile haul if it insisted on interchanging this traffic with the Union Pacific at Denver.

The same situation is true of traffic originating in Colo-
[fol. 128] rado Common Point territory south of Denver. This traffic, some of it originating on the Rio Grande, cannot move at equal competitive rates to Union Pacific points north or west of Ogden unless it is delivered to the Union Pacific at Denver. Lumber:

Reference to page 6 of Section G shows that of the three northwestern states of Oregon, Washington and Idaho, Oregon had the greatest lumber production in 1946 and 1947. A brief analysis on the Union Pacific's position in the transportation of Oregon lumber should prove helpful.

The Union Pacific has filed with the Public Utilities Commissioner of Oregon reports showing that there were originated on its lines in the State of Oregon 19,031 carloads of lumber, shingles and lath during 1947, and 16,356 carloads during 1946. On the basis of an estimate 25,000 board feet per carload, it follows that the Union Pacific in 1947 originated about 35 per cent of the lumber originated by all lines in those counties of Oregon in which it has rails, and about 28 per cent in 1946. Using the figures shown on page 21 of Section L, the Union Pacific appears to have originated about nine per cent of all Oregon lumber shipped by rail for these two years.

As will be explained later when dealing with Section L, we estimate the average annual traffic potential for the Rio Grande on this particular traffic to be 8,576 carloads originating in Oregon and 22,519 carloads originating in the four states of Idaho, Montana, Oregon and
[fol. 129] Washington. I should explain that by traffic potential I mean the annual average number of cars originating in the territory covered by the complaint susceptible to Rio Grande routing in the event of the establishment of competitive through rates in connection with the Union Pacific via Ogden.

In my previous remarks (page 21 of this statement) in connection with Section E, I referred to some tariffs listed in paragraph (h), page 2, Section E, which tariffs name exceptions to the general basis of non-application of joint competitive rates between Utah Common Points on the Rio Grande and points on or via the Union Pacific north and west of Ogden.

One of the tariffs referred to is T. C. F. B. Tariff No. 18-P, Agent L. E. Kipp's I. C. C. No. 1474, which names rates on lumber from Idaho and other northwestern states to Utah Common points on the Rio Grande via Ogden. However, the Union Pacific maintains lower rates on lumber from certain Idaho, Montana and Oregon points to Salt Lake City, a common point with the Bamberger Railroad and the Rio Grande, than those contemporaneously maintained to Salt Lake City when routed via the Rio Grande (see U. P. Tariff No. 6039-K; I. C. C. No. 5000). This is another example of discrimination against the Rio Grande.

Pages 1 to 4 of Section G show some routes via which joint through competitive rates are today in effect in Trans-Continental eastbound lumber tariffs under which routes and rates the Union Pacific Railroad joins other carriers via junction which short-haul the U. P.

[fol. 130] There are many such routes and rates from other points of origin to other destinations, the ones shown in this section being representative. Both as an originating carrier and as an intermediate carrier of this lumber traffic, the Union Pacific participates in routes which short-haul itself, some of them operating through Canada for hundreds of miles, but lumber-destined Colorado Common Points or east thereof cannot move at competitive rates via UP, Ogden D&RGW.

This position is forcibly shown by the following distances (in miles) from representative origin points to junctions of the Union Pacific with other carriers, routes and competitive rates being in effect via all junctions shown except Ogden:

From	*To*						
	Marengo	Spokane	Ogden	Butte	Cheyenne	Denver Pullman	Council Bluffs
Portland, Ore.	307	368	849	978	1,266	1,360	1,776
Pendleton, Ore.	165	227	633	762	1,050	1,144	1,560

From Portland to St. Louis, Missouri, for example, the Union Pacific accepts a 368 mile haul in joining with its connections at Spokane (including the Canadian route), but declines to treat the Rio Grande in the same fashion via Ogden, although it would receive a longer haul of 849 miles via that route. Route No. 1, as explained on page 3 of Sec-

tion G, is via that Union Pacific from Portland, Oregon to [fol. 131] Spokane, Washington (368 miles), then via: Spokane International R.R., Spokane, Washington to Yakh, B.C., 151 miles; Canadian Pacific Railway, Yakh, B.C. to North Portal, Sask., 778 miles, Soo Line, Portal, North Dakota to St. Paul, Minnesota, 562 miles; Chicago, Burlington & Quincy R.R., St. Paul, Minnesota to St. Louis, 605 mines; a total through distance of 2,464 miles, 789 miles of this route being in Canada.

If competitive through rates via Ogden, Utah and Rio Grande were in effect, the distance via a representative tariff route would be: Union Pacific R.R., Portland, Oregon to Ogden, Utah, 849 miles; Rio Grande, Ogden, Utah to Pueblo, Colorado, 663 miles; Missouri Pacific R.R., Pueblo, Colorado to St. Louis, 902 miles; a total through distance of 2,414 miles.

Likewise, the Union Pacific hauls lumber destined Chicago, Illinois, for example, from Pendleton, Oregon to Marengo, Washington, a distance of 165 miles while refusing to apply similar rates via the Rio Grande and haul it 633 miles to Ogden.

In addition to participating in short-haul routes via junctions in the Northwest, the Union Pacific also participates in competitive rates on lumber which it interchanges with its connections at Cheyenne, Wyoming and Denver or Pullman (Denver), Colorado. Examples of these routes are shown on pages 1 to 4 of Section G. Here again the Union Pacific deviates from its "long-haul" p-licy in favor of its connections at Denver or Cheyenne, but no lumber from the [fol. 132] Northwest (including Idaho) can move at equal competitive rates via Union Pacific to Ogden, thence Rio Grande or Rio Grande and connections, if destined Colorado Common Points or points east thereof.

Transit and Reconsigning:

Transit, as that term is used in connection with regulation under the Interstate Commerce Act, is the practice, authorized by tariff, of shipping a specified commodity, generally in carload lots, to some designated point and there subjecting it to storage or one or more manufacturing or commercial processes or services and then re-shipping it to its

ultimate destination at a rate less than the combination of rates into and out of the transit point.

Transit is based on the fiction of a through movement and the application of a through rate, even though the actual movement is separated into two or more distinct hauls. Transit arrangements and privileges may be, and often are, a commercial necessity, and are usually made to meet the need of a free flow of traffic, and to aid shippers in marketing their products.

The types of transit services generally available to shippers today are many and varied and include storage, stopping to complete loading or to partially unload, fabrication, milling, creosoting, feeding and grazing (livestock) and other types of transit enumerated in the statement shown on pages 1 to 6 of Section H.

This statement covers the period from the year 1915 to [fol. 133] date and shows the increase in the number and variety of transit privileges published and on file with the Commission pertaining to transit of all kinds. It shows this situation for successive five-year period- from 1915 until 1940, inclusive, and as it is at the present time. This is a plain indication of the continuing increase in the demand and use of such arrangements. Naturally, the Union Pacific and other lines serving the same general territory as the Rio Grande have likewise published similar transit privileges for application at points on their lines.

While transit and reconsigning are being used today more than ever, and while both railroads and shippers are considered to be beneficiaries of these arrangements, the absence of through competitive freight rates by way of the Ogden interchange has brought about a situation on the Rio Grande which causes the loss of traffic to it, instead of benefits both to itself and to some communities that it serves. Speaking first of westbound movements only, for the purpose of illustration, some of the drawbacks of the present situation for the Rio Grande are:

1) the non-availability of competitive joint through rates from points east of Colorado Common Points by way of Pueblo, Colorado Springs, and Grand Junction, Colorado; also Price, Utah, when ultimate destination is a point north or west of Ogden, Utah, on or via the Union Pacific. Pueblo

[fol. 134] is a city of 75,000 population, Colorado Spring 50,000, Grand Junction, 17,500, and Price 5,000. Each of these points (as well as other points which I have not named) is a potential stopping point and thus a market for shippers who might want to ship their cars via these points —various transit reasons, with final destination in Idaho or other states reached via the line of the Union Pacific beyond Ogden.

Exam. Mullen: May I ask a question at this time: Are those transit services available in the points you named there?

The Witness: Yes sir.

Exam. Mullen: All right.

The Witness: (reading)

2) The non-availability of competitive joint through rates from Colorado Common Points by way of Grand Junction, Colorado and/or Price, Utah when ultimate destination is a point north or west of Ogden, Utah on or via the Union Pacific. What has been said in paragraph (1) is likewise pertinent to this situation.

3) The non-availability of competitive joint through rates from Colorado Common Points and east thereof by way of the Rio Grande through Provo, Salt Lake City and Ogden, Utah when final destination is a point north or west of Ogden, Utah on or via the Union Pacific. In paragraphs (1) and (2) the situation complained of deals with a total lack of transit at certain points via which there is an absence of [fol. 135] through competitive rates; here the distinction is that there is a lack of transit via the Rio Grande route at certain points at through competitive rates. Obviously, the need for transit on traffic moving under situations covered by paragraphs (1) and (2) might well also be present on the same traffic covered by this paragraph, for example:

A carload of freight containing tonnage for Pueblo, Colorado and Boise, Idaho can be advantageously forwarded by a shipper in Chicago, Illinois. Due to present routing restrictions in Agent L. E. Kipp's tariff covering (W. T. L. No. 120-I, I.C.C. No. A-3560), there is no way that the car can be forwarded and the through competitive rate to Boise, Idaho protected if partial unloading at Pueblo is accorded

the shipment, but partial unloading at Denver, Colorado, a point on the Union Pacific Railroad, can be had if desired.

The disadvantage at Pueblo is thus apparent. Also, if further stops at Grand Junction, Colorado, Price and/or Provo, Utah were desired, the through competitive rate could not be protected via the route the shipment would have to move.

Exam. Mullen: Just to clarify something there: Under your Heading "No. 3," you spoke about a distinction there, that there is a lack of transit via the route. Does that mean what transit you have cannot be availed of, or do you mean it has no transit privileges at those points?

The Witness: No, I thought, Mr. Examiner, that my testi-
[fol. 136] mony was clear that all of the transit arrangements listed on pages 1 to 4, in Section H, were and are available at points on our line, when the competitive through rates are available. The series of numbered paragraphs that I am now reading has a heading which says—I will read it—"Speaking first of westbound movements only, for the purpose of illustration, some of the drawbacks for the Rio Grande are"—and I am attempting to show the disability of the Rio Grande, due to the lack of competitive through rates.

The transit privileges are there, are published, are available, but the traffic just won't move through these points for transit because there are no through rates into Idaho or the northwest by our route.

Exam. Mullen: Well, the use of the expression "lack of transit" via your route, I did not quite understand that.

The Witness: I see. Have I made it clear now?

Exam. Mullen: Yes, you have made it clear now.

The Witness: (reading)

4) The non-availability of through competitive rates from Utah Common Points on the Rio Grande south of Ogden, Utah when destination is a point on or via the Union Pacific north or west of Ogden, Utah. Shippers located in the Utah Common Point territory frequently find it necessary or desirable to forward shipments to Salt Lake City or Ogden, Utah, via the Rio Grande, and after transit at those points, find it further necessary to ship the trans-
[fol. 137] ited shipment to an Idaho point or some destina-

tion in the other states north and west of Ogden reached via the Union Pacific.

While perhaps there would be no original intention on the part of the shipper to so handle his shipment, nevertheless it frequently happens that he finds it necessary for him to do so. Not all places in Utah Common Point territory enjoy reciprocal switching—many of these places, while served by both the Union Pacific and the Rio Grande, are without interchange tracks and, consequently, shippers are forced to pay combination rates over the transit point on such shipments as have been described in this paragraph, if the shipper is served exclusively by the Rio Grande.

Prior to July 15, 1946, Utah Common Point territory south of Salt Lake City was also served by an electric line—the Salt Lake & Utah Railroad Corporation—which line enjoyed through competitive rates via Salt Lake City between its points south of Salt Lake City and Union Pacific territory north and west of Ogden.

In Utah Common Point territory, Salt Lake City and north, the Bamberger Railroad, also an electric line, has for years enjoyed, and still enjoys, joint competitive through rates from and to its points on the one hand, and points on or via the Union Pacific north and west of Ogden, on the other. In the circumstances outlined above in the para- [fol. 138] graph, a shipper served by one of the electric lines in this territory was and is more fortunate than shippers who, from necessity, must use the Rio Grande for the handling of their traffic.

5) The situations outlined in preceding paragraphs operate to deprive the Rio Grande of certain traffic which it would otherwise enjoy. In the case of shippers who do not know, at the time of shipment, the ultimate destination of their shipments, it is natural that they protect themselves by using the route into the transit point which will afford them the widest range of distribution territory.

Since there are only two lines into Utah Common Point territory from the east, viz., the Union Pacific and the Rio Grande, and since the former offers, in addition to practically all that the latter can offer, routes at through competitive rates into Northern Utah, Idaho, Montana and the North Pacific Coast, it can be readily seen that the rate dis-

ability of the Rio Grande militates against the use of its line.

In the case of shippers located on Rio Grande rails in Utah Common Point territory, the hardship is more severe, in many instances, the choice of routes is not theirs unless they choose to haul their shipments to Union Pacific loading facilities or pay combination rates over the transit point.

Instances of movements involving transit heretofore referred to have dealt with westbound and northbound shipments, where the Rio Grande would deliver the traffic to the [fol. 139] Union Pacific at Ogden. In the reverse direction, the same disadvantages to the shipper and the Rio Grande are present, though the different character of the prevailing traffic would reveal different transit problems.

In the case of westbound traffic, which would be largely manufactured or partially manufactured articles, storage, fabrication and partial unloading would appear to be those privileges which would be used the most, with, of course, diversion and reconsigning privileges always in demand. Eastbound shipments are largely of perishable commodities, other agricultural and milling products, lumber and its related commodities, and livestock. All of these have their own peculiar transit requirements.

We have had some experience with an eastbound routing application which has been in effect for years. This publication is presently found in Union Pacific Tariff No. 6085-B, I.C.C. No. 4783, Item 85. It was originally designed to accommodate shipments of sheep which were to be grazed in transit at points adjacent to the Rio Grande under the provisions of Rio Grande Tariff No. 7035-D, I.C.C. No. 829.

Item 85 of U.P. Tariff No. 6085-B, I.C.C. No. 4783, reads:

"Application of Rates Via D. & R.G.W.

"Carloads of Sheep or Goats, (double deck) originating at stations on:

[fol. 140] "Butte, Anaconda & Pacific Ry., Oregon and Northwestern R.R., Union Pacific R.R. (except stations Donovan, Wyoming, to Topas, Idaho, Index Nos. 2216 to 2324, inclusive), and destined to Missouri River (see Item 70), Mississippi River (see Item 75), Saint Paul, Minnesota (see Item 50), Peoria, Illinois or Chicago, Illinois

(see Item 55) may be routed via U.P.R.R., Ogden or Salt Lake City, Utah and D. & R.G.W., Denver, Colorado, and U.P. R.R., thence via routes provided in pages 156 to 166, incl., at rates provided in tariff, plus an arbitrary of *19 cents per 100 pounds."

An investigation into the extent to which this route has been used reveals that practically no traffic has moved thereunder. The penalty over the going through rate has been sufficient deterrent to any substantial use of the Rio Grande, although its route offers splendid grazing territory, especially for summer feeding in the high mountain forests in western Colorado. Feeders have found it more profitable to secure herd replacements in other territories as western Utah and Nevada from which through rates with no penalty apply via the Rio Grande.

If markets such as Price, Utah, Grand Junction, Glenwood Springs and Canon City, Colorado were on a route [fol. 141] over which the through competitive rates apply on perishables moving eastward from Idaho and the Northwest, there would exist both a motive and an opportunity for billing cars to and through these points, with the knowledge that through competitive rates from origin to destination would apply in the event no sale was consummated at the first destination and it became necessary to reconsign beyond these points.

A substantial volume of California and Utah perishables, including citrus fruits, deciduous fruits, grapes, potatoes, etc., are annually handled via the Rio Grande and there appears to be no reason why, with the existence of suitable routing over the Rio Grande at competitive through rates, the same situation in regard to traffic from Idaho and other states hereinbefore mentioned should be not developed.

It would increase the fluidity and regularity of the movement of such seasonal crops that today are denied this outlet and thus benefit the shippers in the territory now foreclosed to the Ogden route by way of the Rio Grande.

(*This arbitrary is 19 cents on shipments to Missouri River, but may be different when to other destinations because of the different percentages of increase under X-166 and X-168.)

and its connections to the east, southeast and southwest. In a similar fashion, shippers of non-perishable commodities, such as lumber, would also benefit.

Finally, the jobber and wholesaler in the Intermountain territory is vitally affected by railroad transit rates, privileges, practices and restrictions. In the history of the Intermountain West, the jobber has played an important [fol. 142] part. In the early days of development, his was primarily a wholesaler's role, importing into such natural marketing centers as Salt Lake City and Ogden, merchandise in carload lots and disposing of it in L.C.C. quantities to his customers in the surrounding area.

For years, the same policy of distribution between the manufacturer and the consumer served to meet the requirements of the trade in the West; gradually, however, some of the consumers, or retailers, began to buy directly from the manufacturer, thus by-passing the jobber and wholesaler. Improved transportation also enabled many firms to reduce inventories by ordering more frequently, which encouraged movement by motor truck where lower minimum weights prevailed.

All of these conditions brought about changes, and some of the larger jobbing houses established branch houses in their trade territories to be closer to their customers and to meet the competition of local wholesalers. It has become the practice to ship carloads to be split up among two or more such branch houses. One large dealer in hardware and building supplies, with headquarters in Salt Lake City, has a branch at Grand Junction, Colorado and another at Boise, Idaho. Many times it would have been possible for this concern to split cars between its Grand Junction and Boise branches had the through competitive rates to Idaho applied through Grand Junction.

[fol. 143] Despite the vigilance of this consignor, many cars moved each year with stops at Grand Junction and or Salt Lake City destined to Boise. Frequently this concern has elected to fully unload these cars at Salt Lake City and truck the Boise portion of the load to that destination to avoid payment of the Ogden combination.

The necessity of transit at competitive through rates being available on their inbound shipments naturally influences and controls the choice of inbound routing to that

line which offers the widest range of outbound movement. The restricted application of competitive joint rates via routes of the Rio Grande operates to deprive shippers of the advantages of transit arrangements at points on the line of the Rio Grande, when point of origin is, or ultimate destination may become, a point on or via the line of the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington or British Columbia.

Additionally, such restricted application not only operates to deprive the Rio Grande of through freight traffic which it might obtain if equal rates applied in connection with it, but by virtue of the transit arrangements the Rio Grande is likewise deprived of a haul on an unknown volume of competitive traffic. The availability of through rates by way of the Ogden interchange would remove the impediment that now exists to free and unrestricted use of the Rio Grande as an inbound carrier.

[fol. 144] Some additional instances of transit situations which operate to the disadvantage of shippers located on Rio Grande rails are:

a) Sugar storage at West Jordan, Utah: West Jordan, Utah is a local point on the Rio Grande south of Salt Lake City and is the location of a sugar factory with available sugar storage space. A sugar manufacturer with plants in northern Utah and Idaho, operating also the West Jordan plant, cannot store sugar manufactured at his Idaho or northern Utah factories at West Jordan and re-ship east at through rates via the Rio Grande.

b) A processor of frozen foods, located at Delta, Colorado on the Rio Grande, annually procures cherries and peaches from points on the Union Pacific in northern Utah, principally from Brigham. Before the abandonment of the Utah Idaho Central Railroad (July 25, 1947), this operator could process the fruit at his plant in Delta under the provisions of Rio Grande Tariff No. 7283-A, I.C.C. No. 792, and re-ship from Delta to destinations in Colorado Common Point territory or east thereof and enjoy the through rate. Since the above date, the origin territory has been served exclusively by the Union Pacific; consequently, this shipper has to pay the local rate of the Union Pacific into Ogden, resulting in higher charges for the through movement via Delta, Colorado to destination.

[fol. 145] c) A shipper of carload shipments of unfinished furniture whose factory is located at Pendleton, Oregon has a customer located at Grand Junction, Colorado. In his own words, he "cannot put straight cars into this point because there is not enough demand and we cannot ship cars to Pueblo or Denver and stop them at Grand Junction because routing is not provided via the Ogden gateway."

d) Flour mills located at points in Kansas south of the line of the Union Pacific would like to secure wheat of a desirable type in Idaho and the Northwest and mill it at such points as Wichita, Hutchinson, Great Bend, etc., forwarding the flour to destinations beyond Kansas City, which they cannot do today at through competitive rates since the rates on the wheat in question must be applied via Union Pacific into Kansas City to enjoy the lowest through charges.

Establishment of through competitive rates via Ogden and the Rio Grande, thence via Prairie Lines from Denver or Pueblo to the Missouri River, would put these southern Kansas mills in line of transit and made them competitive with mills in Kansas located on the Union Pacific.

e) A transit operator located at Fruita, Colorado wants to mix Idaho beans (of a variety not grown in Western Colorado) with beans produced in his locality. Because of the absence of joint competitive through rates via the Rio Grande through Fruita, he cannot ship mixed carloads [fol. 146] of Idaho and Colorado beans, although this is highly desirable from a trade standpoint and this man's competitors at Denver and points in eastern Colorado served by the Union Pacific can do so.

Numerous carloads of canned goods originate annually at Tremonton, Utah, a local point on the Union Pacific north of Odgen, and are shipped to Manti and Ephraim, Utah, local points on the Rio Grande for storage in transit. Such of these cars as are reshipped to eastern markets via the Rio Grande and its connections on transit billing are then subject to combination rates over Ogden.

Numerous other transit situations exist which operate to the disadvantage of shippers and receivers at various points. Some of them will be explained in detail by other witnesses.

Section I, Statement showing rates, routes and mileages from and to points north and west of Ogden, Utah:

Section I, consisting of 121 pages, is a comprehensive statement of representative rates on various commodities in effect on September 1, 1949, between points in northern Utah, Idaho, Montana, Washington and Oregon on the Union Pacific (also Anaconda, Montana on the Butte, Anaconda & Pacific Railway), on the one hand, and representative points in the United States, Denver and east, on the other hand.

It also includes some representative rates between Utah Common Points and points north and west of Ogden, Utah. This statement shows the rates in effect via the line of the [fol. 147] Union Pacific, as well as the combination rates which would be charged if a shipment moved through Ogden in connection with the Rio Grande. Also shown are the mileages via both routes and the selected tariff routes used to determine such mileages.

Exam. Mullen: Gentlemen, we have reached our usual time to adjourn. Do you want to proceed longer?

We will recess, then, until 9:30 tomorrow morning.

(Whereupon, at 4.55 o'clock p.m., the hearing was recessed, to reconvene at 9:30 o'clock a.m., Tuesday, December 13, 1949.)

[fols. 148-149] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, et al., Defendants

Transcript of Testimony—Salt Lake City, Utah, Tuesday, December 13, 1949

Met, pursuant to adjournment, at 9:30 o'clock a. m.

Before Frank E. Mullen, Examiner

ADDITIONAL APPEARANCES

Reginald T. Titus, 704 US National Bank Building, Portland, Oregon, appearing for Western Forest Industries Association.

[fol. 150] Proceedings

Exam. Mullen: Come to order, please, gentlemen. The hearing will be resumed.

Mr. Quirk.

T. K. EARLEY resumed his testimony as follows:

Direct examination (cont'd.)

By Mr. Quirk:

Q. Mr. Quirk: Mr. Earley, will you resume your statement where you left off last evening?

A. Before I resume discussion Section I of my exhibit, I think it would be well to explain Notes A to F as they are shown on the top of most of the pages throughout the section. It is true at the bottom of each page reference is made to Page 118 for the explanation of those notes, but I think that a brief summary of what they say would be helpful.

Note A, as referred to throughout this section, appears at the top of each column, under which is shown the through competitive rate applicable via the route of the Union Pacific. These rates are those in effect September 1, 1949. In other words, they include all of the Ex Parte 162, 166, and 168 increases.

The rates appearing under Note B are those applicable via the route of the Rio Grande through Ogden. In other words, combination rates. The distances appearing in the column headed Note C are the distances via the route of the Union Pacific or the Union Pacific and its connections.
[fol. 151] In the column headed Note D are the distances over the route of the Rio Grande and its connections. The selected tariff routes used to obtain the distances shown under Notes C and D, are explained on Page 119 of the exhibit. The key to the route appearing in Note E is that route embracing the Union Pacific, and the key to the route under Note F refers to the routes embraced by the Rio Grande.

I think that is briefly enough of an explanation to enable you all to follow the arrangement of the section.

With respect to the selected tariff routes listed on pages 120 and 121 of Section I, the underlying rule which was observed in making these selections was to be consistent. The routes selected are short, direct tariff routes. When comparing distances via competing routes, such distances should be determined according to the same plan and we have selected those tariff routes which, in fairness, represent the best potentialities of both sides. There would be no point in this case to use distances over the shortest routes which carload traffic may be moved without transfer of lading since the level of existing competitive freight rates is not assailed herein and traffic does not move over such routes.

Q. Mr. Earley, I suggest you explain a little more clearly what you mean by this last statement.

A. I wanted to bring out the fact that in this proceeding the level of the going through competitive freight rates which we are attempting to have made applicable over our [fol. 152] line is in no manner assailed by us. Another way of stating it would be that if any rates are assailed in this proceeding, the rates that are assailed by the Rio Grande

are those combination rates which must be used today, if our line is used in connection with the Union Pacific through Ogden.

Mr. Collins: If I might inquire for further clarification, are you in doubt as to whether you are assailing even the combination rates?

Mr. Quirk: I will answer that, Mr. Collins: We are in no doubt at all about it. We say the combination rates over the existing routes which the Rio Grande participates with the other carriers, including the Union Pacific in traffic, are unreasonable.

Mr. Collins: That is what I thought.

Mr. Quirk: I thought he was going to explain about the distance he used. I didn't quite understand him myself.

Mr. Collins: The reason I asked my question was because he said "if any rates are assailed."

Mr. Quirk: He should not have said that.

Mr. Collins: It is all right, thank you.

By Mr. Quirk:

Q. Proceed.

A. This latter method of computation is usually followed when determining the level of class rates, but the short [fol. 153] workable route has been used frequently by the Commission for rates involving long distances such as are here under consideration. As previously stated, the important thing is consistency and, as long as the comparisons are based on distances via routes which treat each side fairly, the conclusions to be drawn from such comparisons are, in my opinion, based on solid ground.

In order to point up the showing which I wish to make under this section, I shall deal with several examples. In connection with the carload movement of apples from Boise, Idaho to Chicago, Illinois, as listed on Line 4, page 1 of Section I, reference is made to Route No. 7 under Note E for selected tariff route via the Union Pacific and connections, and to Route No. 8 under Note F for selected tariff route via Union Pacific to Ogden, thence Rio Grande and connections.

Route No. 7 calls for movement via Union Pacific through Kemmerer, Wyoming to Omaha, Nebraska, thence C&NW, a distance of 1781 miles. Route No. 8 calls for movement via

Union Pacific to Ogden, D&RGW to Denver, thence CB&Q, a distance of 1992 miles.

Later, under the discussion of Section K of this exhibit, wherein comparisons of the lengths of haul involved are set forth in considerable detail, the distance via the Rio Grande route from Boise to Chicago is shown to be 112 per cent of the distance via the Union Pacific route.

[fol. 154] On page 3 of Section I, line 20, the rate on prunes and plums from Milton, Oregon to Detroit, Michigan is shown, together with distances via the selected tariff routes, which, in this instance, are shown to be via UP through Kemmerer, Wyoming to Omaha, C&NW to Chicago, thence NYC; and UP to Ogden, D&RGW to Denver, CB&Q to Chicago, thence NYC.

On page 4 of Section I, line 26, rates and distances are shown in connection with the movement of fruit from Malad, Idaho to New Orleans, Louisiana. In this instance Route 19 is shown for account of the Union Pacific, which calls for movement via UP through Evanston, Wyoming to Kansas City, KCS to Shreveport, Louisiana, thence L&A, while Route 20 for account of the Rio Grande calls for movement via UP to Ogden, D&RGW to Pueblo, C&S to Sixela, N. M., FW&DC to Fort Worth, thence T&P.

On Line 9, page 7, comparative rates and distances are shown on lettuce from Wilder, Idaho to Boston, Massachusetts, with routing via the UP to Omaha, Nebraska, C&NW to Chicago, thence NYC (2817 miles); and via the UP to Ogden, D&RGW to Denver, CB&Q to Chicago, thence NYC System (3028 miles).

On sugar from Burley, Idaho to Oklahoma City, Oklahoma, rates and distances are shown via the two routes on page 9, Line 7. Route 23, as will be noted by reference to page 121, provides routing via the UP through Kemmerer, Wyoming to Denver, thence AT&SF (1457 miles); while Route 24 calls for routing via UP to Ogden, D&RGW to Pueblo, thence AT&SF (1491 miles).

[fol. 155] On page 13, Line 10, rates on potatoes from Idaho Falls, Idaho to Atlanta, Georgia are shown via UP through Kemmerer, Wyoming to Kansas City, Missouri, Wabash to St. Louis, L&N to Nashville, Tennessee, NC&StL; also via UP to Ogden, D&RGW to Denver, CRI&P

to Kansas City, Wabash to St. Louis, L&N to Nashville, thence NC&StL.

Line 11, page 15, contains an example of the comparative rates and mileages on canned goods from Boise, Idaho to Jacksonville, Florida via Routes 15 and 16. Route 15 calls for routing via UP through Kemmerer, Wyoming to Kansas City, Missouri, Wabash to St. Louis, L&N to Nashville, NC&StL to Atlanta, Georgia, thence ACL (2644 miles); and Route 16 covers routing via UP to Ogden, D&RGW to Denver, CRI&P to Kansas City, Wabash to St. Louis, L&N to Nashville, NC&StL to Atlanta, thence ACL (2844 miles).

Line 4, page 23, contains the comparative rates on apples from Yakima, Washington to Salt Lake City, Utah, and Line 1, page 24, illustrates the situation on canned goods from Boise, Idaho to Provo, Utah, via the routes of the Union Pacific direct and via the UP to Ogden, thence Rio Grande.

Now, dealing with westbound movements, on page 33, Line 36, rates and distances are shown on iron and steel articles from Atlanta, Georgia to Spokane, Washington, via NC&StL to Nashville, Tennessee, L&N to St. Louis, Missouri, Wabash to Kansas City, Missouri, thence UP through Kemmerer, Wyoming, a distance 2870 miles, and via the [fol 156] same routing to Kansas City, CRI&P to Denver, Rio Grande to Ogden, thence Union Pacific (2980 miles).

Canned goods from Pittsburgh, Pennsylvania to Portland, Oregon, shown on Line 7, page 41 of Section I; call for routing via Pennsylvania Railroad to Chicago, C&NW to Omaha, thence Union Pacific through Kemmerer, Wyoming, and PRR to Chicago, CB&Q to Denver, D&RGW to Ogden, thence UP.

Line 29, page 42, shows the comparative rates and mileages on alcoholic liquors from Cincinnati, Ohio to Seattle, Washington, via B&O to St. Louis, Missouri, Wabash to Kansas City, thence UP through Kemmerer, Wyoming (2680 miles), and via B&O to St. Louis, Wabash to Kansas City, CRI&P to Denver, D&RGW to Ogden, thence Union Pacific (2881 miles).

The situation on tires and tubes from New Orleans, Louisiana, to Logan, Utah, is illustrated on Line 40, page 44. Route 19 calls for movement via L&A to Shreveport, Louisi-

ana, KCS to Kansas City, Missouri, thence UP through Evanston, Wyoming (2051 miles) while Route 20 provides routing via T&P to Fort Worth, Texas, FW&DC to Sixela, New Mexico, C&S to Pueblo, Colorado, Rio Grande to Ogden, Utah and Union Pacific (1951 miles.)

Line 13, page 52, shows the comparative rates and distances on roofing and building material from Fort Worth, Texas to Malad, Idaho, via FW&DC to Sixela, New Mexico, C&S to Denver, UP through Evanston, Wyoming (1449 miles) and via FW&DC to Sixela, C&S to Pueblo, D&RGW [fol. 157] to Ogden, thence Union Pacific (1418 miles).

On page 58 of Section I, Line 17, the rates and distances for a movement of paint from St. Louis, Missouri to Butte, Montana are shown. This calls for movement via Wabasli to Kansas City, Union Pacific through Kemmerer, Wyoming (1713 miles), and Wabash to Kansas City, CRI&P to Denver, Rio Grande to Ogden, thence Union Pacific (1913 miles).

Line 5, page 66, shows the rates and mileages on malt liquors from Minneapolis, Minnesota to Boise, Idaho, via GStPM&O to Omaha, Nebraska, thence Union Pacific through Kemmerer, Wyoming (1653 miles), and via CStPM&O to Omaha, CB&Q to Denver, D&RGW to Ogden, UP (1872 miles).

On page 68, Line 5, rates and distances are shown on iron and steel articles from Geneva, Utah to Seattle, Washington. On the same page, line 8, rates are shown on agricultural implements, other than hand, from Salt Lake City to Butte, Montana. On page 69 comparative merchandise rates are indicated. Routing, in all cases, is via the line of the Union Pacific direct and via the Rio Grande to Ogden, thence the Union Pacific.

In addition to domestic rates shown, a few comparative examples on import and export traffic are to be found on pages 25, 26 and 27 and on pages 70, 71 and 72 of Section I.

Obviously, the rates which would be charged for movements via the Rio Grande through Ogden are sufficiently high to discourage any movement thereunder. This higher [fol. 158] charge, of course, is applicable even in those instances where the Rio Grande's route operates over the shorter distance. To return to the example mentioned on page 47 of this testimony, covering the comparative rates

and distances on roofing and building material from Fort Worth, Texas to Malad, Idaho (Line 13, page 52 of Section I) where the Rio Grande route is shorter than the Union Pacific route by 31 miles, the rate is 49 cents per Cwt. higher via the Rio Grande's route. Naturally, no shipper would knowingly or willingly pay any such premium for using the Rio Grande; in fact, any charge over the lowest going rate would result, and has resulted, in precluding the Rio Grande from hauling such traffic.

The situation which Section I is intended to show is that the disparity in rates via the route of the Rio Grande vs. the going competitive through rate via the route of the Union Pacific is so great as to preclude any thought of shippers knowingly or generally using the Rio Grande route. Section I is a very comprehensive study of this situation and, to a large degree, is self-explanatory. As I have previously stated, it also forms a basis for subsequent discussions. Furthermore, Section I gives a fully authenticated cross-section of the rate structure to and from the territory served by the Union Pacific north and west of Ogden, Utah.

Comparison of car-mile and ton-mile earnings on various [fol. 159] commodities from and to representative points on the Union Pacific north and west of Ogden, Utah, via route of Union Pacific, vs. route of Rio Grande through Ogden:

Section J has been prepared to show comparisons with respect to car-mile and ton-mile earnings under the rates in effect on September 1, 1949, via selected routes, including the Union Pacific, and via selected routes including the Rio Grande through Ogden, Utah in connection with the Union Pacific. It also shows the earnings that would result if the rates applicable via the Union Pacific are established for application in connection with the Rio Grande. All rates and mileages used, with the exception of lumber shown on page 11 and iron and steel articles from Minnequa, Colorado on page 14, have been extracted from Section I.

Section J is self-explanatory; nevertheless, I would like to make a little comment on the comparisons. In connection with the examples dealing with selected commodities shown on pages 1 to 11, all of which are eastbound domestic movements to Colorado Common Point territory and points east

thereof, the Union Pacific's average car-mile revenue is shown to be higher than for the Rio Grande, but not materially so, the smallest difference being 1.54 cents on lettuce and the greatest difference being 5.84 cents on hops; the difference on the lettuce is 8.6 per cent and 6.8 per cent on the hops. These differences have been determined by computing [fol. 160] the average car-mile earnings for each commodity via the Union Pacific vs. those via the Rio Grande, the latter being obtained by using the rate applicable via the Union Pacific for the Rio Grande's route.

In connection with the import commodities shown on page 13, the car-mile earnings on wool via the Rio Grande route are 1.25 cents less than via the Union Pacific route, or a difference of 6.5 per cent; on fish or sea animal oils the average car-mile earnings are 1.53 cents less via the Rio Grande than via Union Pacific, or 6.3 per cent; on canned fish the average car-mile earnings are 3.03 cents less, or 8.5 per cent.

In the westbound movements outlined on pages 14 to 18, the Union Pacific's average car-mile revenue is again shown to be moderately higher than the Rio Grande's. The smallest difference is 1.33 cents on furniture, or 5.5 per cent, while the greatest difference is 7.80 cents on chemicals, or 8.8 per cent. These average differences have been determined in the same manner as described above in connection with the east-bound situation.

In the export items shown on page 20, the average of the various examples produce car-mile earnings on machinery via the Rio Grande of but 2.20 cents less than the Union Pacific, or 7.8 per cent, and on rubber products of 3.66 cents less, or 8.6 per cent.

The above remarks are pertinent to the showing made [fol. 161] in this section on the car-mile earnings for the two routes. A similar showing is available by using the ton-mile figures, but I consider it unnecessary to outline these ton-mile comparisons in detail. It appears sufficient to say here that, if competitive through rates in connection with the Union Pacific via Ogden, Utah are made available to the Rio Grande, the average car-mile and ton-mile yields to the Rio Grande route will not be materially lower than the yields to the Union Pacific route.

The per-ton-mile earnings on the selected commodities from the Northwest to Utah Common Points or from Utah Common Points to the Northwest, which, as are shown on pages 12 and 19, respectively, are approximately the same, or greater for the Rio Grande than for the Union Pacific. Where the difference is in favor of the Rio Grande, such difference is brought about by the fact that the distance via the Rio Grande's route is less in those instances.

Comparisons of distances via Rio Grande routes with other routes:

In Section K a comparison has been made of the mileages via the lines comprisong certain routes to and from representative points in the Northwest on the Union Pacific, including the route of the Rio Grande through Ogden. In presenting these comparisons, the per cent of circuity via the longer routes over the short route has been indicated.

On pages 2 to 6 of Section K, the examples have been con- [fol. 162] fined to Union Pacific stations where routing at the present time is restricted via the UP long-haul routes through Kemmerer or Evanston, Wyoming. It will be noted that in those instances on pages 2 to 6 where the mileage via the Union Pacific is shorter than that via the Rio Grande, the per cent of circuity via the Rio Grande route ranges from 102 per cent to 116 per cent. The latter instance represents the mileage between Idaho Falls and Kansas City, as shown on Line 2, page 3.

On pages 7 to 13 the comparisons deal with routes via the Union Pacific, via the CMStP&P, via the Great Northern and via the Northern Pacific, including, of course, the route via the D&RGW. At the outset it might be well to state that the routes via the carriers shown do not constitute all of the lines that the Union Pacific joins in competitive joint rates from and to its stations, but they do comprise, as stated above, the direct routes.

Furthermore, to avoid misunderstanding, it might be well to mention that, while the comparisons are shown as applying between the various representative points, that is, in both directions, there are instances where the rate applies in one direction only, but such cases have not been indicated in Section K as reference to Section F will disclose the rate application.

There are some interesting observations that can be made in considering pages 7 to 13. Out of the examples [fol. 163] there shown, the route having the greatest circuity is via the Northern Pacific from Elgin, Oregon to Fort Worth, Texas. In this instance, as will be observed by reference to Line 13, page 13, the distance via the Northern Pacific route is 151 per cent of the short route, namely, the Union Pacific. It will be noted also that the amount of circuity via the route of the Rio Grande is only 102 per cent.

Distances via the Union Pacific route run as high as 124 per cent of the short route. This situation exists between Yakima, Washington and Minneapolis, Minnesota, as shown on Line 5, page 12. Between these points also prevails the greatest per cent of circuity (137 per cent) via the Rio Grande Route.

Circuity via the CMStP&P ranges as high as 139 per cent of the short route between Elgin, Oregon and Fort Worth, Texas, and as high as 142 per cent between the same points via the Great Northern route, as shown on Line 13 of page 13, Section K.

On pages 14 and 15 the stations selected are Kent and Seattle, Washington, from and to which points the Union Pacific at the present time short-hauls itself only in connection with the Southern Pacific via Portland. It will be noted that the circuity via the SP route through Ogden ranges from 109 per cent to 121 per cent, whereas the range via the route of the Rio Grande is but 101 per cent to 110 per [fol. 164] cent; yet the Union Pacific declines to join the Rio Grande in establishing competitive rates via Ogden.

I have previously had something to say regarding the selection of tariff routes used in this exhibit. The routes indicated on pages 16 to 19 of Section K do not necessarily reflect the short-tariff routes in all instances, but they do, in my opinion, reflect the short workable and service routes. Distances via the short workable routes, rather than via the shortest route over which carload traffic may be interchanged without transfer of lading, represent the generally recognized and preferred measure of computation in cases, other than class-rate proceedings, involving long distances.

In addition, the Union Pacific participates with the

Spokane International Railroad—Canadian Pacific Railway—Soo Line in a route through Canada—via which route the distances approximate those of the Northern Pacific route—and with the Southern Pacific via both its central and southern routes. The circuity via the southern route of the Southern Pacific to and from most, if not all, of the representative points, naturally would be greater than that via the SP through Ogden.

As an example, from Seattle, Washington to Kansas City, Missouri, via the Union Pacific to Portland, Oregon, Southern Pacific to Santa Rosa, New Mexico, and Rock Island to destination, the distance is substantially greater than the distance via the route of the Southern Pacific through [fol. 165] Ogden, as well as via the route of the Union Pacific through Ogden in connection with the Rio Grande.

This is another example of the many examples in this section, to which I have referred, of the Union Pacific short-hauling itself via a route which is substantially longer than via other available routes, including its own, while refusing to join the Rio Grande through Ogden, which route is also substantially shorter than the route of the Union Pacific—Southern Pacific through Portland, etc.

In many of its Fourth Section Orders, such as in FSO No. 11135 of January 10, 1933, as amended, the Commission has prescribed a maximum circuity of 133⅓ per cent where the distance involved exceeds 1125 miles. This Fourth Section Order was issued in connection with the distance rates on livestock prescribed in Rate Structure Investigation, Part 9, Livestock, Western District Rates (176 ICC 1).

There are only two instances shown in Section K where the circuity via the Rio Grande route exceeds this figure. One is in connection with the example from Milton, Oregon to Minneapolis, Minnesota, Line 5 of page 8; the other is in the distance from Yakima, Washington to Minneapolis, Minnesota, Line 5 of page 12, the Great Northern being the short route in both cases.

While the circuity via the Rio Grande is 134 per cent and 137 per cent, respectively, it will be noted that the circuity [fol. 166] via the Union Pacific amounts to 120 and 124 per cent. As compared with the two cases where the circuity via the D&RGW exceeds 133⅓ per cent, an examination

of the examples in Section K will disclose two such instances via the CMStP&P, four via the Great Northern, and eleven via the Northern Pacific.

Estimated annual traffic potential for Rio Grande:

In Section L is submitted the results of a comprehensive study made to determine the potential amount of traffic for the Rio Grande each year in the event of the establishment of competitive through rates with the Union Pacific via Ogden. This study covers only the states of Idaho, Montana, Oregon and Washington and was undertaken to give us some definite idea as to the traffic to and from those states included in our petition.

From this study it has been determined that there exists for the Rio Grande an annual traffic potential of 157,762 cars of carload traffic originated and terminated by the Union Pacific in Idaho, Montana, Oregon and Washington. Of this total traffic potential. 101,476 cars represent traffic originated by the Union Pacific and 56,286 cars represent traffic terminated by the Union Pacific in those states.

This Union Pacific traffic, susceptible to Rio Grande routing, which is termed traffic potential, represents a conservative estimate of business available to our solicitation. [fol. 167] I have not attempted an estimate of the amount of traffic which would actually move over the Rio Grande should we achieve what we are seeking in these proceedings.

Any such estimate would be, in my opinion, nothing more than guesswork, until such time as we might have the benefit of some actual and recent experience with an open gateway. The experience of forty years ago when we enjoyed through rates via Ogden cannot be considered a reliable guide as to what we may expect today.

In those days the Rio Grande could not have been called a service route, yet we did handle considerable competitive traffic from and to OSL and OWR&N points.

As previously stated, I believe this determination of traffic potential to be conservative. We have included in our study only Union Pacific traffic originating and terminating in the northwestern states. There are no figures included in our estimate to cover Union Pacific shipments from or to points in Utah north of Ogden, inasmuch as we

have no way of separating traffic within that state, or any state.

Likewise, no attempt has been made to include traffic which the Union Pacific handles as a bridge or intermediate line to or from the Northwest. Here again, we know of no method by which we can determine the amount of such traffic. Nor have we attempted to measure traffic which might result from the general growth of the northwestern states.

[fol. 168] In preparation of this study, all sources of data available were in the form of public records. This information was not always in such detail, nor as up-to-date as we would have liked, but we have made the best possible use of the limited material at hand. The public records which were used to develop the estimate produced under Section L are:

1. Annual reports filed by the Union Pacific with the Public Utilities Commission of Idaho, the Public Utilities Commissioner of Oregon, the Washington Department of Public Service and the Montana Railroad Commission;

2. Comparative car loading report for the State of Idaho, compiled and issued monthly and annually by the Public Utilities Commission of Idaho;

3. "Freight Commodity Statistics—Class I Steam Railways in the United States," issued annually by the Interstate Commerce Commission Bureau of Transport Economics and Statistics;

4. "Tons of Revenue Freight Originated and Tons Terminated in Carloads by Class of Commodities and by Geographic Areas—Class I Steam Railroads," statements numbered Q-550 and M-550, issued by the Interstate Commerce Commission Bureau of Transport Economics and Statistics;

5. "Interregional and Intraregional Traffic of the Mountain-Pacific Area in 1939," published by the Office of Domestic Commerce of the United States Department of Commerce;

[fol. 169] 6. "Carload Waybill Analyses—State to State Distribution of Tonnage by Commodity Groups," for the years 1947 and 1948, issued by the Interstate Commerce Commission Bureau of Transport Economics and Statistics,

statements numbered 484, 486, 4814, 4825, 4838, 492, 498 and 4920;

7. "Carlot Unloads of Certain Fruits and Vegetables in 100 Cities—1948," issued by the Production and Marketing Administration of the United States Department of Agriculture.

An examination of Section L will show that the Rio Grande's traffic potential follows the plan of the Interstate Commerce Commission five commodity group classifications —Products of Agriculture, Animals and Products, Products of Mines, Products of Forests, and Manufactures and Miscellaneous. Traffic originated—eastbound—and terminated —westbound—is treated on separate pages.

Within a particular commodity group, where a specific commodity accounted for a substantial volume of Union Pacific traffic, a separate analysis was made of that commodity. For example, page 8 of Section L deals with potatoes, a crop of major significance in the Union Pacific territory north and west of Ogden.

The number of cars of potatoes originated by the Union Pacific in the states of Idaho, Montana, Oregon and Washington during the years 1944 through 1948 is shown, together with the total number originated by all lines in those states for the same year.

[fol. 170] This latter information for all lines is shown as a matter of general information; and since these figures were developed from sources different than those from which the Union Pacific carloadings were obtained, they also provide a check upon our data. Likewise, for reference, and to portray long-term traffic trends, the same information for the Oregon Short Line and Oregon-Washington Railroad and Navigation Company for the years 1929, 1933 and 1935 is shown where such information has comparable value.

1935 was the last year in which traffic data for the OSL and OWR&N were reported separately. Thereafter, operations of these two railroads have been included in the reporting of the Union Pacific System's operations.

In the case of potatoes, mentioned above, as is also the case with most of the individual commodity movements analyzed, a five-year average of the Union Pacific's car-

loadings served as a basis for determining the traffic susceptible to Rio Grande routing. In a few instances, less than a five-year average was used, either because of a declining trend, the effect of the war years, or because the data for all five years were not comparable.

To these averages were applied percentages representing our view as to the portion of Union Pacific traffic susceptible to Rio Grande routing. The percentages were [fol. 171] determined in accordance with the methods explained either footnotes "e", "g" or "j", depending upon the commodity being analyzed. For potatoes shown on page 8, footnote "g" applies, resulting in an estimate of 25,247 carloads annually available for routing through Ogden.

It should be pointed out that three different governmental studies were used in the determination of the percentages of Union Pacific traffic susceptible to Rio Grande routing. In the case of fruits and vegetables, the Department of Agriculture publication entitled "Carlot Unloads of Certain Fruits and Vegetables in 100 Cities—1948," was used. The 100 cities named in this publication blanket the country and give a comprehensive picture of the flow of this type of traffic.

On other commodities, the US Department of Commerce publication entitled "Interregional and Intraregional Traffic of the Mountain-Pacific Area in 1939," was used as a basis for determining the applicable percentage of Rio Grande routing susceptibility. Rail transportation data used in this study were obtained from tabulations made by the Board of Investigation and Research—established by authority of the Transportation Act of 1940—in its waybill studies of 1939.

Quoting in part from the Commerce Department study: "By providing information on intrastate and state-to-state rail traffic, the BIR sample makes it possible to estimate the traffic flow between any given state and each of the [fol. 172] other 47 states, as well as the traffic originating and terminating in the same state. That information is important for many purposes. It shows the volume of carload rail transportation which was required during the sample year to satisfy the economic activities of the state and it provides a rail traffic pattern for the commodity

movements into and out of the state. That traffic pattern also reveals the extent of the market areas of the individual commodities produced or manufactured in the state."

Our final source of data upon which our percentages of susceptibility were based is the Interstate Commerce Commission Bureau of Transport Economics and Statistics "Carload Waybill Analyses—State to State Distribution of Tonnage by Commodity Groups" for the years 1947 and 1948. These studies are the results of a one-per-cent waybill sample from all Class I railways, as required by the Commission's order of September 6, 1946.

As stated in the Commission's 61st Annual Report, dated November 1, 1947, page 142, "The primary objectives of this work (waybill studies) are to portray the traffic patterns and rate structures of the United States in terms of (1) groups and classes of commodities, (2) intra-territorial and interterritorial movements, (3) short-line distances, (4) type of rate, (5) rates charged, and (6) relation of the rates charged to the first-class rate."

As to the value of the waybill studies, the Commission in [fol. 173] its 62nd Annual Report, dated November 1, 1948, page 128, has this to say: "Our expectation with regard to the value of these waybill analyses from the standpoint of regulatory work has already demonstrated itself in the use which we are able to make of tabulations from these data in connection with various proceedings."

From the summaries of eastbound carload traffic on page 31 of Section L, and westbound carload traffic on page 32 of Section L, the following schedule has been extracted:

Annual Traffic Potential for the Rio Grande on Total Carload Traffic Originated and Terminated by the Union Pacific in the States of Idaho, Montana, Oregon and Washington:

	Cars Originated (Eastbound)	Cars Terminated (Westbound)	Total Cars (Eastbound and Westbound)
Products of Agriculture	51,305	5,145	56,450
Animals and Animal Products	9,376	5,868	15,244
Products of Mines	703	2,204	2,907
Products of Forests	23,713	220	23,933
Manufactures and Miscellaneous	16,379	42,849	59,228
Grand Totals	101,476	56,286	157,762

Again, I wish to emphasize the point that the foregoing traffic potential represents to a considerable degree less

traffic than what I believe would be actually available to our solicitation for the reason that our study included only the amount of traffic loaded and unloaded on the Union Pacific in the four northwestern states.

[fol. 174] I also wish to point out with additional emphasis that this estimate of the traffic possibilities for the Rio Grande route is not an attempt to show the number of cars which we think will actually move through Ogden via the route of the Rio Grande in connection with the Union Pacific in the event of the establishment of competitive through rates via that junction.

Mr. Gibson: Mr. Examiner.

Exam. Mullen: Mr. Gibson.

Mr. Gibson: With Mr. Collins' approval, I would like to ask Mr. Earley to step down at this time and we would like to place another witness on the stand who has a business engagement outside of Utah, and would like to leave Salt Lake as soon as possible.

Exam. Mullen: Is that agreeable to you, Mr. Collins?

Mr. Collins: I beg your pardon?

Exam. Mullen: Is that agreeable to you, to let this witness step aside for a moment?

Mr. Collins: Yes, I am agreeable.

Exam. Mullen: You may call your witness.

(Witness temporarily excused.)

Mr. Gibson: Mr. Reed.

DONALD L. REED was sworn and testified as follows:

Direct examination.

[fol. 175] By Mr. Gibson:

Q. Will you please state your name and address, Mr. Reed?

A. My name is Donald L. Reed. I live in Denver, Colorado.

Q. Mr. Reed, will you please explain your operation at Delta, Colorado, the plant you have at that location?

A. We operate a frozen food plant at Delta, processing mostly fruit.

Mr. Collins: Would you tell us is that operated in your name or is it in the name of some company?

The Witness: It is the Skyland Food Corporation.

Mr. Collins: Located at Delta?

The Witness: That is right.

Exam. Mullen: What is your connection with that company?

The Witness: I am the President.

By Mr. Gibson:

Q. Mr. Reed, is your plant located on the Denver and Rio Grande at that point?

A. It is.

Q. What is the capacity in pounds of your operation annually?

A. Our capacity is about 15 million pounds annually.

Q. Are you using that full capacity at the present time?

A. No, we are not.

Q. What is the average usage of your plant?

A. We run about 50 per cent of capacity.

Q. I see.

A. At this time.

[fol. 176] Q. What are the sources of the fruits that you use in processing at that plant?

A. We handle all the fruit in western Colorado, that is in the Palisade area, and the Paonia district.

Mr. Collins: Which?

The Witness: Paonia.

Mr. Collins: Where is that district?

The Witness: It is in western Colorado, about thirty miles from Delta.

Mr. Collins: Thank you.

The Witness: We also get fruit out of Provo, Utah, and Ogden, Utah.

By Mr. Gibson:

Q. I see.

Are there other areas in this Northwestern territory where you could procure fruit for processing?

A. Yes, Idaho is a big fruit growing—there are several big fruit growing sections in Idaho.

Q. What fruit could you use from Idaho?

A. Apples, mainly.

Q. Mainly apples.

A. Yes.

Q. Are there various grades of apples?

A. Well, in our business we use what they call "C" Grade Apples. On the fresh market there is Fancy, Extra Fancy and "C" Grade, the only differences being mainly [fol. 177] the color. The "C" Grade Apple does not have any color.

Q. For your purposes the "C" Grade Apple is just as good as a Fancy or Extra Fancy Apple.

A. That is correct.

Q. What benefit would that be to the fruit growers in Idaho if you were in the market for their "C" Grade Apples?

A. If we could buy the "C" Grade Apples, the fruit growers in the Payette district could eliminate these "C" grades from the apples they ship on the fresh market and enjoy a higher price from combination pack of Fancy and Extra Fancy with the "C" grade eliminated.

Q. At the present time, are you able to utilize "C" Grade Apples in Idaho?

A. No.

Q. Why not?

A. Well, on account of the freight rate. We can't afford to ship them from Payette to Ogden and then ship them again to Delta. We enjoy no through rate.

Q. Well, you mean by that that you would like to utilize the transit freight in your processing operation at Delta?

A. That is correct. We have a processing and transit rate as far as Ogden, but when we get to Ogden we are through. We can't go on through to Idaho on account of not having a through rate.

Q. I see.

[fol. 178] A. From Payette.

Q. Have you ever purchased applies in northern Idaho and used them in spite of this rate situation?

A. To a small extent. We have bought some apples out there this year.

Q. You know the apples would be usable in your operation.

A. Very definitely.

Q. What is the present rate situation if you ship apples from Idaho to Delta for processing and then ship them East?

A. We have to pay the rate from Payette to Ogden, which is 72 cents a hundred on fresh fruits, and then of course we rebill the apples at Ogden to use the transit privilege which we have on the Rio Grande.

Q. I see.

When you use the present rate situation that is available to you, you only have the transit privilege from Ogden?

A. That is correct.

Q. If the rates were available through the Ogden gateway you would have your transit privilege from Payette, would you not, to final destination?

A. That is correct.

Q. Are there other areas in this Northwestern territory where you could purchase fruit for processing at Delta?

A. Yes, in the Brigham area, we could buy fruit there if we had a through rate from Brigham to Delta, but as [fol. 179] it is now, if we had any fruit we buy there, we have to truck to Ogden and load on the cars at Ogden, and of course the expense involved merely keeps us out of that market.

Q. What are the fruits you could buy?

A. Apricots and peaches.

Mr. Collins: Where do you buy those, I didn't hear.

The Witness: We buy apricots and peaches in Colorado and also in Provo, and Ogden, but when we get to Ogden we are through. Anything we buy from Brigham we have to truck down to Ogden in order to use the processing in transit privilege.

By Mr. Gibson:

Q. Mr. Reed, what is your estimate as to the amount of apples you could use from Idaho of this "C" grade type annually?

A. Well, it would amount to several thousand tons. I

would assume somewheres between 1 and 2 hundred cars a year. It would depend on the crop condition.

Q. I see.

A. We could use all the "C" grades that were available from that point.

Q. Would that be new business for the apple growers in Idaho?

A. I don't believe it would be new business, but it would enable them to eliminate the "C" grade——

Mr. Collins: Mr. Examiner, I will have to object to the witness testifying to the apple growers.

Mr. Gibson: Mr. Examiner, this man buys apples, and [fol. 180] I think he is competent to testify to that question.

Mr. Collins: He can testify where he would like to buy, and how much he would like to buy, but as to benefits which he thinks might accrue to those people up there, it is obvious all they would get out of it would be to sell him some apples or fruits.

Exam. Mullen: I would like to ask a preliminary question.

What use is now made of the "C" Grade apples?

The Witness: They are shipped on the fresh market.

Exam. Mullen: Then according to your testimony, this would just give them an additional market?

The Witness: Yes.

Exam. Mullen: I think the witness is competent to testify to that, Mr. Collins.

Go ahead, sir.

The Witness: If we could buy the "C" Grade Apples, the apples that were shipped on the fresh market would be nothing but Fancy and Extra Fancy, thereby bringing a greater return to the grower than with the "C" grades included in the fresh pack.

By Mr. Gibson:

Q. Mr. Reed, would the movement of apples from Idaho to Delta be new business for the railroads?

A. Yes.

Mr. Collins: Well, now, you will have to explain that. How do you know that? Do you know that those Grade [fol. 181] "C" apples are not moving?

The Witness: Yes.

Mr. Collins: I don't want to interrupt you too much. They are not moving at all, they are lying in the ground?

The Witness: They are not moving as "C" grades, they are moving in combination with Fancy and Extra Fancy to the fresh market.

Mr. Collins: The railroads are hauling them.

The Witness: Yes.

Mr. Collins: Excuse me.

Direct examination.

By Mr. Quirk:

Q. They are not hauling them to Delta, though, are they?
A. No.

Mr. Collins: That is too bad.

By Mr. Quirk:

Q. Mr. Reed, these 100 or 200 carloads of apples that you referred to that you might purchase up there if you had the joint competitive rate through Delta from the Idaho point of origin to the other destinations in the East, processed under transit at Delta, would be new business so far as your company is concerned, wouldn't it?

A. Yes.

Q. Would you say that the existing combination rates on Ogden that you have paid in the past tends to restrict your purchase of apples in Idaho, for use at Delta?

[fol. 182] A. Very definitely.

Mr. Gibson: You may cross examine the witness, Mr. Collins.

By Mr. Collins:

Cross-examination.

Q. Where do you buy the fruits that you now freeze in this plant at Delta, Mr. Reed?

A. In Ogden, Utah, Provo, Utah, and the Grand Junction area in western Colorado.

Q. Do you have any competitors in your frozen food

business located on the Union Pacific or existing routes where the rates are lower than by way of the D&RGW?

A. I didn't get the last part of that question, sir.

Q. Do you have any competitors in the frozen food business located on the Union Pacific Railroad who have the so-called freezing in transit privilege at rates lower than yours?

A. Not that I know of.

Q. Your interest, then, is entirely in getting possibly, if you care to use it, Idaho or Oregon fruits or prunes, or whatever you might decide to use, at a rate lower than the rates now in existence to Delta and on out of Delta, after freezing, is that right?

A. I would appreciate your clarifying that again, sir.

Q. Let me try again.

What you really—rather the only thing you want here, if you want anything, is a lower rate on fruits from Idaho or Oregon to Delta with the freezing in transit privilege [fol. 183] at that point?

A. I don't want a lower rate, I want a freezing in transit privilege.

Q. I see.

Don't you have that on the D&RGW right now?

A. We do on anything that originates on the D&RGW, yes, sir.

Q. You mentioned, I believe, to your counsel, that the present use of your plant was about 50 per cent of its capacity, is that correct?

A. That is correct.

Q. And to what do you attribute the lack of use of the other 50 per cent?

A. Our inability to get sufficient quantities of fruit.

Q. Inability to get sufficient quantities?

A. That is correct.

Mr. Collins: OK, that is all.

Redirect examination.

By Mr. Quirk:

Q. That inability is due somewhat to the rate situation which confines your buying to the State of Colorado, they don't let you get out of the states, do they, the railroads?

A. I get up to Ogden, but I am through at Ogden.

Q. I see.

That is because the D&RG serves Ogden.

A. That is right.

[fol. 184] Q. Don't you have some competition in the sale of your commodities to the East?

A. Oh, yes.

Q. Where would they be located?

A. Well, on apples we compete with Virginia and Michigan mainly; some New York fruit.

Exam. Mullen: Mr. Reed, has your plant ever worked or utilized its full capacity?

The Witness: No.

Exam. Mullen: How did you happen to build a plant of such large capacity?

The Witness: Well, it's the length of time that we could run that we could increase our capacity. In other words, if we, on apples particularly, if we could run apples another 30 or 60 days that is where our increased capacity would come in.

Exam. Mullen: The length of time you keep it in full operation.

The Witness: That is correct, sir.

Exam. Mullen: All right.

Mr. Collins: May I ask a few more questions?

Exam. Mullen: Certainly.

Recross-examination.

By Mr. Collins:

Q. When did you construct this plant at Delta, Mr. Reed?

[fol. 185] A. 1944.

Q. 1944. Was it in a sense constructed because of war necessities?

A. I believe so, at the time.

Q. Are apples grown in Colorado?

A. Yes.

Q. From what other sources than Colorado could you get them than the sources you mentioned, Idaho, Oregon, or Washington?

A. There are no other sources that we could get apples from that I know of.

Q. Perhaps I was not paying proper attention when you started to speak, but do you handle any other, do you freeze any other fruits than apples?

A. Yes, we freeze peaches, apricots, plums, and cherries, in addition to apples.

Q. All of those are grown in Colorado?

A. Yes. Of course the quantities are limited.

Q. The quantities are limited?

A. Yes, sir.

Q. Do you mean by that that enough of those particular fruits that you mentioned, that the total of them would not be sufficient to occupy the capacity of your plant?

A. The total available——

Q. Total grown in Colorado.

A. The total grown might, but the total available to a [fol. 186] processing plant isn't enough to satisfy our demand.

Q. Are there other food freezing operators there in your neighborhood?

A. No, sir.

Q. I mean any place, not necessarily in Delta, but anywhere around in that part of Colorado, or anywhere in Colorado on the D&RG?

A. No, there are not.

Q. That is the only one.

A. Yes.

Q. You realize, do you not, Mr. Reed, that there are available to you through rates with the transit privilege from California, which opens to you the source of all of their fruits, produce of that sort?

A. It isn't the same type of fruit that we grow in this section of the country, namely, Colorado, Utah, and Idaho. There is a very great difference in the type of fruit. Consequently we couldn't use California in our operations.

Q. Why not?

A. Because the type and variety would not fit in with our Colorado fruit or Utah fruit.

Q. You mean you blend them or do something like that?

A. Well, when we are running, we run Colorado fruit and Utah fruit all at the same time.

Q. What do you mean by "running," putting it in the same can, or same vat, or place to freeze it?

[fol. 187] A. Well, I wouldn't say the same can, but we run it the same day, and probably put it in the same car going out, but it is the same type fruit. Take apricots, for example, they grow Blenheim variety of apricots in California, while in Colorado and Utah they grow what they call a Chinese variety, and it would not be practical for us to use the variety of fruits that are grown in California.

Q. What impracticability would there be in it, if I might suggest, is it because the California fruit won't freeze, is that it?

A. No, it will freeze, but it is just entirely a different type of fruit than we grow in Colorado, Utah, and Idaho from a variety angle.

Q. I wish you would help us out a little more than just to say it is not practical.

Exam. Mullen: Do you think that is necessary, Mr. Collins?

Mr. Collins: Sir?

Exam. Mullen: Do you think it is necessary to pursue that much longer?

Mr. Collins: I won't much longer.

Exam. Mullen: All right.

By Mr. Collins:

Q. Is it because of a particular marketing arrangement that you have that you don't care to use California fruits?

[fol. 188] A. To some extent.

Q. Could you suggest any other reason?

A. Well, it's mainly that the apricot that we pack, which is grown in Colorado and Utah, is much better than the apricot that is packed in California. We get a higher price for it.

Q. I see.

A. We enjoy a finer reputation on it.

Q. That is an excellent reason.

Mr. Collins: Thank you very much.

Mr. Gibson: That is all.

Exam. Mullen: That is all. Thank you, Mr. Reed.

Mr. Gibson: Thank you very much.

(Witness excused.)

Exam. Mullen: We will take a ten-minute recess.

(Short recess.)

Exam. Mullen: The meeting will please come to order.

Mr. Quirk: We have no further questions of Mr. Earley. You may cross examine.

Mr. Collins: Mr. Examiner, as you undoubtedly know, former Chief Examiner Butler promised me that an adjourned hearing would be arranged in this case, largely for —he didn't specify the reasons, but the reason I had for asking it was to enable us to see what the complainant put in evidence, and then endeavor to meet it, and give us time to do that.

Mr. Earley's testimony in particular is of such a nature [fol. 189] and covers such a long period of time, historically, and such a broad sweep of tariffs and technical information, 274 pages we count them, in his exhibit, and 60 pages of testimony and description, I feel indisposed to attempt to cross examine him at this time, and I am not sure of the extent of cross examination that might eventually be thought necessary, even after a chance to study his material. I make the request that we be allowed to reserve the privilege of cross examining him at the adjourned hearing to whatever extent we then see is necessary, which extent I am sure will be much less than if we undertake to ramble around now and go through this material that he has.

Mr. Quirk: Mr. Examiner.

Exam. Mullen: Mr. Quirk.

Mr. Quirk: My understanding of the basis for the request made by Mr. Collins for an adjourned hearing, and the basis on which the Chief Examiner, former Chief Examiner Mr. Butler, would be considered, was for rebuttal, and not for the idea they would have an adjourned hearing to rebut our case, but an adjourned hearing to cross examine our witness, I think that is asking too much.

Now I don't want to sound too unreasonable. If these gentlemen don't feel they can cross examine Mr. Earley now, I think they ought to cross examine him, they could determine whether they want to cross examine him before this hearing is over.

[fol. 190] Mr. Collins: I think that is a good suggestion. We will accept it that way then.

Exam. Mullen: All right. Then you may renew your request later on in the hearing this week.

Mr. Collins: That is to cross examine Mr. Earley. We are now accepting Mr. Quirk's suggestion to defer cross examination of Mr. Earley until later on in this hearing.

Mr. Quirk: I am not suggesting you do it, I would not object to it. The volume would not be unreasonable that you could cross examine him tomorrow sometime later in the week.

Mr. Collins: Sometime later in this hearing.

Mr. Quirk: You may decide after you consider this matter that you prefer to meet his testimony to such extent as you can by your own witness in rebuttal.

Exam. Mullen: Suppose you consider that, Mr. Collins, and then later on this week, before the hearing is concluded this week, you may again present your request.

Mr. Collins: All right. That will be OK.

Exam. Mullen: Mr. Quirk.

Mr. Quirk: May we go off the record?

Exam. Mullen: Yes, off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Do you have another witness now, Mr. Quirk?

Mr. Quirk: Yes.

[fol. 191] R. K. Bradford was sworn and testified as follows:

Mr. Quirk: Before calling the next witness, I would like to offer in evidence Exhibits No. 1 and 2 by Witness F. C. Hogue, which I didn't offer yesterday. Are those received?

Exam. Mullen: Any objection, Mr. Collins?

Mr. Collins: To which ones?

Exam. Mullen: Receipt of Exhibits 1 and 2.

Mr. Collins: No.

Exam. Mullen: No objection, they are received in evidence.

(Complainant's Exhibits 1 and 2, Witness Hogue, received in evidence.)

Mr. Quirk: I now offer Exhibit No. 3 of Witness Earley.

Mr. Collins: Well, is the time ready for that?

Exam. Mullen: Do you wish to wait until the cross examination?

Mr. Collins: I think that would be more orderly

Exam Mullen: We will postpone it then.

All right.

Direct examination:

By Mr. Quirk:

Q. Mr. Bradford, have you been sworn?

A. Yes, sir.

Q. Will you give your full name to the Reporter, Mr. Bradford?

A. R. K. Bradford.

Q. What does "R" stand for?

[fol. 192] A. Richard.

Mr. Collins: What does the middle initial stand for?

The Witness: Knox.

By Mr. Quirk:

Q. Mr. Bradford, you have prepared your testimony in the statement form, and also had some exhibits prepared by yourself or under your direction, is that true?

A. Yes, sir.

Q. Will you proceed to give your testimony?

A. My name is R. K. Bradford. I am Vice President of the Denver & Rio Grande Western Railroad Company, with headquarters at 24 South Main Street, Salt Lake City, Utah. I have been in its employ since 1923, with the exception of 13 months, 1938-1939, during which time I was on loan to the Reconstruction Finance Corporation in Washington as special examiner, working on railroad loans.

Prior to being employed by the D&RGW I had one year's service with the St. Louis & Southwestern and nine years service with the Chicago, Rock Island & Pacific Railroads. Out of my more than 36 years of railroad service, practically 25 years of it has been in various capacities in the operating department. I served in the operating depart-

ment of the Rio Grande as Superintendent of Transportation and Assistant General Manager.

The main line of the Rio Grande extends from Ogden to Dotsero, 441 miles, where it divides and one main line proceeds through the Moffat Tunnel to Denver, 166.8 miles, and [fol. 193] the second main line proceeds through Pueblo and Colorado Springs to Denver, a distance of 342 miles. The main lines of the railroad are entirely protected by automatic block signals, and in addition to automatic block signals Centralized Traffic Control is in operation from Denver through the Moffat Tunnel to Orestod, from Niche, just east of Dotsero through to Salt Lake, with the exception of certain double track areas which while not controlled by Centralized Traffic Control are signaled for operation in both directions.

Ordinarily business for Denver and its connections is handled through the Moffat Tunnel route, while business for the connections at Pueblo moves over the Tennessee Pass route. From Ogden to Pueblo, via the Tennessee Pass route, the distance is 663 miles. From Ogden to Denver, via the Moffat Tunnel route, the distance is 607 miles.

From Ogden to Denver, via Pueblo and the Royal Gorge over the Tennessee Pass, the distance is 782 miles, so that the Moffatt Tunnel route from its first operation June 15, 1934, reduced the distance through the Denver Gateway by approximately 175 miles.

Both Pueblo and Denver Gateways are on a parity as to service both east and westbound. Trains are quite often consolidated between Grand Junction and Salt Lake and Ogden, both east and westbound, depending upon the type and amount of business.

Rio Grande Exhibit No. 4 gives data in detail as to rail, [fol. 194] grades, curvature, mileage, block signals, ballast, and other necessary and interesting data.

The Rio Grande is a party to through east and westbound freight train schedules and as I have stated, such schedules are identical as to delivery days, etc. through Denver and Pueblo. The Rio Grande has been a party to through eastbound schedules under 1924. Prior to 1923 the Rio Grande had no competitive through schedules.

Our first attempt to get into through eastbound schedules

started with perishable traffic in 1923 when less than 500 cars were obtained. In 1924 when there was a 154 hour schedule from California to Chicago it was decided that we could actively enter the competitive eastbound schedule picture through Pueblo, although not Denver, and in doing so we became competitors with the Union Pacific route and their eastern connections through Cheyenne.

At that time the only competitive schedule the Rio Grande had was in connection with the Western Pacific and Missouri Pacific; however, we and the Missouri Pacific solicited on the assumption that the 55 hour schedule of the Southern Pacific from the Roseville concentration yard to Ogden would apply via the Rio Grande and we built a schedule to Chicago via Ogden, Salt Lake and Pueblo on certain early arriving business. Later we were advised the 55 hour schedule of the Southern Pacific applied only to arrival at Ogden, and it [fol. 195] became our purpose to get such delivery arrangements as possible through the Ogden Union Railway & Depot Company.

The partial schedule line-up we operated during that year was hardly comparable with Union Pacific's; however, we obtained 2305 cars of California perishables. Schedules have changed from year to year. They have been speeded up. They have been lenght-ned. They have been adjusted; other lines have joined. It was not until 1930 that the Rio Grande was able to enter into full participation on traffic moving eastbound via the Southern Pacific.

In other words, to and through 1929 there was not a full competitive schedule between California and Chicago via the Rio Grande-Missouri Pacific and Kansas City lines and no comparable schedules through Denver, yet for the year 1929 we secured 9883 cars of perishable traffic, or approximately four times the amount obtained in 1924.

In 1930 the Southern Pacific route came into full participation via certain routes and business for 1930 nearly doubled due to a heavy grape crop in California and also due to a material increase in personnel in our California perishable agency. In 1929 the Rock Island came in on a partial schedule through Colorado Springs.

In 1931 the Santa Fe and Milwaukee came in on the schedule through Kansas City. In 1932 the Burlington came in

on the partial schedule through Denver, as did the Union [fol. 196] Pacific, although no formal schedule agreement was entered into at that time. In 1932 we handled approximately 18,000 cars. In 1934 the Dotsero Cutoff opened up which really put our route into the competitive picture through Denver as well as Pueblo. The business since that time has fluctuated and since then California Eastbound perishables approximate 16,000 to 18,000 cars a year.

To me the history of the Rio Grande and its California perishable business is indicative of two things—that additional routes and schedules are welcomed by perishable shippers and also that the establishment of such routes, regardless of the fact that they may not always offer a competitive schedule are beneficial.

Prior to 1930, as previously stated, the Rio Grande did not have a competitive schedule through Ogden on eastbound California perishable business, yet between 1924 and 1930 our perishable business multiplied six times.

The interchange of traffic at Ogden as between the Union Pacific and the Rio Grande would, of course, be handled by the Ogden Union Railway & Depot Company, which is an equally owned subsidiary of the Union Pacific and Southern Pacific. Our yard at that point is adjacent to the OUR&D yard. We are spending approximately $200,000 this year increasing our yard to improve our facilities and bring about a faster and better interchange of business at that point.

[fol. 197] The OUR&D yard is a modern yard and in our opinion is adequately capable of taking care of the additional Northwest business which might move through there; we do not at the present time, nor do our plans contemplate a classification by us of business received at Ogden. It is our practice to run trains out of Ogden as the business is received to Salt Lake where in our modern Roper Yard we do all of our eastbound classification work.

We also have a very modern yard at Grand Junction where consolidated Denver-Pueblo trains are split. We have just opened up our new North Yard at Denver which cost us $2 million, and this yard is modern in every respect.

We are equipped to and did handle through Ogden in

1948 a maximum of 1018 car moves a day. That is not the top capacity of the yard. During the war we got up to over 1200 moves a day. Likewise, during 1948 our top through Salt Lake was slightly under 2900 car moves per day, while during the war we handled approximately 3900 car moves a day. At Grand Junction in 1948 we reached a maximum of around more than 2400 car moves a day, as compared to 2950 during the war.

At Pueblo in 1948 we handled a maximum of 3,000 car moves a day, while during the war we handled approximately 3400 car moves. At Denver we handled 1506 in 1948 as compared to a maximum of 1762 car moves a day during the war period. These figures are not indicative [fol. 198] of the amount of traffic handled through Denver, because prior to the construction of the North Yard all of the Denver Gateway business interchanged with the Burlington was set out and picked up at Fox Junction by road crews, so there were many cars actually handled through Denver Gateway which did not move through our Denver yard. From these figures it can be plainly seen there is an available yard capacity on the Rio Grande at the present time.

As a matter of fact, during the war years we were never able to definitely establish the maximum handling capacity of our yards because while we handled an exceptionally heavy amount of traffic additional cars would have been handled through the yards had road crews and power always been available to move them as fast as we were getting them assembled and made into trains, assuming of course, that our connections at junction yards would have been able to take the business away from us as fast as we were able to bring it to them which, of course, was not the case.

Eastbound it is our practice, as I have previously stated, to classify trains at Roper which is our Salt Lake City, Utah, freight classification yard. If they are consolidated Denver-Pueblo Gateway trains they are then divided at Grand Junction and by a very simple switch move are consolidated with other divided trains and complete trains made up for Pueblo and Denver Gateways.

These eastbound trains all have as their objective, that [fol. 199] is, seventh morning from California concentra-

tion point. The trains have business for all points; the schedule is tied into Chicago seventh morning delivery. The condensed freight schedule which I now submit as Exhibit No. 5 gives not only the eastbound but the westbound condensed schedules.

Eastbound the schedule is of the run-off blocks, this being the last block out of concentrating point. We have many advance sections and it is by reason of these advance sections that we are able to have fills ready and available for the last section at Grand Junction. The last section ordinarily is a combined Pueblo-Denver train and by reason of advance planning we can put this last section into Grand Junction, separate it, fill it, and have both Pueblo and Denver trains moving within an hour. This is done with regularity.

As shown in Exhibit No. 5, the condensed freight schedule of the Rio Grande, effective May 15, 1949, which is still in effect, contemplates in addition to eastbound business competitive through schedules on westbound business. As is true of eastbound, the condensed westbound schedule shows the last or run-off schedule.

As to the classification of westbound business, prior to 1949 we were able to classify no business at Denver because of picking up all business by road crews at Fox Junction from the Burlington and the Denver stockyards. Denver trains were generally classified at Grand Junction; how- [fol. 200] ever, if conditions were right and the train stood in the proper condition on their schedule we might let them go unclassified to Roper, which is our Salt Lake yard.

Pueblo trains, however, were classified at Pueblo and blocked to and including Roper and connections. It was always our purpose to pock up in blocks or add in blocks at subdivision, nothing is done and if there is any new business therefore, which we receive and originate at Ogden are run out of there unblocked to Salt Lake Roper where the major blocking is performed. At Helper, Utah the next freight subidvision, nothing is done and if there is any new business it is added by a switch engine, but the run-off blocks are not touched except crews are changed.

At Grand Junction, Colorado, trains are divided as between Denver and Pueblo Gateways and we are able to get through that station in one hour with both Denver and

Pueblo trains. At Minturn, Colorado the next freight subdivision on the route to Pueblo, Colorado the run-off blocks are not touched except crews are changed.

The same thing is true at Salida, Colorado and at Pueblo the trains are broken up and business delivered to connections. On a Denver train it is progressed the same up to Grand Junction, but there is one less freight sub-division and the movement from Grand Junction to Bond, Colorado and thence to Denver corresponds with the move from [fol. 201] Grand Junction to Minturn, to Salida, to Pueblo. Nothing is done to the run-off trains at Bond except to change crews.

Therefore, on Pueblo Gateway business we pass through on our line seven yards and on Idaho business that we might receive from the Union Pacific from Idaho Falls, such business would move from Idaho Falls to Pocatello and Pocatello to Ogden. Considering Idaho Falls as one yard, there would be ten yard moves of more or less importance involved. Via the Union Pacific the same car, counting Idaho Falls as one yard, would move Idaho Falls to Pocatello to Montpelier, to Green River, Rawlins, Laramie, Cheyenne, Denver and Pueblo—nine yards as compared with ten via our lines. The difference, of course, is our short Ogden to Salt Lake move. The Union Pacific has a very wonderfully equipped hump yard at Pocatello where they do a very thorough job of classifying westbound business.

On their eastbound business they classify in three general blocks—cars for short points then Denvers and "North Platte". In other words, at Pocatello eastbound it is their general practice to only separate the shorts, the Denver business and move everything else to North Platte, Nebraska, where the final eastbound classification is made.

At Montpelier, Green River, Rawlins and Laramie their yard operation on through trains is comparable to our performance at Helper, Bond, Minturn, Salida, etc. in that [fol. 202] they change crews and go ahead. On Denver business that goes into Cheyenne they possibly do about the same work we do at Grand Junction. From the standpoint of the number of yards to move through the two routes may be considered as comparable.

By Mr. Quirk:

Q. Mr. Bradford, you have used some terms that might not be clear to the Interstate Commerce Commission. You have used the term "run-off blocks". Will you stop long enough to describe what you mean by that?

A. All California perishable business handled out of concentration points, Roseville, Sacramento, Colton, and other concentration points, on a basic 16-hour run off, which means that business leaving up to the cut-off time, and on a spread of 16 hours is all due at the terminal markets on the same day or the same day delivery.

Q. You have used the term "short points." What do you mean by that?

A. A short point is a point ordinarily between terminals or between classification yards where one classification yard would classify in block or in line all cars up to the next classification yard. I think that is as good an explanation as I might give you.

Q. All right.

Now proceed. What does "shorts" mean as distinguished from short points?

A. Those are cars for short points.

[fol. 203] Q. It means the same thing.

All right, proceed.

A. If the Ogden Gateway was available at equal rates, the movement of business to and from Idaho and the Northwest via the Union Pacific and the Rio Grande would, of course, not be a one-way street. The Rio Grande at the present time delivers the Union Pacific more originated business than it delivers to any of its other connections which, during 1948, totaled 466,477 tons at Denver and 1,573,474 tons at Utah junctions.

Actually we delivered the Union Pacific about 45.6 per cent, equivalent to 55,000 carloads, of all originated business delivered connecting lines during 1948. In the circumstances it will be seen that we are familiar with the problem of joint operation and interchange of business with that line, and any additional business which might be interchanged with the Union Pacific to and from Idaho and the Pacific Northwest would not present an operating problem.

The peak traffic year for the Rio Grande was 1944 and

there is attached hereto Exhibit No. 6 showing the business that was handled in 1948 in the same comparative territory and on the same basis of computation. You will note that this exhibit carries out the information given above so far as capacity of yards is concerned, and indicates that so far as road service is concerned there is definitely room on the Rio Grande at the present time for a considerable [fol. 204] amount of business even if 1944 is considered as a peak, and 1944 was not the peak of our capacity for various reasons.

The situation in 1944 at the peak of the war was a difficult one from the standpoint of personnel as we, at that time had many inexperienced men in our employ. In addition, since January 1, 1945 up to and including the 31st of August, 1949, improvements resulting in changes, additions and betterments of $41,400,000 had been made on the Rio Grande railroad and charges to operating expense incidental to this expense amounted to $19,800,000, so since the peak war year we have spent over $60 million in improvements to the property and enlarging the capacity thereof.

Items covered under this improvement program have been as follows: 3-5400 HP diesel freight locomotives; 10-6,000 HP diesel freight locomotives; 2-6,000 HP diesel passenger locomotives; 4-1,000 HP and 3-1,500 HP switch engines, so as a result of this there has been an increase of 15% in the available tractive effort on the railroad as compared to an increase of 13.6% in the country as a whole. During the same period we rebuilt and purchased 3,065 freight cars which has more than offset the retirements since January 1st, and we have increased the capacity of the railroad in freight cars 4.2%

Two main line bridges have been rebuilt and approximately four miles of line changes have been completed, re- [fol. 205] ducing curvatures; new tunnel construction at Tennessee Pass, and ten of the Moffat line tunnels have been concrete lined. Flood lights have been installed in yards at Pueblo, Minturn, Grand Junction, Helper and Roper. New yard offices have been constructed at Denver, Pueblo and Grand Junction and considerable space has been added to other yard offices.

The North Yard at Denver was constructed and this

constitutes about 18 miles of new track, a 16,000 ton capacity ice house, etc. Shops and engine houses have been improved, enlarged and modernized. Two-way systems have been installed at Denver, Pueblo, Grand Junction and Roper. Radios have been installed on switch engines in the territory Denved to Alamosa and Salida.

Pneumatic tube systems have been installed at Grand Junction, Salt Lake and Pueblo which expedites the handling of waybills, operating instructions, etc. Radio has been installed on main line freight diesels for en-to-end, train-to-train, and train-to-wayside communication. CTC has been installed between Denver and Orestod and automatic block signals from Denver to Pueblo and North Salt Lake to Ogden.

Slide detector fences have been erected where they would be advantageous. These among other improvements have resulted in an increased train speed on the main line territory involved in this case between 1944 and 1948 of from 2 to 4.5 miles per hour on all main line sub-divisions. This [fol. 206] represents an improvement of from 10% to 20% in train speed. At the same time the available gross tons per train mile have been increased about 400 tons which represents an increase in the train load of 15% or 16%.

There is another measure of capacity which might be used. In 1943, from a gross ton miles standpoint we handled 12,500,000,000 Gross Ton Miles. The heaviest month was August when we handled 1,100,000,000 Gross Ton Miles. As a result of our modernization and dieselization program our Gross Ton Miles per train hour changed from 29,747 in 1943 to 37,848 in 1948. In 1943 we operated 421,118 train hours. If this same number of train hours had been operated in 1948 our Million Gross Ton Miles capacity would have been 15,938,474,000 or about 27% over what we handled from a Gross Ton Miles standpoint in 1943.

Since January 1, 1949 we have increased our diesel ownership nine 6,000 HP locomotives which further increases our potential capacity. In August, 1949 our Gross Ton Miles per train hour was 43,714, so if we operated the same train hours in 1949 as we did in 1943 we would have a potential capacity of approximately 18,000,000,000 Gross

Ton Miles. Actually in 1948 we had a Gross Ton Mile figure of 10,800,000,000, which would indicate that we have a potential at the present time of approximately 70% in addition to our present business.

In addition to the improvements made on our own line we must not overlook the fact that improvements have [fol. 207] been made on connecting lines, which improvements enable them to take business from us currently, something they were unable to do in 1944. As a concrete example of this, there was a very serious congestion started in the fall of 1944 and during the months of September, October, and November we had to set out business on our line due principally to the inability of our connections to keep the flow current.

These railroads were working under war conditions just as we were. Their conditions have improved and they have likewise made improvements to their physical plants. It is inconceivable that short of another war a congestion of any consequence can occur. All of these things tend to show that while 1944 was the biggest year on the Rio Grande up to the present time it does not by any means indicate the potential capacity of the railroad.

We are not stopping with the work of improving the railroad because such things never stop. Our program for 1950 carries an estimated R&E charge of $2,500,000.

Exam. Mullen: Will you state what R&E means?

The Witness: Roadway and equipment charges to capital. Over $1 million of this is for heavier and improved rail.

At the present time we have an ownership of 215 steam and 67 diesel locomotives on our standard gauge lines. In addition to this ownership we have a contract with the American Refrigerator Transit Company, which company [fol. 208] has the responsibility of keeping us supplied with refrigerator cars, under which contract we have at our command a total of approximately 11,500 refrigerator cars.

The significance of this ownership is illustrated by the fact that during the past five years we supplied to our western connections, other than the Union Pacific, a total of 11,320 ART cars for return loading. These connections are usually supplied refrigerator cars by the Pacific Fruit Express. If the competitive rates which we seek in this proceeding are established to and from the closed door

territory north of Ogden, we would be in a position to contribute to the alleviation of any car shortage that might occur in that territory.

During the war years, as nearly as we can determine, we handled approximately 11% of all the east and west transcontinental traffic. There are seven routes involved and on an equal basis each of us should have handled slightly more than 14%. During this period we diverted under Kirk's Orders 19,075 cars to the Union Pacific's Northwest territory. These diversions took place principally in the years 1942, 1943, 1944 and 1945. In addition we handled many troop trains, military specials or freight billed from the east and south origins to and from the Northwest territory.

We delivered many cars to Clearfield and Ogden Storage Depots under transit because the war situation demanded free and unhampered transportation. As Mr. Hogue has [fol. 209] testified, another example of the ability of our railroad to keep on its feet and in a position to render service to the community, during last February's unprecedented blizzards we handled 4,208 carloads of diverted business for the account of the Union Pacific, of which 1,394 cars were Idaho and Northwest cars.

We handled 210 carloads of express, 276 carloads of mail and 44 Union Pacific passenger trains during this same period. The capacity of our railroad was not reached. The capacity of the power that was available and the power that we could rent from our connections was reached at the peak of this storm. Had the Union Pacific been able to turn over to us additional power, as at one time it appeared they could, we would have been in a position to have moved additional business during this trying period as our main line was at no time tied up.

During this period we rented 204 unit days diesels from the Union Pacific, February 11th to 24th, and had 4 of their 3900 series 97,000 tractive effort locomotives between February 13th and 23rd. We also had one 3 unit Missouri Pacific diesel for seven days and had two Western Pacific 99,000 tractive effort steam locomotives for about 20 days.

A good part of the business developed in Idaho and the Northwest is perishable business which requires ice. The Rio Grande owns natural ice storage capacity of 88,000

[fol. 210] tons; we have storage capacity of 4,000 tons of artificial ice and have standing contracts for 16,000 tons of additional ice. There is also available an additional 16,000 tons or a total of 124,000 tons of ice.

The largest single year we have had on the consumption of ice was 1947 when we consumed 81,070 tons. If we take the largest year from 1944 to 1948 we have a maximum usage of 89,094 tons. There appears to be no shortage of ice in our territory.

Mr. Quirk: I now ask that Witness Bradford's Exhibit 4, which is the condensed profile; Exhibit 5, which is the condensed freight schedule; No. 6, which is gross tons hauled one mile per mile of road, consisting of two sheets, and we are now asking that Exhibit No. 7, serviceable freight car miles per freight car day, be also identified.

Exam. Mullen: They will be so marked, Exhibits 4, 5, 6 and 7.

(Complainant's Exhibits 4, 5, 6 and 7, Witness Bradford, marked for identification.)

By Mr. Quirk:

Q. Mr. Bradford, do you have any comment to make about the significance of Exhibit 7?

A. Exhibit 7 shows the serviceable freight car miles per freight car day, the Rio Grande, the Western District, and the total for the nation as broken down to show the eight months of 1948, for the year '48, and for the eight months of 1949. It is simply indicative of the results of the im-[fol. 211] provement made on the Rio Grande and the effect of such improvements on our operations.

Q. For the first eight months of 1949, while shown on the exhibit, the Denver and Rio Grande serviceable freight car miles per freight car day exceeds all other railroads, the average of the other railroads in the Western District, does it not?

A. Yes, sir, 5.7 miles per day, and it exceeds the national average by 15.5 miles per day.

Q. From the standpoint of an operating man, what do these figures mean?

A. They are indicative of the movement of your general over-all business, empties as well as loads.

Q. Do they indicate the efficiency?

A. Yes, they indicate the efficiency in the movement of the business, and in the handling of cars, and speed.

Q. All right.

Exam. Mullen: Will you explain for the record at this point, what is a freight car day?

The Witness: One freight car, one day.

Exam. Mullen: That is actual use, actual movement?

The Witness: No. The cars that are serviceable. You take the total car miles made on any period and divide into it the number of cars on the railroad, multiplied by the days they are on the railroad, after eliminating the non-serviceable cars, and you will get the answer serviceable [fol. 212] freight car miles per freight car day.

Exam. Mullen: That note at the bottom, what does that mean?

The Witness: That is the source of it—source of these records, ICC M-20.

Exam. Mullen: The letters "OSF", I don't understand them.

The Witness: I don't remember just what they do stand for, but they are from an ICC form.

Exam. Mullen: Does somebody here know what they mean?

The Witness: I can find out and put it in the record for you.

Mr. Collins: Operating statistics for steam railroads, and it is like many of the Government organizations, we have to abbreviate.

Exam. Mullen: All right.

Mr. Quirk: That finishes with this witness. He may be cross examined.

Exam. Mullen: Do you have cross examination at this point, Mr. Collins?

Mr. Collins: I have a few questions, Mr. Examiner, but I unfortunately have a situation in which I feel compelled to ask for as early an adjournment and as long a recess as you can give us up to two o'clock.

Exam. Mullen: We will recess then until two o'clock.

Mr. Collins: Thank you very much.

(Whereupon at 12:02 p.m. the hearing was recessed to reconvene at 2:00 p.m. the same day.)

[fol 213] Afternoon Session 2 p. m.

Exam. Mullen: Are you ready to proceed, gentlemen? The hearing will be in order.

Mr. Bradford is ready for cross examination.

Mr. Collins: Yes, just a second, please.

R. K. Bradford resumed his testimony as follows:

Cross-examination.

By Mr. Collins:

Q. Mr. Bradford, on page 4 of your statement, at the beginning of the first full paragraph on that page you refer to—you say, "We are equipped to and did handle through Ogden in 1948 a maximum of 1,018 car moves a day." Was that what you would call a single car movement, I mean a movement in, or was it a movement in and a movement out?

A. Movement in and out, or interchange.

Q. In other words, it would have been——

A. It would not be 1018 individual cars.

Q. I see.

This is what you would call a double car count then?

A. It might be, yes, sir, of individual cars.

Q. Now on page 5 you refer to a "run of time" in connection with your mention of schedules, I believe, is the subject, and I believe you made some explanation to your counsel in which you mentioned a 16-hour run-off period. Do you recall that, Mr. Bradford?

[fol. 214] A. Yes, sir.

Q. Is that so-called run-off period still in effect, do you know?

A. I believe it is.

Q. I'm sorry I didn't hear all of your explanation about that period—explanation of the meaning of the 16-hour run-off period. Let me ask you, did you explain it in the record as to what it means in operation of the trains?

A. I thought I did. It simply means that a box leaving the concentration point as much as 16 hours after the first schedule is due out are entitled to the same basic arrivals

at Chicago, St. Louis, and other junction points as those that are leaving earlier.

Q. Well now, a block of cars leaving Oakland, Mr. Bradford, under this so-called 16-hour run-off period, isn't it a fact the block would be due to arrive in Ogden, or Salt Lake City, or wherever the interchange would be, at the same time?

A. No, sir, the blocks do not leave Oakland. The block leaves the concentration point and that territory would be either Sacramento or Roseville, and they are due at Chicago and the basic schedule points for the same deliveries.

They are spread out over different periods at Ogden and Salt Lake and other intermediate terminals.

Q. Well, would that 16-hour run-off period be of any benefit to the D&RG if cars were interchanged to it at [fol. 215] Ogden? In other words, would that mean any free time or extra time to the D&RG?

A. It does if the cars are in advance of the run-off block, yes, sir.

Q. I see.

Is there any division as among carriers, of this 16-hour run-off period, does so much of it belong to one carrier and so much to the other carrier?

A. There is between certain carriers on our line.

Q. But you don't know how it would work out as between the Union Pacific and your line if the Ogden gateway were opened?

A. There is no run-off involved from Idaho that I have ever heard of.

Q. I see.

A. This is California perishable and it is simply put in there to give you an indication of our eastbound perishable schedule.

Q. I see.

That part of your statement had no reference to the traffic involved in this case actually.

A. No, except those schedules, and all schedules prior to those schedules would be available for any business that comes to us from any connection.

Q. Well I thought you just said it would not be so if it came from the Union Pacific from Idaho through Ogden.

A. No, you misunderstood me. I said there was no run-
[fol. 216] off block arrangement that I knew of from Idaho.

Q. And you don't know how it would be, something would have to be worked out if the gateway were opened as a result of this case?

A. No, I said that the schedule given in my exhibit would be available to Idaho business and all of the schedules prior to those times would be available to that business, as they are available to other business that may develop in Utah, Ogden, Salt Lake, or any other point.

Q. Will you explain then—I confess I don't understand your explanation—will you explain how it might have some effect on Idaho traffic?

A. The schedule, for example, shows the run-off or last block is due out of Ogden at 9:40 p. m. the third day. Therefore, any business received up to that time could move on that schedule through to the destinations as shown and by connection to other destinations east of those river junctions.

Q. Well, then, whether that schedule would mean anything in connection with the Idaho traffic, would depend on when the Idaho traffic were delivered for interchange at Ogden, would it not?

A. Oh, yes. Any schedule from Idaho will be dependent entirely upon the type of service that your company renders up to Ogden, and the type of service your Ogden Union Railroad and Depot Company renders in delivering business to us at Ogden.

[fol. 217] Q. In connection with your Exhibit No. 7, as I have it numbered, showing serviceable freight car miles per freight car day, do you have that?

A. Yes, sir.

Q. You show for the Denver and Rio Grande in the first column 54 for the eight months of 1948, 54.9 for the year, and 57.5 for eight months of 1949. Then you make comparisons with the Western District and the national total freight car miles per freight car day. Would it affect your conclusion, whatever it is that you draw, to know that the freight car miles per freight car day of the Union Pacific is approximately 85?

A. I can give you exact figure for the eight months of '48 and the eight months of '49.

Q. Well, can you give them?

A. Eight months of '48 was 76.0; eight months of '49 was 66.9.

Q. Of the Union Pacific?

A. Yes, sir.

Q. And do you know what it is now, since we got past the blizzard and the block and all that?

A. I know what it was an October, 1949, it was 85.1.

Q. Now on the bottom of page 7 of your statement you are speaking about, as I understand it, a capacity on the Rio Grande now to carry additional tonnage?

A. That is correct.

Q. And your comparison, do I understand correctly, is [fol. 218] with your peak war year?

A. That is one of my comparisons.

Q. One of them, yes.

In the article in Fortune Magazine, in November, 1949, it is stated that—this article I refer to is concerning the Rio Grande Railroad—it is stated that the then tonnage of the railroad was only 11.5, as I recall it, under its peak war year, is that correct, do you know?

A. I don't know, sir. But the exhibit that I introduced with my testimony shows 1944, the peak war year, and 1948, the last complete year, and the percentages are mathematical.

Q. Yes.

A. Computations, you can probably get the correct amount.

Q. You don't know what the figure would have been for the period as of when this article was written, published in the November Fortune Magazine, do you?

A. I don't know what period they were covering in the article. I don't recall the figure that you quote, but I am willing to accept your statement that that was in the article.

Q. You have seen the article, haven't you?

A. Oh, yes, I saw it.

Q. Have you given any consideration in connection with this complaint as to what we might call the excess, unused or idle capacity of the Union Pacific Railroad to haul more tonnage?

A. None whatever.

[fol. 219] Q. You have not.

Now on page 8, Mr. Bradford, you refer to "expenditures in additions, betterments and improvements." Could you state about how much of that total expenditure has gone into main line, and how much has gone into branch lines of the Rio Grande Railroad?

A. Practically all of it has gone into main line expenditures, except, if you would enlarge that question to cover main line yards and supporting facilities for main line operation.

Q. I see.

But, essentially, it is main line expenditures?

A. Yes, it is, except to the extent that as the diesels have replaced steam locomotives from the main line, those steam locomotives are shoved back and placed over on certain of the more important branch lines, and thereby aided the branch lines to that extent.

Q. Now on page 10 of your statement you refer to the refrigerator car ownership and availability, and I see this sentence, "In addition to this ownership we have a contract with the American Refrigerator Transit Company, which company has the responsibility of keeping us supplied with refrigerator cars under which contract we have at our command a total of approximately 11,500 refrigerator cars."

Now isn't the American Refrigerator Transit Company a company that is jointly owned by the Wabash and the Mis-
[fol. 220] souri Pacific?

A. I believe so.

Q. I'm not positive of it, but that is the common understanding.

A. Yes, sir, I think that is right.

Q. And that is the total of the cars that they own, that the ART owns, isn't that correct?

A. Yes, sir.

Q. And does not that ART Company have contracts, so far as you know, with other railroads than the Denver and Rio Grande?

A. So far as I know they have no contract with anyone except the Denver and Rio Grande, but I imagine that they probably supply cars to others.

Q. Yes.

A. Under what arrangement I do not know.

Q. You don't intend at all to imply in saying that you have at your command this total of 11,500 cars that you can take any portion of 11,500 that you want at any particular time, do you?

A. Yes. I think that I intend just that. Under the contract we have with the ART Company they undertake to supply our demands and the demands of our connections.

Q. Do they always supply all that you ask them for?

A. They have done a very good job of it.

Q. You will have to be very specific about this, Mr. Bradford.

A. No, sir, I don't think they always supply every car we have asked for any more than any other car company, [fol. 221] or any more than we can supply every shipper every car he asked for.

Q. Then wouldn't this be a more nearly accurate statement that that company owns 11,500 refrigerator cars, and you have this contract with it, and you can ask for all you want, and they will do the best they can to supply all they can, and it doesn't mean at all they will supply all that you ask for or that you can come first in getting supplied out of 11,500?

A. Well, you become pretty involved in it. I will go to this extent, that I don't think anyone in the car supplying business can at any time guarantee they will furnish any customer all the cars they might order.

Q. As far as you know, though, there are other people who also draw on this—other lines, railroads, that draw on this 11,500 refrigerator cars?

A. Yes, as I stated in my direct testimony, the PFE contract lines drew on it to the extent of 11,320 cars over the past five years.

Q. Yes.

A. So presumably others are calling on them too.

Q. Yes, but I mean, though, in the first place, there are lines, railroads like the Wabash, the Missouri Pacific, and yourselves, and undoubtedly others, that have what we might call first call on the 11,500 ART cars, isn't that your understanding?

A. No, sir, I don't agree they have first call on them at all.

Q. You don't?

[fol. 222] A. Yes, sir.

Q. I named your line as one of them.

A. I agree we have, under our contract, we have a call on those cars. What their arrangement is with the other lines you will have to ask them, I do not know.

Q. Does your contract read to the effect that you do have first call on these cars?

A. No, I don't believe that that word "first" is used in there, Mr. Collins.

Q. Would it be asking too much of you to put a copy of that contract in evidence?

A. I would not object to putting that part of the contract that has to do with the supplying of cars, I think that would not be asking too much. There are other things in there I think might be immaterial to this case.

Q. Well, yes, I appreciate that. I would appreciate your putting in evidence——

Mr. Quirk: Wait a minute, Mr. Bradford.

Mr. Collins: Just that part.

Mr. Quirk: We will consider that.

Mr. Collins: He already said he has no objection to it.

Mr. Quirk: I may have an objection to it.

Mr. Collins: You are not a party to the contract.

Mr. Quirk: I am an attorney in this case.

Mr. Collins: Well, Mr. Examiner, I hope Mr. Quirk will [fol. 223] be rather lenient in his consideration of this, because I feel quite sure the record needs some clarification on it, and I appreciate that Mr. Bradford doesn't have knowledge, or could not be supposed to have knowledge of the immediate arrangements between the American Refrigerator Transit Company and other lines that I am sure he and all of us who are in that general field know there are other lines that draw on that supply of that group of cars.

Mr. Quirk: Just a moment. Mr. Examiner, I'm not sure that the contract is the pertinent thing here. The witness, in response to questions on cross examination, has testified as to just how the contract works, and how they work under the contract, and that is the important thing, nobody is chal-

lenging the contract as between the parties that have a right to challenge it.

Exam. Mullen: I assume Mr. Collins merely wants the exact terms of the contract governing the supply of these cars, that is all you desire, isn't it, Mr. Collins?

Mr. Collins: Yes.

Exam. Mullen: You are not interested in the entire contract, are you?

Mr. Collins: No, just that part. I don't want this record to be left in what I am quite certain is an erroneous, misleading impression, that the Rio Grande Railroad has command of 11,500 refrigerator cars.

[fol. 224] Exam. Mullen: Will you give consideration to that, Mr. Quirk, and let us know later?

Mr. Quirk: Yes. But let me make this one more observation. I don't want to have this case, Mr. Examiner, for the parties in this case to have an argument about what a contract means.

Mr. Collins: I'm not.

Mr. Quirk: Just a minute. I think the important thing is what the witness has said, that is the important thing. Are we in position to furnish cars in the manner he has indicated we are, and if that is what the contract has been applied as between the parties to the contract, then his testimony is competent to settle that question.

Exam. Mullen: Frankly, Mr. Quirk, when this testimony was given I was somewhat puzzled by that same expression, "We have at our command." I wish you would give consideration to that question, as to those particular portions of the contract only.

Mr. Quirk: All right. Maybe the witness can elaborate on that. I didn't understand him to mean he can command all the cars that are there at any moment. I don't believe he means that.

Exam. Mullen: That particular phase of the contract might clear that up.

Mr. Quirk: We will look at it.

Mr. Collins: Mr. Examiner, if they don't feel disposed [fol. 225] to alter the impression that the use of the word "command of 11,500 refrigerator cars," if they are not disposed to handle the matter, I—I mean to clarify it—give us a more definite picture on the record as to just

what they do mean—I may be able to find some information about it myself in the future, and put it in the record.

Exam. Mullen: Mr. Quirk will let us know about that later.

Mr. Collins: Yes, but I am anticipating his refusal.

Exam. Mullen: We have not had it yet, Mr. Collins.

Mr. Collins: No, that is right.

By Mr. Collins:

Q. In connection with the refrigerator car situation, Mr. Bradford, what was the refrigerator car situation during the so-called peach loading season in Colorado? I forget that area there, maybe you could mention it for us.

A. The Grand Junction area, Western Slope, Pallisade?

Q. Yes.

What was the refrigerator car situation then as to supply for Rio Grande loading in 1948, do you recall?

A. No, I expect it was rather tight right at that particular time. It generally is during the peach loading season because those commodities come on pretty fast and all at one time.

Q. Would you know whether your Superintendent of Transportation, Mr. Hale, called on the Union Pacific a number of times during that peach loading season in 1948 for PFE cars?

A. He probably did, there is nothing uncommon about [fol. 226] that. We call on them quite often when we get into a situation where we are short of not only ART's and where we are short of other cars, we call on them for help.

Mr. Collins: That is all; thank you. I had just one more question I wanted to ask.

By Mr. Collins:

Q. Page 11 of your statement, about the eighth line from the top, you have a sentence saying "We handled 210 carloads of express, 276 carloads of mail and 44 Union Pacific passenger trains during this same period. Will you tell us how long a period it was during which you handled these units you have mentioned?

A. I would say between February 13th and 23rd—about a ten-day period—1949. I am not quite sure of those particular dates, but it was about that time.

Q. Then in the second sentence from the one I read, you say "Had the Union Pacific been able to turn over to us additional power—" you could have handled additional business, and so on.

A. Yes, sir.

Q. Your own motive power was not sufficient to take—you had not a capacity of your own without help from the Union Pacific or some other railroad to handle these additional cars?

A. Not under those blizzard conditions at that particular time. We had plenty of railroad capacity, as I have ex-
[fol. 227] plained, and all of this business which has been backed up was dumped on us, you might say overnight. We did not have the power at our command, nor could the Union Pacific rentals have loaned us enough power to move it. We had to take what power we could get, and with that power we moved what business we could move with it. We had greater railroad capacity if we could have gotten more power.

Q. The Union Pacific, however, did turn over to you on some basis, rental or lease or something, a number of diesel units, and cooperated in that way, did it not?

A. Oh, yes, but the point I had in mind was the question of the capacity of the railroad, and a further point that at that time there was some discussion with the Union Pacific officers to see if we could get additional power from them. At one time it appeared they might be able to rearrange and help out in that respect, but they were not able to do so, so that the power, shortage of power, plus the heavy dumping of business at one time was the stopping point there, rather than the capacity of the railroad.

Q. Well of course is it not a fact that the capacity of the railroad to transport would be limited by the extent of its motive power to move trains?

A. That is correct, sir, but——

Q. Now——

A. May I add to something else?

[fol. 228] Q. Yes.

A. If you are seeking information in connection with that.

Q. Not on that feature, but you may certainly say what you wish.

A. The situation was a very unusual one. The Union

Pacific had hundreds of cars backed up, and numerous passenger trains, the night that they decided to divert business to us at Salt Lake for example, I think we handled 12 or 13 trains out of here during the night.

Q. Yes.

A. That disorganized not only their power but our power.

Q. Yes.

A. As I have stated, I cannot conceive of a thing like that happening again under those same circumstances, because I am satisfied that if the Union Pacific were unfortunate enough to be snowed in again, they would not wait quite as long as they did in time to let such an amount of business back up. An even flow of business is very important to keep it moving, and the even flow is what tests the capacity of the railroad, and not dumping stuff on it at very short notice as had to be done at that time.

Q. On the passenger trains, for instance that you handled, Union Pacific trains that you handled for them during that period, such as the City of San Francisco, and those streamlined trains in particular, didn't their own motive power [fol. 229] accompany the trains through?

A. Yes, sir.

Q. Now as I understand——

A. But we had to supply crews.

Q. Oh, yes.

A. And we had to supply motive power for the express trains, for the mail trains.

Q. Yes.

A. And for the approximately 5,000 carloads of business that—freight business that was diverted to us.

Q. Yes.

A. Including a trainload of Union Pacific oil.

Q. The fact is, though, the Union Pacific turned over to the Rio Grande during that period all of the motive power the Union Pacific officials said they could.

A. Yes.

Q. And your point is if they had turned it over to you, you could have handled even more traffic.

A. Yes.

Mr. Collins: That is all, thank you.

Exam. Mullen: Anything on redirect?

Mr. Quirk: No further questions.
Exam. Mullen: That is all, thank you.

(Witness excused.)

Mr. Quirk: Mr. Examiner, I offer in evidence Bradford [fol. 230] Exhibits 4 to 7, inclusive.
Exam. Mullen: No objection, they will be received.

(Complainant's Exhibits 4, 5, 6, 7, Witness Bradford, received in evidence.)

Exam. Mullen: Do you have another witness?
Mr. Quirk: Dr. Nelson.

El Roy Nelson was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your name, please, and your residence?
A. El Roy Nelson, resident of Salt Lake City.
Q. What is your address?
A. 1469 Princeton Avenue.
Q. Now at the request of the officers of the complainant here have you made an economic study and prepared some exhibits, and are you prepared to put your testimony in in this case in the form of a statement?
A. Yes, I have prepared an exhibit.
Q. You prepared a statement, your testimony.
A. A statement, and I am prepared to put this on the record.
Q. All right. Proceed to deal with your statement.

Mr. Collins: Before you do, I haven't any exhibits of Mr. Nelson. I have this pamphlet of the EXT here.

(Material furnished Mr. Collins.)

Mr. Collins: Is there just one?
[fol. 231] Mr. Quirk: I think you are the only one on the Union Pacific that doesn't have one. You ought to train your crew.
Mr. Collins: I have one.

Exam. Mullen: Go ahead, Dr. Nelson.

Mr. Collins: Mr. Examiner, I don't know when will be the right time to do it, but glancing at this gentleman's text, he apparently is going to show the growth of the Northwest, the increase in traffic, population, and all of that sort of thing, within the Northwest, and I presume would be ultimately laying the situation open to draw the conclusion that additional transportation facilities will be needed, but since I don't know when will be the right time, and I assume he will want to read this, I object to this sort of testimony on the ground of its irrelevancy, unless and until the Rio Grande Railroad shows that it proposes to furnish additional transportation facilities into this lush neighborhood, as they have called it.

In other words, my thought is it won't help the neighborhood, transportation-wise, just to have additional freight solicitors in there whose railroad line doesn't touch that area, and consequently, any information of this sort has no relevancy.

Exam. Mullen: Do you desire to say anything about that, Mr. Quirk?

Mr. Quirk: I doubt whether it is necesary, but I will just say this: The Commission is called upon to act in a case [fol. 232] of this kind, even Mr. Collins knows they have to look to the future.

Mr. Collins: Strike out "even."

Mr. Quirk: To the extent an economist can aid them getting together things that are generally known, but putting it in orderly fashion, is relevant material in a case of this kind.

Exam. Mullen: We will let the witness proceed, and if Mr. Collins has any objection to any particular portion of it, you may raise the point at that time. It seems at first glance to me to be relevant. But you may reserve the right to object to any particular portions of it as the hearing proceeds.

Mr. Collins: Thank you.

The Witness: My name is El Roy Nelson. For the past two years I have been associated with the Bureau of Economic and Business Research of the College of Business, University of Utah; as Director since 1949. From 1938 to 1947 I was associated with the University of Denver as

Professor of Economics. During that nine-year period I was, at times, also Director of the Colorado State, and the Tri-County Planning Commissions, Economist for the regional office of the National Resources Planning Board and for the Department of Commerce. During this 11-year period I have had considerable opportunity to observe economist trends, including production and trade in various areas and regions of the West. I am not, however, an authority on transportation, freight rates or traffic.

[fol. 233] My appearance before the Commission is at the request of the Denver and Rio Grande Western Railroad, a party to the action filed (ICC Docket 30297) against the Union Pacific Railroad.

Economic changes in the Pacific Northwest:

Dramatic changes in the economic patterns of areas and regions result from special causal factors. Since 1940 the biggest single factor has been war, which brought with it development of natural resources, use of special locational factors, use of power resources. To those who planned for war production, made decisions locating and constructing new plants must be given credit for capitalizing on natural mineral resources, locational advantages such as high productive labor forces, and available cheap power sources.

Aside from the exigencies of war, and viewed from the present, much of the government construction or sponsored construction of the arsenal of democracy, and subsequent sale of war built plants to private industry in portions of the west, hastened the economic development of the regions. In fact, such direct or indirect government sponsorship telescoped in less than a decade, a 30-40 year expectancy in industrial development of certain areas.

In no place in the nation is this more dramatically shown than in the Pacific Northwest. Readily available power from federally constructed hydro-electric projects on the [fol. 234] Columbia River was the most important foundational factor. Add to this the construction of industries dependent on cheap hydroelectricity—aluminum, chemicals, paper, products of electric furnaces. This combined set of forces based on cheap power overshadows all other economic development of the region. It is electric energy that

best exemplifies growth in the Northwest, especially in Oregon and Washington.

Population Growth in the Northwest:

Shifts in population from decade to decade have long presented intriguing patterns, and this is especially true since 1880 in the 11 western states. Interestingly enough, California has shown the most stable decade-to-decade percentage growth of any of the 11 western states. Montana and Nevada show the most violent reaction to local economic changes—and in and out migration of population. But violent fluctuations have also taken place in the Pacific Northwest. These are shown in page 1 of Exhibit 8.

Mr. Quirk: I offer this document of 11 pages as Exhibit 8 for identification.

Exam. Mullen: It will be received for identification as Exhibit 8.

(Complainant's Exhibit No. 8, Witness Nelson, marked for identification.)

The Witness: Completion of the transcontinental railroads to Washington and Oregon in the 1880's was at once [fol. 235] followed in that decade in doubling and trebling the total population of those states. The decade ending in 1900 was less dramatic. In fact, in that ten-year period, Idaho led the west in percentage increases in population.

In the next decade, ending in 1910, Washington shared with Idaho to lead percentage-wise population gain in the west. To 1920 Washington and Oregon did little more than hold their own in population and increased percentage-wise but slightly more than did the nation. To 1930 increase in population in Washington was below the national average, in Oregon but slightly above that average.

During the depression decade Oregon, Washington, and Idaho all increased in population somewhat above the national average due in part to the construction of hydro-electric projects in all three states and irrigation development in Idaho. The increase was not sudden. In fact, growth in the Pacific Northwest was generally undramatic from 1910 to 1940.

However, in that nine years since 1940, shifts in population to the west coast constitute one of the most significant

migrations in American History. Not only has the increase in numbers far outsripped that of any previous decade, but percentagewise the population growth of Washington and Oregon (like that of California) is greater than in any decade since 1910.

As shown on page 1 of Exhibit 8, Oregon leads the nation [fol. 236] in percentage increase from 1940-49, with a 59.3 per cent increase; Washington is reported to have a 48.7 per cent increase. Washington and Oregon have increased approximately four times as fast as has the nation as a whole. Idaho, in that decade, has increased by the same percentage as has the nation.

Montana shows a decrease in population since 1940. This latter is due primarily, like that in the extensive agricultural states, to mechanization in agriculture and consequent decreased need for agricultural workers.

Population and Employment:

Population shift to the Northwest from 1940 to 1949 has resulted from the obvious aftermath of increased economic activity in that region. We have been increasingly aware of the mobility of labor from region to region, to the extent that almost all population shifts can be accounted for by relative availability of jobs and employment opportunities. For recent decades and except for war periods, approximately 35 per cent of the total population is in the labor force; 52 per cent of the population over 14 years of age is at work or seeking work. So as nearly as can be determined from population and employment data, these percentages apply to the nation and to Washington, Oregon, Idaho, and Montana. Relative availability of jobs from area to area, state to state is a significant factor in population shifts.

[fol. 237] Employment patterns:

Now the pattern of total employment of a given area or region does not always provide the best key to measuring economic development. As of an earleir date, new land was important. Only to a minor extent has new land under irrigation projects been an important factor since 1940. The migration to areas is associated with industrial growth.

Of greater significance is the trend in employment in the basic or physical production industries.

In the Northwest, or in any other region, this basic principle holds true—the ultimate population growth of a region is determined by the employment opportunities in the physical production industries. These are catalogued to include agriculture, mining, manufacturing, transportation and construction. As of 1940 employment in the basic industries as a percentage of total employment in the Northwest states was approximately 50 per cent.

This is also true in 1948 and 1949. This is the same thing as saying that the total of the basic economic activities has developed since 1940 in a constant ratio to those activities in service industries.

New Patterns:

The war brought to the Pacific Northwest new fields of basic production activities, with various electro-process industries including aluminum production, the chemicals [fol. 238] and expansion of other industries including paper and steel. According to data from the War Assets Administration government and private investment provided 160 million dollars of new plants in electro-process industries alone. This marked a definite change from the natural resources type of opportunities to one of converting goods such as alumina into finished products, where power, rather than mineral resources found locally was the base. This was the first major step in the Northwest disassociated from distinct developments of the soil, forests, mines, and fishing waters of the region.

Industrial changes in the Northwest:

Hydro-electric power developments in the Northwest have been the most important factor in the wartime expansion and the post-war development in Washington and Oregon. This has been the causal factor in aluminum production and fabrication of this product.

New industries together with expansion of old ones made possible the condensing, in less than a decade, of industrial development that might have been spread over 40 to 50 years. It was based on power development, and on the sup-

plemental industries associated with this field. Nature had not favored the Northwest with large quantities of coal—of coking coal or with petroleum or natural gas. Although there is a possibility of gas and oil from Canada the large power resources of Washington and Oregon are water power and electricity.

[fol. 239] Industrial employment:

Industrial employment has kept pace with total employment and expansion of industrial activities throughout the Northwest area, extending through Oregon and Washington to British Columbia which, like the two states, has cheap electricity. Although current data are not readily available, a comparison of industrial employment in manufacturing industries of Oregon, Washington, and British Columbia shows the major changes that have taken place from 1940 to 1947 and 1948. These data are shown in pages 2-6 of Exhibit 8.

Exam. Mullen: When you use the expression "British Columbia," do you include that in your definition of the Pacific Northwest? Just what states are included in the Pacific Northwest?

The Witness: Specifically in the Northwest, Washington, Oregon and to a lesser extent Idaho and Montana.

Examiner Mullen: Just a minute, to a lesser extent, geographically?

The Witness: Geographically.

Exam. Mullen: Will you tell us just what portions of those states are eliminated, so that in reading the record we will know definitely the areas you are speaking of?

The Witness: For this particular point, production workers, '39 through '47, the four Northwest states previously listed, plus British Columbia.

[fol. 240] Mr. Collins: Excuse me, Mr. Examiner, do you mean all of Washington, all of Oregon, all of Idaho——

The Witness: These are total figures for the states, yes.

Mr. Collins: I want to get all of the states. All of Oregon, all of Washington, all of Montana, all of Idaho, is that it?

The Witness: For this exhibit I have taken the total data form each of those states.

Mr. Collins: I see. All right. Go ahead.

Exam. Mullen: In response to my question, I thought you said that it didn't include all of two states you named there. What did you mean by that?

The Witness: I thought you were asking for a definition of the Northwest.

Exam. Mullen: I'm asking for a definition of the Northwest as you use it in your testimony.

The Witness: As I use it in this particular testimony, it applies to all four of those states, and for this exhibit, British Columbia.

Exam. Mullen: So you do not eliminate any portion of those states in your testimony.

The Witness: That is right.

Mr. Collins: I thought he just said to a lesser extent, Idaho.

What did you mean by that?

[fol. 241] The Witness: That was where I was attempting to give another definition of the Northwest.

Exam. Mullen: That is the thing that confuses us somewhat. I want to know what you mean by the Pacific Northwest, when you use it in your testimony, not any other definition. I think you explained that, as including all of the states?

The Witness: That is right.

Exam. Mullen: All right.

The Witness: Data available for 1949 indicate some recession in Washington and Oregon from the peak of 1948. Decreases are apparently about the same as for the nation as a whole.

Manufacturing Industries:

Increase in population in Oregon and Washington since 1940 is best explained in the increase in basic productive industries, which not only provide employment in those industries, but provide the foundational income on which service industries, and employment in service industries are based. Oregon's population increase of 59 per cent since 1940 to lead the nation, and Washington's increase of 49 per cent are accounted for largely by the industrial development of those areas.

As an additional causal factor, the most important single

item in those two states is the availability of cheap electricity. Cheap power is associated first with the aluminum industry, but also effects other industries such as chemicals, iron and steel, machinery manufacture, paper production, and even furniture.

[fol. 242] According to the Federal Power Commission reports, generation of electricity in Washington in 1948 was 14.8 billion kilowatt hours. Compared with 3.9 billion in 1940, this was an increase of 279 per cent in eight years. Oregon's generation of electricity in 1948 was in excess of 5.5 billion kilowatt hours, compared with the 1.7 billion kilowatt hours generated in 1940. This was an increase of 220 per cent. The national increase in eight years was 132 per cent. These are shown on page 7 of Exhibit 8.

The Grand Coulee Dam, constructed from 1933 to 1940, is by all odds the biggest single source of power in the Northwest. The Bonneville Dam constructed in the 1930's, although small by comparison with the Grand Coulee, is still six times as big as the largest electric generating plant in Utah. The McNary Dam now under construction will add approximately one million kilowatt capacity to the Northwest, and will help to remedy in that area the lack of power which plagued the Northwest in the winter of 1948-49, and necessitated the transmission of power even from Utah through the regional interconnected power pool.

But for industrial purposes, such as the aluminum industry, firm power is available in the Northwest at 2.1 mills per kwh according to the Bonneville Power Commission, far below that of most other areas of the country excepting industrially owned plants which by now have written off the [fol. 243] capital cost of their generating equipment. Although temporary shortages of power such as occur with the freezing of streams in Washington last winter are to be expected for some time, including this week, the fact remains that the Northwest has approximately 76 per cent of the potential hydro-electric power of the nation, and this factor is the most important single additional industrial location factor in that area.

Aluminum

The aluminum industry of the Northwest is founded on one idea, cheap electricity, which became available with the

completion of the Bonneville and Grand Coulee projects after 1940. Government constructed plants for the production of pig aluminum from alumina and for rolling mills for bars and slabs have since been disposed of to private industries. In 1940 the aluminum industry of the state of Washington was begun with construction by the Aluminum Company of America of a 5,000 ton capacity plant in Vancouver, Washington, to use Bonneville power.

This was, in 1940, 2.4 per cent of the national total. As of 1948 the Northwest production of 295,000 tons was 47 per cent of the national total. In the meantime the United States production of aluminum had increased by 200 per cent over the 1940 total. Even during the peak of the war period the Northwest did not exceed 41 per cent of national [fol. 244] production, and is relatively more important in 1948 and 1949 than during 1943-1945.

In contrast to most other industries, as yet there is no real relationship in the Northwest between Aluminum and sources of raw materials or markets. The one factor is power, beginning with Alcoa's use of Bonneville dam power in 1940 and the use of up to 46 per cent of Bonneville Administration power generation's capacity for aluminum alone. According to data from the Bonneville Power Administration the aluminum industry in the Portland, Tacoma, and Spokane areas consumed in excess of 4.6 billion kilowatts of electricity in 1948. Reduction of alumina to aluminum requires almost 10 kwh per pound of aluminum, and additional power is required for rolling mill operations.

In addition to power, the aluminum industry of Washington and Oregon consumed in 1948 more than 800 million pounds of alumina (all from the Louisiana area), 5 million pounds of cryolite (mostly from Greenland), one million pounds of aluminum fluoride from Missouri. Petroleum pitch, petroleum coke, and soda ash in significant quantities were from Oregon, Texas and California.

In 1949 approximately the same quantities will have been used. The Northwest's aluminum industry must find most of its market outside Washington and Oregon. Some of the aluminum is shipped as pig, other as bar and sheet. So [fol. 245] nearly as can be determined, in 1948, only 6 per cent of the Northwest's aluminum products was used in

Washington and Oregon; ten per cent in California and Arizona, and the remainder shipped east of the Missouri River as pig aluminum or as rolled aluminum products ready for fabrication.

Construction in 1949 of Alcoa's seven million dollar bar and rod mill in Vancouver (Portland area) will consume some additional quantities of Northwest-produced aluminum. This plant will produce electric transmission cable and is expected to consume 15,000 tons of pig or bar aluminum per year (about five per cent of the Northwest production). But the plant will then have a product which will also be marketed primarily in the east.

According to data from the State departments of employment security in Washington and Oregon, the aluminum industry of those two states in 1948 directly provided employment for 5,700 people, with an annual payroll of eighteen million dollars. According to Maurice W. Lee of the University of Washington, derived industrial operations from aluminum provided employment for 22,000 people in 1948 in Washington and Oregon with an annual payroll of sixty-one million dollars.

Ferrous metals:

Rather significant steel production is also located in the Seattle and Portland areas. In the absence of low cost pig iron, the industry is based primarily on scrap, but more [fol. 246] significantly on the electric furnace. According to data from the Iron and Steel Institute, steel ingot capacity of Washington and Oregon was 170,000 tons in 1938, and in excess of 400,000 tons in 1948.

Most of this capacity is in the Seattle area, but significant quantities are also in Portland. Characteristic of the industry is the electric furnace. One problem in steel expansion in the Northwest has been the lack of firm power corresponding to that available on a contractual basis in the aluminum industry.

Rolling mill capacity in iron and steel, however, is significant, and includes heavy structural pipes, universal plates, splice bars and tie plates, track spikes, hot rolled bar steel, and concrete reinforcing bars. While a considerable portion of this industry's market is in the Portland and Seattle areas, significant quantities go into miscellaneous items, es-

pecially transportation equipment marketed both within the Northwest and other areas. Of significance are alloy steels, the production of ferro-silicon, again dependent on low-cost electricity.

This industry, in steel ingot capacity, as well as in fabricating plants, has expanded significantly since 1940. Data shown on pages 2, 3 and 4 of Exhibit 8 illustrate the growth, the number of establishments, and production workers in primary metals, fabricated metals, machinery, electric machinery, and transportation equipment in Washington and [fol. 247] Oregon—confined largely to the Seattle and Portland areas. Although total production workers in Washington increased from 1939 to 1947 by 50 per cent, workers in various metal industries increased from 87 per cent to 350 per cent.

In Oregon (largely confined to the Portland area), increases were just as significant as in Washington. Interesting also are the increases in production workers in these same industries in British Columbia. Although some of these industries are relatively small, the increase in the Northwest in number of production workers since 1939 is of significance.

This is especially true of electric machinery and transportation equipment in Washington; the primary metals, electric machinery and transportation equipment in the Portland area. Again the most significant key in this group of industries is the availability of power, to a lesser extent the immediate marketing areas.

Lumber and lumber products:

The largest manufacturing industries of the Northwest from a standpoint of employment are the lumber, paper, and related industries. As shown on pages 2, 3 and 4 of Exhibit 8 approximately one-third of production employment in manufacturing industries in Washington, Oregon and British Columbia are in these industries.

Percentage-wise, these industries increased much less than did those of the allied industries, such as furniture, [fol. 248] paper and paper products. Of interest is the growth in the plywood industry of Washington and Oregon, but centered largely in the Portland area. According to the Portland Chamber of Commerce, in the Portland area alone,

nineteen operating plants, in 1949 have a capacity for plywood of one billion square feet annually.

Thirty per cent of this is exterior grade, the remainder interior. This itself has grown up almost entirely since 1940. The market for 80 per cent of these materials is outside the Northwest.

Pulp and paper manufacturing is confined largely to the Portland area, about one-half in Oregon and the other half across the Columbia in Washington, and the capacity is in excess of one million tons, most of which is moved east to markets.

Food:

Second only to lumber and allied products from the standpoint of employment is that of food processing industries of Washington and Oregon, which increased from 1939 to 1947 in terms of production employment by approximately 50 per cent. These industries include fish, and the canning and freezing of foods and vegetables. The number of workers in this industry are shown on page 2 and 3 of exhibit 8 for 1939 and 1948. Rather obviously, the big market for these industries must be beyond the borders of the two states. [fol. 249] This is especially true of berries, but is true of most other fruits, and of peas and corn. In 1948 Washington and Oregon produced more than 13.4 million cases of canned vegetables (13 per cent of the US total); 3 million cases of canned fruit (9 per cent of the US total); a major portion of quick frozen fruit. Most of these products are marketed east of the area.

Miscellaneous industries:

Of importance primarily from a local market standpoint, but also for some national markets, are the textile and apparel industries of Washington and Oregon. Blankets, swimming suits, shirts and ski togs are produced. All of these have national markets.

Chemical Industries:

Chemical industries of the Northwest are associated rather distinctly with other manufacturing, such as paper, plywood, furniture, wood preservatives, with agricultural

and related industries such as fertilizers, insecticides, and fungacides. To a great extent, raw materials for these industries must be imported into the Northwest. Exceptions are lime and limestone, or products coming from by-product plants. Many of the chemicals, however, are related closely to electric power.

Chlorine and caustic soda:

Caustic soda and chlorine are produced in the Portland and Tacoma areas in sufficient quantities to satisfy the Northwest demands. The big customers are the wood pulp [fol. 250] and paper making industries. However, in 1948 approximately one-third of the chlorine production was marketed outside the area. Raw materials, primarily salt, are shipped into the region, but electrolytic processes from available cheap power are used. In this instance, despite the freight charges on salt from the San Francisco Bay area, the cheaper electricity is the important causal factor in establishing the industries in the Portland area.

Sulfuric Acid and other acids:

With completion of the American Smelter and Refining Company's 100 ton daily capacity sulfuric acid plant at Tacoma, the Northwest should have an adequate supply of sulfuric acid. The new supply will be added to that of a small unit plant which utilizes waste sulfuric dioxide gas. Other chemicals including hydrochloric acid, sodium silicates, ethel alcohol are of a size sufficient to satisfy the Northwest's basic demand. All of these are marketed to northwest industries to produce other items that are shipped east.

Trade—Northwest and other parts of the nation:

Specialization by areas of the United States in production of products in which comparative advantage is the rule remains a definite part of the economic pattern. The specialization is usually based on some comparative advantage such as climate, soil conditions, mineral deposits, and other factors such as cost of power and fuel.

[fol. 251] Although for manufacturing data alone there is evidence of considerable increase in production to satisfy

just a local demand, the greatest increase in processing is reflected in trade beyond the state borders. Historically, the Northwest, like most other sections of the West, is a producer of raw materials or small processed goods. This is fundamentally true today, although the new addition of power in the Northwest must be considered in its proper place as a significant industrial locational factor.

Changes in trade as among the states, both in total quantity and in specific types of goods, reflect the economic growth of those areas and are closely associated with total population growth as well as with industrial, agricultural, and other employment.

The trends in Northwest trade are best told from official publications or from data available from such publications. These include Interstate Commerce Commission quarterly and annual reports on Tons of Revenue Freight Originated and Tons Terminated in Carloads, by Groups of Commodities and by Geographical Areas, Class I Steam Railways. These are available from 1940 through the first quarter of 1949.

A second source of relatively greater value from the standpoint of a study of specific transportation by rail from state to state is found in the Interstate Commerce Commission, Bureau of Transportation Economics and [fol. 252] Statistics, Studies on Carload Way Bill Analyses, available for 1947 and 1948. These data, while including state to state relationships, did not identify the specific product but only the general class of agriculture, livestock and manufactured goods, and the two other classes. The data are from sampling including one per cent of the traffic of Class I railways.

A third source of data is available only for 1939, and is a carload traffic study based on way bill analyses for one day each month for that year.

These items are on a commodity basis, but show the trade originating and terminating for each major commodity item as among all of the states. A combination of these data reveals rather significant trends from pre-war to 1948. Shown on pages 8-11 of Exhibit 8 are total trade reported for 1939 and for 1948 between the four northwest states and the other states.

Originating and terminating traffic:

Class I railway freight tonnage increased considerably from 1939 to 1948. For the United States as a whole that originating increased by 49 per cent, that terminating, which theoretically should be the same as originating, increased by 40.6 per cent. The difference in these totals is explained by the fact that originating and terminating on smaller than Class I railways do not appear, nor does the freight forwarded traffic. There is also the lag at the [fol. 253] end of the year. Of significance, however, as shown in the exhibit, are the changes in trade as among the four states and the rest of the nation.

Northwest states' trade with other states 1939 and 1948 as shown by Class I railroad data:

As shown on Page 8 of Exhibit 8 freight originating in Washington and terminating in states to the south and east increased substantially from 1939 to 1948. The same is true of freight terminating in Washington and originating in states to the south and east. Of those states shown in the exhibit, Illinois, Minnesota and New York continue as the most important terminating states for Washington products. However, from the period 1939 to 1948, percentage increases were greatest in the south and east.

As shown by tonnage terminating in Washington, the states of Louisiana and Utah, of those shown, are the largest shippers. Percentage increases from 1939 to 1948 were greatest in Louisiana. Although details by commodities are not available (except for 1939) data on freight originating and terminating by commodities and by states reveal important changes. These data are not shown in the exhibit, but are readily available in the ICC quarterly and annual reports of "Tons of Freight Originated and Tons Terminated in Carloads by Groups of Commodities and by Geographic Areas—Class I Steam Railways." Generally the difference between amount originating and terminating indicates the net shipments into or out of the state. [fol. 254] Although increases are noted in agricultural and forestry products, the most significant increases are in manufactured goods: aluminum, newspring, woodpulp, and building woodwork shipped from the state. Significant in-

creases in goods entering the state (net terminating) are in machinery, iron and steel products, and alumina.

Oregon's trade with other states—shown on page 9 of Exhibit 8 is similar in trend to that of Washington. New York, Texas and Minnesota are the most important south and east terminating states for Oregon products. Percentage-wise increases since 1940 are most noticeable in Florida, Connecticut, and Virginia. As originating states for freight shipped to Oregon from the south and east, Illinois and Utah are the leading states. Percentage increases since 1939, however, are most noticeable in Kansas and Maryland.

Data from the ICC quarterly and annual reports by commodities indicate the same trends as Washington—significant increases in aluminum, woodpulp and paper shipped from Oregon, and alumina and machinery shipped into Oregon.

Idaho, chiefly dependent on potatoes as its "exported" product, ships chiefly to Utah, then Illinois, but markets significant quantities in other states to the south and east. These are shown on page 10 of Exhibit 8. Changes in amounts of goods shipped into Idaho from states to the east and south have not been so significant as in Oregon and [fol. 255] Washington. As to commodities, while potatoes dominate Idaho trade to the east, phosphates and fertilizers are of growing importance.

Montana's trade as shown on page 11 of Exhibit 8 has changed less than has trade of the other northwest states. However, significant increases are in phosphate rock and fertilizer (not shown specifically in the exhibit).

Trade among the northwest states and to the east and south is only a partial clue to changing economic patterns. However, significant changes are noted that indicate growing industrial development.

Mr. Quirk: You may examine the witness.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Mr. Collins: Mr. Examiner, I suppose now after the wit-

ness—you told me I could object to any particular part of this, and I find that one part of it—each part of it is as irrelevant as every other part of it, so I now move to strike the testimony, the text, and if and when the exhibit is offered in evidence, to reject it on the ground that both are irrelevant and immaterial for particular reasons which I would like to state.

One is that since there has been no indication of the purpose of the testimony, it must necessarily undertake to show such increase in various industries and what not in the Northwest as necessitates greater transportation ca- [fol. 256] pacity. Now, Mr. Earley has testified with respect to the fact that to the territory, that part of the Northwest territory, which includes Portland, Seattle, and Tacoma and the area of western Oregon, all this lush area, or most of it at least, where the industries are, as recited by this witness, that the Rio Grande Railroad has that territory wide open to solicitation on joint through rates on an equality with other carriers.

Now if the testimony is intended to prove the need of additional transportation capacity to and from this growing area, then I suggest to you that since there is no proposal to add any trackage or any physical transportation to what the Union Pacific and the other lines have between that area, and speaking specifically with reference to the Union Pacific, from the Portland and Northwest area down to Ogden, there would be nothing added to transportation carrying ability, why the testimony then can have no possible relevance, because it is obvious the Union Pacific Railroad can haul whatever share of the stuff it gets from Portland to Pocatello, it can certainly haul it all on its main line to east or to the west.

In short, this is probably 800 or 900 miles from any of the points, the nearest point at which the Rio Grande Railroad could be of any assistance from a transportation standpoint. I move to strike the testimony, and to reject the exhibit on the grounds that I have stated.

Exam. Mullen: Do you wish to reply to that, Mr. Quirk? [fol. 257] Mr. Quirk: Do you think it is necessary?

Exam. Mullen: I thought perhaps you might want to say something on it.

Mr. Quirk: I would like to say this: Of course this case doesn't involve the building of new railroad facilities, but according to the premise assumed by Mr. Collins——

Mr. Collins: On the facts stated, not the premise assumed.

Exam. Mullen: We will let Mr. Quirk continue with his reply.

Mr. Quirk: Even with the railroad facilities that exist in the Northwest, each of the railroads in the Northwest, if they had this policy of closing the door to each other as to through routes and equal rates, the Northwest could not have developed. Therefore, it is relevant in a case of this kind to have before the Commission in an organized manner, not only the present, the past, but the prospective development and otherwise of this Northwest territory.

The Commission, of course, knows without being told by us that it is a growing territory. Therefore, it will be relevant in this case for the Commission to have before it in concrete form and manner that all the routes of the railroads will be necessary to this growing country.

I submit it is relevant and material, and the motion should be denied. I offer Exhibit 8 in evidence.

Exam. Mullen: It is the Examiner's opinion that the [fol. 258] facts stated here are relevant, and the Commission may give such weight to it as it desires in the light of all of the testimony in the record. The motion of Mr. Collins, therefore, is denied. The exhibit is offered in evidence. Is there any objection in addition to those you have already raised?

Mr. Collins: Do you say I renew it?

Exam. Mullen: Do you have any additional objection to the receipt of the exhibit in evidence other than the one you have already raised?

Mr. Collins: No.

Exam. Mullen: Then the exhibit is received in evidence.

(Complainant's Exhibit No. 8, Witness Nelson, received in evidence.)

Mr. Quirk: That is all, Dr. Nelson.

Exam. Mullen: Do you have some cross examination of this witness?

Mr. Collins: No.

(Witness excused.)

Exam. Mullen: We will take a recess for ten minutes.

(Short recess.)

Exam. Mullen: The hearing is ready to resume.
Do you have another witness, Mr. Quirk?
Mr. Gibson: Mr. Snooks.

LE ROY SNOOKS was sworn and testified as follows:

[fol. 259] Direct examination.

By Mr. Gibson:

Q. Will you state your full name, please.
A. Le Roy Snooks.
Q. Where do you live, Mr. Snooks?
A. 150 East Alberta Drive, Ogden, Utah.
Q. Do you live inside of the City of Ogden, or is that on a ranch or farm outside of Ogden?
A. North Ogden is a suburban town now of Ogden.
Q. I see.
Do you own ranch or farm property?
A. Yes, sir.
Q. What products do you raise on that property?
A. Cherries, apricots, peaches, hay, and grain.
Q. Do you have another occupation besides that of a grower of farm products?
A. Yes, sir.
Q. What is that?
A. Manager of a Co-op, North Ogden Fruit Exchange.
Q. How many grower members are there of the North Ogden Fruit Exchange?
A. About 70.
Q. And what area do the members cover geographically, with their ranches and farms?
A. The north half of Weber County and a good portion of the south end of Boxelder County.
[fol. 260] Q. Would you say the northern limit of that

area would be the City of Brigham or approximately in that area?

A. Yes, sir.

Q. What products do the members of your cooperative grow, Mr. Snooks?

A. Principally cherries, apricots, and peaches.

Q. Can you give us some idea of the carloads that are produced by these members in a year's time?

A. About from 20 to 25 cars of cherries, 50 or 60 cars of apricots, and the same amount of peaches.

Mr. Collins: How much?

The Witness: The same amount of peaches.

Mr. Collins: 50 to 60?

The Witness: Yes.

By Mr. Gibson:

Q. Where are the markets for the products you grow?

A. On what we call the fresh shipments, we ship to the Middle West and the Southeast, and a good portion of our apricots and peaches, when they get to the over-ripe stage, we ship to Delta, Colorado, a processing plant.

Q. That is a frozen fruit processing plant, isn't it?

A. That is right.

Q. Is that the same processing plant that Mr. Reed testified about this morning?

A. The Skyland Food Corporation, yes, sir.

[fol. 261] Q. How are the products of your grower members shipped into Delta, Colorado, Mr. Snooks?

A. Carload.

Q. Do they move from the vicinity in which they are grown, or are they trucked to Ogden and moved by rail from there? What is the process?

A. They are trucked to Ogden and shipped from Ogden.

Q. What is the advantage in shipping from Ogden?

A. The freight rates.

Q. Well, do you mean in shipping, or in transporting the fruits to Ogden, and then shipping into Delta, you are able to use a transit arrangement at Delta?

A. That is up to the processor. They insist that we load our fruits at Ogden on the Denver and Rio Grande, on account of freight rates.

Q. I see.

What is the relationship between the members in your organization that are close to Ogden and those that are farther away from Ogden with regard to the expense of trucking into Ogden and shipping on to Delta?

A. We load most all of the fruits in and around Ogden for Delta. Those who are farther out, a lot of their fruit goes to the ground on account of the transportation charges, especially this past year.

Q. In other words, they lose their crop because of the [fol. 262] high expense of trucking it into Ogden in order to ship it over the Rio Grande?

A. That is right, inasmuch as the price this past season was such that it didn't pay them to harvest and haul that far to load on the cars.

Q. Why can't you load these products on the Union Pacific, Mr. Snooks?

A. Because we are instructed from the buyer to load on the Rio Grande.

Q. Is that because he wants to use the Rio Grande, and thus enjoy the transit privileges at Delta?

A. Evidently so.

Q. To points beyond in the East?

A. That is right.

Q. Mr. Snooks, do you have any estimate as to the loss of crops that was suffered this year because of the high expense of trucking these fruits into Ogden?

A. Well, I would say that we lost between 2 and 3 hundred tons of apricots. The processing plant, Mr. Reed was asking for more apricots all the time, but we just couldn't get them trucked in from the Northwest district.

Q. What is the distance from Brigham to Ogden?

A. 18 miles.

Q. How close are these growers around Brigham to the Union Pacific tracks?

[fol. 263] A. Oh, the farthest of them away would not be over a mile and a half.

Mr. Gibson: You may cross examine, Mr. Collins.

Cross-examination.

By Mr. Collins:

Q. Mr. Snooks, I understand that the crop of your co-operative members was not marketed this year, in some one of these products? I didn't understand you.

A. I didn't understand your question correctly.

Q. Did you say that some of your members did not market a portion of their products at all this year?

A. Apricots?

Q. Apricots?

A. Apricots and peaches.

Exam. Mullen: Read the answer, please.

(Answer read.)

By Mr. Collins:

Q. Now, you are aware of the fact, are you not, in other apricot growing areas farmers did not market them because the price was too low?

A. I realize that they were not all marketed.

Q. Because the price was too low?

A. Because they didn't have a market.

Q. Well, all right.

Do these products, cherries, apricots, and peaches, or some of them, require pre-cooling or protective refrigerator service while they are in transportation by rail?

[fol. 264] A. Yes. Not all pre-cooling, they require refrigeration.

Q. Refrigeration, yes.

The Union Pacific has no machinery for that process in the beginning, at least, as I understood it they were pre-cooled. It has none of that machinery available there for pre-cooling at Brigham or that area, has it, or any place short of Ogden,—nearer than Ogden?

A. That is right.

May I correct that to a certain extent?

Q. Yes.

A. The shipments to the processor do not require pre-cooling.

Q. All the way to Delta, you mean?

A. That is right.

Q. Neither do the cherries nor apricots nor peaches?

A. I'm talking of apricots and peaches, because we ship no sweet cherries to the processor.

Q. Well, the ones you ship to Delta are over-ripe peaches?

A. They are ripe peaches, not over-ripe.

Q. Oh. What do they require, refrigeration?

A. Just standard refrigeration. We usually use Rule 247.

Q. You said your markets, the markets of your members, were in the Middle West. Would you mention some of the larger cities or towns within the area that you call the Middle West?

A. Topeka, Kansas, Omaha, Wichita, Kansas City, Sioux City, Dallas.

[fol. 265] Q. Do you go as far as Chicago?

A. No, we very seldom go to Chicago.

Q. Now in the Southeast, will you mention some of the principal cities?

A. We have gone to New Orleans this past season with some peaches, very few. Dallas is a common shipping point.

Q. Those are the——

A. Down in that area.

Q. I thought you said the Southeast.

What was the first town you mentioned besides Dallas?

A. New Orleans.

Q. New Orleans and Dallas.

A. Yes.

Q. Do you go any farther east than New Orleans?

A. No.

Q. Now, Mr. Snooks, who pays the freight charges on these shipments you ship out from the area that you have described to your counsel, of production of your commodities?

A. The buyer.

Q. On the shipments to the Skyland Food Corporation of ripe peaches, would that corporation pay the freight charges?

A. They pay the freight.

Q. None of these products you mentioned are processed at Delta, Colorado, or any other points on the Rio Grande except these ripe peaches?

[fol. 266] A. Peaches and apricots.

Q. Peaches and apricots.

Q. Do you grow either of these products yourself on your farmlands?

A. I grow all three.

Q. Do you operate the function yourself personally as sort of a buyer for this Skyland Food Corporation?

A. My products, do you mean?

Q. Not necessarily of your own, but from others. I suppose you sell your own direct to the Skyland?

A. No, everything goes through the exchange.

Q. I see.

Well, is it through you personally that the Skyland Food Corporation makes the transactions, or the deals?

A. They make the deal with me for the production from the exchange.

Q. Yes.

What per cent of the products of the North Ogden Fruit Exchange is shipped to Delta?

A. Well, I think over a period of ye-rs I would say about 50 per cent of the peaches and apricots.

Q. Yes.

And none of the cherries, of course?

A. No, none of the sweet cherries.

Q. Now when you market, when you have a high price [fol. 267] and a good demand for these products, they would go on to market, would they not, regardless of what you referred to as high truck rates?

A. On the fresh market, do you mean?

Q. Well, whatever way they are marketed. If the price is high——

A. The price fluctuates with the processor as well as on the open market, usually.

Q. Well, what happened to the portion that was not marketed this year?

A. They are still on the ground.

Q. Rotted on the ground we may say.

Now, if the price had been high, two or three times as high as it was, and there had been a demand, the entire crop would have been marketed, would it not?

A. No doubt, if the grower could deliver to that point at a profit.

Q. What I'm trying to ascertain is, whether this is the fact, that the market demand and market price are the controlling things insofar as the sale and disposition of the products of the North Ogden Fruit Exchange are concerned, aren't they?

A. Yes.

Q. Now you told your counsel that loss this year to members of your exchange, as I understood you, was the cause of the high truck rates from the Brigham area, or wherever [fol. 268] this land is into Ogden, is that correct?

A. Overhead expense, yes.

Q. Do you know whether the truck rates are lower or higher than the rail freight rates?

A. I am unable to answer that.

Q. Well, you just don't know. That is all right.

Mr. Collins: That is all. Thank you.

Redirect examination.

By Mr. Quirk:

Q. Mr. Snooks, I am told by our traffic man that the rail rate from Brigham and Ogden, to say, Chicago, is the same. Now if the Union Pacific had adequate service and gave joint and equal rates with the Rio Grande, would these producers up there, yourself, ship by the Union Pacific instead of trucking into Ogden?

A. No doubt.

Mr. Quirk: That is all.

Recross-examination.

By Mr. Collins:

Q. What would have to be done to make the service and rates adequate, do you know?

A. The rate on the Union Pacific would necessitate them cutting the rate to Ogden.

Mr. Collins: Will you read me the answer?

(Answer read.)

Mr. Collins: That certainly is not an answer. I asked him what would have to be done to make the rates and serv-

[fol. 269] ices adequate, to use the word Mr. Quirk, his counsel, used.

By Mr. Collins:

Q. What would the Union Pacific have to do, how far would it have to cut the rate? Let's strike that out.

I wish to remind you that a while ago, Mr. Snooks, you told me you didn't know whether the rail rate was lower or higher than the truck rate.

A. That is right.

Q. Then you don't know—do you know what adequate means, as your counsel used the term to you?

A. I might state that under the conditions of the past year that the truck or the rail must be cut in order for those people to deliver to the Denver and Rio Grande at Ogden, so as to cut their overhead, that they might make a profit on their fruit.

Q. In other words, when your market is dull, and your prices are low, then in order to make any money, all expenses including transportation charges would have to be reduced proportionately, wouldn't they?

A. Yes.

Q. Now, who is it that needs the lower rates, or the transit privileges on such of your products that move to Delta, is it you or your members, or is it Mr. Reed with his Skyland Food Corporation?

A. It certainly means to both, from my way of looking.

[fol. 270] Q. The needs you have, then, is it not, is that Mr. Reed and his food corporation might not buy them?

A. If the price is too high. He comes out with a price, and if we can't meet it, then the fruit is not harvested.

Q. Mr. Reed's food corporation buys the products, you might say, on the ground, or at your——

A. Loaded on the cars.

Q. At your produce exchange, and your people load them on the cars. They are FOB car at the point where they are loaded.

A. That is right.

Q. And the rest is up to him, including the routing of the shipments. That is, you ship them wherever he says to ship them?

A. It is understood we ship to the processing plant at Delta.

Q. All he buys from you, then, goes to Delta?

A. Yes.

Q. He pays the charges?

A. That is right.

Mr. Collins: That is all.

Mr. Gibson: I have one more question, Mr. Snooks.

Further redirect examination.

By Mr. Gibson:

Q. Isn't it true you have every year a certain part of your crop that is over-ripe and is for sale to only a processing plant?

A. Approximately 50 per cent over a five-year period.

[fol. 271] Exam. Mullen: That appears to be all, thank you, Mr. Snooks.

Mr. Collins: Just a minute.

Exam. Mullen: I beg your pardon.

Mr. Collins: This witness told me a while ago he didn't ship over-ripe, and I scratched out on my pad over-ripe. Which is it, is it over-ripe?

The Witness: May I correct that, we don't ship over-ripe, we ship ripe peaches to the processing plant.

Mr. Gibson: My mistake, Mr. Collins.

Mr. Collins: All right, thank you.

(Witness excused.)

J. Arthur Knudsen, was sworn and testified as follows:

Direct examination

By Mr. Gibson:

Q. Will you state your full name, please.

A. J. Arthur Knudsen.

Q. What is your address, Mr. Knudsen?

A. 1353 South 19th East, Salt Lake City.

Q. In what line of business are you engaged?

A. I'm President and General Manager of Knudsen Builders Supply Company.

Q. What products does your organizations have for sale, Mr. Knudsen?

A. We sell on a wholesale basis roofing, insulation, wall boards, hardwoods, plywoods, doors, windows, and a full [fol. 272] line of general building material.

Q. Is your main selling office at Salt Lake City?

A. Yes.

Q. From what points do you get your products that you wholesale?

A. We get them from Marrero, Louisiana.

Q. Would you give the product?

A. Cellotex Corporation. From Cincinnati, Ohio, roofing. From Minneapolis, Minnesota, asphalt siding. From St. Louis, Missouri, asbestos products. From Orangeburg, North Carolina, hardwood, plywoods. From Louisville, Kentucky, doors. From Algoma, Wisconsin, hardwood, plywoods. That is about the extent of our shipments from the East.

Q. How many customers do you have, Mr. Knudsen?

A. We have a customer list of about 500 with a substantial portion of that being bought by about 300.

Q. Can you give me general locations of your customers?

A. From St. George, on the south——

Q. That is in Utah?

A. Yes—throughout Utah. The western slope of Colorado, through to Rock Springs in southwestern Wyoming.

Mr. Collins: Through to Rock Springs?

The Witness: Yes.

Up to and including Jackson, Wyoming, on the western strip of Wyoming. Southeastern Idaho, as far north as Ashton, and as far west as Magic Valley, including Sho- [fol. 273] shone, Twin Falls, and Buhl.

Q. Do your customers buy the products you handle in carload lots or part carloads?

A. They buy three different ways: carload, pool car, and out of our jobbing stocks.

Q. In general, how is most of your freight handled, in part car lots?

A. It varies with the commodity involved. A low-co

high tonnage commodity such as roofing is best distributed on a pool car, or carload basis. Such items as hardwood, plywoods which might run $15,000 a car, and any fraction thereof, would be too large for any one single account that usually goes through a jobbing stock.

Q. Taking the product of celotex, which is shipped from Louisiana, would the orders you have been for part carloads to your dealers along the Rio Grande and Salt Lake and northeastern Utah and into Idaho?

A. We have a manufacturer's specification of 7,000 feet per stock. A carload involves 56,000 feet. Theoretically we could have seven stops and one destination. Practically, we often have four or five stops to destination.

Q. How would you handle an order of 7,000 feet of celotex to your customer in Durango, Colorado, for instance?

A. I could not at the present time, if the car was going to move into Idaho. It would have to be a car which I [fol. 274] could stop before it got north of Ogden.

Q. I see.

And a dealer in Grand Junction, who wanted 7,000 square feet, could you handle that?

A. We couldn't handle that. When you mention Durango, Colorado, we couldn't service Durango out of here, because of the fact that I have been told it is a narrow gauge railroad going down there.

Q. That is right.

A. We have customers who want to haul by their own truck from Grand Junction to Durango, but the complicated shipping situation, and our being unable to time every shipment with cars that are not going to go north of Ogden, often precludes the possibility of our including such customers in cars.

Q. If you had through rates available, over the Rio Grande in connection with the Union Pacific, then you could handle these various customers in Colorado and Idaho with one car, unloading a part of the car at various stations, could you not?

A. Yes.

Q. Mr. Knudsen, how many cars do you ship over a year's time?

A. In our entire operation, and depending upon whether we use maximum car weights on it, we will run from 4 to

5 hundred cars a year. That number, however, includes some cars coming out of the Northwest. From the East [fol. 275] I would say we would run 150 to 200 cars a year.

Q. Do you have customers along the Rio Grande at Glenwood Springs, Price, Grand Junction, Ephraim, Manti, Provo?

A. Yes, we have customers in all those places.

Q. And if the rates were available in connection with the Union Pacific, you could handle part carloads to those customers as well as to customers in northern Utah and Idaho?

A. Right.

Mr. Collins: Mr. Examiner, I object to counsel making the statement and having the witness just agree with him. The question is leading.

Exam. Mullen: The question is leading.

Mr. Gibson, you will have to direct your questions directly to the witness without leading him.

Mr. Gibson: Yes, sir.

By Mr. Gibson:

Q. Mr. Knudsen, you are familiar with the complaint of the Rio Grande in this case, are you not?

A. I have not read the complaint, nor am I entirely familiar with it other than my understanding is that the net result will be that shippers will be able to ship into Idaho without having the Union Pacific carry them from either, in my case, Kansas City, or Omaha. We can bring them in by the D&RG and serve customers on the western slope of the Rockies, and in eastern Utah on the D&RG, and still have the Union Pacific take them into Idaho at the same transcontinental rate.

[fol. 276] Q. If these competitive rates were established, would you be able to expand your business, in Idaho, and Colorado?

A. We would be able to give better service to our customers in the western part of Colorado, and effect savings for them on numerous occasions which would build up their financial capacity, increase their efficiency, and enable us to do more business with them, and by the same token, we are shut out from aggressively soliciting business of

certain customers over there, because the few cars we have coming into Salt Lake City that we are sure Salt Lake City is going to be the eventual destination, there are so few that we don't always like to include the D&RG routing on those cars.

We have to remain flexible enough in our schedules to permit us to either divert or place on original routing so those cars end up at our Pocatello warehouse.

Mr. Quirk: I would like to ask one question, Mr. Examiner, if I might.

Exam. Mullen: Go ahead.

Direct examination

By Mr. Quirk:

Q. Is the inference correct, although you have competitive rates, equalling the Union Pacific in its connections to Salt Lake City, you don't dare use the Rio Grande to Salt Lake City unless you are sure that there will be no partly unloading or any other transit arrangement, is that right?

A. That is right. If I am 100 per cent sure, a car is [fol. 277] going to end up in Salt Lake City. I have no reason why I can't route it by either railroad, but if there is a slight possibility that that car might have to go to Pocatello, in order that we might have to take care of either our own warehouse stocks, or some customer in Idaho, we have to keep our routing such that we can divert that car.

Q. And did I understand you correctly to say that in these circumstances, you ship very few cars over the Rio Grande to Salt Lake, although its rates are equal and the same as the Union Pacific?

A. That is right.

Q. You lose all that business because of the existing——

Mr. Collins: I object. That is the most leading on yet.

Exam Mullen: That is leading.

Mr. Quirk: I admit that is leading.

Exam Mullen: Do you want to reframe the question, Mr. Quirk?

Mr. Quirk: I think the witness has answered my questions all right that were not quite so leading.

Mr. Gibson: You may cross examine, Mr. Collins.

Cross-examination

By Mr. Collins:

Q. I take it you don't pay the freight charges on the shipments that you were speaking of, do you?

A. The freight is often billed to the receiving yard. Supposing a yard is on a tail end of a series of pool car [fol. 278] deliveries, that customer might be billed the freight. We usually instruct the agent if the customer does not desire to pay the freight to forward it to us and we will pay it. In most cases we will pay the freight.

Q. You gave the street address of your Salt Lake City——

A. That is my residence address.

Q. Oh,

What is your business house address here?

A. 203 West 5th South.

Q. What is that, Mr. Knudsen, is it a warehouse, or storage place?

A. It is on premises 198 by 165, with 30,000 feet of storage space, and office and accounting office.

Q. And aside from the office portion, what goes on in the rest of the building?

A. We have a spur facility where we can unload four cars at a time and we handle all types of building materials from that location.

Q. As stated, indicated by carloads, from what origin point would you say the greater number of carloads move toward you and your customers in this area?

A. I think it would be a toss-up, varying according to the seasons, between Cincinnati, Ohio, and Marrero, Louisiana, and Minneapolis, Minnesota.

Q. And out of the sum, say 500 cars a year, approxi- [fol. 279] mately, that you might ship, about how many would that total be from these three points you mentioned? Would that be most of the 500?

A. There would be from those three points about 150

cars a year. I amended my testimony to read that while we ship 500 cars, only about 150 to 200 came out of the East.

Q. I see.

What portion of your total volume of business is transacted at these points along the Rio Grande Railroad in Colorado or in Utah?

A. I don't have a complete analysis of the percentage. We have three very fine dealers in Price, Utah, one in Helper, a very small one in Green River. We have one resident—one dealer who has headquarters at Grand Junction, and another with large operations at Durango and Cortez, who is often called upon to truck his materials clear from Salt Lake City to his point of use, due to the fact that we are unable to stop cars in Durango.

We have had to pass up business as far East as Glenwood Springs, due to the fact that we couldn't so route the cars in order to accommodate those customers with the tonnages they could accept and pay for.

Q. You say you could not so route the cars?

A. That is right.

Q. Well, why not?

[fol. 280] A. Well, rather than theorizing, I have this one account, who I would not trust for over $1200 worth of merchandise, unless we wanted to go through an involved procedure of sight draft bill of lading and so forth, which are clumsy. The car originates in Minneapolis, Minnesota. We must keep flexible enough to get merchandise into Pocatello and other southeastern Idaho points. Those cars do not always move right on the dot, as far as our ability to order them, or the manufacturer's ability to ship them.

We must keep our shipping schedules as flexible as possible to meet the needs of our customers. They cannot always accept material exactly when it is our convenience to ship. We would increase our percentage of being able to accommodate those customers and get the material to them at exactly the time when they are best able to pay for them, if we could route every car, or a reasonable number of those cars, to include those points in western Colorado in order that we might serve those accounts and get the merchandise to them when they most need it.

Q. Why can't you route them that way now?

A. I can, if I want to pay local freight from here to Pocatello, but it isn't economically sound for us to penalize our customers, nor is it economically sound for us to take a loss on that.

Q. You mean that you are saving money by not routing [fol. 281] them that way, is that it?

A. We save some.

Q. You are avoiding the loss of money.

A. Yes.

Q. You do serve these customers now, don't you?

A. Not as efficiently as we could if we had a more flexible shipping schedule.

Q. Do you mean if you had lower rates?

A. I am not asking for lower rates than we have, all I want is the privilege to so route a car that it can come into say Denver and be given to the D&RG for a stop or two on the western slope of Colorado, or in the eastern part of Utah, and then to be given to the Union Pacific to be taken on up to Pocatello at our prevailing rate.

Q. At through rate.

A. Right.

Q. It is of no benefit to you to have the present rates and privileges by way of the Union Pacific from the East to Salt Lake City and stop to partly unload and thence to points in Idaho?

A. It is a benefit to have that.

Q. Then would the desirable situation that I understand you to describe, result from having the same privilege at these various points to stop off and partly unload on the Rio Grande in Colorado and maybe Utah?

A. I would like to hear that question again.

[fol. 282] (Question read.)

The Witness: Yes.

Exam. Mullen: May I interrupt at this point: How many stop-off privileges do you have on the D&RGW?

The Witness: Providing Ogden is the eventual destination, we have the same number of privileges as far as railroad regulations are concerned, with the exception of lumber products, there we get only one stop in destination. But on miscellaneous products, we can get a number of stops.

Exam. Mullen: Suppose the stop is beyond Salt Lake City.

The Witness: Then I have no stops—pardon me, did you say beyond Salt Lake City?

Exam. Mullen: Ogden, rather.

The Witness: I have no stop-off privileges. I have no way of even routing that at the same rate if the D&RG par-icipates in the haul.

Exam. Mullen: You mean you cannot use thos- stop-off privileges and joint through rate at the same time, is that it?

The Witness: No, Union Pacific has to get that car from the way we ship it at either Kansas City or Omaha.

Exam. Mullen: All right.

Mr. Collins: That is all.

Exam. Mullen: Anything further?

Redirect examination.

By Mr. Quirk:

Q. Mr. Knudsen, if the car moved say from Minneapolis [fol. 283] or Chicago, via the Rio Grande, via Denver, or Pueblo, and it was destined at the time it started say to Los Angeles on the Union Pacific or to some points served by the Southern Pacific or Western Pacific, could you then stop at the D&RG points?

A. I am not involved in that routing privilege, because sometimes if the manufacturer has such a shipment, I leave it to their traffic men, who are full-time in their capacity, to wrangle that out with their own shipping line. We have had complications, though, where they have been shipped, and then we have not been able to get them stopped.

Mr. Quirk: All right.

Recross-examination.

By Mr. Collins:

Q. Just a moment.

Could you tell us about what percentage of your shipments, carload shipments I guess they would be, do you think you would partly unload at these various points named

in Colorado on the D&RG if you had this privilege that you speak of?

A. Of that 150 cars, I think the maximum that we would exercise that privilege in that area would be approximately 25 per cent, roughly.

Q. Per year?

A. Yes.

Mr. Collins: All right, that is all.

Exam. Mullen: That is all, thank you, Mr. Knudsen.

(Witness excused.)

[fol. 284] Exam. Mullen: Do you have another witness?

Mr. Quirk: Mr. Examiner, there is a gentleman here from Portland who would appreciate it very much if he could take the witness stand. He should not be longer than ten minutes or more on direct. If there is no serious objection to that we can put him on.

Exam. Mullen: I hope we can finish in 15 minutes, because we have to give up the room at five.

Mr. Quirk: We have to give up the room at five?

Exam. Mullen: Yes.

Mr. Quirk: You can make no promises about cross examination, can you?

Mr. Collins: What did you say?

Mr. Quirk: Get on the witness stand.

REGINALD T. TITUS was sworn and testified as follows:

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

There has been filed with the Examiner a petition for leave to intervene, filed by the Western Forest Industries Association, which has been presented by Mr. R. T. Titus, Executive Vice President. Is there any objection to the petition?

Mr. Collins: I would like to know if this is the action of [fol. 285] his association, or whether he is just acting individually, using their name.

The Witness: No, it is the action of the association Board of Directors at a meeting on September 13th, authorizing our applying for a petition to intervene.

Mr. Collins: Do you have a lot of members?

The Witness: Yes.

Mr. Collins: Is this the result of membership action, or just what is this?

The Witness: No, it is membership in our association, the Board of Directors is the governing organization, and they take action after considering the problem without referring the matter to the members, individually.

Mr. Collins: They have that authority.

The Witness: Yes, sir.

Exam. Mullen: Mr. Titus is appearing here as a witness.

Mr. Collins: But not necessarily on this intervention.

Exam. Mullen: No. No objection?

Mr. Collins: No objection.

Exam. Mullen: It will be received, and the association is permitted to intervene.

Do you wish to be noted on the record as appearing in a representative capacity for the Western Forest Industries Association, in addition to signing this document?

The Witness: Yes. I didn't understand what you meant. [fol. 286] Exam. Mullen: You will file your appearance then with the Reporter after you finish your testimony.

The Witness: Yes, sir.

May I proceed with my statement?

Exam. Mullen: Go ahead.

For the record, in addition to filing the petition, Mr. Titus is appearing here as a witness, has been sworn, and is prepared to give his testimony.

The Witness: My name is Reginald T. Titus. I am the Executive Vice President of Western Forest Industries Association, office address at 704 US National Bank Building, Portland, Oregon.

In accordance with action of the Board of Directors of our association on September 13th, we wish to indicate that we believe the action requested by the DR&G Western in this case is necessary to carry out the national transportation policy to provide transportation at reasonable rates and without undue advantages or discrimination. There are

only two or three items in which we as lumber shippers or shippers of forest products are concerned.

We are vitally interested in having a flexibility in the routing of your products to all parts of the United States. We believe that the lack of competitive through rates, via the Ogden gateway and the D&RGW, discriminates against the lumber shippers in some areas in the territory north and [fol. 287] west of Ogden.

That discrimination I might say is primarily because they are denied the privilege of selecting their own route, inasmuch as the rates by way of Ogden and the D&RG to certain points are higher than the rates via the Union Pacific and its connections. The result is that these lumber shippers do not always have the privilege of choosing their rates economically, and we would like to see that condition eliminated.

Another important factor is that under the present situation these lumber shippers do not enjoy the same transit privileges on the D&RG that they do on the Union Pacific, and by transit privileges, I have in mind particularly stopping of a car to partially unload or to be remanufactured, or to be treated, preservatively treated, and then to continue its journey. Another important factor is the inability under present conditions to reconsign a car, and by that I mean this: It frequently happens that a seller of lumber from some part of the territory north and west of Ogden will sell a car of lumber to a dealer on the D&RG. When that car arrives, for some reason, the dealer is not able to take it, and the car must be reconsigned to another destination.

Now, if it is necessary to send that car beyond the limits of the D&RG lines, the shipper must pay a combination rate which is higher than the through rate, and that may make the difference between a profit and loss on the transaction. [fol. 288] Because of the fear that that may happen, a good many of our shippers of lumber just do not take a chance and do not ship into the territory that is served exclusively by the D&RG. We believe that if the petition of the D&RG is granted, that it will give us more flexible routing, it will increase the lumber consuming territory that our shippers have in which to market their lumber.

That is all.

Direct examination.

By Mr. Quirk:

Q. Mr. Titus, are there markets on the D&RG and Colorado such as at Salida, that your lumber might reach if the equal competitive rates were established by the Union Pacific and the D&RG?

A. Yes, we believe so.

Q. What caused you to believe that? What is there at Salida, Colorado?

A. I mentioned the fact that one of the transit privileges that we desire is that of stopping to treat lumber preservatively. There is a wood preserving plant at Salida, and material coming from the Northwest could stop there for treating in transit and then be reshipped to points east and south of Salida.

Q. Is it a fact that market at Salida is now closed to your shippers to the extent they use the Union Pacific?

A. Yes.

Mr. Quirk: I have no further questions.

[fol. 289] Exam. Mullen: Mr. Collins.

Cross-examination.

By Mr. Collins:

Q. Is that market also closed to the extent that you use the Southern Pacific?

A. No.

Q. Western Pacific? Any other railroad?

A. No, the only one I know it would be closed to would be the Union Pacific.

Q. Have you had anyone request you to stop a car at Salida to have this wood preserving process inflicted upon it?

A. Nobody asked me. I don't sell lumber. I'm the Executive Officer of the association.

Q. I see.

A. I do not know what the members have requested.

Q. As a matter of fact, you don't know whether any requests have been made, do you?

A. I assume they have, from the desire of the members to have the privilege of stopping at that plant.

Q. The desire of the members.

A. Members of our association.

Q. Where are they located principaly, Mr. Titus?

A. They are scattered from British Columbia, through Oregon, Washington, Idaho, Montana, New Mexico, northern California. I would say there were more—I should say there are more in Oregon and Washington than in any other of the states I mentioned.

[fol. 290] Q. Would that include the area around or near Seattle, Tacoma?

A. Yes.

Q. Down to Portland and west?

A. West and east.

Q. What?

A. West and east.

Q. You know, don't you, as to all of that area from somewhat east of the towns I mentioned that the Rio Grande Railroad had joint through rates over its line?

A. Yes, sir.

Q. You know that?

A. Yes.

Q. Do they use that route, do you know?

A. Oh, yes.

Q. Has there been any inadequacy in that route, doesn't it serve the purpose of your membership?

A. It doesn't serve the members who are not on the Southern Pacific, or who do not connect with the Southern Pacific.

Q. Do any of your members actually sell any lumber at any point on the Denver and Rio Grande Railroad, do you know?

A. Yes.

Q. They do?

A. Yes.

Q. How does that move, do you know?

A. It moves in various ways. Some of it moves by way of [fol. 291] the Southern Pacific, and then D&RG, and some of it moves by way of the Union Pacific, and the D&RG. They are sales which are to points on the D&RG, not for transit purposes.

Q. In other words, that is its destination at those points.

A. Yes.

Q. And at those points you have joint through rates.

A. Yes.

Q. How many carloads do you suppose, or if you know, would your members ship if there were joint through rates between the Union Pacific and the D&RG for transit at some point on the D&RG?

A. I do not know.

Q. Have you given any consideration to that?

A. I have no way of ascertaining that.

Q. Has any of your membership ever given you any idea as to what they need in that respect?

A. No, I don't think anyone knows, until the situation is such that it could be utilized, no one is going to develop the territory.

Q. Then what gives rise to your thought they might want to use that privilege?

A. Our shippers like to be free to ship in all directions, and over all lines.

Q. What brought this situation to your attention?

A. Oh, I suppose that some of our members read in the [fol. 292] newspapers about the case, and what was being proposed, and as shippers naturally they are interested in improving the facilities that they have for serving their customers.

Q. And if, as you just said, without knowing whether or not, or having an idea whether or not they might use the privileges?

A. There is no way they can tell whether they would use it until the privilege existed.

Q. How many of your members indicated to you a desire to have these through routes and rates as requested in this complaint?

A. I do not know, because the information was brought to the Board of Directors by our traffic committee.

Q. I see.

A. And the traffic committee is the one that receives the reports, I suppose, from the members.

Q. From your testimony here, then, the record must show that you don't know whether a single carload might avail

itself of this more flexible transportation arrangement that this complaint talks about.

A. Of my own knowledge, I don't know. As I say, I do not ship the lumber.

Mr. Collins: That is all.

Redirect examination.

By Mr. Quirk:

Q. The factor of reconsignment and treating lumber in transit, is that an important factor in the lumber business? [fol. 293] A. Yes, it is.

Q. Do you have what you call in the trade "distressed cars" frequently?

A. Yes, we do.

Q. What happens in connection with these distressed cars of lumber?

A. A distressed car is a car of lumber which has been consigned to a customer and which for some reason or other has not been accepted by the customer. It then must be resold. When one has a distressed car on his hands, he sells it as quickly as possible to avoid paying the demurrage. There is a large volume of lumber business which is handled on what we call a transit basis. In other words, cars start rolling from the mill unsold, and the efforts of the shipper are to sell that car before it reaches certain points, and when you have the privilege of reconsigning on a through rate, if you don't sell it at one point you can divert it to another point, but when you do not have that privilege of reconsigning, then the car is distressed and you have to sell it to the best of your ability in the territory that is available, which may be restricted to a single town, or a few towns in that vicinity.

Mr. Quirk: That is all.
Mr. Collins: That is all.
Exam. Mullen: That is all.
The Witness: Thank you.

[fol. 294] (Witness excused.)

Exam. Mullen: We will recess until 9:30 tomorrow morning.

(Whereupon, at 5:04 p. m. the hearing recessed to reconvene at 9:30 a. m. on Wednesday, December 14, 1949.)

[fol. 295] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, et al., Defendants

Transcript of Testimony—Salt Lake City, Utah, Wednesday, December 14, 1949.

Met, pursuant to adjournment, at 9:30 o'clock a. m.

Before Frank E. Mullen, Examiner

ADDITIONAL APPEARANCES:

Lowe P. Siddons, P. O. Box 1052, Colorado Springs, Colorado, appearing for the Holly Sugar Corporation, Colorado Springs, Colorado.

Jefferson C. Church, Public Service Commission of Wyoming, Supreme Court Building, Cheyenne, Wyoming, appearing for the State Board of Equalization and Public Service Commission of Wyoming.

[fols. 295a-296] Chas. E. Blaine, 900-1-2 Title & Trust Building, Phoenix, Arizona, appearing for American National Live Stock Association and Colorado Cattlemen's Association, Intereveners in support of Complainant.

[fol. 297] Proceedings

Exam. Mullen: The hearing will come to order, please. Are there any additional appearances?

Mr. Siddons: Lowe P. Siddons, Holly Sugar Corporation.

Exam. Mullen: What is your position in this proceeding?

Mr. Siddons: We have an intervening petition in support of the petition so far as it pertains to livestock.

Exam. Mullen: Did you file it?

Mr. Siddons: Yes sir.

Exam. Mullen: Any other appearances?

Mr. Church: Jefferson C. Church, Supreme Court Building, Cheyenne, Wyoming, State Board of Equalization and Public Service Commission of Wyoming, intervenor in opposition to the complaint.

Exam. Mullen: Any other appearances?

(No response.)

Exam. Mullen: That appears to be all.

M. S. ROSENBLATT was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Will you give your name to the reporter?

A. M. S. Rosenblatt.

Q. You have been sworn, have you?

A. Yes sir.

Q. State your address and your business.

[fol. 298] A. President and General Manager of the Structural Steel and Forging Company of Salt Lake City, Utah.

Q. Do you have a warehouse or some plant served by the Denver, Rio Grande, Western Railroad?

A. We have a warehouse and fabricating plant served by the Denver and Rio Grande Railroad.

Q. Describe the character of your business.

A. Our business is divided into two departments; one is the warehousing of all types of steel, and the other is the fabrication of steel buildings, bridges, tanks, and various items of steel fabricating work.

Q. Where does your steel originate that you get at this plant in Salt Lake City?

A. We have a number of places or origin. The Pacific Coast, Geneva Steel Company, Geneva, Utah, and points in

Chicago, Pittsburgh, Youngstown, Sparrow's Point, Kansas City, and numerous other suppliers or producers of steel in eastern United States.

Q. Approximately how many carloads of steel do you receive from the East?

A. This year, we have received approximately up to November 1st, 105 carloads.

Q. Are you interested in fabrication in transit?

A. Very much so.

Q. Where does the fabrication occur?

[fol. 299] A. At our plant here in Salt Lake City.

Q. Where are some of your markets?

A. Our markets for fabricated and prepared steel are in Utah, Idaho, Wyoming, Montana, Nevada, western slope of Colorado—they are the substantial portion of our markets.

Q. How does most of the steel that you receive at Salt Lake City reach Salt Lake City, by rail—from the East I am speaking of?

A. Entirely by rail.

Q. Does it come in over the Denver and Rio Grande?

A. Yes, it does, at Salt Lake City.

Mr. Collins: Excuse me. Would you read that question, please?

(Question read.)

By Mr. Quirk:

Q. Now, by that, do you mean that the Union Pacific transports the steel into Salt Lake City and then delivers it to your plant over the Switching services of the Denver and Rio Grande?

A. All steel originating in the east comes over the Union Pacific Railroad and is transferred here at Salt Lake City to the Rio Grande for delivery at our plant.

Q. Now, I presume, Mr. Rosenblatt, you are familiar with the fact that the rail rates on steel from the eastern points to Salt Lake City as destination apply by the Denver and Rio Grande and its connections, eastern connections, as well [fol. 300] as via the Union Pacific at its eastern connections?

A. I am fully aware of that, yes, sir.

Q. Then, in the circumstances, why does your company

route or cause to be routed all of the business to Salt Lake City via the Union Pacific?

A. Primarily because we have no transit privileges for fabrication on any steel moving from eastern points via the D&RG. I mean by that, transit privileges into areas which take approximately 50 per cent of our business, Idaho particularly, and parts of Montana. It is impossible for us to use tonnage coming in on the D&RG, fabricating that steel, and then competing in the Idaho or Montana markets.

Q. Is Salt Lake City the final destination as to some of the steel you receive at your plant in Salt Lake?

A. Some of it is probably used here for fabrication, but when the steel is ordered, both as to structural shapes and sheets and other types of steel, we have no way of knowing where the final destination is likely to be. Therefore, we can't take a chance on bringing in steel which we might have to fabricate and furnish in markets to which the D&RG tonnage would carry no fabrication in transit privileges.

Q. If the competitive rates which the complainant here seeks should be established in connection with the Union Pacific to points northwest of Ogden, Idaho, and other states, would your company benefit thereby?

[fol. 301] A. Only to the extent that we would be in position to repay the D&RG and their urgent solicitation for our business as a reward for the very good service they give us for handling in and out cars at our plant.

Q. And it would give you another route that you could safely use to Salt Lake?

A. There are times when one railroad is in position to give better and quicker service than the other, and vice versa.

Q. That happened last January and February, didn't it, on the Union Pacific?

A. Yes, that was——

Q. One example at least?

A. One example, yes, sir.

Q. Now, have you any other comment to make, Mr. Rosenblatt, concerning this question we are talking about?

A. No, I don't think so.

Mr. Quirk: You may cross examine.

Mr. Collins: No cross examination.

Exam. Mullen: That is all, Mr. Rosenblatt. Thank you, sir.

The Witness: Thank you.

(Witness excused.)

Mr. Quirk: Mr. Davis.

Cy Davis was sworn and testified as follows:

Direct examination.

[fol. 302] By Mr. Quirk:

Q. Will you state your name?

A. Cy Davis.

Q. Where do you reside, Mr. Davis?

A. I reside at Idaho Falls, Idaho. I am manager of the Idaho Falls Chamber of Commerce.

Q. How long have you been manager of that chamber?

A. Since the first of April, 194[illegible].

Q. What was your business before that?

A. I was manager of the Dawson Chamber of Commerce in Montana for approximately three years, and the previous ten years I was in the newspaper business, editor and business manager.

Q. What is the position of your Idaho Chamber of Commerce in this proceeding?

Mr. Collins: Of what?

Mr. Quirk: What is the position?

Mr. Collins: Of what?

Mr. Quirk: Idaho Chamber of Commerce.

The Witness: Idaho Falls Chamber of Commerce.

By Mr. Quirk:

Q. Idaho Falls Chamber of Commerce.

A. By unanimous vote of the board of directors, they have taken the position they favor the operation of the Ogden gateway.

Q. What is the composition of that chamber, so far as membership is concerned by economic groups?

A. It might be said to be divided into half a dozen or more

[fol. 303] groups, comprising agriculture, industry, professional men, service. Ordinarily we don't classify them, but it is a general cross section of the community. It is definitely an agricultural community, and represents all phases of the economy of the area.

Q. Is there a large movement of agricultural products out of the Idaho Falls area?

A. Very definitely.

Q. And Idaho Falls is served by the Union Pacific exclusively; is it not?

A. Yes sir, in rail cases; yes sir.

Q. How many members are there of this Idaho Falls Chamber of Commerce?

A. It fluctuates; more than 618 at the last count we made of the roster of our membership bulletin mailing in November.

Q. Is Idaho Falls, Idaho one of the largest agricultural shipping points in the state?

A. I think that is true. We consider that to be very true.

Q. Mr. Davis, you are in touch with the membership and quite familiar with their problems, I take it?

A. Yes, we attempt to represent the problems of the community on a community-wide basis.

Q. Have you any comments to make in addition to what I have questioned you about?

A. That is a little difficult, I believe.

[fol. 304] Q. You don't have to make it unless you want to.

A. None occurs to me right at this moment as being outstandingly important in clarifying the position that we have taken.

Q. I suppose your membership does believe in competition, does it not?

A. Yes sir, they do.

Q. Does it believe that all existing rail facilities should be made available at equal rates to the shippers?

A. Very definitely. The resolution passed by the Idaho Falls Chamber of Commerce by unanimous vote of its members was in favor *or* opening all gateways that restrict the economy of Eastern Idaho.

Mr. Quirk: That is all I have. You may cross examine.

Cross-examination.

By Mr. Collins:

Q. Mr. Davis, was there a meeting of the full membership of the Idaho Falls Chamber of Commerce preceding the adoption of their resolution or whatever it was they adopted?

A. I doubt if there has ever been a full meeting of all membership of the Idaho Falls Chamber of Commerce. I don't believe there is a place in the city where we could accommodate 618 persons.

Q. How did they communicate their vote or attitude on this question?

A. By various means. When the question came up early [fol. 305] in August, they deferred any action on it until the membership could hear both sides of the question, which was presented in two public meetings, one conducted by the officials of the Union Pacific Railway Company, and the other conducted by the officials of the Denver and Rio Grande.

Q. How many members were recorded, if you recorded them, how many members out of your 600 recorded themselves as favoring the side of the Rio Grande Railroad in this law suit?

A. There is no official figure to my knowledge. They were contacted in a number of different ways.

Q. Wait a minute. I do believe that is a fair question and I think you can answer it. You must know.

How many members, if any, recorded themselves as favoring the Rio Grande side of this case?

A. They were contacted in three different ways, and I don't——

Q. I don't care how they were contacted; I just want to know the results. Isn't that a fair question?

A. Not if I am unable to give you the complete results.

Q. Just say you don't know, then. Do you know?

A. Not the complete vote of the 618 members, not the complete thinking down to the last man.

Q. I didn't say anything about the thinking. How many, to your knowledge, recorded themselves in favor of the Rio Grande's position in this case, if you know?

A. I don't believe I could answer that in the way it was put.

[fol. 306] Q. How do you know you said to your counsel there was a unanimous approval of the Ric Grande side of the case? How do you know that?

A. By the board of directors. We are a corporation, and a non-profit corporation, and the Board of Directors are fully qualified to pass on any matter of policy which they believe, and they were very conscientious in making an inquiry into the full membership to make sure they were representing the feeling of the majority of the group.

Q. You say you have 618 members. Are all of those shippers?

A. Certainly not.

Q. How many of them are shippers, would you say?

A. I would not know.

Q. Then you are not representing a shipper's organization, as such?

A. No, it is the Chamber of Commerce of Idaho Falls. It is not a shippers' organization.

Q. Oh, it is not?

A. No.

Q. What would be their interest in taking a stand on this?

A. We feel we have a very definite interest in the basic economy of the community. It is an agricultural economy definitely. The board of the membership feels it would be advantageous to this agricultural economy. They would be possibly very inclined to base their decision somewhat on that premise.

[fol. 307] Q. You are not speaking for the State of Idaho here?

A. We are speaking for the Idaho Falls Chamber of Commerce.

Q. And its members, or including its members?

A. I don't believe you can exclude its members. I am representing the board of directors, who are authorized to make policies and decisions for the whole membership.

Q. Are you speaking for the members?

A. I am speaking for the directors of the Idaho Falls Chamber of Commerce, who make the policies and decisions of the chamber.

Q. Is this it, then, the Board of Directors has acted on its own and without regard to the wishes and desires of the shippers?

A. No sir, they feel they have very definitely investigated and are acting the way the majority of its members wish them to act.

Q. Then how many of the members told the Board of Directors to come down here and testify for the D&RG in this suit?

A. I don't have any figures on that.

Q. You don't know?

A. No.

Q. You don't know whether it was a majority vote, or a majority expression or not, do you?

A. I am quite confident the Board would not back a minority decision.

Q. But you don't know, do you?

A. I would not care to give any figures.

[fol. 308] Q. I say, do you know or don't you know?

A. I don't have any figures to offer, no.

Q. Isn't the answer that you don't know, but you won't admit it?

A. I don't know, but I won't admit it?

Q. Yes, won't admit that you don't know?

A. I told you I had no figure on that. You asked me for a number or a percentage.

Q. I asked you two or three times if you knew how many members recorded themselves or expressed themselves in favor of the Rio Grande Railroad in that law suit.

Mr. Collins: Now, Mr. Examiner, I call upon you for help. That is certainly a fair question. If he doesn't know, he should say so.

Exam. Mullen: I think so. You should know the number or state that you do not know the number.

The Witness: I offered to give three ways in which this answer was propounded.

Exam. Mullen: No, the question is confined to the number of persons who favored the D&RG in this proceeding. Do you know the manner in which they expressed their agreement?

The Witness: I don't know how many——

Exam. Mullen: You do not know?

The Witness: No.

Exam. Mullen: That is the answer, you do not know.

[fol. 309] The Witness: That is correct.

Mr. Collins: That is all.

Redirect examination.

By Mr. Quirk:

Q. Mr. Davis, did I understand you to say a representative of the Union Pacific was given an opportunity to present what you call——

Mr. Collins: Mr. Examiner, that is not proper redirect questioning. Nothing was said about that in his direct testimony, except that wrangled over both sides of this.

Exam. Mullen: I would like to have the thing clarified.

Mr. Collins: All right.

By Mr. Quirk:

Q. Did the Idaho Board of the Chamber of Commerce listen to everything the Union Pacific representative had to say concerning this question?

A. I am sure they did. They went into it with an open mind. They didn't consider it as an issue in which they would take sides between litigants, but as what was the best for the community.

Q. And despite what they heard, the board of directors of the Idaho Falls Chamber of Commerce decided to participate in this case and demanded that you participate, is that right?

A. Yes sir.

Mr. Quirk: That is all.

Recross-examination.

By Mr. Collins:

Q. Who listened to these both sides? How many mem-

[fol. 310] bers of the Chamber listened?

A. I have no figures on that either. It was a community meeting.

Mr. Quirk: There was enough to make a defense, anyway.

By Mr. Collins:

Q. You don't know how many members were informed about both sides of this, or either side?

A. No, I would not know how many members.

Mr. Collins: That is all.

Further redirect examination.

By Mr. Quirk:

Q. By the way, what is the population of Idaho Falls?

A. Something between 22 and 25 thousand. The R. L. Polk Company says the Chamber of Commerce figure of 22,000 is conservative.

Mr. Quirk: All right.

Further recross-examination.

By Mr. Collins:

Q. What portion of that population consists of railroad employees and employees of the Union Pacific Railroad, do you know?

A. No, I would not. I would not make a guess.

Q. You would—know at all?

A. No.

Q. And yet you are Secretary or something of the Chamber of Commerce of Idaho Falls?

A. We don't have access to the files of the Union Pacific [fol. 311] and their employees or any other matters.

Q. Would you be surprised if a third of the population, or a fourth of it, were railroad employees?

A. I would be very surprised, yes sir.

Q. What did you think, a dozen of the railroad employees would be there?

A. Would you want me to hazard a guess?

Q. I won't be bound by it, but I would like to have you make it.

A. I would say 250, possibly.

Q. 250?

A. Yes. That is purely a guess. I have not been interested enough to attempt to make any investigation.

Mr. Quirk: Are you finished?
Mr. Collins: I want to continue, Mr. Quirk.
Mr. Quirk: That is all.
Mr. Collins: Wait a minute.

By Mr. Collins:

Q. Is the Chamber of Commerce of Idaho Falls—just what are its interests? Is it interested in the community generally?

A. Definitely. Their slogan is to make Idaho Falls a better place in which to live and make a living.

Mr. Collins: All right, that is all.
Exam. Mullen: That is all. Thank you, Mr. Davis.

(Witness excused.)

[fol. 312] C. A. Harris was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your name?
A. C. A. Harris.
Q. Mr. Harris, are you engaged in farming and in business in Idaho?
A. Yes sir.
Q. At what point are you engaged in business?
A. Rexburg and Saint Anthony, Idaho.
Q. What business are you engaged in?
A. The implement and hardware business at Rexburg and Saint Anthony, and the wholesale agent of the Standard Oil Company of California in Madison County and part of Jefferson.
Q. And are you also engaged in farming?
A. Yes sir.
Q. Where is your farm; what is the size of it?
A. I own a 400-acre farm, and grow wheat, dry land wheat on the farm.

Q. Have you been authorized to speak for any other organization besides yourself in this proceeding as a witness?

A. Yes sir.

Q. Name them, please.

A. The Ashton Chamber of Commerce, the Saint Anthony Chamber of Commerce, the Rexburg Chamber of Commerce, The Idaho Falls Chamber of Commerce, the Intermountain [fol. 313] Hardware and Implement Dealers' Association, and the Upper Snake River Valley Grain Growers Association.

Q. How long have you been engaged in business in Idaho as a farmer?

A. I have been a farmer since 1912, owning my own farm, and I was born and reared on a farm prior to that time.

Q. By reason of the length of time you have been in the State, and by reason of your business activities, do you feel that you are familiar with the business problems of these various groups that you refer to?

A. Yes sir. I feel that I am very much familiar.

Q. Speaking for the time being about the implement business you are engaged in, are you a dealer or a jobbler?

A. A dealer.

Q. You sell—where is your principal market?

A. My principal market is Madison and Fremont Counties.

Q. In other words, you sell to the farmers and others in Idaho?

A. Yes sir.

Q. What particular commodities do you handle?

A. We handle the entire International Harvester Company Line, and some sidelines we buy such as Eversman scrapers and other sidelines that the International Harvester Company do not manufacture.

[fol. 314] Q. Are those shipments made to you from Chicago and other eastern points?

A. Yes sir.

Q. Do you receive anything that is shipped from Pueblo, Colorado?

A. No sir, not up to this time.

Q. What is your position and the position of these other organizations in this case?

A. Speaking for myself and these other organizations,

we feel and have all gone on record for the opening of the Ogden gateway. We feel that when the gateway is closed to one railroad, that the road that it is open to immediately has a monopoly on our haul, and that a monopoly upon our haul creates a monopoly among our buyers.

It closes in our markets to the direct connections over the line that holds the monopoly. We feel that we, as growers, and buyers, and in many cases growers decide that they want to sell to the open market themselves in order to get and open up competition; we feel that we should have the right as individual citizens, as individual growers, as individual buyers, to choose a railroad over which we desire the haul of our products to be made to destination. We feel——

Mr. Collins: Mr. Examiner, I object to any more of this speech. It is not testimony. He wants competition of the D&RG in there. That is answer enough to the question, but we don't need any more of this.

[fol. 315] Exam. Mullen: Well, so far this is just an expression of opinion. How much more of that statement do you wish to make? You might get some facts in the record.

The Witness: We would like to clarify and make some general statements, and then clarify with an actual operation, and the way it does affect our economy.

Exam. Mullen: Suppose you give us that now.

The Witness: We feel that the gateway problem, the transit and diversion problem are barriers entered against our freedom of competition when applied against us and our competitive producing communities in the same line——

Mr. Collins: I interrupt to object again. This is more of the same thing. It is not getting near any facts.

Exam. Mullen: It seems to me the objection is well taken. I think Mr. Harris has stated quite generally his opinion in this matter. I would like to get some facts as to just how it affects your operations and the operations of those whom you represent here.

By Mr. Quirk:

Q. Mr. Harris, the group that you are interested in, and yourself, are interested in attempting to sell wheat wherever the market is good, is that correct?

A. Yes sir.

Q. Are you familiar with the testimony in this case, where you can't dispose of wheat in an area of Wichita, Kansas at the present time under competitive rates?

[fol. 316] A. Yes sir.

Mr. Collins: I object to that. This record doesn't show that.

Mr. Quirk: Yes, it does.

Exam. Mullen: The witness is competent to testify to that. Will you give us the facts, Mr. Harris, as to that kind of a shipment?

The Witness: We understand that under the gateway being closed to the Denver and Rio Grande, that our shipment must go over from an economic point of view where there is no graded rates of combination rates, but on direct rates over the Union Pacific into Kansas City or Wichita, Kansas. When our grain reaches there, there is no outlet.

The gateways are closed there unless an additional penalty is to be paid to get out into the open markets in the southern territory.

Exam. Mullen: Which gateway are you speaking of there?

The Witness: The gateways in Kansas, in Nebraska, and in Colorado.

Exam. Mullen: That moves over what?

The Witness: They cannot go south, because the barriers are there against us. We feel that the buyers of that section of the country will not come into Idaho and bid for our wheat by reason of the fact that they can't get out with our wheat or our products by the fact that the gateways are [fol. 317] closed at the terminal ends south of the Union Pacific into the south part of our country.

Exam. Mullen: Why is it closed?

The Witness: We claim that these gateways are closed for the purpose of directing and limiting our marketing area.

Exam. Mullen: No, my question was, how is it closed? What are the circumstances which lead you to believe that the gateway is closed?

The Witness: Yes sir. The through rate on a car of wheat today from Pocatello, Idaho to Denver by the Union Pacific is 59½ cents, and it is a direct through rate. Over the

Denver and Rio Grande it is 86½ cents, or a 27½ cent differential penalty. The penalty against the Denver and Rio Grande forces us to ship the wheat over the Union Pacific or else the grower must sell his wheat to the buyer for 27½ cents less per hundred in order to use the Denver and Rio Grande, who now have open gateways in the southern territory.

Exam. Mullen: You get your wheat to Denver on this rate of 59½ cents over the U.P.?

The Witness: Yes sir.

Exam. Mullen: Then what do you do with it?

The Witness: When the buyers get it there, they can't get it out.

Exam. Mullen: In Denver?

[fol. 318] The Witness: They can't get it to the south.

Exam. Mullen: Why not?

The Witness: Only because the barrier is there, the gateways are closed there to our wheat; therefore, that market is closed to us.

Exam. Mullen: Just a moment. Let me get this straight. You say you have a movement over the Union Pacific from Pocatello to Denver of 59½ cents?

The Witness: Yes sir.

Exam. Mullen: Why can't the wheat go from Denver to the points you mentioned?

The Witness: It can go; the economic term of the closed gateway is that the barriers, or the combination of the rate is higher than over a through rate, and that combination rate closes the opportunity of the buyers to get the benefit of the demand in all sections of the country.

Exam. Mullen: Over what railroad?

The Witness: Beyond where the barriers are effective.

Exam. Mullen: What railroad would the wheat move from Denver—to what ultimate destination do you have in mind? Pick out an ultimate destination point.

Mr. Quirk: Mr. Examiner, could I interrupt?

Mr. Collins: Mr. Examiner, please carry on. This witness is doing very well with your questions.

Exam. Mullen: Just a minute, gentlemen. I am trying to [fol. 319] get a matter clarified.

Mr. Quirk: I am going to try to do that if I am permitted. I asked this witness on that question about Wichita.

Exam. Mullen: It isn't clear to me and I would like to clear it up. What is the ultimate point of destination you have in mind on this movement of wheat from Pocatello to Denver?

The Witness: Wichita.

Exam. Mullen: Wichita, Kansas? Over what route would it move from Denver to Wichita?

The Witness: It would move over the Union Pacific for 68½ cents. If we use the Denver and Rio Grande, it would be 96 cents to Wichita.

Exam. Mullen: And what is the disadvantage to you?

The Witness: The advantage to us——

Exam. Mullen: You are speaking of the disadvantage.

The Witness: The disadvantage to us is we have a closed market after our wheat gets to Wichita. In other words, the buyer at Wichita, Kansas will not buy our wheat because he can't get it out without these additional barriers or additional combination rates.

Exam. Mullen: Then there is a combination rate on the Union Pacific, is that it?

The Witness: What we are asking is that we may have the privilege to ship our wheat into Wichita and encourage Wichita, Salinas and those southern points to buy our wheat to a free and open market, which they will if they are not [fol. 320] penalized with these combination rates that now exist with the Denver and Rio Grande.

Exam. Mullen: I understood from your testimony you have a combination rate over the Union Pacific to Wichita.

The Witness: Yes sir.

Exam. Mullen: And also a combination rate over the D&RGW?

The Witness: No, we don't have a combination rate over the Union Pacific.

Exam. Mullen: You have a joint rate—I mean a through rate?

The Witness: A direct rate.

Exam. Mullen: You have access to Wichita with a direct rate?

The Witness: Yes. We have access anywhere in the United States over any railroad if we pay the price.

Exam. Mullen: I still don't understand you, Mr. Harris. Maybe Mr. Quirk could straighten this out.

Mr. Quirk: Well, Mr. Examiner, you just don't recall Mr. Earley's rate testimony. There is no competitive rate through that Wichita area via any of the routes today if the wheat is going beyond Wichita.

Exam. Mullen: I would like to get this witness to state it specifically so it is clear. It is not clear in my mind from this witness' testimony.

[fol. 321] Mr. Quirk: He is not a technical rate man, he only knows what happens to it when he is trying to market the wheat.

Mr. Collins: Mr. Examiner, I submit he doesn't know what happens to him or why he is on the stand.

Exam. Mullen: Let the witness proceed.

Mr. Quirk: I will put Mr. Earley back on the stand to clear up this rate problem before we are through.

Exam. Mullen: I would like to get Mr. Harris—he is the witness now—to state how he is affected. He is a farmer, he is a shipper.

The Witness: If I sell, or if I seel a carload of my wheat and I desire to sell it direct to a Wichita buyer, I am denied at the present time the privilege of using the Denver and Rio Grande Railroad by reason of a 27½ cent penalty over what I would pay the Union Pacific. That penalty, or that additional charge to get it into Wichita denies me that rate.

Now then, the Kansas City buyer will not bid for our wheat in our territory, or for my wheat, because when he gets it to Wichita he can't get it out without similar penalties. The gateways are closed. Therefore, he couldn't sell my wheat down into the south and be competitive on the wheat market. Understand, the nucleous of what I am talking about is that I understand it is an accepted rule that a fraction of a cent price on our commodities will turn a trade, either to a territory or against a territory, even a [fol. 322] fraction of a cent, and that is why the economy of the grower and the buyer and his position to get our goods out to the markets of the country is so vital.

Exam. Mullen: Very well.

Mr. Quirk: Well, you may cross examine this witness.

Cross-examination.

By Mr. Collins:

Q. Mr. Harris, I understand you were speaking for the Saint Anthony Chamber of Commerce—first, the Ashton Chamber of Commerce.

A. Yes sir.

Q. How many members has it?

A. I imagine 50, around there. I don't know the exact number.

Q. What generally are the occupations of the member, what businesses?

A. They are merchants and farmers and shippers. I think there is a combination of the industry and economy of the upper territory.

Q. How many of the 50 asked you to speak for them in behalf of the Rio Grande Railroad?

A. The Board of Directors of the Chamber of Commerce gave me their authorization.

Q. But not the members?

A. I——

Q. The members did not?

A. They usually have meetings with their members be- [fol. 323] fore they make up their decision.

Q. You didn't know——

A. I could not say they had called a membership meeting at Ashton. They may have done so, they may not have done so.

Q. How about Saint Anthony: How many members do they have?

A. At Saint Anthony, I would say approximately 75 to 100, possibly 150. I am not familiar with the exact number.

Q. These chambers of commerce are not shippers in their own names, as Ashton Chamber of Commerce and Rexburg Chamber of Commerce, are they?

A. They don't ship goods in the name of the chamber of commerce, but their individual members are shippers. Some of their individual members are shippers.

With respect to all of these chambers, would your answer be the same as it is with respect to the Ashton Chamber?

A. No.

Q. It would not?

A. No sir, it wouldn't.

Q. What about Saint Anthony?

A. I will read my authorization.

Q. Is that authorization from the members?

A. It clarifies your question.

Q. Well, is it from the members?

A. It is from the Board of Directors.

Q. But it is not from the members?

[fol. 324] A. And the members.

Q. And the members?

A. Yes sir. This will clarify that point.

Q. Is it from a majority of the members?

A. Yes sir.

Q. That is all right. How about Rexburg?

A. Rexburg, the Board of Directors gave me their authorization of the chamber.

Q. And that one is similar to Ashton?

A. I have not been present to know whether they called the entire membership on this question. I think both organizations have presented the question to these chambers. I know that. I know that these chambers have received the Union Pacific point of view as well as the Denver and Rio Grande point of view.

Q. Well, you don't know——

A. Before they made up their mind definitely in this case, and in the case of authorizing me to speak for them.

Q. Yes, but you are in the same position with respect to Rexburg as you told me you were with respect to Ashton?

A. I know that the Saint Anthony comes from the body of the membership——

Q. I am not speak of Saint Anthony.

Exam. Mullen: Just a minute, Mr. Collins. Let him finish his answer.

[fol. 325] Mr. Collins: I would like to have him come nearer the question if he would.

Exam. Mullen: Let him clarify it; it is confusing on the record.

The Witness: I advise, I don't know whether the Ashton Board of Directors called in their membership or not. I

now advise that I do know the Saint Anthony Board of Directors put the question to their members.

By Mr. Collins:

Q. I told you that was all right and went to Rexburg. Now, is Rexburg in the same position as Ashton? What about Rexburg?

A. Rexburg, I don't know as to whether they called in the members at this particular time when they issued that authorization, but they have discussed the matter with their members pro and con for two months.

Q. All right, sir. How about Idaho Falls Chamber; I understood you were also speaking for them?

A. Yes sir.

Q. You are speaking in addition to Mr. Davis?

A. Yes sir.

Q. How does your situation differ, if any, from his?

A. I would be glad to read the authorization, if you desire to clear that.

Q. You don't need to read anything. Are you in the same position that Mr. Davis was in with respect to rep-
[fol. 326] resentation of the Idaho Falls Chamber here?

A. The Idaho Falls Chamber appointed Mr. Davis and myself to represent them at this hearing.

Q. I see. All right. That is talk enough about that then. Now, would you tell us, Mr. Harris, in about what part of Idaho these two counties are located, Madison and Teton? I am not familiar with the locations there.

A. Madison County is in the southeast.

Q. Southeast, and——

A. And bounded on the north by Teton County, which county is bounded on the Wyoming line east.

Q. And Teton County is in the southeast?

A. Teton County and Madison County joint together.

Q. Is your wheat farming operation conducted in one of the other of those counties, that is, either Madison or Teton County?

A. I grow wheat in Madison County.

Q. How many carloads of grain did you ship over whatever period you can indicate? Have you shipped this year's crop, 1949?

A. Of my own crop?

Q. Yes.

A. Yes sir, it has been sold, and shipped out.

Q. How many carloads?

A. I grow on an average of five thousand bushels per year.

Q. How many carloads would that be?

[fol. 327] A. I understand a carload is around five hundred bushels. The carloads will vary with the size of the car.

Q. Yes. How do you sell your wheat, Mr. Harris? Is it sold to some buyer at some point near you?

A. I have sold it for years either to General Mills or to Sperry, or the Colorado Mill and Elevator Company because they are almost the only buyers that are in our territory bidding for our wheat.

Q. They do come in the territory and bid for it?

A. They are established in the territory.

Q. They are established. Well then, is this it: They buy it from you at your farm or an elevator?

A. We deliver it to their elevators.

Q. To their elevators?

A. Where they are set up.

Q. And from there on, you don't own the wheat or have anything more to do with it, do you?

A. Not after it is sold.

Q. Now; with respect to the agricultural implements, Mr. Harris, those come in, do they not, from, I believe you said, International Harvester; you represent that company?

A. Yes sir.

Q. And those implements are shipped by the Harvester Company to you at some place of business?

A. Our place of business at Rexburg and our place of [fol. 328] business at Saint Anthony.

Q. And from those places of business, do you sell direct to the farmer?

A. Yes sir.

Q. And they are farmers located in the general area around Rexburg and Saint Anthony?

A. It is wholly an agricultural community—both of them.

Q. I have information, whether it is right or wrong, to the effect that for eight months of 1919 you had shipped in, or there were shipped in to you, your place of business, eight cars of implements. Would that be about *gith*, do you think during this eight months of 1919?

A. We have had shipped into us a monetary value of around two hundred thousand dollars in 1919. Just how that would be divided up into number of cars, I am not familiar.

Q. My information is that the eight carloads that we know about that were delivered to you came from Rock Island, Illinois, or Chicago, Illinois; would that be correct?

A. I think that is correct, over the Union Pacific. The Union Pacific picks up the haul at Omaha.

Q. Yes. Now, you have a good many carloads of shipments of gasoline. That comes from where?

A. The bulk of it comes from Salt Lake City. Some of it, at times, is shipped from the factory in California.

Q. From a factory in California?

[fol. 329] A. The processing plant of the Standard Oil Company; Kennington Field, I believe it is.

Q. Would that be at Richmond, California?

A. Yes.

Mr. Collins: That is all, Mr. Harris.

Mr. Quirk: That is all, Mr. Harris.

Exam. Mullen: Thank you, Mr. Harris.

(Witness excused.)

Mr. Quirk: Mr. Bass.

M. M. Bass was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Will you give your name, Mr. Bass, and spell it to the reporter?

A. M. M. Bass.

Q. Where are you located, Mr. Bass?

A. Idaho Falls, Idaho.

Q. In what business are you engaged?

A. I am potato sales manager for the Idaho Falls Bonded Produce and Supply Company.

Mr. Collins: Would you say that again?

The Witness: Potato sales manager for the Idaho Falls Bonded Produce and Supply Company.

By Mr. Quirk:

Q. Describe the composition of the members of that organization.

[fol. 330] A. That is an incorporated firm engaged in a number of businesses. The produce line probably accounts for approximately 50 per cent of our volume. In addition, the firm handled Purine feeds, Link Belt or Timken stokers, Williams automatic furnaces, and Anaconda fertilizers. They have a processing plant for turkeys and raise their own turkeys. They have a retail store. I think that pretty well covers the nature of the business.

Mr. Bass, are you also an officer or director of the Idaho Potato-Onion Shippers' Association?

A. Our firm is a member of the Idaho Potato and Onion Shippers' Association, and I am vice president of that organization.

Q. What is your own position and the position of your company in this proceeding?

A. We are in favor of the opening of the Ogden gateway.

Q. Why are you in favor of it?

A. We feel that closed gateways restrict our markets. In fact, we are in a position where we can't sell in certain markets with safety. We are also very much in favor of free enterprise, and we think the closed gateways restrict our freedom.

Q. Are potatoes reconsigned or diverted in transit frequently?

A. Very often. It depends on market conditions. We are allowed three free diversions, or reconsignments, and two additional at a certain figure.

Q. If you ship from some point in Idaho to Grand Junc-[fol. 331] tion, Colorado, on the Rio Grande as an original proposition, and something should cause you to divert that

car to points east of the Colorado Common Points, what would happen?

A. It is my understanding we would be paying a combination of local rates.

Q. Does that tend to restrict your market on the Denver and Rio Grande?

A. Yes.

Mr. Collins: Just a minute. Would you read that question?

(Question read.)

Mr. Collins: I move the question be stricken, Mr. Examiner, because Mr. Quirk has now jumped from the hypothetical—if so and so in his other question—and now he says "does that tend?".

Exam. Mullen: I think the question is proper, Mr. Collins.

Mr. Collins: If he said "would that tend," it would be one thing.

Exam. Mullen: I think the witness understands the question. You may answer.

Mr. Quirk: He did answer.

Exam. Mullen: Will you read the answer?

(Answer read.)

Mr. Quirk: You may cross examine.

Cross-examination.

By Mr. Collins:

[fol. 332] Q. How long have you been in this business of the Idaho Falls bonded warehouse and supply company, Mr. Bass?

A. The name is Idaho Falls Bonded Produce and Supply Company. I have been engaged in my present occupation since June 1, 1947.

Q. When did you come to the conclusion that you wanted the Ogden gateway opened?

A. After hearing arguments put forth by Union Pacific employees, by the Rio Grande employees who were in Idaho.

Q. That is since this complaint was filed in this case, August 1st?

A. At the time the complaint was filed, I notified representatives of both railroads that I was taking a neutral position at that time.

Mr. Collins: Just a moment, Mr. Examiner.

That is all.

Redirect examination.

By Mr. Quirk:

Q. Mr. Bass, I forgot to ask you, the company you are directly connected with, as distinguished from the association, is a shipper, is it not?

A. Yes, that is my relationship with the firm I am employed by.

Q. What does it ship; what is the principal commodity?

A. Principally potatoes, some onions, and dressed poultry.

Q. Do you know what the volume would be in a year?

[fol. 333] A. I can say that last season, the season beginning with July 1, 1948, and terminating June 30, 1949, we shipped both carload, truck, and lcl, 1063 units of potatoes and onions. Those are the only commodities that I can give you definite figures on.

Q. What do you call a unit?

A. Some LTL truck units amounted to only 10,000 pounds, some up to 50,000 pounds. The rail shipments were generally in accordance with the O.D.T. minimum in effect at that time.

Q. Do the members of the Idaho Potato and Onion Shippers' Association also ship potatoes and onions?

A. All members are either active shippers or there are a few holding associate membership. The active shippers are engaged in the shipping of potatoes and onions. The associate members are bag companies and, I believe four Idaho banks who hold membership in our association.

Q. The shipments made by the members of that association, does that amount to a large percentage of all shipments made out of Idaho, do you know?

A. In excess of 90 per cent of the potatoes and onions

shipped from Idaho are shipped by members of our association.

Mr. Quirk: That is all.

Exam. Mullen: Where do you ship the commodities by rail, to what destinations?

The Witness: Idaho is in a position where, from an economic standpoint, they must export their produce. Our [fol. 334] local market takes a smaller percentage of what we produce. Therefore, the shipments are made to all sections of the United States, some exported to Canada, to the South Pacific, to South America, and to Cuba. We have inquiries from African and other points——

Exam. Mullen: We were only interested in the United States movements.

Mr. Quirk: How is that?

Exam. Mullen: We are interested only in the movements to points in the United States.

Mr. Quirk: The complaint is filed for export-import traffic as well as domestic traffic.

Exam. Mullen: I am interested in where these shipments move to in the United States.

Mr. Quirk: I see.

The Witness: I might say further, to the entire forty-eight states.

Exam. Mullen: How many move to the Pacific Coast states?

The Witness: Well, I am not in a position to give you any accurate figures. I would suggest if that is required for the record it be secured from——

Exam. Mullen: I am merely asking you if you know.

The Witness: I do not know.

Exam. Mullen: All right.

Mr. Quirk: That seems to be all.

[fol. 335] Exam. Mullen: Is that all, Mr. Collins?

Mr. Collins: It is, unless Mr. Quirk asks some more.

Exam. Mullen: Pardon me, I am asking you.

Mr. Collins: That is all.

Exam. Mullen: All right. The witness is excused.

(Witness excused.)

L. E. STEPHENS was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name, Mr. Stephens?

A. L. E. Stephens.

Q. Mr. Stephens, where are you located?

A. I am located at Blackfoot, Idaho.

Q. In what business are you engaged?

A. At the present time I am engaged in potato shipping business. I am also in the feed and grain business.

Q. Are you engaged in these activities as an individual or as a company?

A. The ptotato shipping business is operated under the name of L. E. Stephens. The grain and feed business is operated under the name of Stephens Bond, Incorporated.

Q. Are you a shipper—are each of these companies shippers?

A. Yes sir.

Q. Where are your principal markets?

A. The principal markets cover the entire United States [fol. 336] with the exception of Maine. I never shipped any potatoes to Maine.

Q. Did Maine ever ship any out here?

A. Yes sir.

Q. They do?

A. They have in the past.

Q. Do you, as a shipper, and as an individual, favor the competitive rates which this complaint seeks?

A. Yes, I do.

Q. In what respect will such a rate system benefit your activity?

A. At the present time, there are certain markets in the United States which are termed closed markets due to the application of the tariff as it stands at the present time.

Q. Do you ship any of your commodities to local points on the Denver and Rio Grande, potatoes or onions?

A. I don't recall of any specific market that I have shipped to other than Denver.

Q. Are onions diverted in transit frequently?

A. Yes, I handle very few onions, though.

Q. Potatoes are diverted, aren't they?

A. The potatoes are diverted. That is a normal procedure in handling potatoes. Many potatoes are shipped with the idea in mind of diverting in transit on sales that are made.

Q. Have you had any car difficulties on the Union Pacific?

A. You refer to——

[fol. 337] Q. Boxcars. Do you always get the cars you need from the Union Pacific when you need them?

A. No sir, I definitely do not. I have not in the past. As a matter of fact, this is the first year since I have been in business that I have ever been able to operate my warehouse to capacity.

Q. Has the car service improved on the Union Pacific since August 1, 1949?

A. I have partially answered that question. This is the first time in 11 years that I have ever been able to operate my warehouse to capacity, and the reason I have not, in most instances, during the harvest season, is because of a car shortage.

Q. Did you have one period where you got only a small proportion of the cars ordered per day for a sustained period?

A. Yes sir, I think—I believe it was two years ago. I can't recall whether it was two or three years ago, but it was during the harvest time, when our business is the heaviest, and our profit most, I believe the record will show that I received less than one car per day for a period of 60 days, and I have a potential capacity of from seven to nine cars daily.

Q. When that situation occurs, you simply lost money, didn't you?

A. Yes sir, I am at a standstill.

[fol. 338] Mr. Quirk: That is all.

Cross-examination

By Mr. Collins:

Q. Mr. Stephens, isn't it a fact that during the grain harvesting season, I suppose it must have been cars for

grain loading that you wanted and did not get, was it not?

A. It has been both, principally potatoes.

Q. Potatoes, yes. Well, during the grain and potato harvesting season, isn't it a fact that every shipper of those commodities is seeking what we might call a peak load of cars, or a greater number then than at any other time of the year?

A. In most instances, that is the case, yes sir.

Mr. Collins: That is all. Thank you.

Exam. Mullen: Mr. Stephens, what will be the benefit to you of the establishing of joint rates over the D&RGW, via Ogden?

The Witness: Well, I would say I can answer that in a general way. There are certain markets which we term closed, and in many instances a shipper is not too familiar with the tariffs, and will get into a market of this type unknowingly, and then be unable to get out.

Exam. Mullen: What market do you refer to now, specifically, that are closed to you as a shipper?

The Witness: I can't give you those markets off hand. I know there are several of them. One particularly is Wichita, Kansas. Once you are in there the only place you [fol. 339]can go then is Kansas City without paying the local freight rate beyond.

Exam. Mullen: I see. That is all.

Redirect examination

By Mr. Quirk:

Q. If you had a car at Grand Junction or any other point, on the Denver and Rio Grand-, and you desire to reconsign it to a point east, what would happen?

A. I don't believe that would be possible.

Q. You would have to pay the combination rates, wouldn't you?

A. Yes sir.

Mr. Quirk: That is all.

(Witness excused.)

Mr. Quirk: May we have a recess, Mr. Examiner?

Exam. Mullen: Yes, we will take a ten-minute recess.

(Recess taken.)

Exam. Mullen: We will resume the hearing. I understand Mr. Harris desires to make a correction in his testimony.

C. A. Harris resumed the witness stand and testified further as follows:

Direct Testimony.

The Witness: I testified five hundred bushel was an average carload. I meant to say five hundred sacks, which would be approximately one thousand bushels and up, according to the size of the car.

(Witness excused.)

[Vol. 340] A. G. STANGER was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name?

A. A. G. Stanger.

Q. Mr. Stanger, where are you located?

A. Our place of business is at Idaho Falls, Idaho, Idaho Falls Bonded Produce and Supply Compan:.

Q. Are you an officer or director of that company?

A. Both.

Q. What office do you hold?

A. I am executive vice president and manager of this company.

Q. Are you engaged in any other business under any other name?

A. I am engaged in farming on my own farm, livestock feeding, and also president of the Rexburg Feed and Supply Company, Rexburg, Idaho.

Q. In what commodities are the companies you referred to interested, in transportation?

A. Shipping of produce consisting mostly of potatoes, some onions, receiving and shipping of feeds, and the heating business, fertilizer business, the receiving of coal, the handling of feeds and grain.

Q. Under produce, what do you include under produce?

A. Mostly potatoes and onions.

Q. You didn't mention turkeys. Do you ship turkeys?

[fol. 341] A. That is right, we do ship and process turkeys.

Q. Now, where is your market, principal market, for the potatoes, first?

A. Our principal market for potatoes is in the southwest, Texas, Oklahoma, Louisiana, into the Middle West, into the West, and some into the East.

Q. Just state in your own way what your interest is in this proceeding.

A. We feel as shippers and producers of the commodities mentioned, that we should have the right, inasmuch as we own and have our investment in these products, to route them as we see fit. As the situation now stands, there is only one way in which we can route them, speaking of produce, without being penalized, unless we use exclusively the Union Pacific facilities.

Q. Have you ever had any car problems with the Union Pacific?

A. Yes, we have had many car problems.

Q. How recently?

A. Well, particularly prior to the presidency of Mr. Stoddard. In other words, prior to the present regime.

Q. Have you found from experience in dealing with certain markets on certain commodities that competition is beneficial to you?

Mr. Collins: Just a minute. I object to that question. It is vague.

[fol. 342] Exam. Mullen: I think you might clarify it.

By Mr. Quirk:

Q. I will ask another question: Where do you ship your turkeys?

A. Most of our turkeys go to Philadelphia, New York; some into Chicago.

Q. What is the rate on turkeys from Idaho Falls to New York?

A. I think at the present time, and although our Mr. Keyes is handling the turkey end of our business in charge of that, I think at the present time the freight rate to New York from Idaho Falls is $4.31 per hundred.

Q. What is the rate on turkeys from Cedar City, Utah, on the Union Pacific?

A. I think the freight rate on turkeys from Cedar City, Utah, and I might say also Richfield, Utah, would be, one being on the D&RG, and the other being on the Union Pacific, would be $3.51, or approximately 80 cent differential, and the only reason we can figure out why this differential exists is because of competitive services which can be had on either line.

Q. You mean in relation to Cedar City and Richfield?

A. Correct.

Q. Idaho Falls is served exclusively by the Union Pacific?

A. Idaho Falls is served exclusively by Union Pacific.

Mr. Collins: Before you leave it, may I inquire, Mr. Stanger, you mentioned Cedar City, Utah and Richfield, Utah?

[fol. 343] The Witness: Yes.

Mr. Collins: Which place is on which railroad?

The Witness: I think you will find Richfield is on the D&RG.

Mr. Collins: Yes.

The Witness: And Cedar City undoubtedly is on the Union Pacific.

Mr. Collins: Thank you.

By Mr. Quirk:

Q. It has already been testified that potatoes are reconsigned in transit quite frequently; is that your experience, too?

A. What do you mean by "reconsigned"?

Q. Diverted. Maybe you call it diversion.

A. That is correct. Potatoes—it is a frequent practice to divert potatoes while in transit.

Q. Do you sell potatoes at times, do you ship potatoes at times that are not definitely sold at the time they start rolling?

A. Yes sir, we do.

Q. Does that mean you need a very flexible market diversion privilege at equal rates over various routes?

A. Especially when we have a buyer's market we need flexible conditions, and by that I mean we need diversions, and oftentimes we need routes which are not now granted to us.

Q. Do you have a buyer's market now on potatoes?

[fol. 344] A. Yes, sir, definitely a buyer's market.

Q. Have you had experience with potatoes being in a pocket so that they could not get out except on combination rates?

Mr. Collins: Mr. Examiner, I think before he answers we might have the record show what Mr. Quirk means by a "pocket". I am frank to state I do not.

Mr. Quirk: Everybody else knows.

Mr. Collins: I do not know. I am in this law-suit.

Exam. Mullen: Does the witness know?

The Witness: Yes sir.

Exam. Mullen: Will you explain it, sir?

The Witness: The general explanation of a pocket, using Wichita as an illustration, if a car of potatoes is billed, or sold, rather, in Wichita, and that car happens to be rejected for some unknown reason, then there is only one place that that car can be diverted on a through rate, and that is into Kansas City, Missouri. If you tend to divert that from Wichita, as an illustration, into Fort Worth, or Dallas, then you are penalized with a combination of freight rates.

Mr. Collins: That is enough for me. Thank you.

By Mr. Quirk:

Q. If you shipped a car of potatoes to Grand Junction or some other local points on the Rio Grande, and you had to divert it, the same thing would happen, wouldn't it?

A. I am not a freight rate man, but it is practically an impossibility to bill a car into Grand Junction with through [fol. 345] rates applying over the D&RG. It is my understanding that if you go into Grand Junction, over the D&RG,

a combination of local rates apply, which makes it almost prohibitive to ship in there without being penalized.

Mr. Collins: Well now, for further clarification, you don't mean just to ship into Grand Junction as a destination point, do you?

The Witness: I mean to go into Grand Junction and then try to get out of there on diversion privileges.

Mr. Collins: I see.

By Mr. Quirk:

Q. I believe that is all, Mr. Stanger, unless you have some comment to make yourself.

A. I would like to make this comment, that we have many friends, particularly on the Union Pacific system, and we are not prejudiced in this thing in the least. We appreciate that friendship. But we do believe that after 40 years of being denied the privilege of routing the products that we own, that we should have the right and the privilege, if conditions exist which shouldn't, and they have in the past in some instances, that we as owners and shippers of this merchandise should have the right to route it, inasmuch as it is our merchandise and our responsibility to deliver to destination.

Furthermore, it seems to us that in principle, which I have just mentioned, has founded and helped to build this country by free enterprise, which we should cherish and help [fol. 346] to maintain.

Furthermore, I think that if this privilege of diverting and handling our products over a different route will tend to give us better service by the line that is serving as due to the fact that competition exists which at the present time does not, in fact, is a monopoly, and inasmuch as we are all human, and particularly in view of the fact we have past history to back us up on these things, there is a possibility in the future that some mismanagement might take place in the Union Pacific which will be detrimental and harmful as it has been in the past because of inefficient and mismanagement.

Mr. Collins: I move to strike all of that statement on the ground it is irrelevant, incompetent and immaterial.

Exam. Mullen: That seems to me to be a sound objection,

taking the latter portion of it. However, we will let it stand.

One question I wanted to ask you: You were asked about the cost situation on the U.P.

The Witness: Yes sir.

Exam. Mullen: How will the opening of this ro[illegible]e by the D&RG better or help correct the cost situation with respect to furnishing you with cars?

The Witness: May I give our experiences, in answer to the question?

Exam. Mullen: I would like you to answer this question [fol. 347] specifically.

The Witness: We have found in the past, in fact we have been penalized severely in not being able to ship our perishables because of lack of equipment.

Mr. Collins: Well now, Mr. Examiner, I am sorry to interrupt on what ought to be an answer to your question, but which is not. I object to his speaking of having been penalized unless he states what he means by "penalized."

The Witness: I can give you a definition of "penalization."

Exam. Mullen: Don't let us get too far from the question I asked. How will the opening of this route help you out on the car situation? Can you tell us that?

The Witness: Yes. We think if these freight rates over the D&RG are the same as they are over the Union Pacific, that competition will become a factor whereby the Union Pacific will see that the cars are furnished to shippers when the shippers needed them, which has not been the case in the past because they knew that if they didn't get the freight today, it would move over their line tomorrow, inasmuch as a monopoly exists th[illegible]

Exam. Mullen: That's all I have.

Mr. Collins: Are you finished, Mr. Quirk?

Mr. Quirk: I have not said a word.

Mr. Collins: I said "have you finished?".

Mr. Quirk: Yes.

[fol. 348] Mr. Collins: Thank you.

Mr. Quirk: That answer was in answer to the Examiner's question.

Mr. Collins: Thank you for that, too.

Mr. Quirk: I thank you.

Exam. Mullen: Let's proceed.

Cross-examination.

By Mr. Collins:

Q. What competition, Mr. Stanger, do you have in mind that would result if the Rio Grande succeeds in this law suit?

A. I don't understand your question.

Q. What competition do you think would result if the Rio Grande prevails in this law suit?

A. I take it, in trying to answer the question, which I don't understand fully, I think in answering it that I have already stated that competition is the life blood of American business.

Exam. Mullen: We would like to have the answer more specific than that.

Mr. Collins: If he doesn't answer the question, let me start over again.

The Witness: If you will rephrase it, I will appreciate it.

By Mr. Collins:

Q. Let me start over again.

You spoke of car supply, and you also spoke of the benefits of competition, did you not?

A. No, I spoke of the benefit of service through competition.

[fol. 349] Q. Through competition?

A. That is correct.

Q. Now, what competition will be added to the picture insofar as your shipping is concerned if the D&RGW prevails in this law suit?

A. I don't—the competition so far as we are concerned?

Q. Yes.

A. It will be the competition between the Union Pacific and the D&RG, and other railroads that are soliciting our business.

Q. I see. Can you state how that will give us more cars at times that are more suitable for your purposes?

A. Only from past experience, which I will be glad to elaborate on if you want me to.

Q. No. Won't you just tell us how you anticipate your

car supply will improve if the Rio Grande prevails in this law suit?

A. Yes.

Q. Just tell us what you expect.

A. If the Rio Grande prevails in this law suit, it will mean that we have, as a shipper, the opportunity of routing our merchandise over the Union Pacific or the D&RG.

Q. Yes.

A. If the Union Pacific or the carriers fail to give us cars with which to move this produce, then, as retaliation, or to help to put the Union Pacific on their toes, we can take the freight away from them and ship it over the D&RG, which [fol. 350] at the present time we cannot under circumstances unless we are penalized.

Q. Penalized by the combination rate?

A. By the combination of freight rates.

Q. Yes. Now, you haven't overlooked the fact, of course, that your cars will still be delivered to you by the Union Pacific, and your actual physical transportation services will still be Union Pacific?

A. I have not overlooked that at all. As a matter of fact, in the past, I think your own records will show it, you have diverted cars from Idaho that should be shipped and loaded by shippers in Idaho to other lines where you had competition simply because you needed cars in that district in order to take care of business because of competitive purposes where we sit high and dry in the past not having the cars to load the merchandise out, knowing that you would get it, if you didn't get it today, you would get it tomorrow.

Q. You think the Union Pacific would not be able to do that after the Rio Grande might prevail in this law suit?

A. I am definitely sure the Union Pacific would pay more attention to the shippers' requests, if we had the opportunity of routing it over both lines, they would pay more attention to it than they do at the present time.

Q. How do you know that?

A. I say I don't know that. I feel that, I think that.

[fol. 351] Q. You think if you had this club to use over them, they would come nearer giving you exactly what you want?

A. I would not call it a club at all. I would merely say it is competition.

Q. Then to use your word, retaliation?

A. I can strike that from the record. I didn't mean it in that manner at all.

Q. All right. We will leave it as it is.

In the instance you mentioned, of not getting the cars that you wanted, did you have knowledge then of the available car supply of the Union Pacific Railroad for distribution?

A. In a limited way, yes. We have often been told that there would be cars loading for this day, the next day, and so forth, but many, many times we were disappointed and did not receive the cars that had been promised. I can tell you why in some instances.

Q. Just a minute now. You can tell me that later. Haven't other shippers throughout Idaho had the same disappointment in the receipt of car supply in proportion—receipt of cars in proportion to the cars ordered by them?

A. Oh, I think that is true.

Q. Yes.

A. We have all been handicapped.

Q. And those disappointments in receipts of cars ordered have been generally at what periods of the year?

[fol. 352] A. Your records show that, sir.

Q. Well, yes, that is the reason I can depend on asking you.

Exam. Mullen: Speaking of your own experience.

The Witness: Well, we have been disappointed in receiving cars——

By Mr. Collins:

Q. Let me strike out that question, and ask you, isn't it at the season that potatoes, onions, grain, whatever are the products that are harvested at particular times of the year, that this, what you would term, I suppose, an inadequate supply, is felt by you and other Idaho shippers?

A. I don't understand your question; I am sorry.

Q. Isn't the shortage of cars that you speak of at the time of the year when your potatoes, onions, and all of those things are harvested, right at that peak harvest period?

A. Not necessarily.

Q. You don't feel it at that time?

A. We feel it sometim at that time, and other parts of the season as well.

Q. Have you ever gotten the cars you wanted from the Union Pacific Railroad?

A. Have we ever?

Q. Yes.

A. Oh, yes.

Q. What time of the year was that?

A. We are getting enough at the present time.

[fol. 353] Q. Well, in 1946, how did you fare then? That is, at any period you pick out?

A. Well, I would have to go back into the record, and I haven't them with me, but it seems to me, without the records at hand, that we had a period in 1946 that we didn't have adequate supplies.

Q. Yes.

A. May I explain why we didn't have adequate supplies at times?

Q. Well, you can explain from your standpoint, but the Union Pacific Railroad won't be bound by it.

A. That is correct.

Q. If you won't make another speech.

A. Then maybe I hadn't better say anything.

Exam. Mullen: If you have something to clarify on the record, you may do so.

The Witness: There have been cases, and the record will bear us out on this, at Idaho Falls, where we have needed cars and needed them badly. The Union Pacific had cars on their so-called tracks, but they had not been serviced. By that I mean that had not been cleaned.

We needed those cars so badly that we offered to clean them ourselves at our own expense in order to rush and expedite those cars into service so that they could be loaded. But we have been refused that, and the reason that those cars, in my opinion, have not been available to us when we [fol. 354] needed them is because of the lack of facilities that the Union Pacific and the PFE failed to have at that loading point.

Q. Now, is it your understanding that the Denver and Rio Grande Railroad will come up to Idaho Falls and clean those cars and spot them for you?

A. Definitely not, sir.

Q. So that the situation would not be necessarily changed, would it?

A. That situation would not be necessarily changed except in this, that if we failed to receive the service which we are entitled to, then I am sure the shippers would say that if the Union Pacific is going to take the attitude and not service the shippers as they should, then in some cases those shipments would move over a line that does appreciate business.

Q. In other words, you would route against the Union Pacific?

A. That may be the case in some instances.

Q. That really is all you have in mind as a possible benefit?

A. Oh, no, that is not all.

Q. Is that so?

A. No.

Q. Do you have something else?

A. Yes.

Q. What else?

A. Do you want me to make a speech?

Q. What other benefits do you have in mind?

[fol. 355] Exam. Mullen: You can answer the question.

The Witness: The other benefits I have in mind is this: We have in Idaho a very productive territory, and if the Union Pacific will help develop that territory, that much more tonnage can be grown and produced in that territory.

By Mr. Collins:

Q. Wait a minute. You promised to answer by stating what other benefits you and the business at your end would derive.

A. I am getting to that.

Q. Getting to that?

A. By increased production, we would have greater tonnage to give to you and other lines.

Q. If the Union Pacific would build up Idaho, you say?

A. If they would help build it up.

Q. Have you helped build it up?

A. Certainly.

Q. Do you realize the Union Pacific Railroad, or what is now the Union Pacific Railroad, was constructed in Idaho in 1881?

A. I do, but not by the Union Pacific.

Q. It is a subsidiary or forerunner of the Union Pacific, and we need not explain that on the record.

A. That is right.

Q. Do you know what the population of Idaho was at that time?

A. No, I don't.

Q. Would you be surprised if I told you it was only 34,000 people?

[fol. 356] Exam. Mullen: I don't think we need to go into that. I don't think we need to pursue that, Mr. Collins.

Mr. Collins: No, I didn't think so either

That is all I want to ask Mr. Stanger.

Exam. Mullen: Anything on redirect?

Redirect examination.

By Mr. Quirk:

Q. Do you know enough about the way railroads interchange cars between each other to answer a question like this: If competitive rates were established in connection with the Denver and Rio Grande, wouldn't you expect in the course of events, that some of the cars offered by Rio Grande would go up to the Union Pacific and thereby increase the supply of the Union Pacific.

A. I certainly would expect it.

Mr. Quirk: All right, that is all.

Mr. Collins: That is all.

Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

BERT HIGGINS was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name, Mr. Higgins?
A. Bert Higgins.
Q. Where do you reside?
A. 265 East 21st Street, Idaho Falls.
[fol. 357] Q. Mr. Higgins, are you on the executive committee of the Idaho State Grange?
A. Yes sir.
Q. What is that membership composed of?
A. Composed of farmers and shippers—shipper farmers, or grower dealers. We have some grower dealers that ship quite a lot of produce that are members. In order to qualify for membership in the Idaho State Grange, they have to be agricultural workers or producers, or till the soil.
Q. Is that a state-wide organization?
A. Yes sir.
Q. How many members are in the Grange?
A. We have at present some small number over 12,000, just right around 12,000 members—adult members.

Mr. Collins: How many, 12,000?
The Witness: Yes, 12,000.

By Mr. Quirk:

Q. Have you been a farmer for a long time?
A. I came to Idaho in 1907, and bought a farm on the 8th day of August, 1907. I came to Idaho and bought a farm, and I farmed continuously then until 1945.
Q. During that period, you were a grower of grain, I take it, fruit and vegetables?
A. Not any fruit. We didn't raise much fruit, but I grew potatoes, grain, and hay, principally.
Q. Did you ever bring up lambs and ship them?
[fol. 358] A. No sir, I never shipped any lambs myself.
Q. Well now, what is the position of the Idaho State Grange in this proceeding?
A. The Idaho State Grange, after considering both sides of the proposition, and getting what information that they

could assemble, decided that it would be to the best interests of Idaho, as an agricultural state, to not have the Ogden gateway closed, or to have it opened, rather.

Mr. Quirk: You may take the witness.

Cross-examination.

By Mr. Collins:

Q. Mr. Higgins, you yourself are not a shipper any more, are you?

A. I haven't been a shipper for two and a half years or more—nearly three years.

Q. Yes. Now, you said that the Idaho State Grange, after considering both the Rio Grande's situation or position, and the Union Pacific's position in this case, the Idaho State Grange—I guess that is correct—decided the Ogden gateway should be opened; is that what you said?

A. Yes sir. We didn't make that decision until after 51 per cent, about, or 51 per cent of the Grange itself, had sent in resolutions to the state secretary asking that the state grange present that at the State Grange session in Idaho Falls.

Q. Do you know about what date that this decision was made?

A. The executive committee decided that they were in favor of the opening of the Ogden gateway, I think it was on [fol. 359] October 20.

Q. 1919?

A. Yes sir.

Q. That was how long after hearing both sides, or considering both sides of the controversy in this law suit?

A. We heard the Denver and Rio Grande's side I believe it was in September.

Q. The exact date is not of particular importance, Mr. Higgins.

A. It was around about September 20, or somewhere along there, right at that time somewhere. It was in the month of September, anyway.

Q. You said there was 12,000-some members of the Idaho State Grange, and that they are shippers or dealers?

A. Or producers. They are not all shippers and dealers. They are producers of agricultural products.

Q. Do you know whether those members expressed themselves before the controversy in this case?

A. I know that Pomona Granges, which are county organizations, and 18 subordinate granges, the Pomona Granges have for their membership about from seven to twenty, the suburban granges, and they were at that time—the State Secretary reported that there was ten of those granges, Pomona Granges, that had sent in resolutions or signed resolutions that had been sent in which would, taking the number of Granges into consideration, be practically 50 per cent.

[fol. 360] Q. Maybe I don't understand the way the Idaho State Grange is constituted, Mr. Higgins. Would *the* be it, that the state-wide grange is constituted by, or is made up by local granges like the Pomona, and other granges?

A. Yes sir, we have 167, I think it is, at present, subordinate granges.

Q. Then there is no direct shipper membership, that is a person, there is no person who is a member of the Idaho State Grange, but instead the membership of that grange is made up by other local granges, is that correct?

A. Yes sir. The State Grange is, yes sir.

Q. Now, the 12,000 members you mentioned constitute membership of local granges, which local granges are in turn members of the Idaho State Grange, is that correct?

A. Correct.

Q. Is that it?

A. Yes sir.

Q. You don't know, then, do you, whether the individual people who make up the local granges expressed themselves, or how many of them expressed themselves about the controversy in this law suit, do you?

A. I don't know exactly the personal number, but I know the number of granges that had sent in resolutions to the State Secretary, or else had signed resolutions. In the Pomona Granges, the subordinate granges that are usually in there sign the resolutions that are sent by the Pomona [fol. 361] Grange to the State Grange.

Q. Yes. So that the actual vote, if any, of the membership of the local grange, would not come to your attention,

would it? You would get your authority here from a local grange in one county and another county by resolution of that local grange sent up by an officer, wouldn't you?

A. Yes sir.

Q. Then, Mr. Higgins, you don't know, do you, how many of the 12,000 people in this entire grange set up might favor or not favor the Denver and Rio Grande's position here, do you, as individuals?

A. No sir, only that we are expected to know that a majority of the grange favored the resolution, or else it would not be sent in; it would be turned down.

Q. You assumed that the heads of the local granges had a majority of their members of each local grange; that is what it is?

A. That is right.

Q. All right. Do you know if these local granges stated why they wanted the Ogden gateway opened, or what benefits they expected?

A. Usually the resolutions sent in covered it generally. They thought for the benefit of the State of Idaho, for the shippers and producers that ship, they should have the right to ship over any road they saw fit.

[fol. 362] Q. In other words, they thought the greater the number of possible routes, the more benefit there might be to them?

A. They figured in their resolutsion, some of them stated it would open up new markets, possibly open up new markets and create better facilities for handling their produce.

Q. Well, did they indicate what new markets would open up?

A. They never specified any particular markets.

Q. All right. Understand, Mr. Higgins, if the membership, or individual members of these Idaho granges, which constitute the state-wide grange, rather, think that they will get lower freight rates if the Ogden gateway is opened than they now have?

A. No sir, they didn't think that, because they had to be told by the Union Pacific people in almost all of the granges south of the Salmon River, I think, that they would not, and they had to be told by the D&RG people that possibly it might not affect freight rates in any way.

Q. Yes. They understood, I suppose, that if the Rio Grande prevailed here, that what they would get would be the same rates by the D&RG, approximately the same rates as they now have; is that what was understood, if you know?

A. Well, I think that was the misunderstanding. They might not have cheaper rates, but they would possibly have better service.

Q. And how do they think that better service would come about; was that stated in the resolutions?

A. No sir, they didn't state in the resolution why they thought they would have better service.

[fol. 363] Q. They just expressed a general desire that the gateway be opened for whatever it might benefit them in the future: is that about the substance of it?

A. I didn't happen to be able to advise or visit many of the granges, I only visited two or three where I talked with the masters, the head of the granges, or the members. They thought competitive effort would be better for the transportation than to have it in one railroad alone.

Q. Well, did they know that the Rio Grande Railroad was not going to furnish any transportation services in Idaho?

Mr. Quirk: I object to that.

Mr. Collins: Just a minute.

Exam. Mullen: I think the cross examination is proper. Go ahead.

The Witness: They knew that the Rio Grande wouldn't build any tracks into Idaho.

By Mr. Collins:

Q. That is a sufficient answer to me. Now, as a matter of fact, Mr. Higgins, didn't you send out a letter to all local granges, advising them to take a stand against the Union Pacific Railroad in this case?

A. I sent out letters to almost all the granges south of the Salmon River.

Q. Yes.

A. I didn't particularly urge them to take a stand.. I [fol. 364] urged them to send a resolution to our utilities commission at Boise, to intervene in the case.

Q. You did tell them, though, did you not, that in your

opinion this closed Ogden gateway was a great detriment to shippers and producers in Idaho?

A. Yes sir.

Q. And it was your view, was it not, that the gateway should be opened to eliminate that detriment? Now, I wish you would state exactly what benefits you expected to accrue to any of the 12,000 members of the Idaho State Grange, if the gateway were opened?

A. I want to state first, to clarify that just a little bit, that we had 50 per cent of the granges south of the Salmon River that had sent in resolutions prior to the time that I sent out this letter.

Q. Yes.

A. The benefits that I figured or studied out that would accrue was that it would give us competitive rates to markets that were not now open to the shippers of Idaho, and also that competition, in my estimation, does a lot of things, and I thought possibly it would help to eliminate the shortage of cars and give us better service than we had previously.

Q. Well, would this be a correct statement of the position that you took——

Mr. Quirk: Mr. Examiner, I suggest Mr. Collins ask [fol. 365] questions instead of summing up now. If he is going to sum up, I object.

Mr. Collins: This gentleman is under cross examination.

Mr. Quirk: I know. You are not asking questions, you are stating something. You are summing up. You are going to sum up his position now. He answered your question.

Mr. Collins: I am entitled to sell him my position.

Exam. Mullen: Go ahead, Mr. Collins.

Mr. Quirk: Mr. Examiner, I object to Mr. Collins summing up the man's position.

Exam. Mullen: The question is not complete. I don't know what the question is, or what it is going to be. Go ahead, Mr. Collins.

By Mr. Collins:

Q. Is this a correct statement of your position, and of those whom you represent, that you think that there may be

some benefit derived if the route and rates are opened up by the Rio Grande Railroad?

A. According to the evidence that I have been able to get——

Q. No, wait a minute.

Exam. Mullen: Let him answer.

By Mr. Collins:

Q. Go ahead.

A. I know that there will be certain benefits.

Q. You know; what are they?

A. I just stated them prior to this time, that there would be other markets opened up, and possibly competitive service would give us better service than we had in the past.

[fol. 366] Q. Well now, where are you lacking in competitive routes other than the Rio Grande Railroad?

A. We only have the two railroads, the Rio Grande and the—we only have the Union Pacific. We don't even have the Rio Grande yet.

Q. They don't intend to build up there, do they, as far as you know?

A. No.

Q. Don't your members ship stuff as far as Chicago, do you know?

A. I think possibly our members ship into every state, I think.

Q. Do you know whether any one of the members of the Idaho State Grange has had any occasion to ship via the Denver and Rio Grande Railroad?

A. No sir, I don't. I know of occasions where livestock has been shipped via the Denver and Rio Grande Railroad, the north section; my son-in-law ships a lot of lambs in Colorado and Kansas, which are shipped via the Denver and Rio Grande.

Mr. Collins: That is all.

Mr. Quirk: That is all, Mr. Examiner.

Exam. Mullen: All right. Thank you, Mr. Higgins.

(Witness excused.)

Exam. Mullen: Do you have another witness?

Mr. Quirk: Mr. Examiner, I believe Mr. Siddons is here, who represents the Holly Sugar people, who would like to proceed.

Exam. Mullen: Is Mr. Siddons here? You may proceed [fol. 367] now, sir, if you wish.

Roger S. Smith, was sworn and testified as follows:

Mr. Siddons: Mr. Examiner, my name is Lowe P. Siddons. I am an attorney for the Holly Sugar Corporation. We will have two witnesses; Mr. Roger S. Smith, and Mr. Worth Stimits.

Direct examination.

By Mr. Siddons:

Q. Mr. Smith, have you been sworn?

A. Yes.

Q. Will you state for the record your name, address and occupation?

A. Roger S. Smith, superintendent, livestock operations, Holly Sugar Corporation, Denver, Colorado.

Q. How long have you been employed by the Holly Sugar Corporation?

A. Since 1926.

Q. During that time of employment, have you been engaged wholly in the livestock department?

A. Yes sir.

Q. How long have you been the superintendent of their livestock operations?

A. For the past six years.

Q. The Holly Sugar Corporation, as indicated by the name, is primarily engaged in the manufacture of sugar, is it not?

A. Yes.

[fol. 368] Q. How do they happen to be in the livestock business?

A. Well, in order to utilize their beet and molasses by-products, to enable the farmers to feed these cattle and lambs on their own farms, and by doing so increase the

fertility of their soil, and also increase the tonnage of sugar beets.

Q. You mentioned beet pulp and molasses. Where are these two commodities obtained, or how are they obtained?

A. Well, they are obtained at each one of our factories, and the tonnage of the beet pulp produced amounts to about 25 per cent of the tonnage of the beets sliced at each factory.

Q. Does Holly Sugar have a sugar factory on the Rio Grande Railroad where they carry on livestock operations?

A. Yes sir.

Q. Where is it located?

A. Delta, Colorado.

Q. Will you tell us more particularly where Delta is located on the Rio Grande, with respect to Grand Junction, Colorado?

A. Well, it is about 35 miles southeast of Grand Junction.

Q. During a normal year of beet sugar production, about how many tons of beet pulp would you have available for feeding at Delta, Colorado?

A. Well, that would vary all the way from 25 to 60 thousand tons. That, of course, depends on the tonnage of beets raised in the community.

Q. About how much molasses would be available?

A. That is a question that I couldn't answer at this time.

[fol. 369] Q. It would be several thousand tons; you know that, do you not?

A. Yes sir.

Q. Will you tell us, Mr. Smith, about how many pounds per day of pulp that you would feed to cattle, we will say, on feed?

A. Well, an average steer will consume from 70 to 100 pounds of beet pulp per head per day.

Q. About how much molasses?

A. Oh, from two to five pounds.

Q. Where are these livestock pens of Holly or these operations carried on, with respect to the sugar factory?

A. They are immediately adjacent to the factory.

Q. How is the beet pulp accumulated at the factory?

A. Well, it is accumulated in pit silos, large pit silos.

Q. And is there made available for your livestock feeding?

A. Yes sir.

Q. What other factories in Colorado do you have where you feed livestock?

A. We have one at Swink, Colorado.

Mr. Colorado: Swink?
The Witness: Yes.
Mr. Collins: S-w-i-n-k?
The Witness: Yes sir.

By Mr. Siddons:

Q. Do you have any at any other other place?
[fol. 370] A. South Torrington, Worland.

Mr. Collins: What was that?
Mr. Siddons: Worland.
The Witness: Sheridan, Wyoming.

By Mr. Siddons:

Q. Do you have factories in Montana where you feed livestock?

A. Yes sir, we have two. One is at Hardin, Montana and one at Sidney, Montana.

Q. The factory that you mentioned at South Torrington, Wyoming, what railroad is located there?

A. Union Pacific.

Q. Mr. Smith, do you have charge of the buying of the livestock for all of these feeding operations?

A. Yes sir.

Q. What two classes of livestock do you feed?

A. Lambs and cattle.

Q. Where do you buy this livestock?

A. Well, we buy it in most all the western states. Do you want the states?

Q. No, I will go ahead. About how many head in a normal year of cattle do you buy for livestock feeding at the factories?

A. Well, it will vary, depending upon the amount of beet pulp available, but I would say approximately ten to twelve thousand cattle, and from fifth to sixty thousand lambs.

Q. Do you have livestock feed on hand now at the Delta, [fol. 371] Colorado factory?

A. Yes sir.

Q. How many head of cattle and how many head of lambs do you have there?

A. We have approximately five hundred cattle, and a little over five thousand lambs.

Q. Are these animals now in the feed lots or are they in the hands of the farmers?

A. Well, a very small percentage of the lambs are in our feed lots, the balance are out on the different farms.

Q. Will you explain that operation a little more fully.

Q. Well, we allow the beet farmers to take our lambs, or cattle, out on a contract basis, whereby, when they are returned to us we pay them for the gain they have put on these lambs or cattle.

Q. Why do you do that?

A. To enable the beet farmer to produce more fertilizer for his farm.

Q. Do we restrict that operation to farmers who raise sugar beets?

A. Yes, we do.

Q. Why do we do that?

A. Well, it is in order to keep the fertility of the soil up to the maximum production.

Q. Would you say that encourages sugar beet growing by the farmers?

[fol. 372] A. Yes, it does.

Q. Now, Mr. Smith, in past years, has it been your experience to purchase livestock in both sheep and cattle on the Union Pacific in Idaho and Montana?

A. Yes sir.

Q. Would you tell us about what quantity you purchased there last year?

A. I don't remember exactly the number we purchased in Montana last year, but considerable number of cattle and lambs.

Q. Where did you ship this livestock when you purchased it in Idaho and Montana?

A. Do you mean this fall?

Q. Yes, and as a rule, generally, in other years?

A. Most every year we purchase cattle originating on the Union Pacific, and they are shipped to some of our

west coast feed lots, also to South Torrington, Wyoming.

Q. What are some of the points from which you purchase this livestock on the Union Pacific in Idaho and Montana?

A. Well, from Divide, Melrose, Armstead, Dillon, Dell, and Monida.

Q. That is known as the Big Hole country, is it not?

A. Yes sir.

Q. Have you shipped any of this livestock to the Delta, Colorado factory for feeding?

A. No, we have not.

[fol. 373] Q. Why haven't you shipped to Delta, Colorado?

A. This fall I investigated the possibilities of shipping some cattle from Western Montana to Delta, Colorado, and I found the freight rates would be local from points of origin on the Union Pacific to Salt Lake, then local from Salt Lake to Delta, Colorado.

Q. Did you make any comparison of the through rates on the fat cattle via the Union Pacific from these Montana, Idaho points, for example, Dillon, Montana, to Omaha, for example, when moving Union Pacific direct, when feeding at South Torrington, Wyoming, to Delta, Colorado?

A. Yes.

Q. Could you give us some of those comparisons?

A. Well, the notes I have on this is cattle shipped from Dillon, Montana, via Union Pacific, and D&RG; the sheep rate from Dillon to Denver was $1.31, that is, via the D&RGW, and from Dillon to Denver, via Union Pacific, it is 97 cents, making a difference of 34 cents a hundred. And then sheep from Dillon to Omaha, $1.31 via D&RG, and $1.12 Union Pacific, making a difference of 19 cents. Cattle from Dillon to Omaha, $1.61 D&RG, and $1.12 Union Pacific, making a difference of 49 cents.

Q. What would be the difference at Chicago on cattle?

A. On cattle from Dillon to Chicago, via D&RG would be $1.94, and via Union Pacific $1.42, or a difference of 52 cents.

[fol. 374] Q. And you attribute those differences in rates as the principal reasons why you have not shipped the Idaho and Montana stock, originating on the Union Pacific Railroad, to the Delta, Colorado feed lots for feeding in transit?

A. Yes.

Q. What are your usual markets east of the Delta, Colorado factory for shipping cattle and sheep?

A. Denver, Omaha, Kansas City, Chicago.

Q. Have you anything further to state?

A. I prepared a small summary that I would like to read. We have found from several years' experience that more efficient and more favorable economic conditions are promoted among our sugar beet farmers in a beet sugar factory territory if the wet beet pulp and beet sugar final molasses, by-products of beet sugar manufacture, are fed to livestock in the territory instead of being shipped to eastern purchasers.

I know from experience that livestock feeding is more efficiently operated and economies experienced when the best grade of feeder is used. The livestock in the Northwest, particularly in Idaho and Western Montana, on the Union Pacific Railroad, is of excellent grade for use in our feeder operations on the D&RG Railroad and elsewhere.

The Union Pacific Railroad does not publish as an originating carrier in connection with the D&RG, thence U.P., or U.P. and connections to the eastern livestock markets joint through rates and routes on livestock from [fol. 375] the Northwest, including points on the Union Pacific Railroad in Idaho and Montana on as low a basis as is available to livestock feeders on the Union Pacific Railroad, for example, in the states of Wyoming and Nebraska.

This has hindered us and other livestock feeders in the efficient and economical operation of livestock feeding on the D&RGW Railroad.

I request that this Commission order that the same rates, single or joint lines, applicable on livestock from points on the UP, above described, and joint routes in connection therewith be established via the UP-D&RGW to Denver, Colorado, and UP-D&RGW, UP or UP and connection to livestock markets east of Denver, such as Missouri River markets and Chicago.

Q. Do you have anything further?

A. No.

Mr. Collins: Mr. Examiner, we would like to defer cross examination of this witness until after lunch, if we might do that.

Exam. Mullen: Can you be back at 1:30?

Mr. Collins: I will be glad to take the time off at the other end of the recess.

Exam. Mullen: We will make it 1:45.

Mr. Collins: Very well.

[fol. 376] Exam. Mullen: We will recess until 1:45.

(Whereupon, at 12:20 o'clock p.m., the hearing was recessed, to reconvene at 1:45 o'clock p.m., the same day.)

[fol. 377] Afternoon Session, 1:50 p. m.

Exam. Mullen: Come to order, please.

Mr. Collins.

Mr. Siddons: Just a minute, please. I believe Mr. Smith wants to add to his testimony.

ROGER S. SMITH resumed the stand and testified further as follows:

Direct examination (cont'd):

The Witness: I misunderstood Mr. Siddons when he inquired regarding the number of cattle and lambs that we had purchased in Montana and points of origin on the Union Pacific. I was under the impression that he meant the whole state of Montana. I remember now that in the year 1948 we purchased approximately 440 or 450 head of cattle at points of origin on the Union Pacific and shipped them to South Torrington. In the year 1949 we purchased approximately 500 steers in the western Montana District and shipped them to Hardin, Montana. In addition, we purchased about 450 steers and shipped them to the west coast points.

By Mr. Siddons:

Q. These head of cattle were purchased on the points of Union Pacific in western Montana?

A. Yes.

Mr. Siddons: That is all.

Do you gentlemen over here want to ask questions before cross?

[fol. 378] Mr. Gibson: No.

Cross-examination.

By Mr. Collins:

Q. Mr. Smith, I understood your company, the Holly Sugar Company, had factories at several points, I won't rename them unless it is necessary, but do you have feed lots at or near each of these points at which you stated you have factories?

A. Yes, sir.

Q. Now, are the cattle or sheep, or both cattle and sheep, raised and are available for sale near these feed lots at these several points where you have factories?

A. Yes, sir.

Q. And I take it you do buy, perhaps, what you can locally, as nearby those feed lots at the several points as possible?

A. That is correct.

Q. If at Hardin, Montana, for instance, you bought cattle in the general area of Hardin, Montana, they would be trucked in, would they not, to the feed lot?

A. No. Ordinarily they are either driven in or shipped in by rail.

Q. I see.

You have feed lots, if I had it correct from your testimony, at points in three different states: Colorado, Wyoming and Montana?

A. And California.

[fol. 379] Q. And California. And each of those states that I named is a rather important cattle-producing state, is it not?

A. Yes, sir.

Q. Also sheep?

A. Yes, sir.

Q. You feed many, many times more sheep than you do cattle, do you not?

A. That is correct.

Q. Do you buy these cattle at their weight at origin points—that is, at the points where you buy them?

A. Yes, sir.

Q. That is, whatever they weigh there?

A. That is right.

Q. They become your cattle, then, at the origin points?

A. That is right.

Q. Is there any significance in the customary matter of shrinkage in cattle during transportation from the standpoint of your company from the point of origin, where you buy them, to the feed lots?

A. Yes, there is.

Q. You prefer to have as little shrinkage take place as you can, I suppose, do you not?

A. That is right.

Q. Is that shrinkage considerable, say, in a 28 to 36-hour time of transportation?

[fol. 380] A. Well, of course that depends on the weighing conditions you have when you purchase the cattle.

Q. I see. You mean they shrink more when they are real full when you put them on the train?

A. That is right.

Q. Is it the practice of your company to try to avoid shrinkage as much as you can?

A. Yes, sir.

Q. And that, of course, will be particularly true when you ship them out of the feed lots to the markets where you hope to sell them, would it not?

A. Yes, sir.

Q. Well, then, it would be to your advantage, would it not, to buy your feeder cattle at origins as near as you can to the respective feed lots?

A. That is right.

Q. Is time in transit—that is, the time that cattle are on the train en route to market—of particular importance from the standpoint of your company?

A. Yes, it is.

Q. Ordinarily, isn't it true that once you have them fed up to the point where you want to pass them on from the feed lots you then want to get them to market as quickly as possible?

A. That depends on your markets, of course.

Q. Well, yes. But if your markets are satisfactory, [fol. 381] then the faster you can get the cattle there the more satisfactory it is to you from the standpoint of transportation, is it not?

A. That is right.

Q. Aren't cattle to markets like the Omaha market, from points like South Torrington, Wyoming, and Sheridan, Wyoming, and this other place you mentioned—was it Worland?

A. Yes, sir.

Q. W-o-r-l-a-n-d?

A. That is right.

Q. Worland, Wyoming—aren't cattle from those points trucked largely to Omaha rather than taken in by rail?

A. No, I don't think they are. I think the majority of them move by rail.

Q. I have heard it said so often in these increased rates cases that such a large percent of cattle are trucked—as much as several hundred miles. I wondered if that were your experience.

A. We prefer to ship our cattle by rail.

Q. I see.

Where have you been buying cattle for feeding at Delta—cattle and sheep, if you will, please?

A. Well, we naturally prefer to buy them as closely as we can to our feed lots.

Q. Yes.

A. But this year we purchased some cattle here in Salt Lake City to go to Delta.

[fol. 382] Q. Where did they come from?

A. They were purchased here through an order buyer. I don't know where the point of origin was.

Q. How long have you had this operation at Delta—this feeding operation?

A. I think it was one of the first operations the company entered into.

Q. About how long ago?

A. Oh, I would say it was 25 years ago.

Q. Well, now you have told us this year you bought some cattle for feeding at the Delta feeding area in Salt Lake City. Where else did you buy, and where else have you been buying cattle for feeding at Delta?

A. Well, we have been buying them around Paonia, Delta, Montrose, Gunnison and as nearly as possible to our feed lots.

Q. How about sheep?

A. The sheep are purchased at about the same localities.

Q. I see. And would there be about the same situation as to your purchases for these other feed lots?

A. Well, we try to purchase as closely as possible, but at times we have to reach way out in outlying districts away from our feed lots to make our purchases—well, in comparison to prices we feel we can afford to pay for these cattle.

Q. Is it correct to say that the number of cattle and sheep you purchase would be more or less in proportion [fol. 383] to the amount of this beet pulp and molasses that you have available for feeding?

A. That governs entirely the number of live stock we feed.

Q. Do you ship to Los Angeles and other California points, or other Pacific points, including perhaps Portland, cattle that you feed at Delta?

A. Yes, at times.

Q. You buy those, as you have just described, as near to Delta as you could?

A. That is correct.

Q. Do those cattle go on to these destination points I mentioned—San Francisco, Los Angeles, or Portland? Is their entire movement on what we call transit billing?

A. If we do have transit billing? Yes. But in the majority of cases we don't have transit billing there.

Q. Would those cattle move into Delta, as you bought from around nearby neighborhoods—would they move in by rail?

A. Part of them move in by rail and part are driven in.

Q. Then it follows that when you don't have transit

billing the cattle move on out at a rate that would be higher than if you had transit billing: is that correct?

A. Yes, sir.

Q. Perhaps we misunderstood one thing you said, Mr. Smith. We thought you said you would have to pay local rates on cattle from Idaho to Delta. If Delta were the [fol. 384] destination, you did not mean to say that you would have to pay combination rates in such a movement as that, did you?

A. Well, what I meant was that feed-in-transit benefits would not apply on any live stock originating on points of the Union Pacific to our Delta, Colorado, feed lots.

Q. It would not apply at any joint through rates. That is really a correct statement, isn't it?

A. I think so.

Q. In other words, if you did feed cattle at Delta that came in from Idaho you would have to pay the inbound through rate and then an outbound rate to California, or wherever they move?

A. That is right.

Q. Now, I understood you to say that this fall, 1949, you looked into the possibility of purchasing cattle at Montana and found this rate situation what it is and did not buy the Montana cattle or sheep.

A. Yes, that was my statement.

Q. And, of course, you did not buy the Montana cattle or sheep because the transportation charges would cost you more; is that correct?

A. That is right.

Q. Had you examined into this rate situation on cattle from Montana prior to this fall?

A. No, I had not. But evidently my predecessor had because in previous years I do not have any knowledge [fol. 385] of any cattle purchased in western Montana having been fed at either our Delta or Grand Junction feed lots.

Q. I see.

A. At the present time we have discontinued the Grand Junction feed lots, but I do know we used to purchase lots of cattle up there.

Q. How long ago?

A. Most every year, along from 1926 on, is when I am more familiar with it.

Q. Since 1926 you purchased lots of cattle in Montana and Idaho?

A. Yes, sir.

Q. The cattle and sheep you purchased since 1926 in Montana and Idaho and fed at Delta moved on combination rates rather than on through rates, so far as the movement inbound to Delta and the movement outbound from Delta is concerned; would that be correct?

A. We have never fed any cattle at Delta that originated in western Montana.

Q. Oh. Oh, I see.

Would you say you have incurred any loss or injury—and when I say "you" I mean the Holly Sugar Company—because you could not purchase cattle in Montana or Idaho and ship them on a joint through rate for feeding at Delta and then out to California or to the East at the same rates [fol. 386] you could purchase and ship over the Union Pacific?

A. It is difficult to say whether there would be any loss; but I might say that it would be quite convenient for us, especially so when we have buyers in the Western Montana territory purchasing cattle there at considerably less money than what we had to pay for feeder cattle adjacent to the Delta factory this fall.

Q. What are the facts about that? Are you always assured of being able to buy for less in Montana and Idaho than you are in nearby Delta, for instance?

A. Not always, no. It happened to be the case this fall.

Q. Well, then, I take it the desire or wishes of the Holly Sugar Company is to have all possible routes open and available so they can go to the markets or to the purchasing areas where they can get the lowest price?

A. That is correct; yes, sir.

Q. Well, wouldn't they consider the amount of transportation charges from the point at which cattle were purchased to Delta as compared with transportation charges from a point nearby Delta?

A. Yes, we take that into consideration, naturally.

Q. Have you, in connection with your appearance in this

case, given any thought, or have you any way of estimating the extent, if any, of any benefit the Holly Sugar Company might derive if the gateway were opened as sought in this complaint?

[fol. 387] A. Well, yes, it would enable us to purchase cattle most any place in the districts where we prefer to purchase cattle without competing against the rates in other localities, or on the main line of the Union Pacific Railroad.

Q. You have operations—feeding operations—on both the D&RG and the Union Pacific?

A. Yes.

Q. Now, wouldn't such use as you would make of the routes and rates sought by the complaint in this case depend entirely on the price of cattle—the price at which you could buy cattle and sheep at the various origin points in these western states?

A. Yes.

Q. Has the Holly Sugar Company made any complaint to the Interstate Commerce Commission about this situation?

A. Well, I think they are intervening in this case. That is all I know.

Q. I mean any complaint to the Interstate Commerce Commission on its own initiative.

A. I think Mr. Siddons would have to answer that question.

Mr. Collins: Would it be permissible for Mr. Siddons to state that now, Mr. Examiner?

Exam. Mullen: If he knows.

Mr. Siddons: Since we have not made any shipments there would not be anything to file a complaint about. [fol. 388] No, we have filed no complaints.

By Mr. Collins:

Q. Have you made any complaint to the Union Pacific Railroad about it?

A. No, sir; I have not.

Q. On outbound cattle, after they are fed at Delta, Mr. Smith, that you might ship to Chicago, to that market who would pay the freight charges?

A. Well, if we consign them to a commission firm we would pay the freight charges.

Q. Do you sell that way to any great extent?

A. Yes, practically all of our cattle that go to the eastern markets are consigned to a commission firm.

Q. Don't you sell in rather large volume to Swift & Company?

A. Not cattle.

Q. Sheep?

A. Yes.

Q. Who pays the freight charges on those you ship to Swift?

A. We sell the lambs f.o.b. cars at our feed lots.

Q. Yes. I see.

That is all, Mr. Smith. Thank you.

Redirect examination.

By Mr. Siddons:

Q. Maybe you didn't understand the question a moment ago. Mr. Collins asked you, where you ship cattle from Delta that came in by truck, if you would pay a higher rate than you would if you applied transit. You said "yes." In fact, your rate would be lower, would it not, [fol. 389] from Delta, where your cattle came in by truck, than it would if it came in by rail from some more distant point?

Mr. Collins: No, Mr. Siddons. Pardon me for interrupting you. If that is what you understood me to say, either I didn't state what I had in mind or else it didn't get across. I meant the rail movement out of Delta would be what we term a local rate, or it would not be a part of a joint through rate, on the outbound trip from Delta, being no portion of a joint through haul.

Mr. Siddons: That would depend on the destination, would it not?

Mr. Collins: It might be a joint rate outbound, but not on the inbound, would it not?

Exam. Mullen: Does the witness understand that?

The Witness: I don't believe I do.

Mr. Siddons: I didn't think he did.

Exam. Mullen: As I understand it, the question was directed to movements by truck into Delta and the outbound rate by rail from Delta. Would that be a joint through rate?

The Witness: I wouldn't think it would be a joint rate that way.

Exam. Mullen: Then, as you say, it depends on the destination?

The Witness: That is right.

Exam. Mullen: Do you have any destination in mind, Mr. Collins?

[fol. 390] Mr. Collins: No, Mr. Examiner. As usual, I am afraid I didn't make it clear, but the truck feature hadn't really anything to do with that question.

Here is what I intended to direct his attention to, or rather inquire of him: If he brought cattle inbound from points near Delta and shipped them, after feeding, on out to Los Angeles, San Francisco or Portland on transit billing.

As I recall it, you did ship it on transit billing if you had it?

The Witness: That is right.

Mr. Collins: If they were trucked in, you would not have transit billing?

The Witness: No, sir.

Mr. Collins: If they were moved in by rail to Delta from other points on the Rio Grande, would you have transit billing there, do you know?

The Witness: Yes, sir.

Mr. Collins: And then the outbound movement to Los Angeles, San Francisco or Portland of those cattle that came in to Delta by the D&RG would be on transit billing, would it not?

The Witness: If it was not a backhaul. I might add that we do purchase lambs, a considerable number of lambs in Utah, and we have feed-in-transit billing on them, and that applies on any lambs we move east.

[fol. 391] Mr. Collins: You purchase those at origin points on the Denver and Rio Grande?

The Witness: Yes, sir.

Mr. Collins: I would like to inquire of Mr. Siddons if

my question or purpose is as much in the dark as it seemed at first.

Mr. Siddons: It is immaterial.

Exam. Mullen: That point seems to have been clarified.

Mr. Collins: All right.

Exam. Mullen: Any more questions, Mr. Siddons?

Mr. Siddons: I would like to ask Mr. Collins a question in response to his question to my witness about filing a case.

Do you wish to imply, by that, that if we made some shipments and filed a case—or, if we didn't file a case you would give us these rates?

Exam. Mullen: We needn't indulge in that. The question was whether your company had filed a complaint with the Interstate Commerce Commission against the Union Pacific. What is the answer?

Mr. Siddons: No, we have not.

Exam. Mullen: Anything more from this witness?

By Mr. Siddons:

Q. Mr. Smith, just one question: In these inter-mountain factories where we feed these cattle—for instance, Sheridan, South Torrington, or Delta—do we do any trucking, outbound, of cattle at all?

[fol. 392] A. Very little.

Q. It is a rail shipment for us?

A. Yes, sir.

Mr. Siddons: That is all.

Exam. Mullen: Is that all, Mr. Collins?

Mr. Collins: That is all.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Mr. Siddons: I call Mr. Stimits.

WORTH STIMITS was sworn and testified as follows:

Direct examination:

Mr. Siddons: Mr. Examiner, may I point out that our intervening position is here also in the nature of a complaint because it is filed against both of these railroads due to their failure to maintain joint through rates.

Mr. Collins: Is that an amendment to the intervention?

Mr. Siddons: That is in the intervention petition.

Exam. Mullen: Let me see the intervention petition.

(Document handed to Examiner.)

Exam. Mullen: All right. What is your point?

Mr. Siddons: This point I am making in paragraph 4 of our petition is in the nature of a complaint, too.

Exam. Mullen: What is the point you desire to make? Do you want to offer some evidence?

[fol. 393] Mr. Siddons: He mentioned whether we filed any complaints here before.

Exam. Mullen: He meant prior to this case.

Mr. Siddons: Yes, sir. But this intervention is in the nature of a complaint itself.

Exam. Mullen: As I understand it, there is an allegation in the complaint of the Rio Grande that the combination rates are unjust, unreasonable and discriminatory.

Mr. Quirk: That is right.

Exam. Mullen: I understand that in your intervention you join in that and you wish to support that.

Mr. Siddons: Yes, sir.

By Mr. Siddons:

Q. Will you state for the record your name, address and present occupation?

A. My name is Worth Stimits. My address is the Golden Cycle Building, Colorado Springs, Colorado.

Q. How long have you been connected with the Holly Sugar Corporation?

A. I have been employed by the Holly Sugar Corporation for the past 8 years.

Q. What are your duties?

A. For the past 6 years I have been chief rate clerk in

the traffic department, in which capacity my principal duties are the rating and routing of all shipments made by the company, which include the live stock we purchase at country points which are then shipped to the factories for feed-
[fol. 394] ing, and also the rating and routing of the outbound shipments after the stock is fattened and re-shipped on to market.

Q. Do you feel that, based upon your experience, you are acquainted with the freight rates on the live stock that Holly ships, to a reasonable degree?

A. I do.

Q. Have you two exhibits we would like to identify in the record at the present time?

A. I have.

Q. Will you please identify them?

A. The first exhibit which I would like to have identified——

Exam. Mullen: Exhibit No. 9. Is that the comparison of rates, or is it the picture?

The Witness: This is the picture.

Exam. Mullen: The picture will be marked Exhibit No. 9.

(Interveners' Exhibit No. 9, Witness Stimits, marked for identification.)

By Mr. Siddons:

Q. What is the heading of the exhibit, at the bottom of the page?

A. The heading is "The Story of Sugar."

Q. What is the next exhibit you wish to review?

A. The next exhibit which I would like to have identified——

Exam. Mullen: That will be marked Exhibit No. 10.

(Interveners' Exhibit No. 10, Witness Stimits, marked for identification.)

[fol. 395] By Mr. Siddons:

Q. That is the rate exhibit?

A. Yes, the rate exhibit.

Q. Referring to Exhibit No. 9, will you state briefly the purpose of that exhibit?

A. The purpose of the exhibit is to show the integral part that the feeding operation conducted by the beet sugar manufacturers plays in the whole sugar manufacturing process.

The whole lower picture shown on the exhibit graphically portrays the beet pulp coming from the factory and going to the feed pans, and also shows the molasses in the same operation.

Q. Now we take up Exhibit No. 10. Do you have any comments to make on it?

A. I believe the exhibit is largely self-explanatory. However, there are one or two statements that I would like to make concerning it.

It is a comparison of the rates applying on cattle and sheep, double deck, which originate on the Union Pacific in Idaho and Montana and fed in transit at Delta, Colorado, on the Denver and Rio Grande Western, with the rates applying Union Pacific direct.

In connection with the rates to Denver, shown under Column, via UP direct, and under Column 3, via UP-D&RGW, the penalty, the rates under Column 3 over the rates under Column 2, varies from a high of 35 cents from Divide, Montana, Line 6, to the low of 31 cents per 100 pounds from [fol. 396] Idaho Falls, Idaho, line 8.

Q. That is when the feeder cattle are bought at Divide, for example, and fed in transit at Delta and then shipped to Denver to market?

A. That is correct.

Q. Union Pacific as compared with the UP-D&RGW?

A. Yes.

Mr. Collins: That is the difference between the two respective rates?

The Witness: That is correct.

The rates on sheep, doubledeck, to Omaha, Nebraska, Column 5(a), to Kansas City, Missouri, 7(a), to Chicago, Illinois, Column 9(a), are uniformly 19 cents higher than the rates applying via Union Pacific direct or via UP to Missouri River and connections in case of rates to Chicago. These rates are in the form of a published through rate via the Union Pacific plus an arbitrary 19 cents when the haul is from Ogden to Denver via the Denver and Rio Grande Western.

To Omaha, Nebraska, the rates on cattle, shown under Column 3(b), via Union Pacific-D&RGW are from 53 cents, from Divide, Montana, to 33 cents from Idaho Falls, Idaho, higher than the corresponding rates under Column 4, which apply via Union Pacific direct. The same is true with respect to rates to Kansas City in that the rates via Union Pacific-Rio Grande, shown under Column 7(b), range from [fol. 397] 45 cents from Divide to 33 cents from Idaho Falls, higher than the rates via Union Pacific direct under Column 6. The same situation prevails with respect to the rates to Chicago on cattle, shown under Column 9(b). The difference there is 57 cents higher from Divide, which is the highest penalty, to a low of 33 cents from Rogerson, Idaho.

By Mr. Siddons:

Q. Mr. Stimits, do we have feed lots on the Union Pacific at South Torrington, Wyoming?

A. Yes, we do.

Q. Now, when we buy cattle at these points shown under Column 1 and they are shipped to South Torrington, Wyoming, on either cattle or sheep which are destined to Omaha, Kansas City, or Chicago we pay the rates shown under Columns 2, 4, 6 or 8; is that true?

A. That is correct; yes.

Q. Then if we ship via the UP-Rio Grande Western or the UP-Denver and Rio Grande Western and connections we pay the rates under Columns 5, 7 and 9?

A. That is correct.

Q. Columns 5(b), 7(b) and 9(b) apply, however to cattle only?

A. Yes.

Q. Did you hear Mr. Smith testify that this fall he shipped some four or five hundred head of cattle from points shown on Exhibit 10 in Idaho and Wyoming to your factory at Hardin, Montana?

[fol. 398] A. Yes.

Q. Did any of those cattle move from Divide, Montana?

A. A portion of them did come out of Divide, yes.

Q. What rate was paid out to Union Pacific on the movement of those cattle from Divide to Hardin?

A. The UP received the feeder rate—their local feeder

rate—from Divide to Butte, and that was the extent of it.

Q. About how long a haul is that?

A. It is 27 miles from Divide to Butte.

Q. Now, if we had shipped those cattle to Delta, Colorado, for feeding in transit, and moving east, what kind of a haul would the UP have enjoyed?

A. The Union Pacific would have received the haul for the maximum length of its railroad, with the exception of the haul from Ogden to Denver, which of necessity would have been via D&RGW.

Q. Do you have anything further?

A. The previous witness, Mr. Smith, stated that on the sheep we sold to Swift and Company they were sold f.o.b. cars at point of origin of our feed lots. I would like to make the statement that that is true, but Swift & Company reimburse the Holly Sugar Corporation for the value of the feed in transit billing which they surrender on those shipments when it is compared with the local rate they would have had to pay if the billing had not been available.

[fol. 399] Q. Is there anything further?

A. I believe that is all.

Mr. Siddons: Any questions?

Mr. Quirk: No.

Cross-examination.

By Mr. Collins:

Q. Mr. Stimits, Mr. Siddons asked you what would have taken place, or what kind of a haul the Union Pacific would have had, if you had shipped to Delta the cattle that had been bought at Divide, Montana. I believe you said you heard Mr. Smith's testimony?

A. Yes.

Q. And you heard him say that it was the practice to send cattle to the feed lots from the nearest available area of purchase to the feed lot?

A. Yes.

Q. It is quite unlikely, then, that you would have sent this shipment on to Delta even if you had had the rates sought in this complaint, is it not?

A. No. As I understood Mr. Smith's testimony, if the

cattle available in the Delta area, and if the price on those cattle compared with that on the cattle at Dillon or other points on the Union Pacific in Montana—if the price situation were such that it would pay us to bring the cattle from Dillon into Delta, we would then do so.

Q. In other words, the only circumstance under which the cattle bought at Divide would have been shipped to [fol. 400] Delta would have been because they would have been bought for a lesser price there, or, rather, a price at Divide sufficiently low to enable them to be transported to Delta at equal or maybe something less than you could have bought or shipped cattle into Delta from a nearby point?

A. That is true; unless other conditions prevailed, you understand.

Q. Yes.

Now, Mr. Stimits, you several times mentioned the penalty you would have to pay if you shipped via the D&RGW. Each time you mentioned that you were referring merely to the differences in the amounts of rates, isn't that correct?

A. The amount of the combination rate versus the competitive joint through rate.

Q. Yes.

Mr. Collins: Thank you very much.

Exam. Mullen: Do you have anything further?

Mr. Siddons: That is all.

Exam. Mullen: That is all. Thank you Mr. Stimits.

Mr. Siddons: That is all of my witness.

(Witness excused.)

Exam. Mullen: Mr. Siddons, do you desire to offer Exhibits 9 and 10 in evidence?

Mr. Siddons: Thank you, Mr. Examiner. May I now [fol. 401] offer Exhibits 9 and 10 for the record?

Exam. Mullen: Any objection?

Mr. Collins: No.

Exam. Mullen: They will be received.

(Interveners' Exhibits Nos. 9 and 10, Witness Stimits, received in evidence.)

C. R. HOLDEN was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your name?

A. C. R. Holden.

Q. You are located where, Mr. Holden?

A. Idaho Falls, Idaho.

Q. In what business are you engaged?

A. Growing and shipping.

Q. Of what?

A. Mostly potatoes. We do grow and ship some live stock and grains, but mostly potatoes.

Q. How long have you been in Idaho Falls in that business?

A. About 15 years.

Q. Did you have experience in buying and selling potatoes and onions prior to your present business?

A. I have handled potatoes and onions since 1920. I spent several years in a wholesale market in Chicago and some time in St. Louis and Kansas City, Missouri.

[fol. 402] Q. And in that business of buying and selling during the past nearly 30 years, did you acquire a working knowledge, at least, of the methods that are involved in routing potatoes and onions, or converting them, etc?

A. I am quite familiar with the rules and regulations in reference to routing on potatoes and onions out of the West; yes, sir.

Q. Where is your principal market for potatoes or onions which are shipped from Idaho Falls, Idaho?

A. Our principal market varies some time from year to year, because practically all potatoes are more or less competitive, but our large markets are in the central states; also in the south and southwestern states and southeastern states.

Q. How do potatoes move to the southwestern states at the present time?

A. Potatoes moving to the southwestern states can move over most any route out of Denver into the southwestern state, such as going into Tulsa, Oklahoma City, Fort Worth,

Dallas, as far east as New Orleans. In case you have any business east of New Orleans into the southeast you cannot move on through without a combination rate.

Q. That is under the existing rates.

A. Under the existing rate; that is correct.

Q. Now, of course the potatoes have to move via the Union Pacific up to Denver, don't they?

A. The potatoes must move Union Pacific to Denver; [fol. 403] that is correct.

Q. We will probably shorten this up. Will you state in your own way, first, in what respect you are injured by the existing situation and in what respect you would be benefited if the complainant here should prevail?

A. We have many markets we could get into south of Denver on potatoes moving east if the gateway was opened so that we could go through there without being penalized if we happened to get into any so-called pocket markets. We could move on east to the river. At the present time you can go as far as the river on cars moving east from Denver unless they move over the Union Pacific. From there on you have to pay a combination or penalty rate to move these cars on east, unless they move into Kansas City over the Union Pacific.

Q. In what respect would you be benefited if the rate sought by the Denver and Rio Grande should be established through Ogden, Pueblo, Denver, etc.

A. Well, for instance, cars designated to the southeast, which we could move through there on an open gateway, we could move through the central states markets into Texas; and in case of a lower market or in case of a troubled car, we would not run into any dead-end markets. We could move the merchandise on east into Florida, the southeastern states on a through rate the same as we can now if we would move them east through Omaha, Kansas City, St. Louis or Chicago.

[fol. 404] Q. Is there a substantial volume of potatoes shipped by your company? Do you operate under your own name?

A. We operate as "Holden Brothers."

Q. I see. Well, is a substantial part of the potatoes

shipped by Holden Brothers from Idaho Falls, subject to diversion in transit?

A. I would say possibly 50 per cent of our potatoes are billed and then diverted in transit. Ma-y cars move direct.

Q. Open routes at competitive rates are, therefore, very important in your business?

A. It is very important in all lines of business, particularly in the produce business.

Mr. Collins: Are you in that?

The Witness: I happen to be in the produce business.

Mr. Collins: Good.

The Witness: It would be a big benefit to eastern Idaho if we had these gateways open.

By Mr. Quirk:

Q. If, for any reason, a car reaches a point where it is called a distressed car—when that happens, is the owner of the potatoes in the car more or less at the mercy of the buyer?

A. When you get a car of perishable commodities into a so-called dead-end market the receiver of the merchandise it was originally sold to, or even if it rolled in unsold, knows immediately that you are at the end of your line, as far as free movement of the car is concerned, and it is the policy of [fol. 405] the buyer to try to reduce the price according to the two rates had you not gotten into one of these pocket markets. In other words, if you had to move south through Denver off of the Union Pacific you would be able to maintain your price in case of trouble because you could sell it to some one else further down the line; but when you get into the end-of-the-line market you are immediately taken advantage of due to the fact that they know you can't move the merchandise on to the eastern markets.

Q. Mr. Holden, have you had experiences, in recent years, of inability to obtain sufficient cars to ship your commodities from Idaho Falls, to the east in particular?

A. We had considerable difficulties on cars, particularly during '36.

Q. Do you mean '46?

A. '46, yes. And we felt like we were more or less discriminated against because in talking to many of our com-

petitors in Nebraska they would tell us they were receiving their fair allotment of cars.

Mr. Collins: Mr. Examiner, I object to this on the ground of pure hearsay.

The Witness: I think that——

Exam. Mullen: Just a moment. Will you read that statement again?

(Answer read.)

[fol. 406] Mr. Collins: Read the question.

Exam. Mullen: Read the question and the answer.

(Question and answer read.)

Exam. Mullen: That seems to me to be hearsay. The objection is sustained.

Mr. Quirk: All right.

By Mr. Quirk:

Q. Now, Mr. Holden, the competition in selling potatoes in particular, and onions, during the past several years has been very keen, hasn't it? There is a buyer's market now?

A. The past several years it didn't take very much of a salesman to sell potatoes and onions because we had a seller's market. For the past few months they are running into what you might term as a normal procedure market in marketing produce. It is a buyer's market. We are now running into lots of difficulty in competition in moving potatoes and onions out of Idaho.

Q. In the process of selling and finding customers, is it necessary for you to keep in touch with what goes on in the competing producing sections?

A. It is very important that we know what is going on in competing areas. We have people we work with over a period of years in other areas that are more or less our competitors as far as price is concerned, and we keep in constant contact with them, both by telephone and wire.

[fol. 407] Q. Is Nebraska one of your competing producing sections?

A. Nebraska is a very important producing section, especially for our lower grades, such as no. 2.

Q. In the nature of things, do you know, by this daily or

weekly contact, whether your potatoes are being shipped in larger volume from one section than from another?

A. I think your Government reports will substantiate the shipments of potatoes out of both Nebraska and Idaho, and I think your Government will show that, in proportion to past history, your Nebraska shipments were heavier than they were out of Idaho during the period I speak of.

Q. Which is 1946?

A. Correct.

Mr. Collins: Do you mean heavier in proportion to the amount produced in Nebraska?

The Witness: I mean heavier in proportion to the amount of potatoes shipped out of Idaho. In other words, if Nebraska shipped 50 cars, on an average, two or three years previous to '46, and Idaho shipped 200 cars, I think the record will show that Nebraska possibly shipped 80 or 100 cars against the Idaho's 100 to 120, in many days less than 100.

By Mr. Quirk:

Q. What Government reports did you have in mind when you mentioned Government reports a while ago, Mr. Holden?

A. There is a Government bulletin put out by the Department of Agriculture that shows the shipments by states [fol. 408] of all potatoes and onions from each state daily. They also report the number of cars.

Q. I understand that is called the "Daily——

A. Daily Market Report, put out by the Department of Agriculture.

Mr. Quirk: You may examine.

Just a minute——

By Mr. Quirk:

Q. Mr. Holden, are your Idaho potatoes sold in competition with potatoes grown in the San Luis Valley on the D&RG and around Greeley, Colorado, on the Union Pacific and the Colorado and Southern?

A. Idaho potatoes are sold in competition with all potatoes, particularly in that area; yes, sir.

Q. Mr. Holden, are you also a farmer or a grower of potatoes?

A. We have been growing, up until this past season, around 300 to 350 acres of potatoes a year. This last season we cut our acreage some.

Mr. Quirk: All right. You may cross examine.

Cross-examination.

By Mr. Collins:

Q. I have information before me, Mr. Holden, to the effect that in 1948 you forwarded—or your company, Holden Brothers—is that the correct name?

A. That is correct.

Q. —forwarded 335 cars of something. Could that have been potatoes?

[fol. 409] A. It possibly could have been.

Q. To the Missouri River and points east of the Missouri River. That would have been potatoes, do you say?

A. I presume the largest portion of them were potatoes.

Q. Would you say where those were ultimately marketed?

A. That would be very difficult to give you, that information where they were marketed, because we market them over a large territory.

Q. What cities do you consider your principal market points east of the Missouri River?

A. East of the Missouri River I would say Kansas City—I presume you would call it east—St. Louis, Chicago and your cities on down through the southeast.

Q. Well, Baltimore?

A. Very few potatoes go into Baltimore, as far as we are concerned.

Q. Washington, D. C.?

A. A few into Washington, D. C., but most of them are in the central and intermediate states and south and southwest—southeast and southwest.

Q. You do ship quite a few to New York, don't you?

A. A few.

Q. In what general area of the country are the bulk of your potatoes sold?

[fol. 410] A. I thought I just answered that question for you.

Q. Well, that is all right. That is O.K. Thank you.

Then you brought in the southwest. What proportion would you say, of your 335 cars in 1948, were sold in the southwest—that is, New Orleans, west?

A. I would say a smaller portion of them were sold in that particular territory in '48 due to the fact that we had a market where we didn't have to go to that territory and take a chance on getting into a pocket market, so to speak.

Q. I see.

A. So we naturally moved the potatoes where we could sell them without that difficulty.

Q. How much did you lose last year on potatoes that got into a pocket market?

A. Our loss was very small, because I just mentioned we stayed out of the pocket-market territory. We will have to go into it probably from now on because we are running into marketing conditions that happen to be a buyer's market instead of a seller's market.

Q. Now, a distressed car is, as you call it, a car which you have sent to some one whom you think will buy it and then he refuses when it gets there; is that right?

A. Not necessarily. A distressed car is generally a car you sold to a party.

Q. Yes.

[fol. 411] A. Or it could be the fact that you rolled cars into a certain market expecting to sell them when they arrived, and, when you get a car into a market of that nature, and if the car should happen to be rejected or an unscrupulous buyer wanted to take advantage of you, you are at a disadvantage in moving out.

Q. Do you know how many cars out of your 335 last year developed into distressed cars?

A. As I told you, a very small percent because we were not forced to go into those markets.

Q. I see. Well, you haven't had very many. In fact, I guess you had practically no distressed cars for quite a few years, inasmuch as the war has made this seller's market.

A. In years past we have had lots of them. In recent years, as far as we are concerned, we have stayed out of

those markets because we were not compelled to go into those markets.

Q. I understood you to tell your counsel that it had been a seller's market.

A. That is correct.

Q. Until the past few months.

A. The past season. We are now going into what is known as a buyer's market, which is normal procedure in marketing potatoes. We very seldom have a seller's market, but we have had during the war; that is correct.

Q. And down to a few months ago?

[fol. 412] A. Yes, sir.

Q. Is this year's crop of Idaho potatoes—or of your own, at least—sold?

A. A portion of them.

Q. When are they harvested?

A. They are harvested mostly in October.

Q. How long a period of time does the harvest take?

A. About four to six weeks.

Q. Four to six weeks?

A. Yes.

Q. Then is it a practice to sell and ship them as rapidly as possible during the harvest season?

A. Many years it is. It so happened this year that a large portion of them went into storage.

Q. I see.

A. There was no ready market at harvest time.

Q. Was that not so last year, too?

A. You mean a year ago you are speaking of?

Q. Yes.

A. A year ago we had a very good market at shipping time, a good demand. The Government was taking a large percentage of the potatoes, so we didn't have much trouble selling them.

Q. You count them sold when the Government takes them?

A. They pay for them; yes, sir.

Q. It is not just a loan; it is a purchase for the Government?

[fol. 413] A. No, it is strictly a purchase program.

Q. I see.

Now, isn't it a fact, Mr. Holden, that Idaho potatoes are

selling, have been selling in the mid-Western markets, at least, at a price considerably above potatoes grown near to those markets?

A. It is a fact that we so happen to have a potato that they don't grow in those markets, and we are fortunate enough to be able to sell them for considerably more; otherwise we could not ship them there with our present freight rates.

Q. Then I have not misrepresented the situation.

How much more do you get for your potatoes, for instance, in Chicago than, say, for potatoes grown in the Chicago area? That is, Illinois and Indiana.

A. At the present time the average potatoes in Chicago are selling for around $3, and Idahos from $4.00 to $4.35 at the present time.

Q. I understood you to say that you sell them throughout the United States—practically all over.

A. I didn't say throughout the United States, but they are sold pretty much throughout the United States. We sell ours mostly through the central states and through the south and southeast.

Q. I have heard it said that you find Idaho potatoes in Boston, which is as you know, not very far from the Maine [fol. 414] County potatoes. Do you know about that?

A. Occasionally a car goes to Boston. That would be some fancy car for hotel or restaurant trade. We have very few cars going to Boston.

Q. It is a fact that the Idaho potato is considered as the rather higher grade potato than potatoes produced generally elsewhere in the country?

A. Well, Idaho considers them that. I hardly think the other states would agree with you.

Q. Other producing states, but doesn't your market situation that you just described bear that out?

A. It so happens, yes, that we are the only state growing any quantity of russets and we are able to demand a small premium on our russets.

Q. Now, you haven't, for your firm, filed any complaint with the Interstate Commerce Commission with respect to your ability to get cars, have you, in the last five years?

A. No, we have not. We have not filed any complaint.

We have been a party to quite a few complaints with the Idaho potato shippers' organization. I happen to be a director and past president of that association, so naturally I was acquainted with the complaints that came in on the car situation.

Q. Did the Idaho Potato Shippers Association file a complaint with the Interstate Commerce Commission?

A. We filed lots of complaints with the O.D.T. during the [fol. 415] car shortage.

Q. I mean you didn't file a complaint in the sense that the railroad, the D&RGW, has filed one here—that is, a formal complaint.

A. Not to my knowledge.

Q. You took it up with the O.D.T., as many people did, the matter of car supply?

A. Right.

Q. You also took that matter up informally with the Union Pacific Railroad—or some one for you—did you not?

A. Naturally.

Q. Now, isn't it a fact, within your knowledge, that generally speaking the other Idaho potato, onion and other perishable-product producers throughout the Idaho area were in about the same situation that you were in for cars at any given time?

A. I couldn't answer that. At that time of year the heavy tonnage out of Idaho is potatoes, so potatoes were the ones that were particularly short of cars.

Q. That would be the only one. I see. All right.

What is your answer as to potatoes? It was so as to potatoes?

A. It was very serious on potatoes, and naturally all potato men that sell on the wires were in touch with the car situation all over the country.

Q. Yes.

[fol. 416] A. That is why it was our knowledge that we were not geting our proportion of the cars.

Q. What was your proportion of the cars?

A. I would say our allocation during the——

Q. I mean, what proportion of the cars do you think you were entitled to?

A. You are speaking of the state of Idaho now?

Q. No, you yourself.

A. Well, I don't think that question could be answered because the cars were originally allocated by the O.D.T. and then they were broken down by the Union Pacific and then distributed from there. Some days we didn't get any cars—many days.

Q. Didn't other shippers fail to get any cars some days?

A. Some days they did; some days they were in the same situation we were in.

Q. Yes.

Mr. Collins: That is all.

Exam. Mullen: Anything on redirect?

Mr. Quirk: No.

Exam. Mullen: Thank you, sir.

(Witness excused.)

Exam. Mullen: We will recess for 10 minutes.

(Short recess taken.)

Exam. Mullen: Let us proceed, gentlemen. Call your next witness.

[fol. 417] L. L. Belcher was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Will you state your name?

A. L. L. Belcher.

Q. Mr. Belcher, you are located in Pueblo, Colorado?

A. Yes, sir.

Q. What is your business address?

A. 511 Elizabeth Street.

Q. And with what organization are you connected, and in what capacity?

A. I am the president and general manager of the Mountain Ice & Coal Company.

Q. In what business is that company engaged?

A. In the ice, coal and cold storage business.

Mr. Collins: The manufacture of ice?
The Witness: Yes, sir.

By Mr. Quirk:

Q. Are you also an officer or director of the Pueblo Chamber of Commerce?
A. Yes—treasurer.
Q. Are you a member of the board of directors, too?
A. Yes, sir.
Q. The Pueblo Chamber of Commerce is an intervening complainant here, isn't it?
A. Yes, sir.
[fol. 418] Q. Now, will you describe more or less in your own words the storage facilities and storage arrangements of the Mountain Ice & Coal Company in Pueblo?
A. Our cold storage facilities consist of a plant for both high and low temperature storage. The capacity is 75 cars.
Q. What commodities are you equipped to store in cold storage?
A. We store most all perishable commodities, the major ones being apples, potatoes, onions, frozen foods, frozen poultry, butter and eggs.
Q. Are you equipped to store turkeys, butter, cheese, onions?
A. Yes, sir.
Q. Now, are you familiar with the issues in this case, at least in a general way?
A. Yes, sir.
Q. Will you state your reasons why you favor the complaint, if that is your position?
A. Our location—being on the four-way railroad center, north, east, south, and west—is one of the advantages of our location for cold storage.

Mr. Collins: You say four-way?
The Witness: Four-way. The free movement in all directions is naturally ideal for a storage customer, to have access to as many markets as possible.
The combination of rates applicable via the UP and Rio Grande limits the flow of northwest products through our

[fol. 419] town, which naturally limits our ability to obtain storage.

Q. Are many of the commodities which are stored in your company so-called transit commodities?

A. A great number, and a great per cent of our business is transit business.

Q. Do you store any commodities that originate or terminate on the Union Pacific north of Ogden?

A. We do store a limited amount of potatoes, onions, apples that originate on the Union Pacific, but are limited

---

Q. Wait a minute. You have answered.

They move via Denver and thence to one of the three railroads to Pueblo, do they not?

A. In the majority of cases. Only when a mis-routing occurs do we receive them over the Rio Grande.

Q. Through Ogden, you mean?

A. Yes, sir.

Q. What commodities that could be moved from points on the Union Pacific north of Ogden that you cannot now store, even through the Denver gateway at the through rates under the transit arrangement, would you like to have that privilege on?

A. The frozen food industry, with the advances it is making; is becoming quite a sizable tonnage for cold storage, and a bigger operation in frozen foods is developing in the Northwest in Oregon-Washington to be moved to the eastern markets which we are interested in, but are not in line or a storage location due to the combination of [fol. 420] rates by going through the Ogden gateway or the limitation to this side of the Missouri River if coming via Denver.

Q. On such transit as exists today there is a limitation as to the destination territory, isn't there?

A. Yes. Even those commodities that originate on the UP that come via Denver are limited to disposition west of the Missouri River.

Q. Under the existing transit tariffs of the Denver and Rio Grande would you be able to store not only those commodities but such other commodities as turkeys, butter, cheese, and so forth, which originated on the Union

Pacific and moved through Ogden and Pueblo if the rates sought by the complaint should be established?

A. Yes, we would have transit privileges on those commodities if we had a competitive rate.

Q. The Union Pacific doesn't run south of Denver? It does not reach Pueblo?

A. No, sir.

Q. Have you any other comments to make, Mr. Belcher?

A. Even with the present routing being available, via Union Pacific through Denver to points in the south, southwest, and up to the Missouri River, we are at a disadvantage in having to pull those commodities through Denver, which is a competitive point with us. We have to pull them through and pass cold storage houses in order [fol. 421] obtain it in our facilities, where, if we had an equal chance by coming direct from the west via the Ogden gateway and Rio Grande, we would have the same opportunity as our competitors in Denver. We would then have an access market to the south, to the east and to the north.

Q. Are you at a disadvantage now as compared with your competitors at Denver?

A. Yes. On all originating on the UP it would have to come via Denver to Pueblo, 100 miles south, for storage. We would be losing the Denver market from those commodities stored in Pueblo. It would be a necessary backhaul.

Q. Would the rates which the complainant seeks, which would allow the business to move from Ogden to Pueblo, remove that disadvantage?

A. Yes, sir.

Mr. Quirk: That is all.

Exam. Mullen: Cross examination.

Cross-examination.

By Mr. Collins:

Q. Your company is the Mountain Ice & Coal Company?

A. Yes, sir.

Q. When was it established at Pueblo?

A. 1897.

Q. 1897?

[fol 422] A. Yes, sir.

Q. On what railroad is your trackage? What trackage serves your plant?

A. Santa Fe and Colorado & Southern.

Q. The D&RGW does not?

A. No, sir.

Q. If it hauled anything to you at Pueblo it would have to be interchanged for a switch movement there, would it not?

A. Yes, sir.

Q. It isn't clear to me just how you have this disadvantage with Denver. Are there other storage companies in Denver?

A. Yes, there are two large storage houses.

Q. It isn't clear to me just how this disadvantage you said you have as with them works out. You have no storage plants yourself at Denver, have you?

A. No, sir. These people that store, as referred to, are attempting to keep as many markets ahead of them as possible.

Q. As many markets?

A. As many markets ahead of them as possible. When they, by the present arrangement, whereby they have to pass up the possibility of the Denver market, the Colorado Springs market, to store with us without an opportunity to return to those markets without a backhaul——

Q. You mean, in order to remove the disadvantage, that you would have to have rates which would be applicable to your plant at Pueblo and then back to Denver equal with [fol. 423] the rates that the Denver cold storage people have; is that right?

A. If the rates were applicable through the Ogden gateway, via the Rio Grande, Pueblo is an intermediate point between the Ogden gateway and Denver.

Q. And in that way your shipments would really be en route to Denver, if you wanted to ship them on up there?

A. That is right. It leaves the entire markets to the north, east and south all open.

Q. What is the product, the single product that produces or affords the greatest volume of your storage in the perishable class? Would fruits be it?

A. It varies so greatly on account of the three seasons that we get into. Fruits are one of the heavy items, I would say.

Q. Isn't it a fact that you have joint through rates on fruits enabling you to store there at Pueblo and ship on in any direction you see fit beyond?

A. The through rate privilege we have now on the apples and pears is the one which must come UP to Denver, through Denver to Pueblo, for storage, which eliminates the north market because it has already passed that market.

Q. I see. But that is a through rate that is as low as—as far as reaching your plant—as you would have if you got the rates that are sought in this complaint, is it not?

A. Yes, that gives us the territory, with the exception [fol. 424] of the north, on a competitive rate, but only on those two commodities.

Q. Just apples and pears?

A. Yes, sir.

Q. It doesn't apply to fruits generally?

A. Well, those are the two major fruits that we store. It may apply to others that we have no demand for storage on.

Q. I think you need have no hesitancy in going into other fruits because I believe the tariff classification is "fruits".

A. All fruits?

Q. Then what marke north of Pueblo, through which the Union Pacific would have passed with your shipments, other than Denver—what other markets would there be?

A. Colorado Springs is the intermediate between Denver and Pueblo. That means passing up Denver and Colorado Springs.

Q. I meant those possible markets through which the Union Pacific would have passed with your shipments.

A. Those are the points that they would have passed.

Q. Now, you say that you are located at a four-way railroad center.

A. Yes, sir.

Q. That includes all points of the compass, I take it—north, east, south and west?

A. Yes, sir.

Q. Is the situation you have described with respect to what would now involve this backhaul of about 100 miles [fol. 425] to Denver, and some kind of a haul—It wouldn't be a backhaul to Colorado Springs, would it?

A. Yes, sir; it would.

Q. Well, wouldn't it be what you would call a side-haul? The Union Pacific would not have passed through there with the commodities.

A. No, but the commodity on some railroad would pass through there.

Q. I see. It is those markets that constitute the basis of your interest in this case?

A. No, it is just those two markets on your fruits.

Q. Oh, I see.

A. Your other commodities, we are limited to the Missouri River and cannot cross the Missouri River, even though we come through Denver on the other commodities.

Q. Your purpose in appearing here, Mr. Belcher, is your interest in additional transit availability or privelege, isn't it?

A. Opening up a wider territory which we might serve.

Q. But serve only through the exercise of the transit privilege; isn't that correct?

A. Yes; with equal rates.

Q. Yes. Yes, of course.

Just a moment please.

(Conference between counsel.)

Mr. Collins: That is all. Thank you.

[fol. 426] Redirect examination.

By Mr. Quirk:

Q. Mr. Belcher, if the rates which this complaint seeks, and which you would like to see established, were established, then you would be on an east-west railroad which would give you transit and competitive rates to practically every place?

A. That is right.

Q. That is what you want, isn't it?

A. That is right. We are entitled to it.

Q. There would not be any question of backhauling between Pueblo and Denver at all in those circumstances, would there?

A. No, sir.

Recross-examination.

By Mr. Collins:

Q. You have not filed any complaint with the Interstate Commerce Commission about this situation, have you?

A. No. I am just a storage man that battles his problem without knowing the entire technicalities of tariffs which are so hard to buck.

Q. Have you raised a complaint to the Union Pacific Railroad?

A. No, sir.

Mr. Collins: All right.

Further redirect examination.

By Mr. Quirk:

Q. The Pueblo Chamber of Commerce filed an intervening complaint on your behalf, didn't they?

[fol. 427] A. Yes, sir.

Mr. Quirk: That is all.

Further recross-examination.

By Mr. Collins:

Q. In this suit, but not previous to this suit?

A. In this suit.

Mr. Collins: That is all.

Exam. Mullen: Thank you.

(Witness excused.)

Mr. Quasey: Mr. Examiner, I will call Mr. Jacob.

I. H. JACOB was sworn and testified as follows:

Direct examination.

By Mr. Quasey:

Q. What is your name?

A. I. H. Jacob.

Q. Where do you live?

A. Salt Lake City.

Q. What positions do you hold at the present time, and how long have you held them?

A. I am general manager of the Producers' Live Stock Marketing Association, which position I have held since its organization in 1935. I am president and general manager of the Wasatch Live Stock Loan Company. I became general manager of that organization in 1930 and president in 1945.

Q. What experience and interest did you have in the live [fol. 428] stock business prior to that time?

A. I have been connected with the live stock business all my active life. I grew up with live stock. I have actively operated live stock since 1915.

Q. In what part of the country was that?

A. In Utah.

Q. What is the Producers' Live Stock Marketing Association?

A. The Producers' Live Stock Marketing Association is an association of producers incorporated to market their live stock. This association, incorporated at Salt Lake City in 1935, has offices at Ogden, North Salt Lake, Los Angeles, Denver and Billings, Montana.

Q. Where is the main office located?

A. The main office is located in the First Security Building, Salt Lake City.

Q. What general area does your organization operate in?

A. It operates in what is generally called the 11 western moutain states.

Q. What is the Wasatch Live Stock Loan Company?

A. The Wasatch Live Stock Loan Company is a company organized by live stock producers to take advantage of the discount facilities of the intermediate credit bank, and loaned to live stock producers.

Mr. Collins: That is a Federal intermediate credit bank, isn't it?

[fol. 429] The Witness: That is right.

By Mr. Quasey:

Q. What general area does the company operate in?

A. Wasatch has loans in Nevada, California, Utah, Idaho, Wyoming, Colorado, and some in Arizona.

Q. Are you familiar with the production, grazing, feeding, and movement of livestock within the area you described and also the other livestock areas of the country?

A. Yes.

Q. What is the National Live Stock Producers Association?

A. The National Live Stock Producers Association is an association made up of member agencies, producers' agencies such as ours, some 19 of them, scattered throughout the country, serving on all principal live stock markets of the United States.

Q. Are there any other credit organizations that are members of the National Live Stock Producers?

A. There are five other corporations similar to the Wasatch that are affiliated with National Live Stock Producers.

Q. What volume of live stock did your association handle during 1948?

A. We handled approximately 30,000 carloads of live stock valued at about $110,000,000.

Q. Can you state, in an approximate way at least, how many of those consisted of rail cars?

A. I do not have any breakdown study on that, but I would assume we handled around 15,000 rail cars.

[fol 430] Q. What is the volume handled during this year to date?

A. It is running about 8 per cent higher than it did a year ago.

Q. Is the number of rail cars in about the same proportion as last year?

A. I would assume so.

Q. Will you describe in a general way the nature and

extent of the marketing service performed by your association?

A. We operate market agencies on the posted markets, under the Packers and Live Stock Act, at Ogden, North Salt Lake, Los Angeles, and Denver; and we operate out of offices at Billings, Montana—which is also a posted market—and the Trovea Yards at Phoenix, Arizona.

Q. Do you perform any sales service off the market range factors, country points?

A. Yes, we have a sales service at country points which we call our direct movement, going direct to feeders, packers; and we also have an order-buying service which is performed by a subsidiary, the Western Live Stock Order Buyers, a subsidiary of the Producers.

Q. Is live stock grazed and fed along the lines of the Union Pacific and D&RGW between Ogden and Denver?

A. Yes.

Q. Is the nature and extent of these operations generally the same in these two areas?

[fol. 431]. A. I would say, generally speaking, yes.

Q. Where is the live stock that is grazed and pastured and fed in the territory served by the D&RG produced?

A. A large part of it is produced locally on the ranges and the farms in that area, but there is a substantial amount that is annually shipped into that territory from other areas, both live stock to go feed in the feed lots and pastures there and live stock to be ranged on the ranges during the summer grazing season.

Q. What areas does this live stock come from to the D&RG?

A. Well, I would think that the live stock in there would come from nearly all areas, immediate areas, within the Rocky Mountain country. The breakdown is a little different on different species of live stock. With respect to sheep, the majority of the sheep goint into that territory for either replacements or pasture and feeding comes from the northwest—Idaho, Oregon, Montana and Washington—that territory.

Q. Are we to understand, Mr. Jacob, that your most important supply area is that north of Ogden?

A. That is for replacement and pasture sheep, yes.

Q. What makes that territory so important, as far as sheep are concerned?

A. Well, in that area, in the northwest area, to get the type of sheep they like in eastern Utah and western Colorado grazing territory, they get the replacements at the time of year that they like, and it just fits in with their [fol. 432] natural operating conditions there.

Q. Where does the live stock move to from the D&RG?

A. Live stock coming out of the Colorado and eastern territory over the Denver and Rio Grande moves both east and west; to slaughter points and feed yards and feed pasture, both east and west.

Q. Does this live stock sell in competition with live stock from points on the UP north of the D&RG?

A. Yes, that is right.

Q. Is the pasturing of live stock on wheat a general practice in the wheat-growing states at the present time?

A. Pasturing of lambs on wheat and, to some extent, the pasturing of breeding stock on wheat, is becoming more general—that is, it is an operation that has grown up in the last few years, and it is an operation that has shown considerable expansion.

Q. Does the pasturing in wheat play an important part in the raising of wheat?

A. Yes, the pasturing off of wheat acreages is beneficial to the production of the wheat crop; and that is the reason for the wheat acreage being made available to the live stock feeder.

Q. Do the wheat pastures of Kansas, for example, offer an important outlet for sheep or lambs on points on the D &RG?

[fol. 433] A. Wheat pasturage in Kansas is a very important factor in determining the feeder live stock market —to a large extent lambs, and to a very great extent cattle. It is a fairly cheap feeder operation, and when the conditions are good a feeder is very anxious to operate in that territory; and the fact that wheat is good in Kansas, and the pasture good in the wheat area, has a very decided stimulating effect on the price of feeder lambs, and to a certain extent feeder cattle also, from the southwest and the northwest territory.

Q. Is freight billing of any value in the sale of live stock from Denver or other markets, like Omaha?

A. The cost of putting live stock to the ultimate market is always a factor in determining price, and if on a shipment of live stock from one particular place you have a feed-in-transit billing available, the extent that feed-in-transit billing reduces the cost of that shipment over the combined rate has a bearing on determining the price paid for that live stock. In a large number of cases the owner of the live stock is recompensed directly to the extent of that feed-in-transit billing value.

Q. I think you stated that you have sold some live stock at country points. That is true, is it not? Some live stock is sold at country points?

A. Yes, we handle a lot of live stock at country points.

Q. And does freight billing have the same effect in connection with the sales at country points as when sold at [fol. 434] market?

A. The usual practice is to allow the owner of the live stock the value of his feed-in-transit billing.

Q. You are familiar with what has been testified to here as the 19¢ arbitrary that applies on and in connection with the movements of live stock off of the UP via the D&RG from Ogden to Denver, are you not?

A. Yes.

Q. Is that 19¢ arbitrary, or, in the case of combination rates applying on a movement, does that have any effect on the operations of the live stock men on the D&RG?

A. Well, that would just have to be figured in as part of your cost of operation, part of the production of your live stock, whether it was grazed on the range, fattened on the range, or fattened on the feed line. That would be one element of the expense of operation.

Q. How would that play a part in the case, for instance, of live stock moving from the D&RG, going up on the UP north of Ogden, and buying replacement stock, or pairs? Would it have any bearing on that deal?

A. Well, that wouldn't enter into the cost of putting the replacement stock or the breeding stock, landing it on the buyer's range; and that is what he is concerned with: how much is the live stock going to cost him landed on his

range. Whenever anybody buys any live stock in the country they want to know what the freight rates are [fol. 435] and what it is going to cost him to land it. If there is an additional charge, or something arbitrary there, that would certainly have to be taken into consideration when he is buying the live stock.

Q. It would also have an effect when the live stock was sold, would it not?

A. Yes, it has a decided effect. As I said before, when you buy live stock in the country, if they have a billing—a billing that can be used on them—they are just worth that much more money, and usually the owner of the live stock is paid direct for that billing.

Q. Mr. Jacob, what do you believe should be done in this case?

Mr. Collins: Well, now, Mr. Examiner, that is what you are here for.

By Mr. Quasey:

Q. All right.

We will say, do you support the position of the complainant in this case, Mr. Jacob?

A. I represent a group of producers, and the producers certainly are interested in seeing low freight rates and increased service. I think that would give them both.

Q. Is there anything else you care to add, Mr. Jacob?

A. No, I have nothing.

Mr. Quasey: That is all. You may cross examine.

Cross-examination.

By Mr. Collins:

Q. How many producers do you serve, Mr. Jacob—do [fol. 436] you represent?

A. Around 30,000. We had 25,000 shippers last year, and I assume, with our increase, it will run around 30,000 this year.

Exam. Mullen: I think the witness is speaking of shipments?

Mr. Quasey: No.

The Witness: No, those are patrons; those are members of our organization.

Mr. Quasey: It is just a mathematical coincidence, Mr. Examiner.

Exam. Mullen: All right.

By Mr. Collins:

Q. Do those 30,000 people, or whatever they are, all produce cattle?

A. Yes, that is right.

Q. Or see that the cattle are produced?

A. That is right—cattle and sheep and hogs.

Q. They are located in the territory that you describe here, throughout these 11 western states?

A. Yes, that is right.

Q. Are the 11 western states the producing territory? That is the producing territory, and it is not related at all, necessarily, to the marketing territory, is it?

A. Well, 11 western states is a substantial producing territory of the United States, but I would not say that it was the producing territory.

Q. But I mean, is it the producing territory for your organization?

[fol. 437] A. For our people; that is right.

Q. You do some marketing in some of those states, do you?

A. That is where most of our marketing is done; in those states, yes. Practically all of it.

Q. Now, your association is a marketing agency for all of these producers?

A. That is right.

Q. Do you buy the cattle and sheep from the owners, or are the cattle and sheep put in your charge and you market them as best you can. How is that done?

A. Most of them are turned over on consignment to us. All of the stuff we market on these posted markets are on consignment. They are just consigned and we charge a straight commission, under the P & S Administration, the Packers and Stock Yards Administration—a joint commission for that service. We have a lot of consignments, a lot

of live stock that is turned over to use in the country to market.

Q. Yes.

A. Then we have, as I said, our order buying department; that fills eastern orders, western orders, packers and feeders, and that live stock is bought direct.

Q. Your association is not at all a cooperative, then, is it?

A. Yes.

Q. Is it?

A. Yes; we are a cooperative, yes; with the exception of [fol. 438] the order buying department.

Q. I see.

A. The order buying department is strictly a purchasing department—purchasing on eastern and western orders.

Q. That is a kind of cattle trading side line in connection with the association's other work, is it?

A. That is right. It is to fill our orders that come in on an order basis.

Q. Well, when you said that in 1948 you handled—I have here—30,000 live stock, that would not be right, would it?

A. No. There were over 2 million live stock, but 30,000 carloads.

Q. I see. When you said you handled that many in 1948, did that mean that you simply marketed that many?

A. Yes, that is right.

Q. You spoke of sheep, I guess principally for replacement and summer pasture purposes in Colorado, did you not?

A. Yes.

Q. Is that replactment just for fattening sheep, or is it used for breeding, or what is it for?

A. That issued for breeding. There is a lot of the Northwest that is white-faced lamb district. What I mean by white-faced lambs is that they are not cross-bred black-faced. The white-faced are the mutton type, Colorado and Utah having an excellent summer area to produce the white-faced mutton lambs. To do that they have to go out of the [fol. 439] state for their replacement ewes. These white-faced cross-bred and Rambouillet types are the kind of ewes they want in the eastern Utah and Colorado district

for breeding purposes, and the best source of supply they have had for those has been the Northwest.

Q. Now, what is the progam? You go up northwest and buy those ewes and bring them down to Colorado and breed them and lambs are born, and then that is considered a transit operation. They move on out to some other part of the country.

A. That is right.

Q. Both the lamb and the ewe?

A. When the ewes are old they go to market, but the lambs move out or the transit billing.

Q. Does that co[illegible]e under the head of feeding in transit?

A. Yes.

Q. Well, what leaves Colorado when you get done there? Is it the lamb or the mother?

A. Both.

Q. Both go. Don't the ewes stay there sometimes for 6 years?

A. Your feeding-in-transit billing doesn't apply that long. The old lamb goes out; if you have a few more lambs come in on that bill you use that billing and go on with them.

Q. You can ship out anything that you call a sheep that has not been there more than a year; is that right?

[fol. 440] A. That is right.

Q. What determines, Mr. Jacob, whether your association succeeds in its business, from a financial standpoint?

A. Whether we can do a better job than the other fellow in marketing live stock.

Q. And make more money; isn't that it? Isn't that the ultimate goal?

A. We have to make expenses. We don't have to make anything above that.

Q. You have to make something for the members, don't you? You have to have something to turn back to them?

A. No. We do if we happen to make it. If we ran along for years and met expenses, and rendered a good service and made expenses, our service would be justified.

Q. I thought you said your service was cooperative, in the main?

A. It is.

Q. In that operation don't you try to do the best you can for marketing the cattle for the producers?

A. That is right.

Q. And pay them?

A. Pay them back any savings in the operation.

Q. Any savings?

A. If there are no savings, we give them service instead of savings. We think that is a good operation.

[fol. 441] Q. If you sell a cow for $100 for one of these producers, don't you give him 90-something dollars?

A. Not if it cost him 90-something dollars to sell a cow. We give him back what we sell the cow for, less the expense of marketing.

Mr. Quasey: Including the freight.

The Witness: Including all marketing costs.

By Mr. Collins:

Q. You would not suggest that you charge him sometimes 90-something dollars to market the cow, would you?

A. Between us and the railroads he doesn't have much left when he gets the cow to market.

Q. Do you reduce your rates?

A. No, but we give him something back over the cost in the end.

Q. Your interest in this case is to obtain for your producers more transit privileges at lower rates. Isn't that the interest of ~~your association~~? At lower rates on the D&RG in transit?

A. In this particular case. It is our interest to see that the stuff moves in to feed on the Denver and Rio Grande territory or to range there without any penalty.

Q. You mean at rates equal——

A. At rates the same as if they came over the Union Pacific the other way.

Q. Yes.

A. And then that gives us what we think is a very valu-

[fol. 442] able thing from the standpoint of a live stock producer.

Q. Yes.

A. That gives us competition in service.

Q. So far as rates are concerned, you- association would like to have all rates brought down to the equal of the lowest rate that you use, wouldn't you?

A. Yes, we would like to see all gateways opened, as a

matter of fact, so the live stock would move whichever way it wanted; then we figure the railroads would be on their toes in giving us that service.

Q. Suppose the Union Pacific raised its rates up to and equal to the D&RG? Would that suit you?

A. That would be bad.

Q. The one thing that would suit you would be equal rates.

A. I assume they are charging rates now to make a living.

Q. Would you answer this: The only thing that would suit you is a reduction in the rates by the D&RG with the privilege that you would have then?

A. Yes, at this present hearing.

Q. Now, Mr. Jacob, is the matter of time of transit of cattle of any importance or signficance to your association and the producers who are its members?

A. You mean the speed of moving the livestock to market from origin point?

Q. That is right.

[fol. 443] A. Very.

Q. Have you considered the extra time that it would take to get cattle into Colorado on the D&RG and the extra time it would take to get them out of there compared with the time consumed by the D&RGW?

A. I don't believe I get your question.

Q. Have you made any comparison of the length of time the cattle would be in transit, or on the train, moving into points on the D&RGW and moving out from those points by way of the D&RGW interchanged to other connections? Have you made any comparison of that situation with the time consumed in train movement by the Union Pacific?

A. Yes, I have observed that over years past. I have observed it was not until recently that either the Union Pacific or the Denver and Rio Grande moved stuff between Denver, Ogden and Salt Lake without feed, without stopping for feed and rest. Today that service is the usual thing.

Q. What service?

A. Of moving the stock from Denver to Ogden or North Salt Lake, either over the Union Pacific or over the Rio Grande, without stopping for feed, which is very beneficial to the live stock shipper.

Q. That is, they have speeded up their trains?

A. That is right.

Q. Do you have occasion to ship from this area here, [fol. 444] around Salt Lake City, to Los Angeles?

A. Yes.

Q. I ive cattle?

A. Yes.

Q. Then you must know about that special train the Union Pacific has to Los Angeles?

A. Which is very wonderful.

Q. What did you say?

A. Which is very wonderful.

Q. Thank you. Thank you. But I don't think you answered my inquiry, Mr. Jacob. Do you know whether your cattle would move or, rather, would be on the trains, in the course of movement, the same time or a greater time if they opened up this route to you and you shipped them by way of the D&RGW into Colorado points and then on out when you got ready to go to market?

A. You mean the combination of the two movements—that it might be all summer between?

Q. No. I mean the time of actual movement.

A. Well, you have a certain time going in, and then you feed or summer the stuff there for two or three months; then you move it out again.

Q. Yes. I am speaking of the train movements.

A. You mean a combination of those two movements?

Q. Not necessarily. I am speaking of each one separately. If you fed cattle, if you grazed cattle on the Union [fol. 445] Pacific, then loaded them and headed for the Omaha market, how would that time compare, if you know, with the time to get to the Omaha market, from a point, a grazing point on the D&RG? Do you know about that?

A. You mentioned to Omaha, Denver, Kansas City.

Q. You have not looked into that?

A. No.

Q. Have you filed any complaint with the Interstate Commerce Commission for your association of producers, Mr. Jacob?

A. In this case, you mean?

Q. Sir?

A. In this case?

Q. No, not in this case. Other than this case.

A. We have filed no complaints that I can remember, but we have, and do have continual contacts with the personnel of the railroads that are in charge of the shipping operations, and we register complaints and requests with them continuously.

Q. What railroads?

A. With the personnel of the railroads handling the transportation end of it.

Q. All right. How about the Interstate Commerce Commission? You have filed no complaint with them?

A. No.

Q. Have you filed any complaint with either the Interstate Commerce Commission or the Union Pacific Railroad [fol. 446] concerning the establishment of joint through rates by way of the D&RG for the purposes sought in this case?

A. Except indirectly, as we have membership in the National Live Stock Producers, and they have intervened.

Q. That is your intervention in this case?

A. That is right.

Q. But nothing previous to that?

A. No.

Mr. Collins: That is all. Thank you, Mr. Jacob.

Mr. Quasey: I have another question, Mr. Jacob.

Redirect Examination.

By Mr. Quasey:

Q. The organizations that you described, being organizations composed of live stock producers, are, in fact, cooperative associations, are they not?

A. That is right.

Q. And all officers and directors, according to the requirements of the by-laws, must be producers of live stock?

A. That is right.

Q. Now, as far as this case is concerned, is to be understood that your position is that you want the Ogden gateway opened, as far as livestock movements are concerned,

so that the live stock may move on the same basis via either route going to Denver or eastern connections?

A. Yes; that is right.

Mr. Quasey: That is all.

[fol. 447] Recross-examination.

By Mr. Collins:

Q. You want all of the routes that you might have possible occasion to use in the future, don't you?

A. Yes.

Q. That is your position?

A. Yes.

Mr. Collins: All right.

Exam. Mullen: Anything further?

Is that all, Mr. Collins?

Mr. Collins: Yes.

(Witness excused.)

Mr. Quasey: Mr. Clyde.

Don Clyde was sworn and testified as follows:

Direct Examination.

By Mr. Quasey:

Q. What is your name, Mr. Clyde?

A. My name is Don Clyde.

Q. And where do you live?

A. I lieve at Heber City, Utah.

Q. Can you describe where that is located?

A. It is located about 50 miles directly east of Salt Lake City.

Q. On what road?

A. You mean railroad?

Q. Yes.

[fol. 448] A. It is on the Denver & Rio Grande. They run a branch into the town.

Q. All right.

What is your business?

A. My business is a live stock operator. I am engaged in running cattle, but principally in the production of sheep.

Q. What is, briefly, the extent of your operation—acreage and average number of head a year?

A. I graze on approximately 15 to 20 thousand acres of private land. I have forest permits and Taylor grazing rights. I operate about 4,000 breeding ewes and 200 head of cattle.

Q. How many other live stock men are there in your locality?

A. Well, in the county in which I live it is rather an intensive live stock-operating vicinity, and I suppose we have approximately 50 sheep men and probably a couple of hundred small cattle operators.

Q. What is the estimated number of head that you and these other men handle a year?

A. You mean the number of breeding ewes we operate?

Q. Yes.

A. I would judge approximately 100,000 breeding ewes are in that vicinity.

Q. Where do you market the live stock you produce

A. Most of the lambs we produce are marketed at the country point at which we live, and some of them, of course, [fol. 449] are shipped to markets such as Denver and Kansas City.

Q. Do you know where those sold at the country points move to?

A. They move both west and east, depending, I think, on the years. Usually the majority of them move east to Denver and river-markets.

Q. Do all these sheep that are either sold locally or moved to markets—are they slaughtered or are some of them sold and used as stockers and feeders?

A. The majority of them are sold as slaughter lambs, because we have a high range which produces an extraordinarily good fat lamb. There is a percentage in every man's output which are sold as feeders. These lambs usually go east and to Mid-western states, in the corn belt, —such states as Kansas, Iowa, Nebraska.

Q. Now, in Kansas do they generally move to what has been referred to here as the wheat pastures?

A. I think that is correct.

Q. Do you bring any live stock into your territory from points off the D&RG?

A. Yes, we bring most of our breeding stock in from states such as Idaho and Montana. In our locality, as I stated before, we have a very high, good range which produces prime lamb, and consequently we run black-faced rams and Suffolk. Consequently we go out of our immediate vicinity and buy replacements which are usually ewes or ewes and lambs, what we call pairs. These are shipped [fol. 450] in from points which I specified, usually Idaho and Montana, and are used for replacements.

Q. Do you also purchase any lambs alone?

A. No, I would say not.

Mr. Collins: Lambs what? Without the ewes?

Mr. Quasey: Without the ewes.

Mr. Collins: Excuse me.

By Mr. Quasey:

Q. Now,——

A. Could I amplify that just a little more?

Q. Yes.

A. Usually an individual sheep man, or a group, moves up into these states in the spring of the year and purchases several thousand ewes and lambs, which are shipped into Heber under feed-in-transit billing, and then later, when the lambs are fattened, they are sent on to Denver or to the river markets. On the replacement of the ewes, that usually happens in the fall of the year, usually through the months of August and September, and a sheep man knows, by mouthing his flock, about how many aged ewes he has to take out; and so he goes out and purchases about the number which will maintain his economic unit. These ewes are shipped in under a transit billing, and then the billing is picked up by him in sending his lambs to market.

Q. Now, in case he sells any of the *shipe* at his ranch, is that billing also used in that kind of a transaction?

A. Well, when you are dickering with a buyer, if the [fol. 451] lambs suit him about the next thing he asks you is whether you have any freight benefits; and if you have it usually adds that much on to the value of the lamb, be-

cause he will take over the benefits and reimburse the grower for the amount he has already in the freight bill—the amount the grower already has in the freight bill.

Q. Mr. Clyde, do you know whether there is any grazing of lambs along the Union Pacific between Ogden and Denver, or Cheyenne?

A. I don't believe I quite understand your question.

Q. I mean, are sheep raised and fed along the UP similar to the way they are grazed and fed in your territory on the D&RG?

A. I think pretty much the same.

Q. And on those that are shipped to Denver, those coming off of the UP and the D&RG would be in competition with each other in the Denver markets, would they not?

A. That is right.

Q. And if there is any difference in the freight rate, such as the extent of the arbitrary charge of 19 cents, as has been testified to, would that mean that the return that the man from your territory would get would be any less than the return the man on the UP would receive?

A. Well, yes. The man who is located off of the UP would be penalized to the amount of the freight, additional freight, which the adjoining lines charge.

[fol. 452] Q. You mentioned there was some movement of feeder lambs into the Kansas wheat pastures. Do you know that the charges on the movement of those shipments would be on a combination basis of rates?

A. I think they are.

Q. Assuming that that were true, would that have any effect upon your situation as to the price you might receive for the sheep you sell?

A. Well, of course. Any differential in the freight would just be that much reduction in the value of what you sold the lamb for.

Q. And any operator who had an advantage in freight billing would just be that much better off, would he not?

A. That is right.

Q. Is there anything else you would like to add here, Mr. Clyde?

A. Well, our interest in this case perhaps is a little bit selfish. We are good friends with both of these roads. They give us a lot of good service. But we have conditions and

emergencies at times, particularly last winter when we were caught in severe weather conditions, and men had to ship their breeding ewes out to where the feed was not snow covered.

We would be interested in a freer movement of live stock at all times. Regardless of who is impeding that movement, we would like to eliminate anything which doesn't give for freer competition; and if here are any restricted areas, or [fol. 453] any restrictions, we would be interested in their removal. Live stock is a very perishable product, very similar to fruits and vegetables, which have been mentioned here today, and it needs to be moved in the shortest manner possible and as quickly as possible because lambs shrink when they are held on railroad cars or when they are held in feeding lots; and also if you are shipping pairs, particularly if the lamb is kept away from his mother for any appreciable — ; the mother weans him and then he is just reduced 50 per cent in value.

Exam. Mullen: Does that complete your testimony?

The Witness: I think so.

Mr. Quasey: You may examine.

Exam. Mullen: Cross examination.

Cross-examination.

By Mr. Collins:

Q. You say your residence is Heber City?

A. Yes, sir.

Q. That is about 50 miles east of Salt Lake, you said, on the D&RGW?

A. Yes.

Q. Is your cattle and sheep operation located immediately by Heber City—near there?

A. Within a distance of perhaps 10 or 12 miles.

Q. Yours is a grazing proposition and not a feeder operation, is it?

A. That is right.

[fol. 454] Q. You said you are a live stock operator. Does that mean just raising cattle?

A. Cattle and sheep.

Q. Then you said running cattle, but principally the pro-

duction of sheep. I was wondering if in there you have a buyer's and seller's business, something of the order of a combination business.

A. No, sir. I am merely a typical operator. In saying "running cattle," that is a merely a term of breeding them.

Q. Yes. But actually—Well, you do raise cattle there in this grazing area where you have these Taylor grazing rights and others?

A. Yes.

Q. How are your cattle and sheep sold, Mr. Clyde? On what basis? Do you sell them to somebody at this ranch and then they take over from there and go on with them?

A. They are sold principally at the ranch, or sometimes at the railroad yards, and they are sold—Maybe I could make it a little clearer. They are sold in various ways; usually through some commission firm; sometimes through an order buyer, as we call them. A man who comes out in the country and has an order for so many sheep and so many cattle; and we merely trade on them, weigh them up and load them on the cars and get paid for them.

Q. He may look at your cattle either on the ranch or even [fol. 455] after you have put them—You mean there are loading pens at Heber, the railroad yards? Is that what you mean?

A. Yes.

Q. When he makes the deal with you you see no more of the cattle. You have no further interest in them, have you?

A. In the cattle, I think that is pretty much true. In the sheep the only interest we would have would possibly be the thing which I said a while ago, if we had some freight benefits——

Q. Yes.

A. —on the sheep which had been shipped in.

Q. You would want that paid back?

A. That is right.

Q. And either the sheep or cattle, when he paid back your freight benefits, would be his from the point where the deal was made, whether on your ranch or in the railroad yard?

A. That is right.

Q. How far is Heber City from Keetley?

A. About 10 miles.

Q. Keetley is on the Union Pacific?

A. That is right.

Q. I would gather, Mr. Clyde, that you must ship or graze most of your sheep or cattle, one or the other, or both, in Colorado; is that so?

A. No, that isn't so. I graze them and operate them [fol. 456] entirely in Utah.

Q. Well, perhaps I didn't catch your situation. What use would you make of the routes and rates sought in this complaint?

A. Well, the use I would make would be principally in the billings which we have in shipping breeder ewes and pairs into Heber and thence east to market.

Q. It would be this freight benefit that you might have in your hands at the time you sold your cattle to somebody else?

A. That is correct.

Q. That would be your interest in the situation?

A. Yes, sir.

Mr. Collins: That is all. Thank you.

Mr. Quasey: That is all.

(Witness excused.)

Exam. Mullen: We have time for another witness, provided it is short.

Mr. Blaine: Mr. Examiner, the first petition I file is in behalf of the American National Live Stock Association and the Idaho Cattlemen's Association in behalf of complainant. We adopted the complaint as our own as far it involves live stock.

The second petition is in behalf of the Colorado Cattlemen's Association. That is also in behalf of the complainant.

Exam. Mullen: Is there any objection to these petitions?

Mr. Collins: Well, no, I guess not.

[fol. 457] Exam. Mullen: The petitions will be received and leave to intervene is granted.

Are you appearing for these associations, Mr. Blaine?

Mr. Blaine: Yes, sir. I am appearing at this time in

behalf of these associations, and I will have a later appearance to enter tomorrow.

Exam. Mullen: Will you file your appearance with the reporter, please?

Mr. Blaine: I will—a written appearance?

Exam. Mullen: That is right.

Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

We will recess, then, until 9 o'clock tomorrow.

(Whereupon, at 4:50 p. m., the hearing was recessed until 9 o'clock a. m., Thursday, December 15, 1949.)

[fols. 458-459a] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, et al., Defendants

Transcript of Testimony—Salt Lake City, Utah, Thursday, December 15, 1949.

Met, pursuant to adjournment, at 9:00 o'clock a.m.

Before Frank E. Mullen, Examiner

Frank E. Mullen, Examiner.

Additional Appearances:

E. E. Kohlwes, 715 East 13th Street, Wichita, Kansas, appearing for the Kansas Milling Company, et al.

[fol. 460] Proceedings

Exam. Mullen: Gentlemen, we are ready to proceed.

Mr. Blaine has some witnesses to present.

Mr. Blaine: Mr. Examiner, and gentlemen: Briefly it is the position of the American National Livestock Associa-

tion, and the other livestock producers for which I speak that the railroads have no private or proprietary rights with respect to the traffic which they originate, and railroad lines are built to furnish transportation service for the public. These lines ought to be used to the best possible advantage in the public interest and the Commission, in cases of this nature, should require that their joint use with that view in mind.

T. HARRY BENTON was sworn and testified as follows:

Direct examination.

By Mr. Blaine:

Q. Please state your name and address.

A. T. Harry Benton, Burns, Colorado.

Q. In what business are you engaged?

A. We have been engaged in the cattle business at Burns, Colorado, since 1908.

Q. Are you President and General Manager of the Benton Land and Livestock Company?

A. Yes, sir.

Q. What is that company?

A. Well, it consists of 16,000 acres of patented land.

[fol. 461] Q. Pardon me, I didn't make myself clear.

Is that company a corporation? If so, under what laws of what state is it organized?

A. It was incorporated under the laws of Colorado in 1912.

Q. Just describe briefly your spread.

A. The property consists of 16,000 acres of patented land of which approximately 5,000 are irrigated farmlands, and about 25 or 30 thousand acres of leased lands, and forest permits for 970 cattle.

Q. When did your family establish the ranch?

A. My father established it in 1908.

Q. How long have you been in active charge thereof?

A. Since 1920.

Q. Do you breed your cattle or do you purchase them annually?

A. We have no breeding herd. We purchase our supplies wherever we can obtain them and fatten them.

Q. What do you produce on the irrigated land you referred to?

A. Principally hay, some alfalfa, but mostly native hay.

Q. How do you market that hay?

A. Through the cattle.

Q. What is the shipping point on the Denver and Rio Grande Western hereinafter referred to by me as the Rio Grande?

A. Our shipping point is Burns, in Eagle County.

Mr. Collins: What was the place?

The Witness: Burns. That is in Eagle County, Colorado.

[fol. 462] By Mr. Blaine:

Q. Where do you endeavor to purchase your annual requirements of cattle?

A. Whereever we feel we can get our supplies in the most advantageous way in regard to price and cost of transportation.

Q. Do you take into consideration quality?

A. Yes, very definitely.

Q. What disposition is made of the cattle after you have fattened them for market?

A. The most of our cattle I would say 90 per cent of them go into the New York Kosher trade. They are heavy steers weighing 1300 to 1500 pounds.

Q. Through what public markets are they sold?

A. Denver and Chicago.

Q. That is 90 per cent of them.

What becomes of the other 10 per cent?

A. They are sold on orders to interior Iowa plants, and we have had some go to Pueblo. There is a packing plant in Pueblo.

Q. Are you interested of necessity in competitive through rates? If so, please state why.

A. Yes, sir. We like to purchase our cattle if we have some freight benefit to go on east whenever we can.

Q. Are you particularly interested in the opening of the Ogden gateway? If so, why?

A. Well I feel it would be advantageous to us if we could go into that territory and purchase our supplies on a feed in [fol. 463] transit basis.

Q. When you refer to that territory, do you mean Idaho, or Oregon, Washington, and Western Mon[illegible]?

A. Yes.

Q. The record shows that you now have sale in transit at the through rates, which is permitted by the railroads. What benefit, if any, is that to the livestock producers?

A. He can move his cattle along on the same billing and the same rate.

Q. Does sale in transit usually attract buyers at all markets?

A. It seems to me it does, Mr. Blaine. I have noticed it on the Denver market that cattle that were brought in on the railroad sold higher than those brought in on trucks, where they had the feed in transit advantage.

Q. Is it for that reason that you endeavor to purchase cattle that have through freight rates with transit balances?

A. Yes, when I can.

Q. Now as to this Northwest territory I have just defined, what has been your experience in attempting to purchase cattle therein?

A. Well, I have been under the impression, I am not familiar with all these rates, but——

Mr. Collins: Mr. Examiner, I think the question ought to be directed to what the witness knows, and not what seems to him, or what he is under an impression about.

[fol. 464] Exam. Mullen: Perhaps Mr. Blaine could direct his questions more directly to the witness.

Mr. Blaine: I withdraw that question.

By Mr. Blaine:

Q. From what general territory or states have you purchased your cattle in the past?

A. Utah, Colorado, Wyoming, New Mexico, Arizona, Old Mexico, Texas.

Q. Have you made any purchases in Nevada?

A. No.

Q. You have from Utah and Nevada through rates via

the Rio Grande to eastern markets, and the record shows that you have no such through rates from the Northwest via the Rio Grande to eastern markets. Have you been able to purchase any cattle in the Northwest?

A. No.

Q. This last season, did you make a special trip to the Northwest in an endeavor to purchase cattle there?

A. Yes.

Q. Not having through rates from that territory, why did you make that trip this last year?

A. We had quite a drought in Montana, and grasshoppers infestation, and I thought I might be able to purchase some distressed cattle out there at a favorable price.

Q. What was the result?

A. I found that the buyers from Iowa, St. Paul, could [fol. 465] afford to pay more for the cattle than I could.

Q. Do you have in your business of producing cattle competitors or other parties engaged in the same business located on the Union Pacific in Wyoming, Nebraska, Colorado, and Kansas?

A. Oh, yes, definitely.

Q. Are your livestock, when sold in competition with the livestock of competitors in the states I named—when you sell your livestock do they come in competition with the livestock produced in Wyoming, Nebraska, Colorado, and Kansas?

A. Yes, we sell our cattle on the open market in competition with other operators.

Q. Now you said you couldn't purchase in the Northwest under the present freight rates. Are transportation charges classed by the producers as a production cost?

A. Yes, they are.

Q. If you incur increased expenses in the form of higher transportation charges or any other factor, can you recoup that excess cost when you sell your cattle on we'll say the Denver or the Chicago market?

Mr. Collins: Will you read that, please.

(Question read.)

The Witness: No.

By Mr. Blaine:

Q. What factor or factors make up livestock prices?

A. Supply and demand.

[fol. 466] Q. Mr. Benton, is your company a member of the American National Livestock Association?

A. Yes.

Q. How long has it been a member?

A. I think since 1920.

Q. What is the American National Livestock Association?

A. It is a non-profit organization made up of a group of livestock operators in the various western states, mostly west of the Missouri River.

Q. You have testified that you do not produce any of the stock which you fatten for market, but you purchase them. Are there other persons, firms, or individuals, likewise engaged on the Rio Grande between Ogden and Denver?

A. There are a few. Most of the operators are in the breeding business, but due to the reduction on the forest ranges, more of them having to go into the feeding business.

Q. Now are there some of those latter that produce some of their requirements and purchase the balance in the open market?

A. Yes.

Q. Now are there on the Rio Grande and on the Union Pacific, between Denver and Chicago, persons who graze their own young stock for conditioning for slaughter?

A. Yes, there are.

Q. The price of livestock being made, as you have testified on supply and demand, what effect, if any, does the inability of you and others similarly situated have when you [fol. 467] cannot go to the Northewest to purchase livestock? What effect, if any, does that have on the producers in the Northwest?

Mr. Collins: Just a minute.

Mr. Examiner, this witness has not qualified himself to know all about the causes and effects of the things that might concern the Northwest producers.

Exam. Mullen: There seems to be merit in that objection, Mr. Blaine.

Just what effect are you referring to?

Mr. Blaine: I will rephrase the question and possibly make it clearer.

By Mr. Blaine:

Q. If, for any reason, the number of buyers for livestock in any territory are curtailed, what effect, if any, does that have on the price of livestock?

Mr. Collins: On the price?

By Mr. Blaine:

Q. On the price of livestock.

A. Well, I would say it would depress the prices.

Q. Is it necessary in the livestock industry that livestock have the freest flow possible?

Mr. Collins: Just a minute, Mr. Examiner, it has not been shown this witness is a student of the whole livestock industry. He is qualified to speak about himself, but certainly he has not been qualified to speak for the industry as a whole.

[fol. 468] Exam. Mullen: The question is quite general, Mr. Blaine. Can you be more specific?

Mr. Blaine: Yes.

By Mr. Blaine:

Q. In the sale of your livestock, is it essential that you have the greatest number of markets available to you, if so, why?

A. Could I have that again, please?

Mr. Blaine: Will you read it to him, please, Mr. Reporter.

(Question read.)

Exam. Mullen: Do you mean in the purchase, or in the sale?

Mr. Blaine: In the sale of his livestock, is it necessary he have available the greatest number of markets possible?

Exam. Mullen: All right.

The Witness: Yes, I feel so. We patronize whatever market has the greatest and the best price.

By Mr. Blaine:

Q. Now, you referred to the reduction in the numbers of livestock on the forests. How long has that policy been in effect, to your knowledge?

A. I think we had our first forest reduction on our permits in about 1925.

Q. Just what has been the trend since that time?

A. There has been a gradual reduction as the ranges, the Forest Department felt were being depleted.

Q. About how long do you hold your livestock on the forest permit that you referred to in your early testimony?

[fol. 469] A. Approximately 75 days.

Q. And how are they sustained and fattened the remaining portion of the year?

A. During the winter months we have them in our meadows, and feeding them hay and cotton seed cake, and during the spring months they are on our privately-owned pastures and the public domain.

Q. Generally speaking, are the forest ranges higher altitudes than your meadows, and other pastures?

A. The forest land that we have our cattle on is at an altitude of 9 to 10 thousand feet. Our meadow lands are at 6 thousand feet.

Q. Have you any other medium through which you could market your grasses, other than through your own cattle?

A. Not that I know of.

Q. Do you feel that the opening of the Ogden gateway on cattle from the Northwest to your ranch would be a benefit to your company?

A. Yes, I do.

Q. Why?

A. Well, it would open up a territory for us to try and purchase our young stock in.

Q. Do you feel that it would be a benefit to the producers in the Northwest?

Mr. Collins: I object to that.

[fol. 470] Mr. Blaine: We won't press it, Your Honor.

Exam. Mullen: All right.

Mr. Blaine: You may cross examine.

Cross-examination.

By Mr. Collins:

Q. Mr. Benton, did you originally graze your cattle there in Colorado to a very considerable extent? In other words, was their feed largely from grazing at some time several years ago, say 20 or 30 years ago?

A. Yes.

Q. Why have you, you might say, converted over to feeding almost entirely, as I understand you now?

A. When we first went to Burns it was a rather primitive country, and we have developed a lot of these lands through ditches and irrigation until we have produced considerable feed. Originally it was just ordinary range land.

Q. I understood you to say there had been a rather constant reduction in the available grazing lands, or the use that might be made of grazing lands since 1925 in your neighborhood?

A. Yes. As the grazers in that territory produced more winter feed, than there was summer pasture for the livestock they were handling, it of course has gone more into a feeding operation.

Q. It is a fact, though, is it not, that the acreage made available to grazing has been gradually restricted and is shrinking because of this, that or the other thing, governmental policy, and regulations, and things like that, isn't that true?

[fol. 471] A. Yes, sir.

Mr. Blaine: I object to the question, Your Honer, unless it is restricted to the forest ranges.

Exam. Mullen: I think the question is permissible, Mr. Blaine.

By Mr. Collins:

Q. You said you produced native hay. Just what is native hay, is it that which grows wild?

A. That is the natural hay of that country. It is made

up of timothy, red top clover, and various other kinds of grasses that come in where there is water for the land.

Q. And your alfalfa, of course, that has to be cultivated.

A. That is a cultivated crop.

Q. About how many cars of cattle do you ship from Burns per year, Mr. Benton?

A. I think in late years it has been around 50 to 75 cars the year round.

Q. Do you ship a considerable portion to Denver?

A. Yes.

Q. Is that shipped by rail?

A. Always.

Q. Always.

Do you transport any portion of your cattle by truck inbound or outbound?

A. No.

Q. You do not.

[fol. 472] A. No.

Q. I understood you to say you buy wherever you can at the lowest price, cattle and lowest price transportation charge. In other words, the lowest cost to you is what governs in your purchases, is that true?

A. Yes.

Q. So that in that phase of your business, total cost is your governing factor, is it not?

A. Yes, it is.

Q. I understood you to say you had competitors located on the Union Pacific in I suppose you mean in the cattle feeding and selling and shipping?

A. Yes.

Q. The same kind of business you are in.

A. Yes, that is right.

Q. Do you have such competitors on the Burlington?

A. We are all competitors, that are in the business.

Q. As a matter of fact, isn't it true that almost every cattle feeder and seller in the country is in a sense a competitor of all others in that business?

A. Yes, that is right.

Q. In an over-all way?

A. Yes.

Q. Would this be true, that the sellers on the Denver

market are in the sense that we are discussing it, also com-
[fol. 473] petitors of sellers in the Omaha, Kansas City, or Chicago market.

A. That is right.

Q. If you can't sell in one market you may go on to another.

A. Yes.

Q. There you meet competition from other and different parts of the country in the form of cattle feed in those parts of the country.

A. Yes.

Q. You wouldn't know, Mr. Benton, would you, of any sale of which you have been deprived specifically because of your competitors located on the Union Pacific?

A. No, I would not have any sale I have been deprived of.

Q. I understood you to say, or rather your counsel said it was your advantage to have the greatest number of markets. Do you know just what is meant by that term "greatest number of markets"?

Mr. Blaine: Available.

Mr. Collins: I'm sure you know, Mr. Blaine, but I wanted to see if your witness knew.

Mr. Blaine: I think he does.

Mr. Collins: All right. Let him have a chance.

The Witness: Our cattle move to whichever market it is to be sold on the most advantageous. We have had cattle move to San Francisco, Omaha, Chicago, or Denver.

Does that answer your question, Mr. Collins?

[fol. 474] Mr. Collins: Yes, that at least gets us on the way.

By Mr. Collins:

Q. Now if there developed another market at some place, a great selling market like Omaha, Kansas City, or in a great consuming market like the San Francisco or Los Angeles area, then you would want to get into the newly developed market, wouldn't you, if a new consuming center or marketing area developed, you would want rights to get into that, too, wouldn't you?

A. Yes, I would.

Q. In other words, so far as your individual welfare and

benefits of your company is concerned, it would be to your advantage to be able to get into every market so that you could pick out the one at any time where you could sell at the best price advantage.

A. Yes.

Q. That would be an ideal situation for you, wouldn't it?

A. Yes.

Q. Then your real interest in this situation here, in controversy in this case, is largely one, if not entirely one of the possibility that if the Rio Grande succeeds in the case, it might enable you to buy cattle at a lower price at some times than you are able to buy them now. That is the inbound end, isn't that true?

A. Well, I would have the advantage of going into a new territory where I might be able to buy at a price that would [fol. 475] benefit us over what we are able to do now.

Q. Yes.

Of course you understand you can go to Montana and Idaho now and buy, but the reason you don't is the transportation costs for one thing are higher than they would be if you—that is to your place, and out from your place, located on the D&RG, than they would be if you were located on the Union Pacific.

A. Yes.

Q. So that the reason you don't buy in this territory now, unless as you said a while ago you might pick up some distressed cattle at a particularly low price, is that the total cost to you is more than you can buy cattle for and transport them to Burns and then on out from other areas, isn't that correct?

A. Yes, sir. Comparative cost is higher than it would be.

Q. That is the governing thing.

A. Yes, that is the governing factor.

Q. You told your counsel, I believe, your company is a member of the American National Livestock Association?

A. Yes.

Q. Do you know whether that association is composed of actual shippers? Are you a direct member of the American National Livestock Association?

A. Yes.

Q. Then you are a shipper and a member.

[fol. 476] A. Yes.

Q. Do you know whether, or will you tell us whether that association obtained expressions from its members before filing this petition for intervention?

A. No, I don't.

Q. You don't know?

Mr. Blaine: I will answer it if you want to know.

Exam. Mullen: The questions are confined to this witness. Go ahead, Mr. Collins.

Mr. Collins: Yes, so far.

By Mr. Collins:

Q. You don't know whether, then, the petition for leave to intervene here for the American National Livestock Association was authorized or not?

A. No.

Q. So your testimony, then, is in your own behalf only, isn't that true?

A. Yes.

Mr. Collins: That is all, Mr. Benton.

Redirect examination.

By Mr. Blaine:

Q. Mr. Benton, because of this differential in the freight rate against you, when you go to the Northwest to buy cattle, can you pay as much for those cattle as a man similarly situated on the Union Pacific that has through rates, for sale in transit?

A. I would say not.

Q. Counsel asked you about the reduction in the numbers [fol. 477] of livestock on the forest ranges?

Mr. Collins: No, Mr. Blaine, I didn't ask him that. I asked him about the reduction in grazing area.

Mr. Blaine: All right.

By Mr. Blaine:

Q. Has there been any reduction in your grazing area, other than on the forest?

A. No.

Q. Do you know of any reduction in the grazing areas other than on the forest?

A. No. As a matter of fact some of us have had to turn our irrigated meadows into summer pasture in order to continue to use the properties most advantageously.

Q. Will the reductions in your opinion that you referred to on the forest require men that are now raising some of their requirements of young stock to discontinue that practice and go out in the open market and buy the live-stock for fattening?

A. In our area the ranchers are finding that they have to go more into the feeding business each year in order to consume their crops because of reduction of range allotments, which is making this change-over from a breeding to a feeding operation.

Q. And in that change-over, are they producing as many cattle as formerly, or are they going out and purchasing as you are now doing?

A. They are being forced to go out and buy their supplies.

[fol. 478] Mr. Blaine: That is all.

Recross-examination.

By Mr. Collins:

Q. Mr. Benton, has there been for say 20 years, as far as you know, any large amount of, or area of grazing lands in Colorado, except in what you call the forest areas?

A. I would like to have the question again, please.

Q. Well, as I understand it from your counsel, he wanted you to say that the grazing lands in Colorado now are confined almost entirely to forest areas, he called them. Is that what you understood him?

A. Yes, I think I did.

Q. Does the term "forest area" have any particular meaning in reference to grazing lands?

A. I had reference to the national forests of the United States.

Q. Well, has there been, for the last several years, any large area of grazing lands that were not in these forests?

A. Yes. There is the public domain, which is a very substantial area.

Q. Apart from the national forests?

A. Yes.

Q. And that area of public domain is being further restricted and reduced, is that the situation?

A. Not on the public domain, just on the forest.

Q. I see.

[fol. 479] But there is enough reduction in grazing area, or in the restrictions in the grazing privilege to drive you more and more into the feeding business?

A. Yes. Of course the people in our area are all affected the same way.

Mr. Collins: Yes. That is all. Thank you.

Mr. Blaine: That is all.

Exam. Mullen: Thank you.

(Witness excused.)

Mr. Blaine: Mr. David G. Rice, Jr.

David G. Rice, Jr. was sworn and testified as follows:

Direct Examination.

By Mr. Blaine:

Q. Please state your name and address.

A. David G. Rice, Jr., Denver, Colorado, 411 Cooper Building.

Q. What official position, if any, do you hold with the Colorado Cattlemen's Association?

A. I'm Secretary of the Colorado Cattlemen's Association.

Q. How long have you held that position?

A. Since December 1, 1949.

Q. Prior to your appointment, what was your vocation or profession?

A. For the past ten years, preceding the time I went to work for the association, I was County Agricultural Agent, working for the Extension Service of the Colorado A&M [fol. 480] College, Fort Collins, Colorado.

Q. Entirely within Colorado?

A. That is right.

Q. Do you hold a degree from the University, if so, what?

A. I have a BS degree in Animal Husbandry from the Colorado A&M College.

Q. What were your duties as County Agricultural Agent in the State of Colorado?

A. Agricultural Advisor to farmers and ranchers in the counties in which I worked, and also as Advisor for commodity groups, such as livestock associations and other groups pertaining to agriculture.

Q. Having served as County Agricultural Agent, as well as being reared in Colorado on a cattle and fruit ranch, are you acquainted with the problems of the Grande River Valley and the North Fork Valleys?

A. I was raised in Mesa County, Grand Junction, and for the last two and one-half years have been County Agricultural Agent for Delta County, which of course is also in the North Glen Valley area of Colorado.

Q. Do you feel that qualifies you to testify that you are acquainted with the problems of those valleys?

A. I do.

Mr. Collins: What problems?

Exam. Mullen: I assume all probems.

[fol. 481] The Witness: All agricultural problems pertaining to the livestock industry, and your farming industry.

By Mr. Blaine:

Q. What is a representative shipping point for livestock in Delta County?

A. Delta is a big shipping point, Paioni and Hoskiss are two other points.

Q. Hotchkiss, isn't it?

A. Yes.

Q. What is the Colorado Cattlemen's Association?

A. It is a non-profit voluntary organization, organized to promote, protect, and develop the livestock industry.

Q. Of what is this membership composed?

A. Livestock men, and all phases of the livestock industry, from your feeders to your operators who raise cow herds and sell calves, and those who derive part of their

income from the raising of calves and purchasing of feeder stock, and those who produce calves and yearlings and send those animals out as feeders.

Q. Then they are producers that condition their own livestock for market and in addition, what you term feeders. Are those pen feeders?

Mr. Collins: Pen?

By Mr. Blaine:

Q. P-e-n.

A. We have in a class like you referred to, there is a group like Mr. Benton, who feeds and grows his animals [fol. 482] out on pastures, in both private and public lands.

Mr. Collins: Mr. Blaine, would you excuse me for a little information. Is this witness supposed to testify as a shipper or as an officer of the Colorado Cattlemen's Association only?

Mr. Blaine: As an officer of the Cattlemen's Association, based on his experience as a Cattlemen's Association member.

By Mr. Blaine:

Q. Do some of the members of the Cattlemen's Association specialize or emphasize in the running of cow herds, or the raising of calves for market?

A. That is right. We have a number who derive their income from that.

Mr. Collins: I didn't understand the answer.

The Witness: That is right.

Mr. Collins: You added something else.

The Witness: Their income is from the calves sold from the cow herds.

By Mr. Blaine:

Q. What is the general practice of the others of the membership?

A. They purchase either calves or yearlings and feed and fatten those for markets and other feed lots.

Q. Is transportation of considerable importance to the cattle producers and feeders?

A. That is right.

Q. How does the membership of the association now purchase their requirements?

[fol. 483] A. These calves are purchased—are you speaking of—the livestock man who purchases calves and yearlings to feed out, they are purchased in Colorado wherever possible, and surrounding states. It has gotten to be where they have to go out more and more out of Colorado to purchases these animals.

Q. When making those purchases, do they take into consideration the freight rates from the point of purchase through their ranches to the ultimate market?

A. They are all interested very much in the feed in transit privileges, that is right.

Q. You heard the testimony of Mr. Benton to the markets through which he sold his livestock.

What is the principal market through which Colorado cattle are sold?

Mr. Collins: Just a minute. Is this witness familiar with the details of the selling of all of the members of this—50,000 members of this association? Are you?

The Witness: On a general basis, yes.

Mr. Collins: What I mean is, do you have actual knowledge? Do you see their shipping papers and sales papers and all that?

The Witness: We do not have any access to the shipping papers, other than the ones which go through the Denver yard.

Mr. Collins: I object to Mr. Blaine trying to stretch this witness too far. He will thin him out too much.

Exam. Mullen: The question I think was a general one. I [fol. 484] think this witness is competent to answer it.

Mr. Collins: It is general, Mr. Examiner, because he doesn't have a witness to testify specifically, I suppose.

Mr. Blaine: Oh, yes.

Exam. Mullen: That is not the point here, Mr. Collins. I think the witness can answer that question. He is competent to answer that.

Do you recall what the question is? Suppose you repeat it, Mr. Blaine, if you remember it.

By Mr. Blaine:

Q. Through what market, generally, is the preponderance of the Colorado cattle sold?

A. I would say Denver, Chicago, and other eastern markets.

Q. Do the cattle feeders you referred to in Colorado, particularly the larger operators, find it necessary to buy replacement stock from the surrounding states?

A. They do. A majority of the big operators go out of Colorado to buy at least a portion of their numbers which they feed.

Q. With respect to your two years and a half service as County Agricultural Agent in Delta County, what was one of the main programs that was conducted?

A. One of the main programs was the development of the feeding program for the North Fork Valley. It is a program that is sponsored by your farmers and your cattlemen.

Q. Is that all?

A. I might add that farmers are interested in a program [fol. 485] of this kind, due to the fertility and soil building program which we have in that area.

Q. What, if any, was the main obstacle confronting you in developing that program?

A. One of the problems that came up almost every time we met on this subject was where we would get our cattle to feed with the forest service numbers being cut down as they are in that area, and the same all over Colorado from the national forest grazing areas.

Q. Did you go to the Northwest, by that I mean Idaho, Oregon, Washington, and Montana, in your purchase of cattle?

A. These programs were handled through committees of livestock men and farmers, and they did investigate, and are investigating at this time purchasing cattle in other states than Colorado, which includes the Northwest area.

Q. Just briefly, what was their findings with respect to the Northwest under the present freight rate situation?

A. It was hard for them to purchase cattle in this area and be on a competitive basis, due to their feed in transit rates. The cattle is being bought and brought in at the

present time from southern Utah, and other points of Colorado, for this reason.

Q. Is there more than one railroad serving the larger portion of the forest section of Colorado?

A. D&RG services, I would say, 80 per cent of all national [fol. 486] forests.

Q. How many per cent?

A. A good 80 per cent by themselves, and they serve all of the national forests, but your eastern forests in eastern Colorado are also served by other railroads which would be somewhat in the neighborhood of 20 per cent of the forests.

Q. By the railroads, you mean the Santa Fe, the Missouri Pacific, C&S.

A. That is correct.

Q. You have been speaking of the livestock fattened in Colorado for market. Do you also produce some feeder cattle that must be further fattened before ready for market?

A. That is correct.

Q. How are those disposed of?

A. They're sold at the country points, they're sold in the Denver markets, and back in other eastern markets for feeders, or buyers also play a part in this program.

Q. Then it is proper to say there is a substantial movement of cattle both into and out of Colorado.

A. I would say so, yes.

Q. What is the interests of the Colorado Cattlemen's Association in this proceeding?

A. We're interested in furthering all phases of livestock industry—which Colorado has—complete round picture in the industry, from the breeding, feeding and raising and [fol. 487] marketing of the livestock.

Q. What are the views of your association respecting the opening of the Ogden gateway here concerned?

A. They are very much interested. In fact, they would like to see competitive—the possibilities of our members buying on competitive basis for feed in transit basis, especially for the western Colorado areas, and Arkansas Valley areas.

Q. Referring for a moment in the diminution in the num-

bers of livestock permitted on the forests. Are you familiar with the program generally in the last ten years?

A. I work very closely with the livestock men in the forest service problem, especially in the last two and one-half years. I have been acquainted with it prior to that.

Q. Can you give us a yardstick to measure the general decrease in numbers of livestock permitted by the forest service?

A. I think our best example of the trend is on the examination of the national forests on the point allotment. Your national forests are divided into allotments, with so many livestock men operating in this given area, which is an allotment. On this point of allotment ten years ago, ran some 5,000 head of livestock, with 30 livestock men operating or running this number of cattle.

At the present time there are 16 operators left in this area, and about a month ago the number was cut to 1250 head, which shows the trend we are up against all through [fol. 488] Colorado of going out of the—we are just going to be forced to stop using our national forests for grazing, which means our members, and other livestock men, are going to have to go into a feeding program to use their grass and their commensurate property, or the property they own adjacent to the national forest. One thing of specific example of one man, a Mr. J. B. Claybaugh, of the White Water Shipping Point, his permit has been cut from some 1200 down to 200, so last year for the first time he is purchasing feeder cattle to graze on his grass land and farm land, and I have been advising with Mr. Claybaugh on his farm land and grass land, and I happened to be there when he received his first shipment of cattle of 500 head. He plans to run some 1500 head in a feeding operation. Today he hasn't been able to fill his requirements in western Colorado, and he is going to other points to fill his ranch, and as I said, he is filling it with calves growing out with yearlings and two-year olds.

Q. Mr. Rice, this diminution in the number of animals that can be run on the forest range, does that necessitate the permit-ees discontinuing raising a large portion of their own cattle and going out to purchase cattle for feeding?

A. That is right. They can operate more efficiently with

feeders. They get more returns from the hay and grass if they are going to use the private lands from a feeder standpoint rather than raising a cow and calf program.

[fol. 489] Q. Just one further question.

Then are we correct in understanding that this reduction in the forest pasture has increased the number of cattle necessary to be brought into Colorado for feeding?

A. I don't think there is any question about it. We also have our pen feeding program in your farming areas, and that is on the increase each year. That is going to be another demand on us, a reason for the purchase of outside cattle.

Q. Have you anything further, Mr. Rice, that you feel would be helpful in the disposition of that proceeding?

A. I don't think so, Mr. Blaine.

Mr. Blaine: You may inquire.

Cross-examination

By Mr. Collins:

Q. Mr. Rice, you are familiar, I take it, with the governmental policies concerning grazing in the national forests.

A. That is right.

Q. That is the source of your information.

A. Yes.

Q. I mean insofar as the Government itself is concerned, and apart from your local information there in Colorado.

A. Did you say what is my——

Q. What I was really asking was, I wanted to determine on this record whether you were familiar.

A. That is correct.

[fol. 490] Q. With the national, the Federal Government's policy, with respect to grazing on national forests.

A. That is correct.

Q. That policy is not restrictive to just Colorado, is it?

A. That is on all national forests in the United States. We seem to have a little more sever policy in Colorado than in other states.

Q. Well the policy is enforced, *it is* not, with reference to the type of grazing land, and it's the ability of grazing lands in the forest to support a given number of cattle or sheep.

A. That is correct.

Q. And if the grazing becomes skimpy—well, if the feed becomes reduced to the point it wouldn't support 10 head per acre, they reduce it to 8 head per acre, or some such thing as that, just to get an idea on the record, is that about it?

A. Yes. There seems to be quite a bit of difference of opinion on this grass count, but that is the basis.

Q. Just generally.

A. Yes.

Q. That policy also is enforced, so far as you know, by the Government, in Colorado, Utah, Idaho, Montana, and any other states where there are national forests?

A. Yes, wherever they have national forests it has been the policy, to have the same regulation policy.

Q. Yes, so the restrictions and the consequent reduction [fol. 491] in the numbers of animals produced, partly at least, or raised partly on the grazing lands, is widespread, as far as there are national forests?

A. That is correct.

Q. I understoood you to say, Mr. Rice, that you are particularly familiar with the marketing problems of the members of the Colorado Cattlemen's Association, and say transportation, as a part of the marketing. Are you?

A. I am familiar with the markets they ship to, but the actual transportation detail problems I would say no.

Q. Isn't it a fact that to the Denver market by far the greater portion of the cattle are trucked?

A. No.

Q. And not hauled by rail?

A. We have members trucking cattle in, but the railroad still has the majority of the hauling.

Q. Do you think the Rio Grande Railroad—as I understood you, the Rio Grande has at least 80 per cent of a monopoly on the cattle producing areas, that is the cattle produced in the national forest areas.

A. That is right, national forest areas.

Q. It is from that area that you say the bulk of the cattle, more than 50 per cent, are hauled in by rail?

A. That is correct.

Q. Are you familiar with these big cattle show events

[fol. 492] at the Union stockyards at Denver, do you attend those?

A. That is correct.

Q. Do you have any knowledge as to where the cattle come from to the Denver market, the over-all picture?

Mr. Blaine: Pardon me, I would like to have that question clarified. Does he mean to the show, or to be marketed?

Mr. Collins: To the market, to be marketed.

Mr. Blaine: All right.

The Witness: It is an international show.

By Mr. Collins:

Q. Let's leave the show.

I just wanted to center your attention on that locality; and stick to the market. Do you know in general where the cattle come from to be marketed there at the Union stockyards in Denver?

A. It is still open to the United States.

Q. You don't know whether they come from any place except Colorado, then, do you?

A. I assume——

Q. You can speculate with me as safely as you can with your counsel, Mr. Rice.

Exam. Mullen: Just a minute, Mr. Collins. Do you mean the Denver market as a sales market?

Mr. Collins: Yes.

Exam. Mullen: And you want to know from this witness if he knows where the cattle come from that enter into that sales market?

[fol. 493] Mr. Collins: Yes.

Exam. Mullen: Do you know?

The Witness: You want, then, what comes from other than Colorado.

By Mr. Collins:

Q. Yes, generally from what areas. If you don't know, don't bother with it, just say you don't know.

A. I will say I don't know on that.

Q. All right.

I understood you to say to your counsel that the Colorado Cattlemen's Association desires to purchase on a competitive basis the cattle that they need in their operations.

Now, don't they now purchase on competitive bases from numerous places nearby or within or adjacent to Colorado?

A. Wherever there are areas where they can, yes.

Q. Where are the areas that they can't purchase on what you call a competitive basis?

A. In the Northwest territory, from north Utah, Idaho, up in that section.

Q. Yes.

Where are any other areas in which your purchasers would be at a competitive disadvantage?

A. Oh, I would say California.

Q. Is that because of freight rates?

A. That is because of California being a consumer state [fol. 494] of its own, and cattle going the other way, cattle going west to their own consuming areas on the West Coast. We can't compete under those kind of conditions.

Q. Well, your inability to compete in that situation is not because of the difference in freight rates, is it?

A. That is right.

Mr. Blaine: Your question was not restricted to differences in freight rates, I point that out at this time.

Mr. Collins: Will you read my question.

(Last three questions read.)

Mr. Blaine: Mr. Collins had restricted his question to freight rates, and the witness answered it as asked.

Exam. Mullen: Well it seems to me to be OK. I don't see anything wrong with the question or answer. I think it is clear enough on the record.

Mr. Collins: I want to apply it to freight rates, and I eventually did, which Mr. Blaine didn't enjoy.

Exam. Mullen: I don't think we need these comments.

Mr. Collins: No, I'm sure.

By Mr. Collins:

Q. Your inability to compete or to purchase or deal with California is not because of a difference in freight rates.

A. That is right.

Q. Mr. Rice, I would like to come back to something I spoke of just a while ago. I am not sure whether your answer, finally that you didn't know, would cover this phase [fol. 495] of the activities at the Union stockyards in Denver.

Do you have any knowledge as to enable you to say approximately the portion of the cattle that come into the Denver stockyard by truck, as against railroad?

A. No, I don't.

Q. Mr. Rice, I take it you are in agreement with Mr. Benton's testimony, as I understood him, that Colorado is becoming more and more a pen feeding area, as the Government restrictions on grazing become tighter.

A. Pen and pasture.

Q. Do you have any particular knowledge of transportation and tariffs and so forth? Your counsel said you were familiar with all the problems affecting the members of this association.

Exam. Mullen: I think that was corrected by the witness, as I recall. He said agricultural and livestock problems.

By Mr. Collins:

Q. But not transportation.

A. That is correct.

Q. I see.

Have you been authorized, Mr. Rice, to speak for all or a majority of the members of the Colorado Cattlemen's Association?

A. That is correct.

Q. In this case?

A. I am representing the association, and that was decided on by the Board of Directors, the Board of Control [fol. 496] of the association, which represents all parts of Colorado—all sections of Colorado.

Q. The Board of Directors, as such, are not shippers in their capacity as a Board of Directors, although individuals may be, but not as a Board.

A. That is correct.

Q. Did they present this problem to the individual members?

A. It was up to the individual direct or from the various sections——

Q. I am having difficulty hearing. Could you talk a little sort of past the microphone. It would be more distinct, I believe.

A. The Board of Control had the right to take it up with their individual members. A. P. Starr from the southwest corner of Colorado for that district did, and I assume that the same thing happened with the other members of the Board of Control.

Q. You say he had the right to take it up.

A. And Mr. Starr took it up with a number of members and local associations in his area.

Q. But you don't.

A. Mr. Bledsoe of the southeast section of Colorado took up with the members of the association, and local associations in his area. Your Colorado Cattlemen's Association is made up of individual members and affiliated local livestock associations, and the state as a whole is divided [fol. 497] into four districts, each district having a member on the Board of Control.

Q. You don't know, then, of your own knowledge, whether the five thousand members, or a majority of them, of the Colorado Cattlemen's Association favor the filing of this petition for intervention, do you?

A. Your local associations.

Exam. Mullen: Just a moment, the question was merely, do you know whether or not there was a majority of members that authorized it?

The Witness: No.

Mr. Collins: What was the answer, if any?

Exam. Mullen: He said no.

Mr. Blaine: What was the answer?

Exam. Mullen: He answered no.

Mr. Collins: That is all, thank you. Thank you, Mr. Rice.

Redirect examination

By Mr. Blaine:

Q. Mr. Rice, you stated that the reason you couldn't purchase cattle on a competitive basis in California was not due to the freight rates. What is the reason you can't purchase in the Northwest in competition with Union Pacific producers?

Mr. Collins: We'll admit, Mr. Examiner, the combination rates that are sought in this case are higher than the through rates direct by the Union Pacific.

[fol. 498] Exam. Mullen: Is that all you wanted to develop, Mr. Blaine? That seems to be obvious.

Mr. Blaine: Yes.

By Mr. Blaine:

Q. Mr. Collins has addressed some questions to you respecting a monopoly that the Rio Grande had on the mountains of Colorado. Doesn't the forest service have a monopoly on the Rio Grande?

Mr. Collins: I meant just for clarification, so I believe you can understand it, Mr. Examiner, and for Mr. Blaine's benefit, I was speaking of monopoly of transportation and not of land.

Exam. Mullen: The Examiner so understood it.

By Mr. Blaine:

Q. Another question: Mr. Collins spoke of 10 animals per acre on the forest range. Doesn't he have that reversed? Isn't it one animal for 10 acres?

Exam. Mullen: Mr. Collins was speaking as an example. I don't think you need to press that.

By Mr. Blaine:

Q. Do you know if cattle from Wyoming are sold on the Denver market?

A. That is correct.

Q. Are cattle from Nebraska sold on the Denver market?

A. That is correct.

Q. Are cattle from Utah sold on the Denver market?
A. That's correct.

Mr. Collins: Just a minute now. You don't want to put [fol. 499] this witness on the hot spot, do you?

Mr. Blaine: I'm not. I just asked if he knew.

Mr. Collins: He said he didn't know where the cattle came from for the Denver market when I asked him. Now what does he know and what doesn't he know?

Exam. Mullen: Maybe the witness would rather explain that in his own language. How much do you know about the sales of livestock on the Denver market, from the states from which the cattle come?

The Witness: Just from special contact in talking with various livestock shippers.

Exam. Mullen: This witness doesn't seem to be informed on that, Mr. Blaine.

Mr. Blaine: That is all, Your Honor.

Mr. Collins: Thank you, that is all.

(Witness excused.)

Mr. Kohlwes: My name is E. E. Kohlwes, 715 East 13th Street, Wichita, Kansas.

I would like, with your permission, Mr. Examiner, to offer a petition of intervention in support of the complainant in this proceeding, on behalf of the group of mills located in south-central Kansas.

Exam. Mullen: Any objection to this petition?

Mr. Collins: No, I think not, Mr. Examiner. I might want to ask some questions about it.

[fol. 500] Exam. Mullen: The petition is received, and leave to intervene is granded.

This petition is filed by the Arnold Milling Company and other elevator and milling companies. Do you want to take the witness stand, Mr. Kohlews?

E. E. Kohlwes was sworn and testified as follows:

The Witness: My name is E. E. Kohlwes. My address is 715 East 13th Street, Wichita, Kansas. I am employed as Traffic Manager of the Kansas Milling Company at Wichita,

Kansas, which position I have held for the past eight and one-half years. Previous to that time I was employed as Executive Secretary of the Board of Trade of Wichita for a period of about four years.

Prior to that I was associated with the Traffic Department of the Merchants Exchange of St. Louis, in St. Louis, Missouri, during all of which time I have been closely associated with the marketing and merchandising of grain, and particularly with respect to the rates and transit arrangements applicable to grain and the milling and transit of grain.

Mr. Collins: Mr. Examiner, this may sound a little queer, but if the witness can indicate he is acquainted with Mr. Walter Scott, I will concede his qualifications for the purpose of this testimony.

The Witness: I am personally acquainted with Mr. Scott, [fol. 501] and I have appeared with him in numerous cases.

Mr. Collins: You are qualified as far as I am concerned. Thank you.

The Witness: In addition to being Traffic Manager for the Kansas Milling Company, I also hold the office of Vice President of the Lawrence Milling Company, one of the parties intervening in our petition of intervention.

I should like to add that I am also authorized to appear here and speak in behalf of the various mills listed in our petition of intervention previously submitted.

Exam. Mullen: Did you say the Lawrence Milling Company?

The Witness: The Lawrence Milling Company.

Exam. Mullen: That company is not included in your present petition.

The Witness: I might offer a correction in the petition, Mr. Examiner, if you please.

The Lawrence Milling Company is listed in the Appendix A attached to the petition, but is not included in the signatory mills on page 3 of the petition, and I should like to have the record include the Lawrence Milling Company as a signatory to the petition, if you please.

Exam. Mullen: That may be done.

The Witness: The interests of these mills in this proceeding lies in their disability to purchase wheat in the Pacific

Northwest, and particularly the origin territory located in [fol. 502] Utah, north of Ogden, origins in Idaho, Oregon, and Washington, located on the Union Pacific, for movement from such points of shipment into these various milling points in Kansas for processing or for storage, and subsequent reshipment from such processing or storage points in Kansas to Kansas City or beyond, on the basis of the direct through rate.

Grain that is purchased by these mills from origins located north of Ogden on the Union Pacific, moving through Utah, Colorado, or interior Kansas gateways, are subject to a combination of local rates which exceed the direct through rate applicable over the Union Pacific direct to Kansas City, or to points beyond Kansas City.

A specific situation that came to my attention within the last month was a movement of some nine carloads of wheat that were purchased by the Moundridge Mill and Elevator Company, of Moundridge, Kansas, which is a trade name for the Lawrence Milling Company, and upon shipment from Ogden to Moundridge, Kansas, the shipper at Ogden applied inbound transit billing on these nine carloads of wheat originating at Idaho Falls, Idaho.

The cars moved into Moundridge routed from Ogden by the Union Pacific, Denver, D&RGW, Pueblo, Missouri Pacific. I might say that Moundridge is a local point on the Missouri Pacific, and of course being such, traffic can only move into this point over the Missouri Pacific.

[fol. 503] This wheat was ground and milled at Moundridge, and the inbound transit covering this inbound movement of wheat was subsequently applied against an outbound movement of flour that was shipped to New Cumberland, Pennsylvania. The outbound routing from Moundridge was via the Missouri Pacific to St. Louis, A&S, Wabash, Pennsylvania. Because of the routing into Moundridge, in connection with the D&RGW from Denver to Pueblo, and thence on the Missouri Pacific, the rates on the through movement from the original point of shipment from the wheat from Idaho Falls, Idaho, to the final destination of the flour at New Cumberland, Pennsylvania, aggregated $1.33 and a half cents.

Mr. Collins: Per hundred.

The Witness: Per hundred pounds, not including the Ex Parte 168 increases.

The direct rate from Idaho Falls to New Cumberland, Pennsylvania, if the movement could have been over the Union Pacific direct to Kansas City and then connecting routes beyond would have been $1.21 per 100 pounds, plus the Ex Parte 168 increases, indicating that in connection with this particular purchase of wheat in Ogden, the mill at Moundridge sustained a transportation cost penalty of 12½ cents per 100 pounds.

I should like to say that wheat, of course, when milled, produces flour, but it is not a fact that specific types or specific grades or qualities of flour can be milled from any [fol. 504] quality, type, or grade of wheat. The mills have laboratory facilities and research facilities through which they develop blends of different varieties, grades, or qualities of wheat, to produce specific types and specification flour. Through these research facilities it has been developed that it is necessary to originate the type of wheat which is produced along the Union Pacific Railroad in northern Utah north of Ogden, Idaho, Oregon, and Washington, to blend with other wheats produced in other sections of the country to produce certain specified types of flour.

Not only do the mills through their research facilities develop the types of flour which they undertake to market, perhaps under specified brand reputations, but the large baking companies of the United States likewise have extensive research facilities through which they develop specifications to conform to their baking production formula, and in order for flour mills to undertake to sell flour to those bakeries it is necessary for them to grind or to mill flour to meet the specifications which these bakeries have established for their flour requirements; and again in the production of that flour it is necessary, through research facilities, to originate and blend different grades, types, or qualities of wheat, to produce the desired quality of flour. Therefore, as I have said, it is necessary for us to originate a certain amount of our flour requirements at these points in the Northwest.

[fol. 505] While this necessity exists, and in view of the fact that we must sustain a transportation cost penalty to

originate wheat on the Union Pacific, for milling at these interior Kansas transit points, and reshipment to the consuming area of the East, we must nevertheless originate a certain amount of that wheat and undertake to absorb this disadvantage in transportation costs.

However, if the transportation cost penalty were removed, it would enable us to originate a considerably greater volume of wheat at stations along the Union Pacific Railroad, and provide those producers with an additional outlet and market for a greater quantity of their wheat. We do have available, without transportation cost penalty, wheat that is grown and shipped from stations on the Great Northern, and Northern Pacific, particularly in Oregon and Washington, that moves over those lines through the Billings gateway, in connection with the Burlington through the Colorado gateways, then the Missouri Pacific, Santa Fe, or Rock Island, through Kansas milling points on the going direct through rate without transportation cost penalty.

Mr. Collins: Excuse me, sir. You don't actually mean a penalty in the sense that tariffs sometimes carry penalties, do you? Aren't you, when you say "penalty," referring only to the difference between the combination rates and the through rates?

[fol. 506] The Witness: That is right.

Mr. Collins: Thank you.

The Witness: So to the extent that it is possible to meet our requirements we undertake to purchase as much of our wheat as we possibly can in this Northwest area where we can move it without this so-called additional transportation cost. But we feel very strongly that we should have open to us, and likewise we feel also that the producers along the Union Pacific Railroad in Utah and Idaho, should have available to them a potential market for their wheat which our demands and requirements provide.

I think that concludes my testimony, Mr. Examiner.

Mr. Quirk: I would like to ask a few questions.

Exam. Mullen: All right, Mr. Quirk.

Direct examination.

By Mr. Quirk:

Q. If the rates on grain, and other commodities that are sought by the complainant in this case should be established, in connection with the Union Pacific, transit that you spoke of in connection with a car that stopped originally at Moundridge and was forwarded to New Cumberland, Pennsylvania, would apply, would it not?

A. That is correct, Mr. Quirk.

I might say that so far as the transit and the routes are concerned, they are available today. Our problem is, due to the difficulty that the through rate applicable over the [fol. 507] Union Pacific Railroad is not also applicable over the Union Pacific Railroad through the Utah or Colorado gateways in connection with the Missouri Pacific, Santa Fe, or Rock Island, operating through these interior Kansas transit points. Just along that point, Mr. Quirk, the Missouri Pacific Railroad, in Item 2400-A of their tariff ICC No. A-9822, for example, authorized transit at Moundridge, Kansas, from points on connecting lines when delivered to the Missouri Pacific at Pueblo, and when the outbound reshipment of the grain or its product from Moundridge is to various destinations, on or east of Kansas City, so that if the rate currently in effect directly over the Union Pacific from Idaho, Oregon, Washington, and northern Utah, were made to apply also in connection with the Union Pacific to Ogden, thence the D&RG to Pueblo, and the Missouri Pacific, this mill could then today—could then, I should say, draw that grain on the same transportation cost and reship the grain or its products to Kansas City or beyond as the rate in effect over the Union Pacific direct.

Does that answer your question?

Q. Yes.

So that the present rate situation against which this complaint is filed, does restrict the mills in the area of Kansas which you represent as to their purchase of wheat, does it not?

A. I would say it restricts our ability to purchase wheat, and also limits or circumscribes our ability to move out [fol. 508] bounds with our products, because of our limited

ability in acquiring this particular grade and quality of wheat.

Mr. Quirk: That is all. Thank you.

Cross-examination.

By Mr. Collins:

Q. Mr. Kohlwes, you could have the same relief as to the mills for which you are speaking, could you not, if by opening the route via the Union Pacific at Denver?

A. You mean Union Pacific, Denver, D&RG, Missouri Pacific?

Q. My point is the Rio Grande would not have to participate in the rates to enable your mills to get the relief that I understand you think you need.

A. Well, if I understand correctly, I don't believe the Missouri Pacific Railroad enters Denver. There would have to perhaps be some connecting line between the Union Pacific at Denver and the Missouri Pacific at Pueblo.

Q. Does the Colorado and Southern connect with the Missouri Pacific at some point?

A. I believe so. Yes, if the rate applied, Union Pacific-Denver, connecting lines between Denver and Pueblo on the Missouri Pacific, the relief would be afforded. Yes.

Q. Now, Mr. Kohlwes, do you know from what area the mills, the companies for which you have intervened, obtain the bulk of the wheat that they use, or that they process, rather? Isn't it from the Kansas area, the area local to the mills?
